PROCEEDINGS AND DEBATES OF THE 95th CONGRESS, FIRST SESSION

SENATE—*Monday, August 1, 1977*

(Legislative day of Tuesday, July 19, 1977)

The Senate met at 3 p.m., on the expiration of the recess, and was called to order by Hon. ROBERT C. BYRD, a Senator from the State of West Virginia.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

The effectual fervent prayer of a righteous man availeth much.—James 5:16b.

Let us pray.

Eternal Father, whose we are and whom we serve, at the opening of a new week we pray fervently to qualify us for the tasks before us. Where we are weak, make us strong. Where we lack wisdom, impart to us Thy higher wisdom. Where we are lacking in righteousness, set us on the righteous course that in and through Thee we may avail much. Grant us Thy grace that we may exert our best effort to complete the American Revolution, fulfill the vision of the Founding Fathers, and advance Thy kingdom on Earth. And to Thee shall be the praise and thanksgiving. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The second assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 1, 1977.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable DONALD W. RIEGLE, a Senator from the State of Michigan, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. RIEGLE thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from Tennessee is recognized.

THE JOURNAL

Mr. BAKER. Mr. President, I ask unanimous consent that the Journal of the proceedings of Friday, July 29, 1977, be approved.

The ACTING PRESIDENT pro tempore (Mr. RIEGLE). Without objection, it is so ordered.

Mr. BAKER. Mr. President, I yield back my time under the standing order.

Mr. ROBERT C. BYRD. Mr. President, I am prepared to yield back my time.

PUBLIC FINANCING OF SENATE ELECTIONS

The ACTING PRESIDENT pro tempore. The question recurs on S. 926, which the clerk will state by title.

The assistant legislative clerk read as follows:

A bill (S. 926) to provide for the public financing of primary and general elections for the United States Senate.

The Senate resumed the consideration of the bill.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a brief period for the transaction of routine morning business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PUBLIC FINANCING OF SENATE ELECTIONS

Mr. BAKER. Mr. President, as one of the primary participants in the effort to defeat S. 926, a bill to provide partial public financing, I was particularly pleased to read the Washington Post editorial printed yesterday. The Post editorial emphasized many of the same points that have been made repeatedly on the floor of the Senate in the past week of debate and speaks for itself.

Mr. President, I ask unanimous consent that a copy of the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAMPAIGN MONEY AND PUBLIC TRUST

President Carter used familiar and fashionable language the other day in endorsing S. 926, the pending bill for partial public financing of Senate campaigns. He said the bill would "help restore the public's confidence and trust in officials" by removing "the appearance of obligation to special interests." Now, that sounds soothing—but this is no time for the Senate to relax. There is more than cosmetics involved here, and the effects of this legislation in its present form might not be as restorative as the advertising suggests.

Consider the matter of "special interests," which has become shorthand for corruption. Any two people could argue all day about which interest groups—bankers or doctors or unions or whatever—are "special" in the pejorative sense, and what their political role should be. Regardless of where one comes out, two points seem clear to us.

First, the most corrosive kinds of interest-group money, the huge, often covert donations such as those revealed in recent years, either have been illegal for decades or were curbed by the disclosure rules and contributions limits enacted in 1974.

Second, the role of political-action committees and big donors would not necessarily be reduced a whit by S. 926. Public matching of small private gifts would give Senate nominees less need to court big contributors. But the bill does not cover primaries, where some elections are settled and early, big donations can have the greatest effect. Moreover, as the Supreme Court emphasized last year, the First Amendment gives individuals and groups the liberty to spend as much as they want on independent, parallel campaigns for candidates. Last fall, while Mr. Carter's election drive was being publicly financed, labor unions were spending, by one estimate, over $11 million independently on his behalf. So when Mr. Carter says that public financing for presidential campaigns "worked very well last year [pause . . . laughter]" without any of the candidates "being obligated to anyone," we get the joke—but not the argument.

The advocates of public financing also claim that it would open up the system and, in Mr. Carter's words, "help enable deserving candidates to run for office even if they are not rich." This also sounds good—but also raises large questions about the nature of political competition and the proper role of government.

It's true that competition is inhibited by the high and rising cost of getting political messages into the marketplace at all. If a candidate can't afford advertising, voters have no way to gauge whether he is "deserving" of support. Especially in primaries, one can justify more public-service broadcasts, publicly financed mailings and perhaps modest matching grants. But public-financing's advocates have much more in mind. They want to assure challengers not just basic access but equal funds. S. 926 would promote parity by setting spending limits as a condition of public aid. And if one candidate foregoes that aid and exercises his right to spend more in private money, his opponent would get extra subsidies.

What's wrong with this? For one thing, it reflects a simplistic view of the role of money in campaigns. More dollars don't always mean more votes. In the past five years, 17 men have come to the Senate the hard way, by beating incumbents; nine of those 17 won even though they were outspent. Beyond that, S. 926 would legislate a value judgment: Big spending is bad. But if a candidate with wealth or access to large sums does spend

millions, as long as his financing is lawful and fully disclosed, who should decide whether that's fair or wholesome? Since the record suggests that lavish spending is not necessarily decisive and can itself become a campaign issue, why not let the voters make these judgments on a case-by-case basis?

That leads to the rock-bottom question: To what extent should government regulate political activity? Public financing of presidential campaigns, of course, also poses that question and in time may help to answer it. In our view, that experiment worked well enough last year to be continued in 1980. It was, however, limited to contests for one nationwide office. And it did affect the structure of politics, especially the nature of fund-raising and the role of political parties, in ways that are not yet entirely clear. The problem of dealing fairly with third-party and independent candidates remains unsolved and may be unsolvable.

Finally, the whole regulatory effort launched in 1974 has produced not just administrative burdens and snarls but also a worrisome degree of official involvement in the details of political practices. That, more than anything else, suggests that Congress should not rush into public financing for Senate and House campaigns across the land. A law meant to return politics to the people would defeat its own purpose if it turned out, instead, to be dictatorial and stultifying.

(Routine morning business transacted and additional statements submitted are printed later in today's RECORD.)

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there morning business? If not, morning business is concluded.

PUBLIC FINANCING OF SENATE ELECTIONS

Mr. ROBERT C. BYRD. Mr. President, may we have the clerk restate the measure before the Senate?

The ACTING PRESIDENT pro tempore. The clerk will restate the pending business.

The assistant legislative clerk read as follows:

A bill (S. 926) to provide for the public financing of primary and general elections for the United States Senate.

The Senate continued with the consideration of the bill.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. CLARK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

UP AMENDMENT NO. 706

Mr. CLARK. Mr. President, I send an amendment to the desk.

The ACTING PRESIDENT pro tempore. The clerk will state the amendment.

The assistant legislative clerk read as follows:

The Senator from Iowa (Mr. CLARK) proposes unprinted amendment numbered 706.

Mr. CLARK. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The amendment is as follows:

On page 20, strike out lines 9 through 24 and insert in lieu thereof the following:

"(4) 'major party' means—

"(A) a political party whose candidate for election to the United States Senate in the preceding general election for that Senate seat received, as the candidate of that party, 25 percent or more of the total number of votes cast in that election for all candidates for that seat, or

"(B) if only one political party qualifies as a major party under the provisions of subparagraph (A)—

"(i) the political party whose candidate for election to that seat in that election received, as the candidate of that party, the second greatest number of votes cast in that election for all candidates for that seat (if such number is equal to 15 percent or more of the total number of votes cast in that election for all candidates for that seat),

"(ii) if no political party qualifies as a major party under clause (i), a political party whose candidate for election to the United States Senate in any two of the preceding three general elections for the United States Senate in the same State received, as the candidate of that party, 25 percent or more of the total number of votes cast in each of those two elections for all candidates for the United States Senate from that State, or

"(iii) if no political party qualifies as a major party under clause (i) or (ii), the political party whose candidate for election to that office in any two of those three elections received, as the candidate of that party, the second greatest number of votes cast in each of those two elections for all candidates for the United States Senate from that State (if such number is equal to 15 percent or more of the total number of votes cast in those elections for all candidates for the United States Senate from that State);

Mr. CLARK. Mr. President, the purpose of this amendment is rather clear, I think. First, it would make a technical correction the necessity of which was pointed out during the opening day of debate by the junior Senator from Virginia (Mr. SCOTT) to insure that, in defining a major party, we are referring to the previous election to that Senate seat rather than the previous election for the office of Senator in that State.

Furthermore, if I might just explain, the bill as presently written and what the amendment will do, as the bill—S. 926—is presently written, a party, a political party, qualifies as a major party if it receives at least 25 percent of the vote in the general election, or if it received 15 percent of the vote in the previous election and came in second.

In some States it is possible and, indeed, probable, that major parties, serious parties, well-established, traditional parties, would not qualify in the general election for funding.

By taking two of the last three elections to the Senate and using exactly the same kind of qualification, that is to say, 25 percent in the general election or 15 percent if the candidate comes in second, we think this solves the problem.

It is an issue, as I said, which Senator SCOTT, of Virginia, raised. I said at that time I felt he was quite right, that it was an inequity, and we would be offering an amendment to try to correct that problem.

I would hope the managers of the bill would find it possible to accept this, but I am perfectly willing to go to a vote if that is not possible.

Mr. CANNON. I say to the Senator from Iowa, as far as the manager of the bill is concerned, that is an acceptable amendment. I think it does address the problem that was raised by several on the Republican side of the aisle last week, and it seems to me it was a good point they made. I think this properly corrects the situation and resolves the matter to meet the needs that were pointed out as being inequitable last week.

Mr. HATFIELD. Mr. President, I want to thank the Senator from Iowa (Mr. CLARK) for his response to this one inequity among many we have pointed out in this bill. It does represent a small step in the direction of correcting at least one inequity. I might say there are many others in the bill, and we shall from time to time raise them, as we have now in two instances where the proponents of the bill have recognized the inequities and have taken steps to correct them.

I think that is good faith and commendable, and I am ready to accept the amendment and vote on it at this moment.

Mr. CLARK. Vote.

The ACTING PRESIDENT pro tempore. The Senator from Iowa requests a vote.

The question is on agreeing to the amendment of the Senator from Iowa.

The amendment was agreed to.

Mr. CLARK. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. CANNON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HATFIELD addressed the Chair.

The ACTING PRESIDENT pro tempore. The Senator from Oregon.

Mr. HATFIELD. Mr. President, the distinguished Senator from Iowa has stated that one of the reasons he moved, in the Rules Committee, to delete primary campaigns from S. 926 was the fact that if primaries were included in the bill, there would not be enough funds in the Presidential election campaign fund to finance all Federal campaigns. The Senator said the following:

Furthermore, it is quite right to say that with the checkoff funds we have provided for, it is clear we will not have enough funding as far as primary elections are concerned, and that would also kill the bill. The senator went on to say: "we would like to have primary elections but are prepared to take half a loaf rather than none."

Well, Mr. President, the proponents seem very concerned about not running the Presidential election campaign fund into the red, so I am curious as to why they have failed to apprise the Members of the Senate of the potential deficit

in this fund once the House of Representatives adds its own campaigns to the public financing program.

I would like to bring to the Senate's attention that by December 1980 the Presidential election campaign fund could be in the hole anywhere from $1.8 million to $19.8 million. This deficit means that candidates for the House and the Senate will be receiving less public financing funds for the 1980 elections than they are entitled to receive. In other words, Mr. President, the proponents admit they are willing to accept half a loaf in order to pass the public financing program, but at the same time, they are also going to force the 1980 House and Senate candidates to accept half a loaf in public financing funds.

Since the proponents of S. 926 have accepted Senator PEARSON's amendment, which prohibits the use of any Government funds for public financing other than those funds generated through the $1 checkoff, we can be certain of one thing—they will be back in 1978 asking the Senate to increase the $1 checkoff to $2, thus creating yet another raid on the Federal Treasury.

Mr. President, it should be clear to the Senate why House campaigns are not included in S. 926. If they were, attention would be drawn to the fact that there just is not enough money in the Presidential election campaign fund to cover the public financing of Presidential, Senatorial, and House campaigns. The Senator from Iowa is attempting to put blinders on the Members of this Chamber and the American people, because he knows that once the true cost figures come to light the American people are going to rise up against the passage of this measure, and the Members of the Senate are going to vote "No" on the bill.

Daily, we hear this hocus-pocus about how this measure is not increasing the tax burden on the American taxpayers. Well, Mr. President, our 1040 form may say that the Presidential election campaign fund checkoff will not increase our taxes or decrease our refund. But whom are we trying to kid? Every dollar which is diverted from our Federal Treasury to line the pockets of candidates running for President, the Senate, or the House means an additional dollar not available for other Federal programs or, even more importantly, available for reducing our national debt.

Whom are we trying to fool, Mr. President? Certainly not the taxpayer, for 72 percent have elected not to check off just $1 for the Presidential campaign fund. They know that someday, down the road, they are going to have to assume an additional tax burden to cover the costs of financing these Federal political campaigns.

If the principle behind truth-in-lending legislation were applicable to this bill, we would have next to the checkoff box on our 1977 tax forms the following: "Caution: This checkoff will eventually increase your Federal tax burden."

Mr. President, we cannot ignore the costs associated with this Senate bill.

We cannot ignore the fact that this measure does not add any more integrity to the electoral process than is already present.

We cannot ignore the fact that this measure does nothing to stop special interest groups from spending as much as they want to elect or defeat candidates to Federal office.

We cannot ignore the fact that this measure does nothing more than increase the tax burden of the American taxpayer.

Mr. President, this bill is like a leaking ship. It is springing holes left and right, and in the end it is going to sink.

The purpose of this debate is to recognize that the holes are there, and that the best remedy—the most cost-effective method—in dealing with this situation is to guide the ship into drydock and to scrap it.

This debate, thus far, has served to apprise Members of this Chamber of the many pitfalls to be found in this measure. Even the news media is beginning to take note of the shortcomings of S. 926. Yesterday's Washington Post carried a thought-provoking editorial on this very subject. I have had copies of this placed on every Member's desk, and I urge them to carefully consider the arguments found in the editorial.

Mr. President, for my colleagues' benefit, I read a portion of the last three paragraphs of the Post's editorial:

> More dollars don't always mean more votes. In the past five years, 17 men have come to the Senate the hard way, by beating incumbents; nine of those 17 won even though they were outspent. Beyond that, S. 926 would legislate a value judgment. Big spending is bad. But if a candidate with wealth or access to large sums does spend millions, as long as his financing is lawful and fully disclosed, who should decide whether that's fair or wholesome? Since the record suggests that lavish spending is not necessarily decisive and can itself become a campaign issue, why not let the voters make these judgments on a case-by-case basis?
>
> That leads to the rock-bottom question: To what extent should Government regulate political activity? Public financing of presidential campaigns, of course, also poses that question and in time may help to answer it. In our view, that experiment worked well enough last year to be continued in 1980. It was, however, limited to contests for one nationwide office. And it did affect the structure of politics, especially the nature of fund-raising and the role of political parties, in ways that are not yet entirely clear. The problem of dealing fairly with third-party and independent candidates remains unsolvable.
>
> Finally, the whole regulatory effort launched in 1974 has produced not just administrative burdens and snarls but also a worrisome degree of official involvement in the details of political practices. That, more than anything else, suggests that Congress should not rush into public financing for Senate and House campaigns across the land. A law meant to return politics to the people would defeat its own purpose if it turned out, instead, to be dictatorial and stultifying.

I can find no better reason for continuing this debate than those found in this editorial. Let the proponents say what they want about this extended debate, but for me, this debate must go on in order to protect our system of free elections—a system free from Government control, and free for all men and women to participate in, regardless of political philosophy or party affiliation.

S. 926 means nothing but more Government control and more discrimination against minor and third-party candidates. These are principles and concepts that I cannot and will not accept. I urge my colleagues to do the same by voting against this motion to invoke cloture.

Mr. President, I suggest the absence of a quorum.

Mr. CLARK. Mr. President, will the Senator withhold his request?

Mr. HATFIELD. Yes.

Mr. CLARK. Just a couple comments and very briefly because we are at a quarter to four.

First of all, with regard to whether there is enough checkoff money remaining in the Presidential account to cover general elections, I find it interesting, that there is argument being made, on the one hand, that we should include primaries but, on the other, that there is not enough money even to cover general elections. The distinguished Senator from Oregon, of course, offered an amendment to include primaries. But be that as it may, the particular estimates that the Senator from Oregon cited from the FEC were estimates that were made with regard to Anderson-Udall bill, plus S. 926, plus the Presidential campaign of 1980.

The fact is that they are just that—estimates. We do not know whether the Udall bill is going to become law. We do not know whether this bill will be substantially changed before it leaves this body. We do not know, in fact, whether the Udall bill if it is indeed considered in the House committee, because it has not been marked up yet—no bill has been marked up—whether in fact the levels will be cut in the House just as we did in the Senate. We significantly cut the amount of total cost in the Senate Rules Committee. So they are estimates and, of course, it is entirely possible that there will not be adequate funds. I think there will be.

I think if one takes the tax returns and looks at the increased percentage each year of people who check off and take the estimates that we have now, there will be enough money. But it is only an estimate. It is not possible to get anything other than estimates at this point.

The fact is, of course, that if we get to 1980, if this bill is implemented and we get that far, and indeed there are not enough funds, if I am wrong about that then obviously one of two things occurs. We either have the opportunity to increase the checkoff in some form or, if no action is taken beyond the passage of this legislation, then obviously the amounts of matchable money, amount of money available to the candidates, as the bill indicates, would be cut back so

that, in fact, each person would be treated equally.

I wanted also to address the question the Senator raised about the Washington Post editorial. I found the Post editorial interesting but for somewhat different reasons. It seems to me there is some confusion about the issue of campaign financing, in fact, among the members of the Post editorial board.

Yesterday the Post wrote that "the most corrosive kinds of interest-group money either have been illegal for decades or were curbed by the disclosure rules and contribution limits enacted in 1974."

However, on Friday, the Post ran quite a different editorial entitled "Big Money v. No-Fault." And the major thrust of that editorial 2 days earlier was to attack "a strong, well-financed campaign" being waged by the Association of Trial Lawyers of America against no-fault insurance. Based on an earlier news story by Post reporter Spencer Rich, the editorial noted that the trial lawyers' political action committee, their PAC, collected $439,000 in contributions from lawyers and distributed $315,000 to Members of Congress in campaign donations.

And that earlier editorial continued:

As the news report noted, the roster of recipients looks like an honor roll of the House Commerce Committee, which has jurisdiction over the no-fault bill, plus a quarter of the Senate and many other House Members.

Mr. President, I am not questioning whether they are accurate or inaccurate. I am only talking about the consistency of the Washington Post editorial position.

The Post, it seems to me, cannot have it both ways. They cannot write editorials attacking special interest campaign contributions on Friday and then on Sunday say that special interest money really is not a problem.

Mr. President, I ask unanimous consent that at the conclusion of my remarks the two Post editorials, as well as recent editorials in the New York Times and the Washington Star in support of S. 926, be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 29, 1977]

BIG MONEY V. NO-FAULT

It isn't supposed to be dignified for lawyers to chase ambulances, but chasing lawmakers, when what is at issue is a large chunk of the law business, is apparently quite acceptable in the trade. As a Herblock cartoon noted so well the other day, the thousands of lawyers whose practice is built upon the risks of driving an automobile can be counted on to swarm all over Congress on short notice whenever no-fault insurance bills are up for consideration. Right now, the no-fault issue is before Congress, and, sure enough, the lawyers are all over the place, dispensing big money, political influence—and generous servings of baloney—in another spare-no-expense effort to kill a sensible no-fault bill.

According to a report this week by Washington Post staff writer Spencer Rich, the Association of Trial Lawyers of America—whose 34,000 members include those who bring virtually every lawsuit in the nation having to do with auto accidents—has been waging a strong, well-financed campaign. Last year, the association's political fund, called the Attorneys' Congressional Campaign Trust, collected $439,000 in contributions from lawyers and distributed $315,000 to members of Congress in campaign donations. So far this year, the association has accumulated $128,000.

Now, there's nothing necessarily wrong with the amounts of money involved here, especially if you consider how much lawyers pocket in fees from automobile-injury cases. The association's president says it's about $300 million; a 1971 Department of Transportation study estimates that it's more like $1 billion. What's more interesting is the pattern of the campaign contributions. As the news report noted, "the roster of recipients looks like an honor roll of the House Commerce Committee, which has jurisdiction over the no-fault bill, plus a quarter of the Senate and many other House members." The lawyer-lobbyists oppose genuine no-fault legislation because they know full well what a sound no-fault law would do—namely, wipe out the vast number of lawsuits and allow victims to collect automatically from their own insurance companies on most personal injuries. The premiums people pay to insurance companies could then be put to use for swift, direct compensation instead of for needless, time-consuming litigation, red tape and excessive legal fees.

That's precisely why more and more consumer groups, insurance companies, premium-payers and accident victims are calling for passage of federal minimum no-fault insurance standards. This year, the administration also strongly supports the no-fault effort in Congress. And now a citizens' group is organizing to push for enactment of a bill. Though this new coalition may not enjoy nearly the financial support behind the effort to kill no-fault, sensitive members of the Senate and House should recognize that their constituents are sick of America's insurance mess—and of the lawyers' lame excuses for it. The debate has already gone on for too many years. Congress should enact the no-fault bill in this session.

[From the Washington Post, July 31, 1977]

CAMPAIGN MONEY AND PUBLIC TRUST

President Carter used familiar and fashionable language the other day in endorsing S. 926, the pending bill for partial public financing of Senate campaigns. He said the bill would "help restore the public's confidence and trust in officials" by removing "the appearance of obligation to special interests." Now, that sounds soothing—but this is no time for the Senate to relax. There is more than cosmetics involved here, and the effects of this legislation in its present form might not be as restorative as the advertising suggests.

Consider the matter of "special interests," which has become shorthand for corruption. Any two people could argue all day about which interest groups—bankers or doctors or unions or whatever—are "special" in the pejorative sense, and what their political role should be. Regardless of where one comes out, two points seem clear to us.

First, the most corrosive kinds of interest-group money, the huge, often covert donations such as those revealed in recent years, either have been illegal for decades or were curbed by the disclosure rules and contributions limits enacted in 1974.

Second, the role of political-action committees and big donors would not necessarily be reduced a whit by S. 926. Public matching of small private gifts would give Senate nominees less need to court big contributors. But the bill does not cover primaries, where some elections are settled and early, big donations can have the greatest effect. Moreover, as the Supreme Court emphasized last year, the First Amendment gives individuals and groups the liberty to spend as much as they want on independent, parallel campaigns for candidates. Last fall, while Mr. Carter's election drive was being publicly financed, labor unions were spending, by one estimate, over $11 million independently on his behalf. So when Mr. Carter says that public financing for presidential campaigns "worked very well last year [pause . . . laughter]" without any of the candidates "being obligated to anyone," we get the joke—but not the argument.

The advocates of public financing also claim that it would open up the system and, in Mr. Carter's words, "help enable deserving candidates to run for office even if they are not rich." This also sounds good—but also raises large questions about the nature of political competition and the proper role of government.

It's true that competition is inhibited by the high and rising cost of getting political messages into the marketplace at all. If a candidate can't afford advertising, voters have no way to gauge whether he is "deserving" of support. Especially in primaries, one can justify more public-service broadcasts publicly financed mailings and perhaps modest matching grants. But public-financing's advocates have much more in mind. They want to assure challengers not just basic access but equal funds. S. 926 would promote parity by setting spending limits as a condition of public aid. And if one candidate foregoes that aid and exercises his right to spend more in private money, his opponent would get extra subsidies.

What's wrong with this? For one thing, it reflects a simplistic view of the role of money in campaigns. More dollars don't always mean more votes. In the past five years, 17 men have come to the Senate the hard way, by beating incumbents; nine of those 17 won even though they were outspent. Beyond that, S. 926 would legislate a value judgment: Big spending is bad. But if a candidate with wealth or access to large sums does spend millions, as long as his financing is lawful and fully disclosed, who should decide whether that's fair or wholesome? Since the record suggests that lavish spending is not necessarily decisive and can itself become a campaign issue, why not let the voters make these judgments on a case-by-case basis?

That leads to the rock-bottom question: To what extent should government regulate political activity? Public financing of presidential campaigns, of course, also poses that question and in time may help to answer it. In our view, that experiment worked well enough last year to be continued in 1980. It was, however, limited to contests for one nationwide office. And it did affect the structure of politics, especially the nature of fund-raising and the role of political parties, in ways that are not yet entirely clear. The problem of dealing fairly with third-party and independent candidates remains unsolved and may be unsolvable.

Finally, the whole regulatory effort launched in 1974 has produced not just administrative burdens and snarls but also a worrisome degree of official involvement in the details of political practices. That, more than anything else, suggests that Congress should not rush into public financing for Senate and House campaigns across the land. A law meant to return politics to the people would defeat its own purpose if it turned out, instead, to be dictatorial and stultifying.

[From the New York Times, July 27, 1977]

THE EFFORT TO UNPAC CONGRESS

Ever since candidates discovered television ads and the cost of campaigning began to soar, students of government have wondered how to contain it. They have feared that,

without some limit, the only candidates who could win would be those who are rich or who will accept, to an unhealthy extent, money from special interests. Congress tried to allay these concerns in 1974 by establishing campaign spending limits. But they were struck down as unconstitutional by the Supreme Court. Such limits, the Court said, would be acceptable only within the framework of campaigns that are publicly financed. And that is exactly the proposal now being filibustered in the Senate.

It is not a perfect piece of legislation. Even if enacted, it would not altogether substitute public dollars for special-interest dollars as the mother's milk of politics. But while it would not wholly solve the problems, it would lessen them, perhaps substantially. And that's enough to make us hope the filibuster is successfully punctured and the bill passed.

One of the compelling factors in favor of the legislation is the rapid growth of PAC's—political action committees for unions, business and other special interests. According to Common Cause (itself a political action group, for reform-minded citizens) there are now at least 1,166 of them. And Congressional campaign contributions made by PAC's jumped from $8.5 million in 1972 to $22.6 million last year. That growth has stirred uneasy feelings on Capitol Hill where Watergate has barely been interred and the Korean skeleton is rattling loudly in the closet. Whether or not such contributions actually succeed in buying votes, the appearances are unsettling.

The proposed legislation, sponsored by the Carter Administration and fiercely resisted by the Republican leadership, seeks to nullify such influence, real or apparent, with public funding. It would draw from the surplus of the voluntary $1 contributions citizens can now make by checkoff on their tax returns for Presidential elections. For Senate races, for example, each major party candidate would be eligible to receive 25 percent of a total spending limit. This limit would be $250,000 plus 10 cents for each eligible voter. (In New York the spending ceiling would come to about $1.5 million and the lump-sum payment to the candidate to $375,000.) In addition, within the overall limit, the candidate could continue to accept private contributions and these would be matched, up to $100 apiece, with public funds.

The filibustering critics object to the proposal as philosophically misguided and administratively tangled. Why is it necessary, they ask, to create so elaborate a mechanism to check the influence of the political action committees? PAC's, they note, are already limited to a maximum contribution of $5,000 to any one Congressman. Why not simply lower the limit, to, say, $100—a level so low that no question of undue influence could arise. In any event, even under the proposed legislation, could not the PAC's continue to make their influence felt, through the private contributions that candidates would still be allowed to accept?

The answer to the first question is that a new, low limit would make it very much harder for new faces to conduct successful campaigns. If there is neither PAC money nor public money in a campaign, there won't be much money of any kind—and hence there could not be much of a campaign. And that would heavily favor the incumbent against the less-well-known challenger. As to continued special-interest contributions, supporters of public financing contend that candidates now take them only because they have to; that for them to take PAC money once public funds were available would subject them to damning criticism. This is an optimistic view, but it has some force. A candidate with guaranteed access to a sizable amount of public funds may still take PAC money, but would not be, as now, so dependent on it.

The current proposal is not perfection; there may be no way to keep special-interest money altogether out of American politics. But it is progress and it's worth a try.

[From the Washington Star, July 29, 1977]

CONGRESSIONAL CAMPAIGNING

The basic question involved in the current debate on campaign financing is this: Should congressional campaigns be financed largely by $1 contributions from American taxpayers or by contributions from special interests?

Stated another way: Should members of Congress be beholden to the American public or to business and union interests that are able to contribute large amounts of cash to campaigns?

The answer is easy: Public officials should be indebted and answerable to the public, not to special interests that finance their campaigns.

That isn't the question raised, though, by Senate opponents of legislation that would provide public financing for congressional campaigns. Led by Minority Leader Howard Baker, they are raising the smokescreen charge that the legislation is designed to perpetuate incumbents in office. They would have everyone believe that if incumbents had access to the federal treasury for campaign funds, it would take blasting powder to get them out of office.

The answer we like best to that argument is one used some time ago by John Gardner, founder of Common Cause: "If it (public financing) really favored incumbents, Congress would have passed it years ago."

No, public financing wouldn't be an incumbents' protective system. That label could more appropriately be attached to the present system of private financing, under which the special interests—the lobbyists, the fat cats—beat a path to incumbents' doors, carrying campaign contributions and expecting or hoping for favors in return.

Except in a few cases, notably candidates with large personal fortunes, it is considerably easier for incumbents to raise campaign money than it is for opponents. More than anything else, what has kept public financing of congressional campaigns from being enacted has been incumbents' fear of giving opponents access to the federal treasury.

If direct evidence is needed to counter the claim that public financing is incumbents' protective legislation, one need look no farther than last year's presidential race. For the first time, public money was made available to presidential candidates. Who won? Not the incumbent, Gerald Ford, but the challenger, Jimmy Carter.

But the important point about the financing of the 1976 presidential campaign is that the candidates no longer had to depend on contributions from special interests and fat-cats. Mr. Carter came to office less beholden to special interests than any president of recent times.

It is not stretching things much to say, as Mr. Gardner and others have, that when special interests found that they couldn't buy a president they tried to buy a Congress. A study by Common Cause showed that special interests contributed more than $22 million to House and Senate campaigns in 1976, twice as much as in 1974.

President Carter put in a timely plug yesterday for extending public financing to congressional campaigns. We hope his support will be enough to swing today's Senate vote against the filibusterers who are trying to talk this important reform to death.

Mr. CLARK. I yield.

Mr. HATFIELD. Mr. President, I am glad that the Senator from Iowa is affirming two of my arguments by his most recent comments. One is that when he says these figures are only estimates with respect to the true costs and that the House of Representatives has not even marked up a bill. That is why I raised an argument in the very beginning of this whole debate that this was a matter that should be considered as a comprehensive bill with the House and the Senate in one major public financing proposal.

We have had that problem ever since this matter was brought to the floor, and I think probably it is a part of the strategy to revise estimates lest we nail down some of the specific points relating to costs, and so forth.

I think also the Senator recognizes that when I raise the question today, it is not only as to the matter of estimates, but I also indicated what the Senator has affirmed, that is, that we may have a deficit—a deficit of as much as $2 million to $20 million.

I do not know what the range of that deficit might be, but at least the Senator admits there could be a deficit, and there could be a possibility that we would be back here in 1976 or 1978 with another dollar checkoff proposal.

How can we consider passing a public financing measure without knowing something about the compresensive costs? We are asked to buy a pig in a poke. This is a grab-bag proposal. As Senators rise day by day with amendments, trying to correct obvious defects in the bill, it becomes obvious that this is a poorly-drafted measure indeed. I suggest that they could have presented a bill far superior to this one. In my judgment this is the poorest piece of legislation I ever saw brought out of a committee. As time goes on, I think Senators are going to have to admit it is, and attempt to draft amendments on an ad hoc basis to improve it. In short, this is a very deficient bill.

Mr. President, I suggest the absence of a quorum.

Mr. SCHMITT. Mr. President, before the Senator does that, will the Senator yield to me?

Mr. HATFIELD. I would for only about 1 minute.

Mr. SCHMITT. Only 1 minute, to say that I think the effect of the efforts of Senators and other individuals in this extended debate is beginning to be noted throughout the country.

Just this morning I was in communication with a number of individuals in the media from New Mexico and Texas, in an open question format, and more than half of those individuals asked questions relative to public financing. And I see by the coverage in the national newspapers as well as the local newspapers that finally this issue is becoming apparent to the rest of the country.

I think that is exactly what our purpose has been. I think it is what our purpose wants to continue to be all this week, to insure that there is full and public airing of the issues the Senator has raised, and all of us are trying to

raise, in this very important and critical matter.

Mr. HATFIELD. Mr. President, I thank the Senator for his contributions over the past few days and his continuing efforts.

I ask unanimous consent that an editorial entitled, "A Steamroller Bogs Down," published in the Chicago Tribune of Saturday, July 30, 1977, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A STEAMROLLER BOGS DOWN

Senate Democrats failed Friday to end the four-day Republican filibuster against the Democratic Party's scheme to extend public financing to congressional campaigns; but they will try again next week. The vote for cloture was 49 to 44, well short of the necessary two-thirds.

In the long march of American political history, this fight over Senate Bill 926 may seem minor, but it could have profound results. It could lead to the perpetuation through statute of a degree of one-party domination not seen since the Jackson era. It could also pave the way for passage for other hasty and dangerous Democratic election "reforms" which fortunately have been held up elsewhere in the congressional process.

Obviously the Republicans are motivated by partisan interests. But resistance to one-party domination is just as obviously in the public's interest.

In his news conference Thursday, President Carter said that public financing of congressional campaigns would remove the appearance of conflict of interest that so often taints the acceptance of large private campaign contributions.

Possibly so. But as Senate Minority Leader Howard Baker replies, its chief effects would be to further entrench incumbent members of Congress—the overwhelming majority of them Democrats—and to strengthen the hand of labor unions in elections.

All this week, interestingly enough, Senate Democrats fiercely resisted amendments to extend public financing to primary campaigns—which is where most Democratic incumbents are most vulnerable to challenge. A Democratic incumbent welcomes juicy private contributions when his opponent is another Democrat.

They also fought desperately against attempts to alter the bill so as to impose curbs on union political activities comparable to those imposed on business.

The threat of a filibuster on the floor is all that is keeping the Democratic leadership of the Senate Governmental Affairs Committee from moving on an even more frightening bill which would all but repeal the Hatch Act. This would make federal employes fair game for political pressure and create a 2.8 million-man patronage army largely subservient to the AFL–CIO.

Success of SB926 could possibly also revive Mr. Carter's proposal for "instant voter registration," now stalled in the House, as an unnecessary invitation to fraud.

It would also embolden Sen. Birch Bayh to proceed with his equally dubious plan to replace the Electoral College with a direct, national popular election.

Filibusters can be a nuisance or a blessing, depending on whose ox is being gored. But they are necessary for the protection of the minority—subject to the rule of cloture—and in the present instance Mr. Baker's Republicans and their allies among responsible Democrats may be likened to the Spartans at Thermoplyae.

Mr. HATFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. MOYNIHAN). The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that I may proceed for 1 minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF FEDERAL HOME LOAN BANK ACT

Mr. PROXMIRE. Mr. President, there is a joint resolution at the desk which would extend for an additional 15 days the term of the member of the Federal Home Loan Bank Board which expired on July 31, 1977.

The purpose of the 15-day extension provided by the joint resolution would be to permit the Board to obtain a quorum for transacting business until the new prospective chairman, Mr. Robert McKinney, can be sworn into office.

This extension was requested by the White House in order to give Mr. McKinney time to wind up his affairs before being sworn into office.

The joint resolution has been approved by the ranking member of the Banking, Housing, and Urban Affairs Committee, and it is noncontroversial.

I ask unanimous consent that the clerk state the joint resolution by title, that it be considered as having been read the second time at length, and that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Without objection, it is so ordered. The joint resolution will be stated by title.

The legislative clerk read as follows:

A joint resolution (S.J. Res. 79) to amend the Federal Home Loan Bank Act.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that further reading of the joint resolution be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered, and the Senate will proceed to its immediate consideration.

The joint resolution is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the joint resolution.

The joint resolution (S.J. Res. 79) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 17(a) of the Federal Home Loan Bank Act, 12 U.S.C. 1437, as amended, is amended by adding the following immediately at the end thereof:

"Upon the expiration of the term of office of a member of the Federal Home Loan Bank Board, such member shall continue to serve until a successor is appointed and has qualified, but not to exceed forty-five days."

SEC. 2. The last sentence of section 17(a) of the Federal Home Loan Bank Act is repealed, effective August 15, 1977.

SEC. 3. This Resolution shall take effect on July 1, 1977.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the joint resolution was passed.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PUBLIC FINANCING OF SENATE ELECTIONS

The Senate continued with the consideration of S. 926.

CLOTURE MOTION

The PRESIDING OFFICER. The hour of 4 p.m. having arrived, and 1 hour having passed since the Senate convened, the clerk will state the motion to invoke cloture.

The legislative clerk read as follows:

CLOTURE MOTION

We, the undersigned Senators, in accordance with the provisions of Rule XXII of the Standing Rules of the Senate, hereby move to bring to a close debate upon S. 926, a bill to provide for the public financing of primary and general elections for the United States Senate.

Robert C. Byrd, Dick Clark, Alan Cranston, Edward M. Kennedy, Gary Hart, Mike Gravel, Adlai Stevenson, John A Durkin, Spark M. Matsunaga, Wendell Anderson, James Abourezk, Joe Biden, Howard Metzenbaum, Claiborne Pell, Patrick Leahy, Harrison Williams, John Glenn, Gaylord Nelson, Walter D. Huddleston, William Proxmire.

CALL OF THE ROLL

The PRESIDING OFFICER. Pursuant to rule XXII, the Chair now directs the clerk to call the roll to ascertain the presence of a quorum.

The second assistant legislative clerk called the roll and the following Senators answered to their names:

[Quorum No. 21 Leg.]

Abourezk	Gravel	Moynihan
Allen	Griffin	Muskie
Baker	Hansen	Nelson
Bartlett	Hart	Nunn
Bayh	Haskell	Packwood
Bellmon	Hatch	Pell
Bentsen	Hatfield	Percy
Biden	Hathaway	Proxmire
Brooke	Hayakawa	Randolph
Burdick	Heinz	Ribicoff
Byrd, Harry F., Jr.	Helms	Riegle
	Hollings	Roth
Byrd, Robert C.	Huddleston	Sarbanes
Cannon	Humphrey	Sasser
Case	Inouye	Schmitt
Chafee	Jackson	Schweiker
Chiles	Javits	Scott
Church	Johnston	Sparkman
Clark	Kennedy	Stafford
Cranston	Laxalt	Stennis
Culver	Leahy	Stevens
Curtis	Long	Stevenson
Danforth	Lugar	Stone
DeConcini	Magnuson	Talmadge
Dole	Mathias	Thurmond
Domenici	Matsunaga	Tower
Durkin	McClure	Wallop
Eastland	McGovern	Weicker
Ford	McIntyre	Williams
Garn	Melcher	Young
Glenn	Metcalf	Zorinsky
Goldwater	Metzenbaum	

The PRESIDING OFFICER. A quorum is present.

VOTE

The PRESIDING OFFICER. The question is, Is it the sense of the Senate that debate on S. 926, a bill to provide for the public financing of primary and general elections for the U.S. Senate, shall be brought to a close? The yeas and nays are mandatory under the rule.

The clerk will call the roll.

The legislative clerk called the roll.

Mr. CANNON (after having voted in the negative. On this vote, I have a pair with the Senator from Minnesota (Mr. ANDERSON). If he were present and voting, he would vote "yea." I have already voted "nay." Therefore, I withdraw my vote.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. BUMPERS), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from North Carolina (Mr. MORGAN), the Senator from Minnesota (Mr. ANDERSON), and the Senator from Missouri (Mr. EAGLETON) are necessarily absent.

I further announce that, if present and voting, the Senator from Arkansas (Mr. BUMPERS) would vote "yea."

I further announce that, if present and voting, the Senator from North Carolina (Mr. MORGAN), the Senator from Arkansas (Mr. MCCLELLAN), would each vote "nay."

Mr. STEVENS. I announce that the Senator from Kansas (Mr. PEARSON) is necessarily absent.

The yeas and nays resulted—yeas 47, nays 46, as follows:

[Rollcall Vote No. 320 Leg.]

YEAS—47

Abourezk	Hart	Moynihan
Bayh	Haskell	Muskie
Biden	Huddleston	Nelson
Brooke	Humphrey	Pell
Burdick	Inouye	Proxmire
Byrd, Robert C.	Jackson	Randolph
Chiles	Kennedy	Ribicoff
Church	Leahy	Riegle
Clark	Magnuson	Sarbanes
Cranston	Mathias	Sasser
Culver	Matsunaga	Sparkman
DeConcini	McGovern	Stevenson
Durkin	McIntyre	Stone
Ford	Melcher	Williams
Glenn	Metcalf	Zorinsky
Gravel	Metzenbaum	

NAYS—46

Allen	Griffin	Packwood
Baker	Hansen	Percy
Bartlett	Hatch	Roth
Bellmon	Hatfield	Schmitt
Bentsen	Hathaway	Schweiker
Byrd, Harry F., Jr.	Hayakawa	Scott
Case	Heinz	Stafford
Chafee	Helms	Stennis
Curtis	Hollings	Stevens
Danforth	Javits	Talmadge
Dole	Johnston	Thurmond
Domenici	Laxalt	Tower
Eastland	Long	Wallop
Garn	Lugar	Weicker
Goldwater	McClure	Young
	Nunn	

PRESENT AND GIVING A LIVE PAIR, AS PREVIOUSLY RECORDED—1

Cannon, against.

NOT VOTING—6

Anderson	Eagleton	Morgan
Bumpers	McClellan	Pearson

The PRESIDING OFFICER. On this vote, the yeas are 47, the nays are 46. Three-fifths of the Senators duly chosen and sworn not having voted in the affirmative, the motion is not agreed to.

EXPORT-IMPORT BANK AMENDMENTS

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. PROXMIRE, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 6415.

The PRESIDING OFFICER laid before the Senate a message from the House of Representatives announcing its disagreement to the amendment of the Senate to the bill (H.R. 6415) to extend and amend the Export-Import Bank Act of 1945, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. PROXMIRE, I move that the Senate insist upon its amendment and agree to the request of the House for a conference on the disagreeing votes of the two Houses thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. PROXMIRE, Mr. STEVENSON, and Mr. HEINZ conferees on the part of the Senate.

PUBLIC FINANCING OF SENATE ELECTIONS

The Senate continued with the consideration of S. 926.

The PRESIDING OFFICER. The question is on the passage of S. 926.

Mr. HELMS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EMERGENCY DROUGHT RELIEF

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. JACKSON, I ask unanimous consent that the Senate proceed to the consideration of S. 1935, which has been cleared on both sides of the aisle, and that there be a time limitation of 2 minutes thereon.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1935) to amend Public Law 95–18, providing emergency drought relief measures.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the bill be considered as having been read the first and second times, and that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senate proceeded to consider the bill.

Mr. ROBERT C. BYRD. Mr. President, this bill, which was reported favorably by the Committee on Energy and Natural Resources, amends Public Law 95–18, which appropriated funds for emergency drought relief and allocated those funds to specific emergency drought programs administered by the Secretary of Interior. However, the Department's experience with the programs indicates that the allocations have not matched the applications for funding. Certain programs may run short of funds while others will have surplus funds.

S. 1935 would remove constraints on the allocation of funds and permit the use of funds already appropriated for the programs authorized by Public Law 95–18 in a more effective and timely manner.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. I yield.

Mr. SCOTT. We have drought in Virginia and in a number of other States at the present time. Would this measure affect these conditions in any way?

Mr. ROBERT C. BYRD. I suggest that the Senator address his question to Mr. MCCLURE or Mr. HANSEN.

Mr. SCOTT. My question is this: In Virginia, in recent weeks or days, we have had some drought problems, and that is true in a number of other Eastern States. I wonder whether this measure would have any effect. I am parochial about this in asking about my own State. Would it have any adverse effect?

Mr. MCCLURE. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. MCCLURE. It would have no adverse effect; but, in my judgment, it would not extend to any of the conditions that exist in Virginia. This is the bill which earlier was drafted to impact primarily in the areas of the country where irrigated agriculture is predominant. All the money was not used for those purposes. It simply broadens within that bill the purposes for which it can be used.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent for 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCOTT. I appreciate the Senator's comments.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill (S. 1935) was ordered to be engrossed for a third reading, was read the third time, and passed as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) clause (a) of the first section of the Act entitled "An Act to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976–1977 drought", approved

April 7, 1977 (91 Stat. 36), is amended by striking out "November 30, 1977" and inserting in lieu thereof "January 31, 1978".

(b) Section 8(c) of such Act is amended by striking out "September" and inserting in lieu thereof "November".

(c) Section 9 of such Act is amended by striking out all beginning with "water purchase" through "authorized by this Act and for" and inserting in lieu thereof "provisions of this Act which shall include the".

(d) Section 10(a) of such Act is amended by striking out all beginning with "during fiscal year" through "(62 Stat. 1052)", and inserting in lieu thereof "pursuant to this Act and the Act of June 26, 1948 (62 Stat. 1052)".

(e) Section 10(b) of such Act is amended—

(1) by striking out all beginning with "during fiscal year" through "(62 Stat. 1052)", and inserting in lieu thereof pursuant to this Act and the Act of June 26, 1948 (62 Stat. 1052)"; and

(2) in the first sentence by striking out all beginning with the colon through "State".

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. McCLURE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, there will be no more roll call votes today.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. Without objection, it is so ordered.

The second assistant legislative clerk proceeded to call the roll.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that Ellen Werther and John Colvin of my staff have the privileges of the floor during the pendency of S. 926.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. STONE). Without objection, it is so ordered.

PUBLIC FINANCING OF SENATE ELECTIONS

The Senate continued with the consideration of S. 926.

INCREASING THE INFLUENCE OF SPECIAL INTEREST GROUPS

Mr. TOWER. Mr. President, the notion that passage of public financing legislation will eliminate the influence of special interest groups on Federal elections is a false one. As the editors of the Wall Street Journal recently pointed out, the results of the last electoral "reform" was not a transfer of power from "the interests" to "the people," but was a transfer of power from individuals with one kind of political resource to individuals with another.

The Supreme Court ruled in the *Buckley* case that although Congress may limit the amount of money a person or organization can give directly to a campaign, it cannot limit truly independent expenditures respecting candidates or issues. Thus an organization such as a labor union or action group might spend large sums of money to oppose a particular candidate whose ability to reply is constrained by the expenditure ceiling he must observe as a condition of accepting public funds. Consequently, the influence of the special interests has not been eliminated but has been strengthened.

Michael Malbin, writing the National Journal gave this illustrative example:

> The biggest winner was organized labor. The magnitude and sophistication of labor's efforts last year are more impressive when stacked up against what others could do, particularly on the presidential level * * * in contrast, labor was unable to spend as much as it wanted to in communicating with union members and their families, registering them to vote, and getting them to the polls.
>
> While the total spending on these efforts cannot be determined with any precision, a conservation estimate of what they were worth to the ticket of Jimmy Carter and Walter F. Mondale is at least $8.5 million. Uncounted and unreported additional spending almost certainly pushed the total up to over the $11 million mark, compared with the $21.8 million that the ticket legally was permitted to spend.

Not to be overlooked is the enhancement of the biggest pressure group of them all—the Federal bureaucracy. The conduct and possibly the outcome of senatorial elections will be lodged in the hands of un-elected bureaucrats in the Federal election commission.

DISCOURAGEMENT OF CITIZEN PARTICIPATION IN POLITICS

If enacted into law, S. 926 would discourage all but minimal participation of a citizen in senatorial campaigns. As a start, the taxpayer may not designate the candidate or party which will receive his checkoff. Instead, the bureaucrats at the Federal Election Commission make that determination. Thus, an independent's tax money may well be added to the coffers of Republican and Democratic candidates.

Nor is there any real incentive to make meaningful personal contributions. The amount of tax deductions and credits are severely limited.

In a similar vein, volunteerism is is discouraged. Experience with the Federal Election Campaign Act demonstrates that because of the intricacies of that law, with its incumbent regulations and interpretations, only the most experienced lawyers, accountants and professional campaign managers dare manage a Federal election campaign. Some technical error can trigger a Federal criminal prosecution or civil liability. Gone are the days of the citizen armies that nominated and elected Dwight D. Eisenhower to the office of Presidency. The additional restrictions on the action of senatorial campaigns will further discourage volunteer management.

Citizens who wish to support or run as third party or independent candidates are discouraged from doing so. Under the bill, independents and third-party candidates are given short shrift. A minor or third-party candidate must raise privately 10 percent of the total expenditures a candidate would make in the general election or $100,000—whichever is smaller—to qualify. For most, this is an impossible task.

DECREASING THE TIES OF A SENATOR TO HIS CONSTITUENTS

If we are to learn anything from the 1976 Presidential Election we find that the combination of limited funds and the need for strict accounting forced candidates to rely heavily on television and radio. In large- and medium-size States this would simply mean that the candidates could not travel in the State to meet and talk with the people.

In addition, the curtailment of grassroots contributions, as S. 926 would do, would tend to have the effect of insulating the candidate from taking stands on controversial issues. In the past a candidate was compelled to spell out where he stands on many issues to raise significant funds. But under S. 926 when he receives public funding, he may be reticent to deal with matters of substance.

ABRIDGMENT OF THE CONSTITUTIONAL RIGHT OF POLITICAL EXPRESSION AND EQUALITY OF TREATMENT

The American Bar Association's special committee on election reform cautioned that the expenditure limitation in S. 926 presents substantial legal questions regarding the curtailment of first amendment rights of free speech and expression. The Bar Association report suggests that the more desirable way of limiting the influence of money in the electoral process with the minimum of interference with the first amendment rights is through full disclosure of private contributions which are limited to reasonable amounts.

Equally disturbing is the inequality of treatment given candidates and States.

Incumbents and major party candidates are favored over independents and challengers.

Smaller, more densely populated States are favored over those States with a larger geographic area and widely dispersed population. The formula does not take into account the problems of travel and multimedia markets, which may differ considerably from State to State.

Prof. Roy A. Schotland, of Georgetown University, questions the fundamental soundness of expenditure limits and raises questions about the equity of the ceilings. In a recent study, he points out that if the limits prescribed in the new proposal had been in effect in 1972 and 1974, 29 of 73 candidates in the smaller States would have broken the law while only 8 of 51 candidates in the larger States would have exceeded their limits.

ENHANCEMENT OF THE ADVANTAGES OF INCUMBENCY

If enacted into law, S. 926 will help to keep in office the persons who are already there. It will exclude fresh talent and new ideas. The expenditure ceilings in the bill will have the effect of freezing the status quo; it discriminates against new candidates who may need to spend larger amounts of money merely to achieve name recognition.

It is therefore repugnant to the spirit of the Constitution in advancing the establishment of the first State political party in our history as a nation. This upsets every historic tradition of limited government by compelling the American taxpayer to finance opinions and candidates of the "established party" which he or she may abhor.

ENLARGEMENT OF THE REGULATORY AND TAX BURDEN

The cost estimates for this bill are seriously underestimated. Its proponents claim that, if the bill is passed, the Presidential election campaign fund will still have a surplus in December 1980, in the neighborhood of $50 million. However, if House campaigns are added to the bill—as they must be to make it work—the fund's deficit may be as high as $19 million. Where will this deficit funding come from? The Treasury? The public will not get the complete bill for S. 926 until it is too late to refuse payment.

Persons who refuse to check off the campaign financing option on their tax returns will be forced to pay for congressional campaigns anyway. Their taxes will have to pay the tremendous administrative costs of implementing this legislation.

The bill will only increase bureaucratic redtape and candidate confusion. Anticipating passage of the bill, the Federal Election Commission has already requested an additional appropriation of nearly $1,800,000 for expenses to handle the administration of public financing for the 1978 Senate elections. Further, since the bill contains conflicting reporting requirements, the FEC will have to issue a considerable amount of new regulations. Finally, candidates will need to incur greater costs for attorneys and accountants in order to be sure that they are in compliance with the law.

In conclusion, Mr. President, I urge that we not take precipitous action in this matter. The only other major change in the election of Senators—the 17th amendment providing for direct popular vote—was before Congress for some 80 years before it passed in June 1911. In contrast, the Rules Committee had a scant 3 days of hearing on S. 926.

Why the rush?

There is no ground swell of popular demand for it.

Of course, the fact that it is here and that we are debating on it, and there is no ground swell of popular opinion in favor of it, is adequate indication that we are operating under pressure group influence now in considering the measure, because self-appointed keepers of the public morality have decided that we are unduly influenced by pressure groups. They do not say which ones. They do not specify to make it clear. It is that we are unduly influenced and, therefore, this corrupting influence of campaign money should be abolished. They proceed under the fiction that campaign money is the only thing that influences a candidate or a sitting Member.

We have been buffaloed into this by Common Cause. Common Cause has recently demonstrated its own intellectual and moral dishonesty in opposing an amendment which would make this bill applicable to primary campaigns.

Common Cause, this self-appointed keeper of the public morality, is quick to decry pragmatism on the part of Members of Congress when they seek honestly to arrive at a compromise to resolve differences that are honestly held. But Common Cause has not the intellectual honesty or the moral courage to stand up and publicly say if public financing for campaigns is right in the sense that it mitigates, ameliorates, or abolishes pressure group influence for general elections, then the same must necessarily apply to primaries.

No. What have the people for Common Cause done? They have whispered around in the hallways, "Oh, yes, in principle you are right in saying it should apply to primaries because there is an enormous amount of influence on a candidate in a primary. But that might make the bill less palatable to some people who do not want it for primaries. To achieve the end we desire, we are willing to strike a corrupt bargain to defeat the provision," that however much more equitable it might make the bill might have the effect of bringing about its defeat because some Members have been convinced that they will support this measure only so long as it does not apply to them in that they have no fears in a general election situation.

Their concern is the primary because in many States in this country nomination in the primary is tantamount to election. It is tantamount to election, yet Common Cause does not seek to remove what they allege to be a corrupting influence on candidates in a primary election.

Why do they not have the guts and the moral courage to stand up and say publicly why they oppose the application of the provisions of this bill to primaries and let them justify it?

It is insupportable to pretend that a man can be corrupted by a compaign contribution in a general election but cannot be in a primary. How can anybody rationalize that? The answer is it cannot be rationalized.

I call on the self-appointed spokesmen for the public morality, Common Cause and others who travel with it, to have the moral courage and the guts to say publicly why they go along with this double standard. Let them explain it to the public. They have easy access to the media. They have buffaloed a lot of commentators and columnists into believing that they have some kind of higher morality. They do not feel it is necessary to explain anything to anybody, including what their source of financial support is.

Whose ax are they grinding? Whose interests are they representing?

They have things going for them. Most of the folks up here in the press gallery will accept a lot of things they say as stemming solely from conscience and from those who desire to advance any kind of selfish end of their own.

Is it possible they want to create a new kind of society? Is it possible they conceive of themselves as the prophets and the planners of a new order in which they will be the ruling elite? Why do they not respond?

Of course they will not. They do not have to, because so much of what they have said and done has been bought lock, stock and barrel.

It should go on the record that they are engaged in a patent act of intellectual and moral dishonesty.

ADDITIONAL STATEMENTS SUBMITTED ON S. 926

Mr. HATCH. Mr. President, the opinion written in dissent by Chief Justice Warren E. Burger in the case of *Buckley* v. *Valeo*, 424 U.S. 1 (1976) at 229, contains a number of astute observations which are certainly germaine to the Senate consideration of Federal funding of Senate elections.

The Chief Justice presented particularly significant views relating to disclosure of contributions, limitations on contributions, and public financing of campaigns. I ask unanimous consent that the dissenting opinion of Chief Justice Burger be printed in the RECORD for the further consideration by each of us.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

DISSENTING OPINION OF CHIEF JUSTICE BURGER

For reasons set forth more fully later, I dissent from those parts of the Court's holding sustaining the Act's provisions (a) for disclosure of small contributions, (b) limitations on contributions, and (c) for public financing of Presidential campaigns. In my view, the Act's disclosure scheme is impermissibly broad and violative of the First Amendment as it relates to reporting $10 and $100 contributions. The contribution limitations infringe on First Amendment liberties and suffer from the same infirmities that the Court correctly sees in the expenditure ceilings. The Act's system for public financing of Presidental campaigns is, in my judgment, an impermissible intrusion by the Government into the traditionally private political process.

More broadly, the Court's result does violence to the intent of Congress in this comprehensive scheme of campaign finance. By dissecting the Act bit by bit, and casting off vital parts, the Court fails to recognize that the whole of this Act is greater than the sum of its parts. Congress intended to regulate all aspects of federal campaign finances, but what remains after today's holding leaves no more than a shadow of what Congress contemplated. I question whether the residue leaves a workable program.

DISCLOSURE PROVISION

Disclosure is, in principle, the salutary and constitutional remedy for most of the ills Congress was seeking to alleviate. I therefore agree fully with the broad proposition that public disclosure of contributions

by individuals and by entities—particularly corporations and labor unions—is an effective means of revealing the type of political support that is sometimes coupled with expectations of special favors or rewards. That disclosure impinges on First Amendment rights is conceded by the Court, *ante*, at 58-60, but given the objectives to which disclosure is directed, I agree that the need for disclosure outweighs individual constitutional claims.

Disclosure is, however, subject to First Amendment limitations which are to be defined by looking to the relevant public interests. The legitimate public interest is the elimination of the appearance and reality of corrupting influences. Serious dangers to the very processess of government justify disclosure of contributions of such dimensions reasonably thought likely to purchase special favors. These fears have been at the root of the Court's prior decision upholding disclosure requirements, and I therefore have no disagreement, for example, with *Burroughs* v. *United States*, 290 U.S. 534 (1934).

The Court's theory, however, goes beyond permissible limits. Under the Court's view, disclosure serves broad informational purposes, enabling the public to be fully informed on matters of acute public interest. Forced disclosure of one aspect of a citizen's political activity, under this analysis, serves the public right-to-know. This open-ended approach is the only plausible justification for the otherwise irrationally low ceilings of $10 and $100 for anonymous contributions. The burdens of these low ceilings seem to me obvious, and the Court does not try to question this. With commendable candor, the Court acknowledges:

"It is undoubtedly true that public disclosure of contributions to candidates and political parties will deter some individuals who otherwise might contribute." *Ante*, at 62.

Examples come readily to mind. Rank-and-file union members or rising junior executives may now think twice before making even modest contributions to a candidate who is disfavored by the union or management hierarchy. Similarly, potential contributors may well decline to take the obvious risks entailed in making a reportable contribution to the opponent of a well-entrenched incumbent. This fact of political life did not go unnoticed by the Congress:

"The disclosure provisions really have in fact made it difficult for challengers to challenge incumbents." 120 Cong. Rec. S 18544 (October 8, 1974) (remarks of Senator Long).

See *Pollard* v. *Roberts*, 283 F. Supp. 248 (ED Ark. 1968), aff'd *per curiam*, 393 U.S. 14 (1968).

The public right-to-know ought not be absolute when its exercise reveals private political convictions. Secrecy, like privacy, is not *per se* criminal. On the contrary, secrecy and privacy as to political preferences and convictions are fundamental in a free society. For example, one of the great political reforms was the advent of the secret ballot as a universal practice. Similarly, the enlightened labor legislation of our time has enshrined the secrecy of choice of a bargaining representative for workers. In other contexts, this Court has seen to it that governmental power cannot be used to force a citizen to disclose his private affiliations, *NAACP* v. *Button*, 371 U.S. 415 (1963), even without a record reflecting any systematic harassment or retaliation, as in *Shelton* v. *Tucker*, 364 U.S. 479 (1960). For me it is far too late in the day to recognize an ill-defined "public interest" to breach the historic safeguards guaranteed by the First Amendment.

We all seem to agree that whatever the legitimate public interests in this area, proper analysis requires us to scrutinize the precise means employed to implement that interest. The balancing test used by the Court requires that fair recognition be given to competing interests. With respect, I suggest the Court has failed to give the traditional standing to some of the First Amendment values at stake here. Specifically, it has failed to confine the particular exercise of governmental power within limits reasonably required.

"In every case, the power to regulate must be so exercised as not, in attaining a permissible end, unduly to infringe the protected freedom." *Cantwell* v. *Connecticut*, 310 U.S. 296, 304 (1940).

"Unduly" must mean not more than necessary, and until today, the Court has recognized this criterion in First Amendment cases:

"In the area of First Amendment freedoms government has the duty to confine itself to *the least* intrusive regulations which are adequate for the purpose." *Lamont* v. *Postmaster General*, 381 U.S. 301, 310 (1965) (BRENNAN, J., concurring). (Emphasis added.)

Similarly, the Court has said:

"[E]ven though the governmental purpose be legitimate and substantial, that purpose cannot be pursued by means that broadly stifle fundamental personal liberties when the end can be more narrowly achieved. The breadth of legislative abridgment must be viewed in the light of less drastic means for achieving the same basic purpose." *Shelton* v. *Tucker*, *supra*, at 488 (STEWART, J.).

In light of these views,[1] it seems to me that the threshold limits fixed at $10 and $100 for anonymous contributions are constitutionally impermissible on their face. As the Court's opinion notes, *ante*, at 77, Congress gave little or no thought, one way or the other, to these limits, but rather lifted figures out of a 65-year-old statute.[2] As we are all painfully aware, the 1976 dollar is not what it used to be and is surely not the dollar of 1910. Ten dollars in 1976 will, for example, purchase only what $1.68 would buy in 1910. Handbook of Labor Statistics—1975, Reference Ed., at 313. To argue that a 1976 contribution of $10 or $100 entails a risk of corruption or its appearance is simply too extravagant to be maintained. No public right-to-know justifies the compelled disclosure of such contributions, at the risk of discouraging them. There is, in short, no relation whatever between the means used and the legitimate goal of ventilating possible undue influence. Congress has used a shotgun to kill wrens as well as hawks.

In saying that the lines drawn by Congress are "not wholly without rationality," the Court plainly fails to apply the traditional test:

"Precision of regulation must be the touchstone in an area so closely touching on our most precious freedoms." *NAACP* v. *Button*, 371 U.S. 415, 438 (1938).

See, *e.g.*, *Aptheker* v. *Secretary of State*, 378 U.S. 500 (1964); *United States* v. *Robel*, 389 U.S. 258 (1967); *Lamont* v. *Postmaster General*, *supra*. The Court's abrupt departure[3] from traditional standards is wrong; surely a greater burden rests on Congress than merely to avoid "irrationality" when regulating in the core area of the First Amendment. Even taking Court at its word, the particular dollar amounts fixed by Congress that must be reported to the Commission fall short of meeting the test of rationality when measured by the goals sought to be achieved.

Finally, no legitimate public interest has been shown in forcing the disclosure of modest contributions that are the prime support of new, unpopular or unfashionable political causes. There is no realistic possibility that such modest donations will have a corrupting influence especially on parties that enjoy only "minor" status. Major parties would not notice them; minor parties need them. Furthermore, as the Court candidly recognizes, *ante*, at 64, minor parties and new parties tend to be sharply ideological in character, and the public can readily discern where such parties stand, and without resorting to the indirect device of recording the names of financial supporters. To hold, as the Court has, the privacy must sometimes yield to congressional investigations of alleged subversion, is quite different from making domestic political partisans give up privacy. Cf. *Eastland* v. *U.S. Servicemen's Funds*, 421 U.S. 492 (1975). In any event, the dangers to First Amendment rights here are too great. Flushing out the names of supporters of minority parties will plainly have a deterrent effect on political contributors, a consequence readily admitted by the Court, *ante*, at 65, 77, and supported by the record.[4]

I would therefore hold unconstitutional the provisions requiring reporting of contributions of $10 or more and to make a public record of the name, address, and occupation of a contributor of $100 or more.

CONTRIBUTION AND EXPENDITURE LIMITS

I agree fully with that part of the Court's opinion that holds unconstitutional the limitations the Act puts on campaign expenditures which "place substantial and direct restrictions on the ability of candidates, citizens, and associations to engage in protected political expression, restrictions that the First Amendment cannot tolerate." *Ante*, at 53. Yet when it approves similarly stringent limitations on contributions, the Court ignores the reasons it finds so persuasive in the context of expenditures. For me contributions and expenditures are two sides of the same First Amendment coin.

By limiting campaign contributions, the Act restricts the amount of money that will be spent on political activity—and does so directly. Appellees argue, as the Court notes, that these limits will "act as a brake on the skyrocketing costs of political campaigns," *ante*, at 20. In treating campaign expenditure limitations, the Court says that the "First Amendment denies government the power to determine that spending to promote one's political views is wasteful, excessive, or unwise." *Ante*, at 51. Limiting contributions, as a practical matter, will limit expenditures and will put an effective ceiling on the amount of political activity and debate that the Government will permit to take place. The argument that the ceiling is not, after all, very low as matters now stand gives little comfort for the future, since the Court elsewhere notes the rapid inflation in the cost of political campaigning.[5] *Ante*, at 51.

The Court attempts to separate the two communicative aspects of political contributions—the "moral" support that the gift itself conveys, which the Court suggests is the same whether the gift is of $10 or $10,000,[6] and the fact that money translates into communications. The Court dismisses the effect of the limitations on the second aspect of contributions: "[T]he transformation of contributions into political debate involves speech by someone other than the contributor." *Ante*, at 16. On this premise—that contribution limitations restrict only the speech of "someone other than the contributor"—rests the Court's justification for treating contributions differently from expenditures. The premise is demonstrably flawed; the contribution limitations will, in specific instances, limit exactly the same political activity that the expenditure ceilings limit,[7] and at least one of the "expenditure" limitations the Court finds objectionable operates precisely like the "contribution" limitations.[8]

The Court's attempt to distinguish the communication inherent in political *con-*

Footnotes at end of article.

tributions from the speech aspects of political *expenditures* simply will not wash. We do little but engage in word games unless we recognize that people—candidates and contributors—spend money on political activity because they wish to communicate ideas, and their constitutional interest in doing so is precisely the same whether they or someone else utter the words.

The Court attempts to make the Act seem less restrictive by casting the problem as one that goes to freedom of association rather than freedom of speech. I have long thought freedom of association and freedom of expression were two peas from the same pod. The contribution limitations of the Act impose a restriction on certain forms of associational activity that are for the most part, as the Court recognizes, *ante*, at 24, harmless in fact. And the restrictions are hardly incidental in their effect upon particular campaigns. Judges are ill-equipped to gauge the precise impact of legislation, but a law that impinges upon First Amendment rights requires us to make the attempt. It is not simply speculation to think that the limitations on contributions will foreclose some candidacies.[9] The limitations will also alter the nature of some electoral contests drastically.[10]

At any rate, the contribution limits are a far more severe restriction on First Amendment activity than the sort of "chilling" legislation for which the Court has shown such etxraordinary concern in the past. See, e.g., *Cohen* v. *California*, 403 U.S. 15 (1971); see also cases reviewed in *Miller* v. *California*, 413 U. S. 15 (1973); *Redrup* v. *New York*, 386 U.S. 767 (1967); *Memoirs* v. *Massachusetts*, 383 U.S. 413 (1966). If such restraints can be justified at all, they must be justified by the very strongest of state interests. With this much, the Court clearly agrees; the Court even goes so far as to note that legislation cutting into these important interests must "employ . . . means closely drawn to avoid unnecessary abridgment of associational freedoms." *Ante*, at 20.

After a bow to the "weighty interests" Congress meant to serve, the Court then forsakes this analysis in one sentence: "Congress was surely entitled to conclude that disclosure was only a partial measure, and that contribution ceilings were a necessary legislative concomitant to deal with the reality or appearance of corruption. . . ." *Ante*, at 22. In striking down the limitations on campaign expenditures, the Court relies in part on its conclusion that other means—namely, disclosure and contribution ceilings—will adequately serve the statute's aim. It is not clear why the same analysis is not also appropriate in weighing the need for contribution ceilings in addition to disclosure requirements. Congress may well be entitled to conclude that disclosure was a "partial measure," but I had not thought until today that Congress could enact its conclusions in the First Amendment area into laws immune from the most searching review by this Court.

Finally, it seems clear to me that in approving these limitations on contributions the Court must rest upon the proposition that "pooling" money is fundamentally different from other forms of associational or joint activity. But see *ante*, at 60. I see only two possible ways in which money differs from volunteer work, endorsements, and the like. Money can be used to buy favors, because an unscrupulous politician can put it to personal use; second, giving money is a less visible form of associational activity. With respect to the first problem, the Act does not attempt to do any more than the bribery laws to combat this sort of corruption. In fact, the Act does not reach at all, and certainly the contribution limits do not reach, forms and "association" that can be fully as corrupt as a contribution intended as a *quid pro quo*—such as the eleventh hour endorsement by a former rival, obtained for the promise of a federal appointment. This underinclusiveness is not a constitutional flaw, but it demonstrates that the contribution limits do not clearly focus on this first distinction. To the extent Congress thought that the second problem, the lesesr visibility of contributions, required that money be treated differently from other forms of associational activity, disclosure laws are the simple and wholly efficacious answer; they make the invisible apparent.

PUBLIC FINANCING

I dissent from Part III sustaining the constitutionality of the public financing provisions of the Act.

Since the turn of this century when the idea of Government subsidies for political campaigns first was broached, there has been no lack of realization that the use of funds from the public treasury to subsidize political activity of private individuals would produce substantial and profound questions about the nature of our democratic society. The Majority Leader of the Senate, although supporting such legislation in 1967, said that "the implications of these questions . . . go to the very heart and structure of the Government of the Republic." [11] The Solicitor General in his *amicus curiae* brief states that "the issues involved here are of indisputable moment." [12] He goes on to express his view that public financing will have "profound effects in the way candidates approach issues and each other." [13] Public financing, he notes, "affect[s] the role of the party in campaigns for office, changes the role of the incumbent government vis-a-vis all parties, and affects the relative strengths and strategies of candidates vis-a-vis each other and their party's leaders." [14]

The Court chooses to treat this novel public financing of political activity as simply another congressional appropriation whose validity is "necessary and proper" to Congress' power to regulate and reform elections and primaries, relying on *United States* v. *Classic*, 313 U.S. 299 (1941), and *Burroughs* v. *United States*, 290 U.S. 534 (1934). No holding of this Court is directly in point, because no federal scheme allocating public funds in a comparable manner has ever been before us. The uniqueness of the plan is not relevant, of course, to whether Congress has power to enact it. Indeed, I do not question the power of Congress to regulate elections; nor do I challenge the broad proposition that the General Welfare Clause is a grant, not a limitation, of power. *McCulloch* v. *Maryland*, 4 Wheat, 316 (1819); *United States* v. *Butler*, 297 U.S. 1, 66 (1936).

I would, however, fault the Court for not adequately analyzing and meeting head-on the issue whether public financial assistance to the private political activity of individual citizens and parties is a legitimate expenditure of public funds. The public monies at issue here are not being employed simply to police the integrity of the electoral process or to provide a forum for the use of all participants in the political dialog, as would, for example, be the case if free broadcast time were granted. Rather, we are confronted with the Government's actual financing, out of general revenues, a segment of the political debate itself. As Senator Howard Baker remarked during the debate on this legistion:

"I think there is something politically incestuous about the Government financing and, I believe, inevitably then regulating, the day to day procedures by which the Government is selected. . . . I think it is extraordinarily important that the Government not control the machinery by which the public expresses the range of its desires, demands, and dissent." 120 Cong. Rec. S 4457 (daily ed., Mar. 26, 1974).

If this "incest" affected only the issue of the wisdom of the plan, it would be none of the concern of judges. But, in my view, the inappropriateness of subsidizing, from general revenues, the actual political dialog of the people—the process which begets the Government itself—is a basic to our national tradition as the separation of church and state also deriving from the First Amendment, see *Lemon* v. *Kurtzman*, 403 U.S. 602, 612 (1971); *Waltz* v. *Tax Commission*, 397 U.S. 664, 668–669 (1970), or the separation of civilian and military authority, see *Orloff* v. *Willoughby*, 395 U.S. 83, 93–94 (1953), neither of which is explicit in the Constitution but which have developed through case by case adjudication of express provisions of the Constitution.

Recent history shows dangerous examples of systems with a close, "incestuous" relationship between "government" and "politics"; the Court's opinion simply dismisses possible dangers by noting that:

"Subtitle H is a congressional effort, not to abridge, restrict, or censor speech, but rather to use public money to facilitate and enlarge public discussion and participation in the electoral process, goals vital to a self-governing people."

Ante, at 86–87. Congress, it reassuringly adds by way of a footnote, has expressed its determination to avoid such a possibility.[15] *Id.*, at 87 n. 126. But the Court points to no basis for predicting that the historical pattern of "varying measures of control and surveillance," *Lemon* v. *Kurtzman*, *supra*, at 621, which usually accompany grants from Government will not also follow in this case.[16] Up to now, the Court has always been extraordinarily sensitive, when dealing with First Amendment rights, to the risk that the "flag-tends-to-follow-the-dollars." Yet, here, where the Act specifically requires the auditing of records of political parties and candidates by Government inspectors,[17] the Court shows little sensitivity to the danger it has so strongly condemned in other contexts. See, *e.g.*, *Everson* v. *Board of Education*, 330 U.S. 1 (1947). Up to now, this Court has scrupulously refrained, absent claims of invidious discrimination,[18] from entering the arena of intra-party disputes concerning the seating of convention delegates. *Graham* v. *March Fong Eu*, No. 75–740, judgment affirmed January 19, 1976; *Cousins* v. *Wigoda*, 419 U.S. 477 (1975); *O'Brien* v. *Brown*, 409 U.S. 1 (1972). An obvious underlying basis for this reluctance is that delegate selection and the management of political conventions have been considered a strictly private political matter, not the business of Government inspectors. But once the Government finances these national conventions by the expenditure of millions of dollars from the public treasury, we may be providing a springboard for later attempts to impose a whole range of requirements on delegate selection and convention activities. Does this foreshadow judicial decisions allowing the federal courts to "monitor" these conventions to assure compliance with court orders or regulations?

Assuming arguendo that Congress could validly appropriate public money to subsidize private political activity, it has gone about the task in this Act in a manner which is not, in my view, free of constitutional infirmity.[19]

I do not question that Congress has "wide discretion in the manner of prescribing details of expenditures" in some contexts, *Cincinnati Soap Co.* v. *United States*, 301 U.S. 308 (1937). Here, however, Congress has not itself appropriated a specific sum to attain the ends of the Act but has delegated to a limited group of citizens—those who file tax returns—the power to allocate general revenue for the Act's purposes—and of course only a small percentage of that limited group has exercised the power. There is nothing to assure that the "fund" will ac-

Footnotes at end of article.

tually be adequate for the Act's objectives. Thus, I find it difficult to see a rational basis for concluding that this scheme would, in fact, attain the stated purposes of the Act when its own funding scheme affords no real idea of the amount of the available funding.

I agree with Mr. Justice Rehnquist that the scheme approved by the Court today invidiously discriminates against minor parties. Assuming *arguendo* the constitutionality of the overall scheme, there is a legitimate governmental interest in requiring a group to make a "preliminary showing of a significant modicum of support." *Jenness* v. *Fortson*, 403 U.S. 431, 442 (1971). But the present system could preclude or severely hamper access to funds before a given election by a group or an individual who might, at the time of the election, reflect the views of a major segment or even a majority of the electorate. The fact that there have been few drastic realignments in our basic two-party structure in 200 years is no constitutional justification for freezing the status quo of the present major parties at the expense of such future political movements. Compare discussion, *ante*, at 67. When and if some minority party achieves majority status, Congress can readily deal with any problems that arise. In short, I see grave risks in legislation, enacted by incumbents of the major political parties, which distinctly disadvantage minor parties or independent candidates. This Court has, until today, been particularly cautious when dealing with enactments that tend to perpetuate those who control legislative power. See *Reynolds* v. *Sims*, 377 U.S. 533, 570 (1964).

I would also find unconstitutional the system of "matching grants" which makes a candidate's ability to amass private funds the sole criterion for eligibility for public funds. Such an arrangement can put at serious disadvantage a candidate with a potentially large, widely diffused—but poor—constituency. The ability of a candidate's supporters to help pay for his campaign cannot be equated with their willingness to cast a ballot for him. See *Lubin* v. *Panish*, 415 U.S. 709 (1974); *Bullock* v. *Carter*, 405 U.S. 134 (1972).

I cannot join in the attempt to determine which parts of the Act can survive review here. The statute as it now stands is unworkable and inequitable.

I agree with the Court's holding that the Act's restrictions on expenditures made "relative to a clearly identified candidate," independent of any candidate or his committee, are unconstitutional. *Ante*, at 32–45. Paradoxically the Court upholds the limitations on individual contributions, which embrace precisely the same sort of expenditures "relative to a clearly identified candidate" if those expenditures are "authorized or requested" by the "candidate or his agents." *Ante*, at 18 n. 25. The Act as cut back by the Court thus places intolerable pressure on the distinction between "authorized" and "unauthorized" expenditures on behalf of a candidate; even those with the most sanguine hopes for the Act might well concede that the distinction cannot be maintained. As the Senate Report on the bill said:

"Whether campaigns are funded privately or publicly . . . controls are imperative if Congress is to enact meaningful limits on direct contributions. Otherwise, wealthy individuals limited to a $3,000 direct contribution [$1,000 in the bill as finally enacted] could also purchase one hundred thousand dollars' worth of advertisements for a favored candidate. Such a loophole would render direct contribution limits virtually meaningless." S. Rept. No. 689, 93d Cong., 2d Sess., 18 (1974).

Given the unfortunate record of past attempts to draw distinctions of this kind, see *ante*, at 55–57, it is not too much to predict that the Court's holding will invite avoidance, if not evasion of the intent of the Act, with "independent" committees undertaking "unauthorized" activities in order to escape the limits on contributions. The Court's effort to blend First Amendment principles and practical politics has produced a strange offspring.

Moreover, the Act—or so much as the Court leaves standing—creates significant inequities. A candidate with substantial personal resources is now given by the Court a clear advantage over his less affluent opponents, who are constrained by law in fundraising, because the Court holds that the "First Amendment cannot tolerate" any restrictions on spending. *Ante*, at 53. Minority parties, whose situation is difficult enough under an Act that excludes them from public funding, are prevented from accepting large single-donor contributions. At the same time the Court sustains the provision aimed at broadening the base of political support by requiring candidates to seek a greater number of small contributors, it sustains the unrealistic disclosure thresholds of $10 and $100 that I believe will deter those hoped-for small contributions. Minor parties must now compete for votes against two major parties whose expenditures will be vast. Finally, the Act's distinction between contributions in money and contributions in services remains, with only the former being subject to any limits. As Judge Tamm put it in dissent from the Court of Appeals' opinion:

"[T]he classification created only regulates certain types of disproportionate influences. Under section 591(e)(5), services are excluded from contributions. This allows the housewife to volunteer time that might cost well over $1,000 to hire on the open market while limiting her neighbor who works full-time to a regulated contribution. It enhances the disproportionate influence of groups who command large quantities of these volunteer services and will continue to magnify this inequity by not allowing for an inflation adjustment to the contribution limit. It leads to the absurd result that a lawyer's contribution of services to aid a candidate in complying with FECA is exempt, but his first amendment activity is regulated if he falls ill and hires a replacement." 519 F. 2d, at 915.

One need not call problems of this order equal protection violations to recognize that the contribution limitations of the Act create grave inequities that are aggravated by the Court's interpretation of the Act.

The Court's piecemeal approach fails to give adequate consideration to the integrated nature of this legislation. A serious question is raised, which the Court does not consider:[20] when central segments, key operative provisions, of this Act are stricken can what remains function in anything like the way Congress intended? The incongruities are obvious. The Commission is now eliminated, yet its very purpose was to guide candidates and campaign workers—and their accountants and lawyers—through an intricate statutory maze where a misstep can lead to imprisonment. All candidates can now spend freely; affluent candidates, after today, can spend their own money without limit; yet, contributions for the ordinary candidate are severely restricted in amount —and small contributors are deterred. I cannot believe that Congress would have enacted a statutory scheme containing such incongruous and inequitable provisions.

Although the statute contains a severability clause, § 454, such a clause is not an "inexorable command."[21] *Dorchy* v. *Kansas*, 264 U.S. 286, 290 (1924). The clause creates a rebuttable presumption that "eliminating invalid parts, the legislature would have been satisfied with what remained." *Welsh* v. *United States*, 398 U.S. 333, 364 (1970) (Harlan, J., concurring, quoting from *Champlin Rfg. Co.* v. *Commission*, 286 U.S. 210, 235 (1932)). Here just as the presumption of constitutionality of a statute has been overcome to the point that major portions and chapters of the Act have been declared unconstitutional, for me the presumption of severability has been rebutted. To invoke a severability clause to salvage parts of a comprehensive, integrated statutory scheme which, standing alone, are unworkable and in many aspects unfair, exalts, a formula at the expense of the broad objectives of Congress.

Finally, I agree with the Court that the members of the Federal Election Commission were unconstitutionally appointed. However, I disagree that we should give blanket *de facto* validation to all actions of the Commission undertaken until today. The issue is not before us and we cannot know what acts we are ratifying. I would leave this issue to the District Court to resolve if and when any challenges are brought.

In the past two decades the Court has frequently spoken of the broad coverage of the First Amendment, especially in the area of political dialogue,

". . . to assure unfettered interchange of ideas for the bringing about of political and social change desired by the people." *Roth* v. *United States*, 354 U.S. 476, 484 (1957);

and:

". . . there is practically universal agreement that a major purpose of [the First] Amendment was to protect the free discussion of governmental affairs . . . [including] discussions of candidates. . . . *Mills* v. *Alabama*, 384 U.S. 214, 218 (1966);

and again:

". . . it can hardly be doubted that the constitutional guarantee [of the First Amendment] has its fullest and most urgent application precisely to the conduct of campaigns for political office." *Monitor Patriot Co.* v. *Ray*, 401 U.S. 265, 272 (1971).

To accept this generalization one need not agree that the Amendment has its "fullest and most urgent application" only in the political area, for others would think religious freedom is on the same or even a higher plane. But I doubt that the Court would tolerate for an instant a limitation on contributions to a church or other religious cause; however, grave an "evil" Congress thought the limits would cure limits on religious expenditures would most certainly fail as well. To limit either contributions or expenditures as to churches would plainly restrict "the free exercise" of religion. In my view Congress can no more ration political expression that it can ration religious expression; and limits on political or religious contributions and expenditures effectively curb expression in both areas. There are many prices we pay for the freedoms secured by the First Amendment; the risk of undue influence is one of them, confirming what we have long known: freedom is hazardous, but some restraints are worse.

FOOTNOTES

[1] The particular verbalization has varied from case to case. First Amendment analysis defies capture in a single, easy phrase. The basic point of our inquiry, however, expressed, is to determine whether the Government has sought to achieve admittedly important goals by means which demonstrably curtail our liberties to an unnecessary extent.

[2] The 1910 legislation required disclosure of the names of *recipients* of expenditures in excess of $10.

[3] Ironically, the Court seems to recognize this principle when dealing with the limitations on contributions. *Ante*, at 20.

[4] The record does not show systematic harassment of the sort in *NAACP* v. *Alabama supra*. But uncontradicted evidence was adduced with respect to actual experiences of minor parties indicating a sensitivity on the part of potential contributors to the prospect

of disclosure. See, *e.g.*, District Court findings of fact, Wertheimer, ¶ 6; Reed, ¶ 8. This evidence suffices when the governmental interest in putting the spotlight on the sources of support for minor parties or splinter groups is so tenuous.

[5] The Court notes that 94.9 percent of the funds raised by congressional candidates in 1974 came in contributions of less than $1,000, *ante*, at 20 n. 27, and suggests that the effect of the contribution limitations will be minimal. This logic ignores the disproportionate influence large contributions may have when they are made early in a campaign; "seed money" can be essential, and the inability to obtain it may effectively end some candidacies before they begin. Appellants have excerpted from the record data on nine campaigns to which large, initial contributions were critical. Appellants' Brief, 132–138. Campaigns such as these will be much harder, and perhaps impossible, to mount under the Act.

[6] Whatever the effect of the limitation, it is clearly arbitrary—Congress has imposed the same ceiling on contributions to a New York or California senatorial campaign that it has put on House races in Alaska or Wyoming. Both the strength of support conveyed by the gift of $1,000 *and* the gift's potential for corruptly influencing the recipient will vary enormously from place to place. Seven Senators each spent from $1,000,000 to $1,300,000 in their successful 1974 election campaigns. A great many congressional candidates spent less than $25,000. 33 Congressional Quarterly 790 (April 19, 1975). The same contribution ceiling would seem to apply to each of these campaigns. Congress accounted for these tremendous variations when it geared the *expenditure* limits to voting population; but it imposed a flat ceiling on *contributions* without focussing on the actual evil attacked or the actual harm the restrictions will work.

[7] Suppose, for example, that a candidate's committee authorizes a celebrity or elder statesman to make a radio or television address on the candidate's behalf, for which the speaker himself plans to pay. As the Court recognizes, *ante*, at 18 n. 25, the Act defines this activity as a contribution and subjects it to the $1,000 limit on individual contributions and the $5,000 limit on contributions by political committees—effectively preventing the speech over any substantial radio or television station. Whether the speech is considered an impermissible "contribution" or an allowable "expenditure" turns, not on whether speech by "someone other than the contributor" is involved, but on whether the speech is "authorized" or not. The contribution limitations directly restrict speech by the contributor himself. Of course, this restraint can be "avoided" if the speaker makes his address without consulting the candidate or his agents. Elsewhere I suggest that the distinction between "independent" and "authorized" political activity is unrealistic and simply cannot be maintained. For present purposes I wish only to emphasize that the Act directly restricts, as a "contribution," what is clearly speech by the "contributor" himself.

[8] The Court treats the Act's provisions limiting a candidate's spending from his *personal resources* as *expenditure* limits, as indeed the act characterizes them, and holds them unconstitutional. As Mr. Justice Marshall points out, *infra*, at —, by the Court's logic these provisions could as easily be treated as limits on *contributions*, since they limit what the candidate can give to his own campaign.

[9] Candidates who must raise large initial contributions in order to appeal for more funds to a broader audience will be handicapped. See n. 5, *supra*. It is not enough to say that the contribution ceilings "merely require candidates . . . to raise funds from a greater number of persons," *ante*, at 16, where the limitations will effectively prevent candidates without substantial personal resources from doing just that.

[10] Under the Court's holding, candidates with personal fortunes will be free to contribute to their own campaigns as much as they like, since the Court chooses to view the Act's provisions in this regard as unconstitutional "expenditure" limitations rather than "contribution" limitations. See n. 8, *supra*.

[11] 113 Cong. Rec. 12165 (1967).

[12] Brief, at 93.

[13] *Id.*, at 94.

[14] *Id.*, at 93.

[15] Such considerations have never before influenced the Court's evaluation of the risks of restraints on expression.

[16] The Court's opinion demonstrates one such intrusion. While the Court finds that the Act's expenditure limitations unconstitutionally inhibit a candidate or a party's First Amendment rights, it imposes, by invoking the severeability clause of Subtitle H, such limitations on qualifying for public funds.

[17] See, *e.g.*, 26 U.S.C. § 9003, 26 U.S.C. 9007, 26 U.S.C. § 9033, 26 U.S.C. § 9038.

[18] Cf. *Terry* v. *Adams*, 345 U.S.C. 461 (1953); v. *Alwright*, 321 U.S. 649 (1944).

[19] See generally remarks of Senator Gore, 112 Cong. Rec. 28783 (1966).

[20] The problem is considered only in the limited context of Subtitle H.

[21] Section 454 provides that if a "provision" is invalid, the entire Act will not be deemed invalid. More than a provision, more than a few provisions, have been held invalid today. Section 454 probably does not even reach such extensive invalidation.

Mr. TOWER. Mr. President, during the past few days of Senate debate on the question of Federal financing for Senate elections, a number of us have pointed out repeatedly the dangers inherent in enacting this kind of legislation.

We have warned repeatedly that this bill will in no way reduce the impact of large interest groups in the election process; that it will, in fact, encourage the growth of independent, unreportable, perhaps even anonymous activities, accountable to no one, and motivated solely by the narrow interests of the group involved.

Further, it has been demonstrated quite clearly that the net result of Federal financing for Senate elections will ultimately discourage and demean the role of the individual in the electoral process—a step which I, for one, find personally intolerable and inconsistent with basic Democratic principles.

The argument has been made by the bill's proponents that it will tend to equalize the opportunities for all who seek to run for office. The fact of the matter is that it will do just the opposite. This is an incumbent's bill—make no mistake about it, and the most grave injustice will be done to those who may prefer to run without the blessing of what this bill so mechanically designates as a "major party."

As those of us who oppose this bill have sought to convey our objections to the public, I have noted with some frustration a certain reluctance, perhaps even indifference, on the part of the media in terms of reporting this ongoing exchange. Fortunately, there have been some outstanding exceptions to this trend recently, and I would like to comment briefly on two of these for the benefit of my colleagues.

On July 28, the Dallas Morning News ran an excellent editorial entitled "The 'Democratic' Way"; and again this weekend, in Sunday's edition of the Washington Post, I was pleased to note another fine commentary entitled "Campaign Money and Public Trust." Both articles, in my view, emphasize in cogent fashion the major objections to S. 926:

It will not reduce political activities by interest groups and large contributors;

It is inconsistent by not including primaries, which, in some States, may be tantamount to election;

It would work to cement the "status quo," protecting incumbents and discouraging new entrants in the political system;

It debases the role of the individual in the political process; implying that the Government, and not the voters, should decide whether or not big spending on the part of a candidate is bad;

And it thrusts the Federal Government into the business of regulating political activity.

Mr. President, I have taken several opportunities to express my own views on this matter, and I expect that I shall continue to do so as our debate here in the Senate proceeds. As the complexities of this issue are unraveled and scrutinized here on the Senate floor, I believe it would behoove all of my colleagues to avail themselves of the sanguine editorial comment contained in the Dallas Morning News and the Washington Post, and I ask unanimous consent that these statements be printed in the RECORD.

There being no objection, the article were ordered to be printed in the RECORD, as follows:

[From the Dallas Morning News, July 28, 1977]

THE "DEMOCRATIC" WAY

The essence of the Public Financing of Senate General Elections Act and Federal Election Campaign Act Amendments of 1977—now under scrutiny by the U.S. Senate—is just this: A lot of senators want to stake out permanent political careers by spending our tax money.

The whole idea is indefensible. Prosperity, therefore, to the bloc of senators, both Democratic and Republican, who are resisting through filibuster. They are relatively few in number, but they are dead right.

The campaign financing proposal is the logical followup to the 1975 law handing tax money to presidential candidates. The idea is supposedly to insulate office-seekers from the atrocious advances of special interest groups by letting the taxpayer underwrite the political ambitions of Claghorns various and sundry.

Senatorial candidates (a similar bill is under consideration by the House) would be subsidized in general elections $250,000 plus 10 cents a voter. The number of voters would of course vary from state to state.

The faults with such a bill are manifold. First, although there is much talk from Common Cause about the sinister "special interests" and how they should be barred from influencing elections, the Senate bill hardly touches, top-side or bottom, the special interest known as labor. Labor would be subject to direct spending limitations, but not to limits on the "volunteer" services it literally provides pro-labor candidates.

Public financing is likewise an imposition on the taxpaying public. Why should public money finance the aspirations of any politician? Why should he not compete for con-

tributions with other aspirants, and may the best man collect the most? That is, if we may say so, the democratic way.

The capital-d Democratic way, alas, is to institutionalize through this scheme Democratic control of the Senate at a time when the Republican party is weakest. The public financing proposal would be overwhelmingly advantageous to incumbents, of whom just now there are 61 Democrats, 38 Republicans and 1 independent.

The reason that is so is that incumbents enjoy inherent advantages over challengers: Name identification, to start with; big staffs and state offices and travel privileges and free mail and the power to dispense favors and patronage—such are the fruits of incumbency. To hold an incumbent and a challenger to the same spending level is manifestly unfair; yet this is what the Senate is being asked to do.

Likewise, the Senate is being asked, so Senators Packwood and Goldwater have charged to define the Republican party in Mississippi, Virginia, West Virginia, Alabama and Louisiana as a "minor party," not a major one (this because of its showing in the 1976 general election). Thus the party's candidates would be denied access to the public purse until after the Democratic primary.

For all these reasons the public financing bill is being heatedly opposed, and Sen. John Tower is predicting success for the filibuster, at least on the first attempt to defend it against cloture. Let's hope he's right. The bill is both cynical and dangerous, the sooner buried beneath an avalanche of words, the better for us all.

[From the Washington Post, July 31, 1977]

CAMPAIGN MONEY AND PUBLIC TRUST

President Carter used familiar and fashionable language the other day in endorsing S. 926, the pending bill for partial public financing of Senate campaigns. He said the bill would "help restore the public's confidence and trust in officials" by removing 'the appearance of obligation to special interests." Now, that sounds soothing—but this is no time for the Senate to relax. There is more than cosmetics involved here, and the effects of this legislation in its present form might not be as restorative as the advertising suggests.

Consider the matter of "special interests," which has become shorthand for corruption. Any two people could argue all day about which interest groups—bankers or doctors or unions or whatever—are "special" in the pejorative sense, and what their political role should be. Regardless of where one comes out, two points seem clear to us.

First, the most corrosive kinds of interest-group money, the huge, often covert donations such as those revealed in recent years, either have been illegal for decades or were curbed by the disclosure rules and contribution limits enacted in 1974.

Second, the role of political-action committees and big donors would not necessarily be reduced a whit by S. 926. Public matching of small private gifts would give Senate nominees less need to court big contributors. But the bill does not cover primaries, where some elections are settled and early, big donations can have the greatest effect.

Moreover, as the Supreme Court emphasized last year, the First Amendment gives individuals and groups the liberty to spend as much as they want on independent, parallel campaigns for candidates. Last fall, while Mr. Carter's election drive was being publicly financed, labor unions were spending, by one estimate, over $11 million independently on his behalf. So when Mr. Carter says that public financing for presidential campaigns "worked very well last year [pause . . . laughter]" without any of the candidates "being obligated to anyone," we get the joke—but not the argument.

The advocates of public financing also claim that it would open up the system and, in Mr. Carter's words, "help enable deserving candidates to run for office even if they are not rich." This also sounds good—but also raises large questions about the nature of political competition and the proper role of government.

It's true that competition is inhibited by the high and rising cost of getting political messages into the marketplace at all. If a candidate can't afford advertising, voters have no way to gauge whether he is "deserving" of support. Especially in primaries, one can justify more public-service broadcasts, publicly financed mailings and perhaps modest matching grants. But public-financing's advocates have much more in mind. They want to assure challengers not just basic access but equal funds. S. 926 would promote parity by setting spending limits as a condition of public aid. And if one candidate foregoes that aid and exercises his right to spend more in private money, his opponent would get extra subsidies.

What's wrong with this? For one thing, it reflects a simplistic view of the role of money in campaigns. More dollars don't always mean more votes. In the past five years, 17 men have come to the Senate the hard way, by beating incumbents; nine of those 17 won even though they were outspent. Beyond that, S. 926 would legislate a value judgment: Big spending is bad. But if a candidate with wealth or access to large sums does spend millions, as long as his financing is lawful and fully disclosed, who should decide whether that's fair or wholesome? Since the record suggests that lavish spending is not necessarily decisive and can itself become a campaign issue, why not let the voters make these judgments on a case-by-case basis?

That leads to the rock-bottom question: To what extent should government regulate political activity? Public financing of presidential campaigns, of course, also poses that question and in time may help to answer it. In our view, that experiment worked well enough last year to be continued in 1980. It was, however, limited to contests for one nationwide office. And it did affect the structure of politics, especially the nature of fund-raising and the role of political parties, in ways that are not yet entirely clear. The problem of dealing fairly with third-party and independent candidates remains unsolved and may be unsolvable.

Finally, the whole regulatory effort launched in 1974 has produced not just administrative burdens and snarls but also a worrisome degree of official involvement in the details of political practices. That, more than anything else, suggests that Congress should not rush into public financing for Senate and House campaigns across the land. A law meant to return politics to the people would defeat its own purpose if it turned out, instead, to be dictatorial and stultifying.

Mr. HATCH. Mr. President, as the flurry of debate continues on the question of Federal funding of senatorial elections, many places serve as a forum for public opinion. I refer my distinguished colleagues to an editorial appearing in the Washington Post on Sunday, July 31, 1977, entitled "Campaign Money and Public Trust."

This editorial clearly identifies some of the hidden consequences which could follow from passage of S. 926. It points out that the actions which have made "special interest" and "corruption" synonymous were crimes long before they occured. It also points out that the role of big donors and political action committees would not be diminished by S. 926. I commend this editorial to my colleagues and ask unanimous consent that it be inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Finally, the whole regulatory effort launched in 1974 has produced not just administrative burdens and snarls but also a worrisome degree of official involvement in the details of political practices. That, more than anything else, suggests that Congress should not rush into public financing for Senate and House campaigns across the land. A law meant to return politics to the people would defeat its own purpose if it turned out, instead, to be dictatorial and stultifying.

POSITION ON CLOTURE VOTE

Mr. ANDERSON. Mr. President, may the record show that as I was traveling today from Minnesota to Washington in order to cast my vote in favor of the motion to invoke cloture, I was unavoidably detained by violent weather. Had the airplane I was traveling in been able to land as scheduled, I would have been here and voted. Mr. President, may the record show clearly my support of the cloture motion.

Mr. HATCH. Mr. President, the controversy over Federal funding of political campaigns is not new to this Congress. For almost a decade now the propriety, efficacy and intent of using tax checkoffs to finance elections has been debated.

In the 93d Congress, the distinguished Senator from South Carolina, Mr. THURMOND, inserted into the RECORD an article entitled "The Ripoff Named Reform." This straightforward expression of mistrust and scepticism was written by Patric J. Buchanan and appeared in Newsweek magazine. I ask unanimous consent that this article be printed in the RECORD, again for consideration, by my colleagues in the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RIPOFF NAMED REFORM

Having passed the Senate by a score of votes, "public funding" of Federal campaigns is before the House. If it is enacted, the burden of financing future Federal campaigns will be shifted permanently off congressmen, their fund raisers, and "fat cats"—onto the backs of the American taxpayers.

The ultimate argument of Senate liberals has a certain crude appeal: only if you taxpayers shoulder the full cost of all our future campaigns, i.e., ads, airline tickets, polling and partying, only then can you be certain we won't sell you out to the big contributors.

This legislation amounts to as splendid a piece of political larceny as this city has seen in some time. What gives the planned political ripoff of the Treasury a special patina is that the enterprise was conceived and carried out in the hallowed name of campaign reform.

As Senator Roscoe Conkling observed: when Dr. Johnson referred to patriotism as the last refuge of a scoundrel, he obviously had not fully considered the uses of the word "reform."

Where, during the Senate balloting, were those eloquent opponents of Congressional "conflict of interest"—Senators Bayh, Mondale, Kennedy, and Jackson? Each, with unblinking eye, voted himself millions of dollars in Federal matching funds for his Presidential primary campaign in 1976—with $17 million in prize money to the winner. As they say in the Statehouse, when the political pork is about to be distributed, "what the hell do you mean 'conflict of interest'? This bill doesn't conflict with my interests."

WINNERS

Who will be the winners when taxpayers are forced to finance elections?

Topping the list is Common Cause and John W. Gardner, the former HEW secretary, who, with ex-Attorney General Ramsey Clark, provided the indispensable goo-goo sheen to LBJ's war Cabinet during the years of escalation in Vietnam. When large private contributions become a Federal crime, Common Cause, the liberal lobby, becomes the likely repository for the millions in "peace" and "conscience" money that can no longer go to liberal candidates. Small wonder the Gardner team has been working the Hill as only the National Rifle Association can, when the Saturday-night special is in trouble.

Runners-up would have to be Mr. Meany and Cope. While the legislation restricts monetary contributions, no similar prohibitions are placed upon contributions in kind, i.e., the millions in manpower unions provide to candidates.

A third beneficiary would be the big media. Under the bill, conservative Republicans—prohibited from raising the funds to overcome off-year media bias in favor of liberal candidates and causes—would have to depend increasingly upon the big media's fairness, objectivity and balance. Good luck.

Fourth, the measure might be retitled the "Incumbents Preservation Act." Not only will congressmen be able to bill the Treasury for campaign costs; the measure effectively clips the wings of potential challengers by denying them the financial resources needed to overcome the traditional incumbents' advantages of recognition, the franking privilege and free media in the off year.

LOSERS

Who are the losers?

First, the nation's business men, whose political influence will contract, while the power of their critics and adversaries in the national media and labor will be correspondingly enhanced.

Second, conservative Republicans, one of whose primary political resources will be curtailed. Third, that perennial loser when national legislators gather, the taxpayer. Certainly, he will be pleased to learn that his role in the national atonement for Watergate is to spare the friends of Senator Kennedy the burden of financing his Presidential ambitions. A fourth loser will be our major political parties. In a prophetic observation, FDR once termed welfare a "narcotic," a "subtle destroyer of the human spirit." What the dole has done to millions, public financing will do for our political parties, when they start mainlining it out of the Treasury.

That "public funding" should be ballyhooed as the answer to Watergate is thoroughly in keeping with the modern politician's instinctive response to each new "crisis" or "problem" that arises: create a new agency, draw up some new laws, give government new powers.

Even those most enthusiastic about the bill, however, leave the impression that they are unconvinced by their own arguments. Does anyone truly believe the influence peddlers and vote buyers who congregate along the Potomac will pull up stakes because the 93rd Congress has outlawed campaign contributions as a medium of exchange?

Few liberals believe that. To them, "public financing" means another new Federal agency, new Federal jobs for sympathetic bureaucrats and those new rules, regulations and guidelines they love to draw up and enforce.

All the media propaganda to the contrary notwithstanding there is no "irresistible public demand" for this legislation. Only 14 percent of the American taxpayers, one in seven, this year exercised the political checkoff on their tax returns, despite the fact it would not have cost them a dime. The 86 per cent who voted to ignore the checkoff option seem rather more expressive of the public will than the tiny fraction who did not.

GOOD-BY JEFFERSON

To the conservative, the measure is just another utopian exercise, calling forth new restrictions on individual freedom, new intrusions into the private sector, and a new transfer of wealth, power and responsibility from the citizenry to the bureaucracy—when every lesson of the last decade screams out that we are headed in the wrong direction.

Finally, in that it requires taxpayers to subsidize candidates they oppose, the scheme is antidemocratic in nature. "To compel a man to furnish contributions of money for the propagation of opinions which he disbelieves is sinful and tyrannical." That is what Thomas Jefferson at least believed and wrote in the Statute on Religious Freedom. And it is at least mildly heartening to know that in 1974 the caucus of the Democratic Study Group would have thrown him out on his ear.

(This concludes additional statements submitted on S. 926.)

Mr. TOWER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CLOTURE MOTION

Mr. ROBERT C. BYRD. Mr. President, I send a cloture motion to the desk.

The PRESIDNG OFFICER. The cloture motion having been presented under rule XXII, the Chair, without objection, directs the clerk to read the motion.

The assistant legislative clerk read as follows:

CLOTURE MOTION

We, the undersigned Senators, in accordance with the provisons of Rule XXII of the Standing Rules of the Senate, hereby move to bring to a close debate upon S. 926, a bill to provide for the public financing of primary and general elections for the United States Senate.

Robert C. Byrd, Dick Clark, Alan Cranston, Edward M. Kennedy, Gary Hart, Mike Gravel, Adlai E. Stevenson, John A. Durkin, Spark M. Matsunaga, Wendell R. Anderson, James Abourezk, Joseph R. Biden, Jr., Howard M. Metzenbaum, Claiborne Pell, Patrick Leahy, Harrison Williams, John Glenn, Gaylord Nelson, Walter D. Huddleston, William Proxmire.

Mr. TOWER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

FURTHER ROUTINE MORNING BUSINESS

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

JOINT RESOLUTION APPROVED

A message from the President of the United States announced that on July 31, 1977, he approved and signed the following joint resolution:

S.J. Res. 77. Joint Resolution to provide for a temporary extension of certain Federal Housing Administration mortgage insurance and related authorities and of the national flood insurance program, and for other purposes.

MESSAGES FROM THE HOUSE

ENROLLED BILL SIGNED

At 3:04 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that the Speaker has signed the following enrolled bill:

H.R. 7558. An act making appropriations for Agriculture and Related Agencies programs for the fiscal year ending September 30, 1978, and for other purposes.

The enrolled bill was subsequently signed by the President pro tempore.

REPORTS OF COMMITTEES SUBMITTED DURING THE RECESS

Under authority of the order of the Senate of July 29, 1977, the following reports were submitted during the recess of the Senate on July 29, 1977:

By Mr. CRANSTON, from the Committee on Veterans' Affairs:

With an amendment:

H.R. 6502. An act to amend title 38 of the United States Code to provide an automobile assistance allowance and to provide automotive adaptive equipment to veterans of World War I (Rept. No. 95-375).

H.R. 7345. An act to amend title 38 of the United States Code to increase the rates of disability and death pension and to increase the rates of dependency and indemnity compensation for parents, and for other purposes (Rept. No. 95-374).

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. THURMOND, from the Committee on the Judiciary:

Without amendment:

H.R. 1952. An act to amend the corporate name of AMVETS (American Veterans of World War II), and for other purposes (Rept. No. 95-376.)

By Mr. RIBICOFF, from the Committee on Governmental Affairs:

A special report entitled "Report to the Senate Pursuant to Section 302(b) of the Congressional Budget Act (Rept. No. 95-377).

Mr. RIBICOFF. Mr. President, pursuant to section 302(b) of the Congressional Budget Act, I herewith submit the report of the Committee on Governmental Affairs concerning the budget authority allocated to it in the joint explanatory statement of managers accompanying the conference report on the first concurrent resolution on the budget:

The PRESIDING OFFICER. The report will be received and printed.

By Mr. WALLOP, from the Committee on the Judiciary:

Without amendment:

H.J. Res. 372. A joint resolution to authorize the President to issue a proclamation designating the week beginning on November 20, 1977, as "National Family Week" (Rept. No. 95-378).

By Mr. JACKSON, from the Committee on Energy and Natural Resources:

Without amendment:

S. 1935. A bill to amend Public Law 95-18, providing for emergency drought relief measures (Rept. 95-379).

By Mr. CANNON, from the Committee on Rules and Administration:

Special report entitled "Accounts of Senate Committees, Offices of Members, and Offices of the Senate and Expenses Incurred by Senators in the use of the Senate Recording Studio" (Rept. No. 95-380).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. LONG, from the Committee on Finance:

Azie Taylor Morton, of Virginia, to be Treasurer of the United States.

Robert H. Mundheim, of Pennsylvania, to be General Counsel for the Department of the Treasury.

Blandina Cardenas, of Texas, to be Chief of the Children's Bureau, Department of Health, Education, and Welfare.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. ROBERT C. BYRD:

S. 1967. A bill to amend section 218 of the Social Security Act to require that States having agreements entered into thereunder will continue to make social security payments and reports on a calendar-quarter basis; to the Committee on Finance.

By Mr. RIBICOFF:

S. 1968. A bill to authorize the establishment of the Long Island Sound Heritage in the States of Connecticut and New York; to the Committee on Energy and Natural Resources.

By Mr. HATFIELD:

S. 1969. A bill to reform and simplify the Federal individual income tax; to the Committee on Finance.

By Mr. PERCY:

S. 1970. A bill to establish the National Commission on Interfuel Competition; to the Committee on the Judiciary.

By Mr. WILLIAMS:

S. 1971. A bill to remove excise tax on bus parts and accessories and to remove excise tax on certain items used in connection with intercity, local, and school buses; to the Committee on Finance.

By Mr. PERCY:

S. 1972. A bill to insure adequate compensation to the United States for the use of Federal property for automobile parking purposes, to encourage the use of mass transportation and car-pooling by Federal employees, and for other purposes; to the Committee on Environment and Public Works.

By Mr. NELSON:

S. 1973. A bill to amend the Arms Export Control Act to change the method of determining the period of time for adopting a concurrent resolution of Congress objecting to a proposed sale under such Act; to the Committee on Foreign Relations.

By Mr. NELSON (for himself and Mr. CULVER):

S. 1974. A bill to amend section 553 of title 5, United States Code, to improve Federal rulemaking practice by creating procedures for regulatory issuance in two or more parts; to the Committee on the Judiciary.

By Mr. DOLE (for himself, Mr. TALMADGE, Mr. HUMPHREY, Mr. INOUYE, Mr. MATSUNAGA, Mr. SARBANES, and Mr. RIEGLE):

S. 1975. A bill to amend title XVIII of the Social Security Act to provide coverage for the services of optometrists related to the treatment of aphakia; to the Committee on Finance.

By Mr. CRANSTON:

S. 1976. A bill to add certain lands to the Redwood National Park in the State of California, to strengthen the economic base of the affected region, and for other purposes; to the Committee on Energy and Natural Resources.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. RIBICOFF:

S. 1968. A bill to authorize the establishment of the Long Island Sound Heritage in the States of Connecticut and New York; to the Committee on Energy and Natural Resources.

Mr. RIBICOFF. Mr. President, Long Island Sound is the largest protected area of saltwater available to our country. Located between New England and Long Island in New York, the sound extends for 90 miles east and northeast from New York City to Plum Island. This great water resource, formed by glaciers thousands of years ago, is situated in the midst of North America's greatest population center.

The 1,300 square miles of Long Island Sound represent a unique study in contradictions. On the one hand it is a pop-

ular area for swimming, boating and sport fishing; on the other hand, it serves as a catch basin for urban waste. In some locations the sound is bordered by industrial harbors and decaying waterfronts while elsewhere there are bright, clean beaches and scenic areas of magnificent beauty. Commercial activities range from nuclear submarine construction to clamming. It is the nesting area for numerous species of birds—the least, common and roseate terns, the glossy ibis, the great egret and the herring and great black-backed gulls. Several nuclear and conventional power generating facilities are situated on its shores.

Long Island Sound displays the way in which Americans use and enjoy but also misuse and destroy many invaluable natural resources. For the last several decades the sound has been jeopardized by spreading pollution and unplanned development along its shores. Described by Daniel Webster as the American Mediterranean, this important and scenic body of water faces a questionable future. Both the public and the private sector have been taking steps and making plans which may infringe on the sound's great potential.

Although there may be no overt attempts to attack or destroy any portion of the sound or its shores, this important area is threatened by the menace of our own carelessness. Water pollution, shoreline erosion, the destruction of rich marshlands, and the loss of open spaces all diminish this great asset. The sound and its shoreline risk being engulfed by unplanned and uncaring urban sprawl.

The sad fact is, Mr. President, that what was once a rich fluid extension of the Atlantic Ocean has become an urban sea which, in some locations, sustains only algae and similar growth. The sound is on the brink of suffering irreparable harm. The quality of life along the shores of southern Connecticut and northern Long Island is menaced. The remaining marshlands, the ecologically fragile wetlands and various rare and endangered species of waterfowl are in even greater danger. Prompt and affirmative action must be taken to reverse the trend of recent years and to protect this rich natural resource.

My deep concern over the sound's future prompted me to introduce legislation in June 1969 which authorized a comprehensive study of the sound and its shoreline. This investigation was to carefully examine the public and private development programs which existed at the time and which were contemplated in the future. A series of hearings were conducted in Connecticut and New York on the various problems facing the sound. Close consideration was given to the many recommendations we received on plans to deal with these diverse issues.

In August 1971 the New England River Basins Commission—NERBC—initiated the Long Island Sound study. The goal of this study was to produce a plan of action which balanced the needs to protect, conserve, and wisely develop the sound and its related shoreline as a major economic and life-enriching resource for the more than 12 million people who live near it. After almost 4 years of effort, the expenditure of $3 million, numerous hearings and onsite studies, the NERBC completed its work. The final report contained more than 600 recommendations for guiding shoreline development, reversing the trend in pollution and enhancing the sound's economic, recreational, and esthetic potential. The proposals suggest action by the Federal, State and local governments.

One of the key recommendations of the Long Island Sound study was the creation of the Long Island Sound Heritage—an expanded system of parks and beaches in Connecticut and New York which would enable more people to enjoy the sound's pleasures. The study proposed that the Federal Government furnish approximately $50 million. These Federal funds would provide up to 75 percent assistance for State and local acquisition and/or development of certain areas of particular recreation, conservation, and scenic opportunity. Fifteen different locations in Connecticut and New York were specifically nominated for acquisition or expansion.

Today I am introducing legislation to carry out this recommendation of the Long Island Sound study. This measure authorizes the creation of the Long Island Sound Heritage in Connecticut and New York. It proposes 15 sites in these two States to be considered for initial inclusion in the Heritage.

The bill I introduce today recognizes that portions of the sound reflect the region's unique natural and cultural heritage. It focuses on the fact that the area's scenic, recreational, natural, and cultural resources are threatened by growth and development pressures. In addition, the legislation addresses the serious shortage of public conservation, recreation, and open lands along the shores of the sound.

The Secretary of the Interior is directed to develop specific plans, following onsite public hearings, for the acquisition, development, protection, maintenance, and administration of the 15 sites. These plans are to be available within a year of the bill's enactment. The plans are to include the specific description of the various Heritage sites, their proposed uses, provisions for public access and mass transportation as well as minimizing the impact on local public facilities. Recommendations on the best methods to acquire, develop, and maintain the properties will also be covered. Once plans have been prepared, the Interior Secretary can acquire the sites, either through donation or purchase. The Interior Department will then enter into agreements with local and State officials on the administration and maintenance of the areas as components of the Heritage. Financial and other aid will be furnished to the States and local communities by the Federal Government to assist them in administering the sites.

The Long Island Sound Heritage will inaugurate a close working relationship among the Federal Government, the States of Connecticut and New York and the appropriate local communities in acting to preserve and protect these areas. Furthermore, natural scientists, such as marine and wetland biologists, local conservation, recreation, and environmental groups and concerned citizens shall play an integral role in the formulation of plans for the protection, development, and administration of the Heritage.

I ask unanimous consent that the full text of the Long Island Sound Heritage bill and a brief section-by-section analysis be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1968

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

FINDINGS AND STATEMENTS OF POLICY

SECTION 1. The Congress finds and declares that—

(1) there are portions of Long Island Sound, such as its waters, islands therein and lands adjacent thereto, which reflect the special natural and cultural heritage of the region;

(2) there are resources of extraordinary scenic, scientific, recreational, natural, historic, and cultural value which are being irretrievably damaged and lost through growth and development pressures, and that such development threatens heretofore successful State and local government and private voluntary preservation, conservation, and planning efforts;

(3) there exists a serious shortage of public conservation, recreation and open lands along the shores of Long Island Sound, and that this shortage of public land has limited the recreation opportunities to the 12 million people living and working in the Long Island Sound region, as well as the Nation;

(4) State and local government efforts to provide conservation and recreation opportunities and to protect unique areas have been hampered by severely limited financial resources;

(5) there is a national interest in preserving and conserving these resources and values for the present and future well-being of the Nation, and the massive Federal expenditures committed to the restoration of the Long Island Sound are evidence of the national interest in the health and use of the Sound;

(6) critical to more effective conservation of the unique values and wise use of Long Island Sound and its environs is a program of coordinated action by Federal, State and local governments to protect areas for natural, scenic, ecological, scientific, cultural, historic, conservation and recreation opportunities; and

(7) the developing of the Long Island Sound Heritage should be carried out in a controlled manner to preserve and protect natural ecosystems.

DEFINITIONS

SEC. 2. For the purpose of this Act, the term "Long Island Sound Heritage" or "Heritage" shall mean those parcels of water-related land areas which, because of their unique scenic, historic, architectural, cultural, conservation, ecological, scientific and natural values, possess characteristics worthy of the Long Island Sound Region.

LONG ISLAND SOUND HERITAGE

SEC. 3. (a) In order to restore, preserve and protect areas which reflect or could reflect the unique natural and cultural heritage of Long Island Sound, Congress hereby authorizes the establishment of the Long Island Sound Heritage in accordance with the provisions of this Act.

(b) The following areas shall be considered for initial inclusion in the Heritage:

(1) Bluff Point State Park, Groton;

(2) Ram, Dodges, and Andres Islands in

the Mystic Island Group in the eastern Sound;

(3) Rocky Neck State Park in East Lyme, including Niantic State Farm for Women;

(4) Stony Creek Quarry and Faulkner's Island;

(5) Lighthouse Point Park, New Haven;

(6) Silver Sands State Park;

(7) Pleasure Beach in Bridgeport; Long Beach in Stratford; and the Great Meadow wetland complex;

(8) Sheffield Island and Chimon Island in Norwalk;

(9) Sherwood Island State Park;

(10) David's Island in New Rochelle;

(11) Fort Totten in Queens;

(12) Port Washington Sand Pits;

(13) Hen Island in Rye;

(14) Caumsett State Park; and

(15) Roanoke Point in Suffolk.

(c) The Long Island Sound Heritage shall include lands, waters, islands, interests or partial interests therein, as may be identified as having special recreational, ecological, conservation, scenic, historic, or cultural potential by the Secretary of the Interior (hereinafter referred to as "Secretary"), by other Federal agencies, or by the State of Connecticut or New York, or political subdivisions thereof.

(d) At such time as the Secretary, in cooperation with the States of Connecticut and New York, and affected political subdivisions thereof, determines that lands, and waters and interests therein, have been sufficiently identified, designated or acquired to provide an efficiently administrable unit to establish the Long Island Sound Heritage, the Secretary is authorized and directed to establish the Long Island Sound Heritage by publishing notice to that effect in the Federal Register, together with a detailed description and map setting forth the parcels of land included therein, and to make such notice and maps otherwise available to the public.

IMPLEMENTATION OF THE LONG ISLAND SOUND HERITAGE

SEC. 4. (a) To implement the purposes of this Act, the Secretary, in cooperation with the States of Connecticut and New York, and affected political subdivisions thereof, the United States Army Corps of Engineers, the New England River Basins Commission, other interested Federal departments and agencies, and appropriate natural scientists, conservation, environmental, and recreation groups, and concerned citizens shall formulate, within one year following the date of enactment of this Act, detailed, site-specific plans for the acquisition, development, protection, maintenance and administration of those areas, parcels of land, or structures thereon, which comprise the Long Island Sound Heritage.

(b) In formulating such plans, the Secretary shall conduct public hearings at or near sites selected for inclusion in the Heritage, and shall receive and consider the comments and recommendations of public interest groups, appropriate natural scientists, conservation, environmental, and recreation groups and other interested individuals, and, if necessary, shall modify such plans accordingly.

PLANS

SEC. 5. The plans formulated under section 4 shall contain but not be limited to the following elements:

(1) precise delineations of the areas to be included in the Heritage.

(2) proposed uses, including conservation, nature trails, recreation, historic and cultural preservation, wetlands, and scientific purposes.

(3) provisions for public access and mass transportation to such areas, where appropriate.

(4) provisions to minimize the impact, such as traffic, and demand for services, on local public facilities.

(5) recommended methods to best assure that such land and water areas, including beaches, will be available to the public, consistent with recreation and conservation purposes of the Heritage.

(6) recommendations as to the least costly and most expedient methods of acquisition, development, and maintenance of such properties.

(7) recommendations to the appropriate agencies and levels of government as to carrying out the plans and proposals contained therein.

LAND ACQUISITIONS

SEC. 6. The Secretary is authorized to acquire by donation or by purchase with donated or appropriated funds, all lands, waters, and interests or partial interests in the areas enumerated in section 3(b) above, and which may be identified in the future.

COOPERATIVE AGREEMENTS

SEC. 7. (a) In furtherance of the purposes of this Act, the Secretary is authorized to enter into cooperative agreements with each of the States of Connecticut and New York, and political subdivisions thereof, pursuant to which such States or subdivisions shall be authorized to administer, operate and maintain areas within such States or subdivisions which are components of the Long Island Sound Heritage.

(b) The Secretary is authorized to provide, by grant or otherwise, financial and other assistance to each of the States of Connecticut and New York or political subdivisions thereof to assist those States or political subdivisions in carrying out its responsibilities under any such agreement. Such grants shall be payable at such time and in such manner, and in such amounts, and subject to such conditions, as the Secretary shall prescribe by regulation, but in no case shall exceed 75 per centum of the cost of administering, operating, or maintaining eligible areas which comprise the Long Island Sound Heritage.

(c) Any such cooperative agreement shall require that such lands, waters, interests or partial interests therein, be administered, operated and maintained in accordance with the plans formulated pursuant to section 5 of this Act, the provisions of this Act, and consistent with the standards promulgated pursuant to the Act of August 25, 1916 (39 Stat. 335; 16 U.S.C.A. 1, 204), as amended and supplemented.

AUTHORIZATION OF APPROPRIATIONS

SEC. 8. For the fiscal year beginning October 1, 1977, there is authorized to be appropriated the sum of $50,000,000, and for each fiscal year thereafter, such sum as may be necessary to carry out the provisions of this Act.

SECTION-BY-SECTION ANALYSIS

S. 1968, To authorize the establishment of the LONG ISLAND SOUND HERITAGE in the States of Connecticut and New York.

Section 1. Findings and Statements of Policy.

The Congress finds that portions of Long Island Sound reflect the region's special natural and cultural heritage; that invaluable resources are threatened by growth and development; that there is a serious shortage of public conservation and open lands along the Sound; that State and local government conservation efforts are hampered by a lack of funds; that there is a national interest in preserving and conserving the Sound's resources; and that the Long Island Sound Heritage's development should be carried out in a controlled manner.

Section 2. Definitions.

The Long Island Sound Heritage means those parcels of water-related land areas which, because of unique values, have characteristics worthy of the region.

Section 3. Long Island Sound Heritage.

Congress authorizes the establishment of the Long Island Sound Heritage to restore, preserve, and protect areas reflecting the unique natural and cultural heritage of the region. Fifteen locations are to be considered for initial inclusion in the Heritage. The Secretary of the Interior, other Federal agencies, the States of Connecticut and New York or local governments can identify areas having the necessary potential for inclusion in the Heritage.

Section 4. Implementation.

Within one year following the bill's enactment the Interior Secretary—with the cooperation of Connecticut, New York, affected local governments, other Federal and regional agencies, conservation and environmental groups and concerned citizens—is to formulate detailed plans for the Heritage. On-site hearings are to be conducted and the comments and recommendations of all interested groups and persons are to be received.

Section 5. Plans.

Plans shall contain precise delineations of the areas; proposed uses; provisions for public access and mass transportation where appropriate; provisions to minimize the impact on local public facilities; public availability; acquisition, development and maintenance methods; and recommendations for carrying out plans.

Section 6. Land Acquisitions.

The Interior Secretary can acquire land through donation or purchase.

Section 7. Cooperative Agreements.

The Interior Secretary can enter into cooperative agreements with Connecticut, New York and local governments for them to administer, operate and maintain areas within the Heritage. Financial assistance, including grants up to 75 percent of the cost of administering the areas, will be available from the Federal Government under conditions prescribed by the Interior Department.

Section 8. Authorization.

$50 million, the figure recommended in the NERBC Long Island Sound Study, is authorized for Fiscal Year 1978 and open-ended authorizations for subsequent fiscal years.

Mr. RIBICOFF. Mr. President, prior to the introduction of the Long Island Sound Heritage bill, I sought the views and recommendations of the responsible officials of Connecticut and New York, various local officials and a number of environmental and conservation groups. I am very gratified by the response. My proposal has met with support across the board. In each instance specific suggestions and/or critical analyses were made.

I welcome these responses and, in particular, the recommendations and thoughtful analyses which were provided. I ask unanimous consent that the text of my letter soliciting views and the responses I have received to date be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MAY 5, 1977.

Hon. STANLEY PAC,
Commissioner of Environmental Protection, Department of Environmental Protection, Room 117, State Office Building, Hartford, Conn.

DEAR STANLEY: Almost two years ago the New England River Basins Commission (NERBC) submitted a final report on its

four-year study of the Long Island Sound. This comprehensive investigation examined a number of issues related to the economic and environmental future of the Sound and to the twelve million persons residing near it.

A major NERBC recommendation was the creation of the Long Island Sound Heritage—a proposal to acquire fifteen sites at various locations along the 577 miles of coastline in Connecticut and New York to protect their unique scenic, scientific, natural, historic and cultural resources. I believe this is a worthwhile recommendation and I have drafted legislation to create the Heritage. A copy of a "discussion draft" is enclosed for your information.

Briefly, this legislation notes the importance of these fifteen locations and provides that they should be closely examined by responsible local, state and Federal officials. If it is determined that they should be included in the Heritage, plans for their acquisition, development, protection, maintenance and administration are to be developed, following public hearings. Once such plans have been formulated, the Secretary of the Interior will acquire the sites through donation or purchase. The Secretary will then enter into agreements with local and state officials to administer, operate and maintain the areas as part of the Heritage. The Interior Department will provide financial and other aid to the states and local communities to assist them in carrying out the administration of the sites.

It has taken approximately a year to draft this measure. I believe it is now time to act to insure that these sites—and others which may be added in the future—are preserved and protected and that local communities and states are assisted in properly maintaining them.

In view of the scope of the proposed Heritage legislation and your obvious interest in this issue, I would welcome and appreciate your comments and observations. If possible, I would like to have your views and recommendations by June 15.

Sincerely,

ABE RIBICOFF.

STATE OF CONNECTICUT,
Hartford, June 6, 1977.

The Honorable ABRAHAM A. RIBICOFF,
337 Russell Senate Office Building,
Washington, D.C.

DEAR ABE: Thank you for providing me the opportunity to comment on proposed legislation affecting Long Island Sound. The work you have performed over the years in protecting and nurturing the sound has clearly led the way in developing a public attitude toward preservation of this resource. This legislation authorizing the establishment of the Long Island Sound Heritage in the states of Connecticut and New York is an excellent method of continuing these efforts.

I fully endorse the concept of protecting the unique and irreplaceable resources on the sound and properties adjacent to it. I will support your efforts to see that this proposal is enacted into law.

I would like to offer one suggestion. Those areas for inclusion in the "Heritage" which are presently owned and operated by the State of Connecticut, such as state parks and the State Farm for Women at Niantic, should remain under the jurisdiction of the state. This would accomplish the objectives of the "Heritage" plan without adding administrative and procedural complications to the proposal.

I have discussed the Long Island Sound Heritage proposal with Commissioner Stanley J. Pac of the Connecticut Department of Environmental Protection and he agrees with my recommendation concerning Connecticut state parks. Commissioner Pac also will support your efforts to protect the resources of Long Island Sound.

Thank you for the opportunity to comment on this important legislation.

With best wishes,

Cordially,

ELLA GRASSO,
Governor.

STATE OF NEW YORK, DEPARTMENT OF ENVIRONMENTAL CONSERVATION,
Albany, N.Y., June 21, 1977.

Hon. ABRAHAM RIBICOFF,
U.S. Senate, Committee on Governmental Affairs, Washington, D.C.

DEAR SENATOR RIBICOFF: This is in reply to your letter of May 5 in which you requested comments on the draft bill to establish a Long Island Sound Heritage.

We have reviewed this draft and also have sought comments from other affected state agencies.

In our comments to you on May 13, 1976 we indicated that we support this legislation as a major step forward from the Long Island Sound Study. At the same time we recognized that some of the areas proposed for study are controversial. We also emphasized the need for close cooperation between the states and the Secretary of the Interior.

With regard to the latter point, we are pleased to note the provision for cooperative agreements (Section 7) between the Secretary and the states and their local governments for administration, operation and maintenance of areas comprising the Heritage. However, we also recommend that such agreements should be extended to include the study phase of the program.

We also are concerned with the timing suggested in Section 4 of the bill. Subdivision (a) states that site specific plans for areas to be included must be prepared one year from the date of enactment. This timing does not allow for adequate study of the areas to be recommended for inclusion, nor does it seem to allow for subsequent additions to the Heritage.

The proposed funding levels and conditions are generous. They constitute a major advantage of this special legislation over the usual funding arrangements under the Land and Water Conservation Fund. It hardly needs to be pointed out, however, that this type of special federal funding formula, and the qualification of operation and maintenance expenses as well as acquisition and development activity for such funds, has not been well-received by the Administration and by Congress in the past.

We hope that these comments will be helpful to you. Please be assured of our continuing interest in and support for this proposal.

Sincerely,

PETER A. A. BERLE.

OFFICE OF THE MAYOR,
CITY OF BRIDGEPORT, CONN.,
June 13, 1977.

Hon. ABRAHAM RIBICOFF,
Senate Office Building,
Washington, D.C.

DEAR ABE: After carefully reviewing the discussion draft of the proposed bill to authorize the establishment of the Long Island Sound Heritage, I believe that this proposal is sound and would provide improved services to the populace of this region. As you know, municipalities such as Bridgeport are hard pressed these days to find the resources to fund the facilities and services required and demanded by our residents. The Heritage legislation is important because it permits and actually facilitates a comprehensive planning effort, with the technical assistance of the federal government, involving an area in Bridgeport (Pleasure Beach) which has traditionally suffered from a lack of funds to properly maintain it. I believe that a study of the 15 sites suggested for initial inclusion in the Long Island Sound Heritage is a worthwhile endeavor.

There is one problem, however, with the bill as it now stands and this relates to the question of providing capital improvements in areas selected for inclusion in the Heritage. While the legislation would provide for up to 75 percent of the ". . . cost of administering, operating, or maintaining eligible areas . . .", the issue of who would fund the construction of necessary facilities is not addressed. I would recommend that the federal government assume all or most of the cost of capital improvements in a designated area. In the case of Pleasure Beach, public access will be a problem due to the antiquated bridge, and the inclusion of this area would seem to necessitate a new structure.

I trust that you will introduce this legislation as soon as possible and keep my office informed of its progress.

Yours very truly,

JOHN C. MANDANICI,
Mayor.

OFFICE OF THE MAYOR,
New Haven, Conn., June 20, 1977.

Senator ABRAHAM RIBICOFF,
Committee on Governmental Affairs, U.S. Senate, Washington, D.C.

DEAR ABE: I am writing to express my support for your draft bill creating the Long Island Sound Heritage.

In its local-Federal partnership, this is unquestionably landmark legislation, and a significant harvest from your Long Island study.

I am particularly impressed by the fact that the Heritage brings national interest to bear on precious sites and locations which previously would have been considered too small for Federal attention.

I have had the opportunity to visit national parks throughout the United States and I have great admiration for the National Park Service. The development of a workable and continuing partnership has a means for the Service to oversee small areas while maintaining local control represents a critical innovation in the application of the Federal interest.

Throughout the legislation I am impressed with the careful thought and attention given to the broad range of issues which would inevitably arise in the implementation of such a program, including: opportunities for public input; the impact of traffic and the need for transportation arrangements; the need for continued maintenance of facilities; and concern for those particular assets which make the sites appropriate for inclusion in your initial Heritage list.

The selection of Lighthouse Park is most appropriate, and appears to meet your criteria precisely. I would note that the Long Island Sound study itself, in describing the Heritage proposal and the specific recommendations for Lighthouse Park, looked to the acquisition of adjacent property known as the Shell Beach area in East Haven. This land presently is unutilized, and contains about six vacant cottages, as well as a substantial area of beach and tidal wetland.

I have a few brief recommendations on the legislation:

1. Section 3(d) states that when "lands and waters and interests therein, have been sufficiently identified, designated or acquired to provide an efficiently administrable unit to establish the Long Island Sound Heritage, the Secretary is authorized and directed to establish the Long Island Sound Heritage. . . . etc." The question of what constitutes an efficiently administrable unit is of course an important one.

I would strongly recommend that the identification of any one of the recommended initial Heritage sites should constitute such a unit and start implementation of the Act's purposes.

2. Section 4(a) states that the Secretary is to work in cooperation with state and local bodies, as well as the Army Corps of Engineers, the New England River Basins Commission, other federal departments, agencies, appropriate natural scientists, conservation, environmental, and recreation groups and citizens; and indicates that this combination is to formulate within one year following the date of enactment of the legislation, detailed site plans. Clearly, the development of specific plans for such an important project should draw upon all knowledgeable sources. However, in the development of any plan, it is important there be a body or bodies specifically responsible for the final determination of just what shall constitute the plan and these should be identified.

In my view, the most appropriate pairing of interests in terms of final responsibility would be the Park Service and that entity which is to assume final operation, administration and maintenance of the facility.

3. The means of funding and carrying out improvements to Heritage sites is not set forth in the bill. I would suggest full federal funding, perhaps on a reimbursement basis, with construction handled locally. This would involve a Cooperative Agreement as delineated in Section 7. A new section covering construction and other improvements might be added, specifying full Federal funding, with an option for Federal or local construction.

It is important to stress that cooperative agreements otherwise discussed under administration, operation, and maintenance (Sect. 7) are set on a 75% funding basis. Improvements sould be at 100%.

My congratulations for your efforts to preserve the heritage of Long Island Sound.

Cordially,

FRANK LOGUE,
Mayor.

CONNECTICUT FOREST AND PARK ASSOCIATION, INC.,
East Hartford, Conn., June 7, 1977.

Senator ABRAHAM A. RIBICOFF,
Chairman, Committee on Government Affairs, U.S. Senate, Washington, D.C.

DEAR SENATOR RIBICOFF: In response to your letter of May 5, 1977, I have reviewed the discussion draft of the proposed bill to establish the Long Island Sound Heritage. As you know I have previously indicated my support for this concept to members of your staff as well as the general support of the Connecticut Forest and Park Association, Inc.

I believe that the designation of the 15 areas proposed to be included in the Heritage is sound in that the possibility to improve the co-ordination efforts to preserve the natural and ecological values of the areas is greatly enhanced. I would also hope that the study requested in the proposed bill would be sufficient to deliniate areas to be preserved for their educational and scientific value such as Bluff Point Coastal Reserve in Groton and others for more intensive recreational development such as Silver Sands State Park in Milford.

I have very strong feelings about the need to acquire, as soon as possible, those areas which are not currently publicly owned. Several of these areas have been on the market from time to time and experience has shown that when they are sold they are quite likely to be developed and less likely to be available for public use.

I do not believe that the title to areas presently owned by the state of Connecticut has to pass to the Federal government so that the Secretary of the Interior can assist the state in the management of these areas. I do, however, support the thought that because of the significance of these areas, the state of Connecticut both needs and welcomes the prospect of Federal assistance in the development and management of these areas. In addition, I also believe that the state can accomplish the management objectives at a lower cost to the public.

I also believe it would be desirable to provide for the identification of additional areas to be included in the Heritage during the study period.

I am most appreciative of the opportunity to present these brief comments which will be supplemented in the hearing process in tho future.

Sincerely,

JOHN E. HIBBARD,
Secretary-Forester.

TOWN OF STRATFORD, CONN.,
May 16, 1977.

Hon. ABRAHAM RIBICOFF,
Chairman, Committee on Government Affairs, Washington, D.C.

DEAR SENATOR RIBICOFF: Your efforts toward drafting legislation for the creation of the Long Island Sound Heritage are to be highly commended.

The Town of Stratford fully supports your efforts to preserve and protect the unique and valuable costal areas along Long Island Sound.

Of special interest to the Town of Stratford in the proposed Senate bill are Long Beach and the Great Meadows wetland complex cited on page 3, section 3, item number 7.

Stratford has been seeking Federal funds for some time to acquire the Great Meadows wetland complex as a viable open space area through the Bureau of Outdoor Recreation and the National Oceanic and Atmospheric Administration. Our efforts have met with great enthusiasm but little success due to the magnitude of the area involved.

Acquisition and protection of the Great Meadows for open space would be a high priority as far as Stratford is concerned.

Since the Long Beach area of Stratford is presently owned and adequately protected and maintained by the Town of Stratford, I feel that inclusion of this area in the Long Island Sound Heritage would be a duplication of governmental efforts. Due to the funding limitation of the Act, money might be better spent in acquiring properties not already publicly owned and protected.

Thank you for the opportunity to contribute input into this worthwhile program and the Town of Stratford will cooperate in every way that it can to provide any needed information or assistance that we can make available.

Sincerely yours,

H. BERNHARD EWERT II,
Town Manager.

CITY OF MILFORD, CONN.,
May 13, 1977.

Honorable ABE RIBICOFF,
U.S. Senator, 337 Russell Senate Office Building, Washington, D.C.

DEAR ABE: Thank you for your lettter of May 5, regarding your draft of a bill to acquire property in Connecticut, including Silver Sands in Milford. As you may be aware, the City has been fighting a long battle with the State over this property, much of which is still owned by the United Illuminating Company.

Our concerns are with access, life guards, policing, and vandalism, all of which must now be borne by the City of Milford. Additionally, the State of Connecticut has promised to build a road along the north boundary of the park and create proper drainage for the wetlands, which encompass at least half the area. In the past, the State has been unwilling or unable to assist the City of Milford in any of these endeavors, and we have borne the load ourselves. This has been offset somewhat by the fact that we have received tax revenue from the United Illuminating property, which lasts until 1981.

The history of Silver Beach is much too long to discuss here. If the Federal government was willing to build a proper park and relieve the City of all responsibility for it, or at least recompense the City or State for its management, I would be more favorable; rather than the lack of action shown by the State over the last 15 years.

I have enclosed a clipping from the Bridgeport Post, which shows both the problem and attitude of the State at present. You will note particularly, the fact that the D.E.P. is willing to let the City of Milford spend money on its park. As you might be able to guess, we are not willing.

If I can be of further service to you in this matter, please do not hesitate to contact me.

Very truly yours,

JOEL R. BALDWIN, *Mayor.*

TOWN OF GROTON,
Groton, Conn., May 24, 1977.

Re: Long Island Sound Heritage

The Honorable ABRAHAM A. RIBICOFF,
U.S. Senate, 337 Russell Senate Office Building, Washington, D.C.

DEAR SENATOR RIBICOFF: Generally, I support the intent of this legislation and feel that the basic purpose has a great deal of merit. There should be an adequate program to carry out a plan for Bluff Point, however, it should be stressed that any plan developed for this area should reflect the concerns of the local community. At the time plans are formulated for the area, the Town should be assured that the potential impact on the Town will be kept to a minimum and the development will not impair the existing natural resource system of Bluff Point.

Sincerely,

CLINTON H. STRONG,
Town Manager.

YALE UNIVERSITY,
New Haven, Conn., May 26, 1977.

Senator ABRAHAM RIBICOFF,
Chairman, Committee on Governmental Affairs, U.S. Senate, Washington, D.C.

DEAR SENATOR RIBICOFF: The Long Island Sound Heritage Bill is superior in intent. I support the ideas and the general tenor of the bill. We have valuable shoreline resources which are being lost for all time. They must be protected. Unhappily, I do not believe the bill in its present form will accomplish its goals.

The Long Island Sound Study consumed a considerable amount of money and time. It was generally praised. It was ignored. We do not need any more hearings. We do not need any more general plans. We do not need any more subsidies to architects, planners, academics, ecologists and others. We need money for acquisition and for management.

The barriers to rapid acquisition are local control and fiscal tightness by those well able to afford certain public expenditures. Connecticut has consistently failed to spend its approved BOR funds because it has been unwilling to put up even the small amount of required matching funds. Connecticut is one of the richest states—yet in the realm of public services is one of the poorest. Funds for outdoor recreation are usually the first to be cut and the last to be supported. Fiscal irresponsibility is tied to local control. There are forty coastal towns. Each thinks of itself as an independent nation-state which seeks "foreign" aid from the State or the Federal Government, but like other foreign nations, it assumes this donation holds no obligations to the donor. The property tax is the sole support for local services and town politicians. Consequently, anything that threatens to take away substantial land resources from taxation will be feared. Secondly, each town thinks that the shore resource is its own and does not look kindly upon 'outsiders' using the facility.

Finally, there is the organized irresponsi-

bility where each region of the State looks elsewhere for its center. Fairfield County is an extension of Westchester County, New York. It wants to earn high salaries in the city and have low taxes and no ethnics in its countryside. Litchfield is a center of old wealth, quite content to collect on its stocks and bonds and protect its precious heritage through various restrictive covenants. The Northeastern counties assume they are still in a mid-19th century agricultural era with mom, apple pie, and the American Legion taking care of most things. The New London region has a direct symbiotic relation to the Defense Department and seems to consider Hartford as part of the enemy rather than the center of the State.

The Senator knows all of these political peculiarities. I am merely reminding him. If the intent of protection is to be accomplished, it must mean nearly 100 percent Federal financing; it must mean subsidy in lieu of taxes to the local community; it must mean ample funds for management of the facilities so that "outsiders" do not add to local burdens.

This last point requires a bit more elaboration. The Bluff Point Park has become virtually a local park for the Town of Groton. The State has acquired it but has not developed a management plan for its operation. I include a report done by some of my students to help nudge the State in a management direction. As this report clearly indicates, there is a great deal of money required to maintain a property after the high acquisition costs have been met. Too often we think that the big problem is gaining public ownership, yet this is only the very beginning. And when the State does acquire these valuable lands and then fails to provide adequate facilities for their use and maintenance, they become slums and a strong argument against public ownership of the next likely tract. Consequently, every dollar of acquisition should be doubled and applied to management of the existing properties.

In sum:

(1) Only the barest of funds should be spent on multi-colored maps and extensive hearings. The Long Island Sound Study gave the professionals and the concerned citizens their opportunity.

(2) Nearly 100 percent Federal Funding will be needed if the acquisitions are to occur before the properties are lost forever.

(3) Money in lieu of property tax should be available to the local towns where the properties are purchased.

(4) There is a strong reservoir of quality talent which can do many of the planning and development tasks at low cost . . . see the Bluff Point Plan. A program of small grants for activities such as this would return benefits several times over. Local professional consultants might complain, but let them be satisfied with the Environmental Impact Statement windfall.

(5) At least twice as much money should be allocated to aid the management of the acquired properties.

(6) As we mentioned in the 1973 SCORP, a contingency fund for acquisition following the next major hurricane is an ideal way to return properties to more ecological and economic uses.

Again, I admire the intentions of the Senator's Bill and make these suggestions in the hope that the realities of the bill will match the intentions. I shall be happy to elaborate on these and other points.

Sincerely,

WILLIAM R. BURCH, Jr.,
Professor of Forestry and Environmental Studies.

Mr. RIBICOFF. Finally, I ask unanimous consent that an excerpt from the final NERBC study on the Long Island Sound, containing the Heritage recommendation, be included in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

RECOMMENDATIONS

1. Long Island Sound Heritage. The study has concluded that there exists: (1) a serious shortage of general public open lands along the shores of the Sound, (2) large concentrations of recreationally deprived low and moderate income families throughout and on the edges of the study area; (3) very limited state and local financial resources for providing significantly increased access to the Sound; and (4) a clear federal interest in the general health and use of the Sound, as evidenced by the massive federal expenditures committed to its restoration.

Presently, the federal role in recreation takes primarily two forms: 50 percent cost sharing in state or local acquisition and development of land through the Land and Water Conservation Fund or 100 percent federal control of recreation lands by the creation of national parks and national recreation areas. Public comment on the recreation recommendations indicated that there is no support for a new national park or other federally-administered area. And, although the Bureau of Outdoor Recreation, which administers the Land and Water Conservation Fund, believed that their existing program and other federal programs were sufficient to provide more recreation, a majority of the other study participants and the general public felt otherwise, for the reasons listed above.

The study therefore recommends that Congress appropriate approximately $50 million to a Long Island Sound Heritage Fund, which would provide up to 75 percent federal assistance for state and local acquisition and/or development of certain areas of particular recreation, conservation, and scenic opportunity. Obviously, much more detailed site plans, including minimizing impacts upon wetlands and other natural systems, detailed cost estimates, and capacity ratings, will be required for each area. To be included in the Heritage:

The southeastern portion of Bluff Point State Park in Groton should be developed by 1977 with one-half mile of beach—in conjunction with Ram Island (see below)—and 500 picnic sites. Controlled hiking trails and an interpretive program will keep the southwestern portion of the park—including the eroding tombolo—undeveloped for wildlife and nature study.

Ram, Dodges, and Andrews Islands in the Mystic Islands Group in the eastern Sound, should be purchased immediately. One-half mile of beach on Ram should be developed by 1980, with ferry service from Bluff Point State Park. Dodges and Andrews should be limited to nature observation activities, with only casual recreation, such as fishing and scuba diving.

Rocky Neck State Park in East Lyme should be expanded with the annexation of undeveloped portions of the about-to-be abandoned Niantic State Farm for Women, an 850-acre tract with prime natural areas, Bride Lake, and a significant freshwater marsh. Buildings on the site should be put to some appropriate re-use, while development of the open land could include about 400 campsites by 1985. State construction of a new erosion control structure at the mouth of Bride Brook would result in the natural restoration of about 0.6 mile of beach.

Stony Creek Quarry and Faulkner's Island should be purchased by 1980 to serve as a single, interrelated casual recreation resource. Access to the historic lighthouse island would be provided by a small recreational ferry or launch. Development of both sites could include 300 picnic sites and at least one-half mile of beach.

Lighthouse Point Park in New Haven should be upgraded and expanded to the east by 1985, through the purchase of flood prone land along Shell Beach on an as-available basis or after a major flood. The area should then be developed as a major new state park, including about one-half mile of beach, 500 picnic sites, and provision for a ferry service to downtown New Haven.

Silver Sands State Park should be developed immediately by the state and expanded by 1980 to include adjacent flood prone areas, which should be significantly enlarged and nourished with sand fill. A boardwalk from Silver Sands to Charles Island would serve as a fishing pier and means of access. Development could include 500 picnic sites, about two miles of beach, and a small public marina facility, including boat rentals and slips.

Pleasure Beach in Bridgeport should be substantially upgraded for development as a state park. *Long Beach* in Stratford should be purchased and included in the park as leases expire. Additional expansion could include the purchase of the *Great Meadow* wetland complex for use in conjunction with a "Classroom by the Sound" nature center. Ferry service between downtown Bridgeport and the existing ferry dock at Pleasure Beach, restoration of the bridge to Pleasure Beach from Bridgeport, and a new road to Long Beach from Great Meadows Road in Stratford would provide access. Parking should be situated at or near the northern terminus of the bridge, with shuttle bus and pedestrian access from there. Recreational use of portions of Long Beach will have to be restricted during the Least Tern nesting season.

Public ownership of the *Norwalk Islands* should be augmented through state purchase of *Sheffield Island* by 1975, as a public offshore swimming and general recreation facility, and of *Chimon Island* as a wildlife refuge. A passenger ferry service between downtown Norwalk and Sheffield would provide access.

Sherwood Island State Park should be expanded by 1980 to include the flood prone properties immediately to the west (0.4 mile) and the area between the northern park boundaries and the Connecticut Turnpike. Development would include 500 picnic sites and four boat ramps.

David's Island in New Rochelle should be purchased by 1978. Development here should include 0.8 mile of beach, 200 picnic sites, and twenty-five to fifty transient marina slips. Access would be provided by passenger ferry from New Rochelle.

Hen Island in Rye should be purchased as a wildlife management and nature observation area which might operate in conjunction with the existing Marshlands Conservancy. Development might include a Classroom by the Sound.

Fort Totten in Queens should be developed by 1980, possibly along the lines of Mission Bay in San Diego or Toronto's new waterfront park, rehabilitating significant buildings within the Fort, adding sand fill to about three miles of beaches west and south, 100 picnic sites, a marina to include public boat rentals, launch ramps, and slips and moorings, a parking garage, and a pier for recreational ferry service to Caumsett State Park.

Port Washington Sand Pits should be purchased and reclaimed as a major new public shorefront facility by 1980. Major emphasis of the reclamation, particularly along the shore, should be the provision of expanded recreation opportunities. Detailed plans should be developed in concert with the Town of North Hempstead and Nassau County.

Caumsett State Park should be developed by the state by 1980 as a regional beach and as a casual recreation facility inland. Development on the shore could include a Classroom by the Sound in the Fly Island wetland area and more than one mile of beach. In the inland portion, development should be limited, but include the preservation and appropriate reuse of the buildings, about 200 camping and picnic sites. Minor improvements to existing roads, development of a small minibus service from inland parking facilities, and passenger ferry service from Fort Totten and Oyster Bay to the existing dock within the cove would provide access.

Roanoke Point in Suffolk. Four hundred and fifty acres of beach, bluff, and woodlands along Suffolk County's north shore between Roanoke Landing and Jacobs Point, should be purchased by 1978, for recreation and scenic preservation. While the back of the bluffs could be used for camping, hiking, and picnicking, foot access to the beach or bluffs, which are extremely erodible, would be limited to a few points.

North Shore Bluffs to the east and west of Roanoke Point should be designated as an area of particular concern in New York State's coastal zone management plan. The bluffs should be preserved and development prevented by the study's proposed permit process described in Chapter 9.

Mr. RIBICOFF. In his message on the environment, President Carter proposed establishing a comprehensive Federal program to identify, acquire, and protect our natural and historic heritage. This national heritage trust is to help coordinate Federal programs with States and private citizens more effectively and to acquire significant and endangered areas. I believe that the Long Island Sound Heritage is precisely what Mr. Carter has in mind. The legislation I am introducing today is not only consistent with the President's objectives but also represents a crucial step in protecting this very necessary area.

Long Island Sound is at a critical turning point in its centuries-old history. It can no longer be ignored or abused by the people who live and work along its shores or who govern activities related to it. The Long Island Sound Heritage is a first step but an important one in reversing public and private indifference to the future of the sound.

Writing of Long Island Sound the late American poet Mark Van Doren, a very dear friend, said:

All such glories must be preserved, and if damage has already been done to them, they must be restored as nearly as possible to their original state. The beauty of beaches is nothing slight; it is solid, it is substantial, it is health and wealth and life itself for millions of people who have every right to take its natural continuation for granted.

Meaningful efforts to revitalize and preserve the sound are long overdue. I urge that prompt and favorable action be taken on the Long Island Sound Heritage so that the necessary work can begin without further delay.

By Mr. HATFIELD:

S. 1969. A bill to reform and simplify the Federal individual income tax; to the Committee on Finance.

SIMPLIFORM TAX ACT OF 1977

Mr. HATFIELD. Mr. President, perhaps the most enduring issue before the U.S. Congress has been the need for tax reform and simplification. Most of my colleagues agree that tax reform and simplification is necessary, but when we set out to do it, conflicting interests result in a tax code even more incomprehensible than before.

During the last year the Congress has taken action on two major tax "reform" or "simplification" bills. The Tax Reform Act of 1976 and the Tax Reduction and Simplification Act were discussed by my colleagues with every good intention of carrying out what their titles imply. These bills left us, however, with a tax code still seemingly ready to crumble under its own weight. Now we are awaiting the Carter administration's own views on tax reform, with a new push for tax legislation expected later this year or early next year. What will be the result of this new debate? If past history is any indication. Congress will once again fail to significantly reduce the burden of a complex and often inequitable tax code on the citizens of this country.

For this reason, Mr. President, I am sending to the desk today a bill which would totally restructure the individual income tax system. The Simpliform Tax Act, which I am introducing is similar to the bill I proposed in the last Congress, and to the concept originally offered to the Republican Platform Committee in 1972.

Few would deny that the Federal income tax system is an indispensible tool for gathering revenue and redistributing income. Since it was first authorized by the 16th amendment to the Constitution in 1913, it has played a leading role in our Federal revenue system. Individual and corporate income taxes are expected to provide 52 percent of the revenue for the fiscal year 1978 Federal budget. State and local governments have also employed income taxes to supplement other forms of revenue.

Nearly 200 years ago Adam Smith offered a helpful set of criteria for a "good tax." He said:

It should be certain, convenient, cost little to collect, and be based on the capacity of the taxpayer.

There is little question that our income tax system is currently falling well short of those goals.

In the first place, income taxes are not certain in the sense of being clear and indisputable to the ordinary taxpayer. The layman who itemizes his deductions must struggle through a very complex tax form or turn to a professional tax preparer or Internal Revenue Service employee for assistance. Even the experts, who work with the Tax Code every day, frequently disagree or make errors about the application of tax laws to an individual. The complexity of the forms required for filing a return with itemized deductions violates the principle of convenience. While some progress has been made toward simplifying income tax forms, they remain far too inconvenient and complex. The person who can afford to employ a tax accountant to handle his personal taxes benefits more than those who cannot afford such services.

Of greatest concern to me, however, in offering the simpliform tax proposal, is the failure of the present system to genuinely reflect the capacity to pay. The Internal Revenue Code is still formally based upon the principle of the ability to pay. That is, the rates are scaled upwards along with income. There is nothing sinister or un-American about this committee to income redistribution. From the very adoption of income tax laws, it has been assumed that the funds to meet the social and economic needs of those with little or no income must come from the higher tax rates of the wealthy.

The failure of the individual income tax to be genuinely progressive in this country is best seen by considering the total tax bills, particularly including the regressive payroll tax. This combined analysis, however, is not necessary to demonstrate the failings of the individual income tax. The public exposure of the minimal income tax payments of public figures over the last several years has dramatized the failings of our tax code. Quite apart from the ethical and legal questions about the tax payments of particular individuals, the point is that the intent of the tax has been violated when a wealthy person pays little or no tax and a person of modest income surrenders $1 in $5 to the Federal Government.

It should not be thought that income tax underpayment is limited to a few highly publicized cases. In fact, studies by the Brookings Institution have indicated that the tax paid by those with income of six figures and above does not average more than 30 percent, in spite of a statutory rate up to 79 percent. Recent attempts to correct the problem by means of a minimum tax have not solved the fundamental problem. The result of this nonprogressive tax is a serious imbalance of income in a country that supposedly values equal opportunity. Studies conducted in 1970 indicate that the wealthiest 10 percent of the population receives 29 percent of the personal income and own 56 percent of the wealth. In contrast, the poorest 10 percent receive 1 percent of the income and owe more than they own.

The feature of the tax laws which allows most people, regardless of income, to keep their tax rate in the 20-percent range is, of course, the generous array of deductions, credits, and exemptions. Tax reform groups have been warning us about the violation of the progressive tax principle and now two significant studies from both the legislative and executive branches lend weight to their arguments.

The Subcommittee on Priorities and Economy in Government of the Joint Economic Committee of Congress completed a study in October 1974 of Federal subsidy programs. This excellent document prepared under the direction of the subcommittee chairman, the distinguished Senator from Wisconsin (Mr. PROXMIRE) covers the full range of direct cash payments, credit subsidies, and in-kind distributions. Of greatest significance in reference to tax policy is the section on tax subsidies, that is, those

provisions of the law which allow an individual or firm engaging in a specific market activity to make smaller tax payments to the Government than would otherwise be made. Having dealt with items which allow reduced tax payments for such things as capital gains, charitable contributions, and medical expenses, the committee estimated that nearly $60 billion was retained by individuals and corporations in fiscal year 1975 because of tax subsidies. Undoubtedly, the figure was even higher in fiscal year 1976.

Of even greater interest is the disclosure by the Office of Management and Budget of a similar listing of tax breaks called tax expenditures in the "special analysis" to the fiscal year 1978 budget. The disclosure of this information is required by the Congressional Budget Act of 1974. Tax expenditures are defined in this report as "revenue losses attributable to a special exclusion, exemption, or deduction from gross income or to a special credit, preferential rate of tax, or deferral of tax liability." It is correctly pointed out that tax expenditures are best seen as alternatives to budget outlays. They are used to encourage specific behavior by individuals and organizations by distributing to such individuals and organizations tax money which would normally be placed in the public coffers.

Of greatest interest in the context of individual income tax reform is the fact that almost 40 percent of the tax expenditures expected for fiscal year 1978 will go to individuals. Even allowing for a margin of error in these estimates—or this year, budget revisions by the new administration—the amount is enormous compared to the total expected receipts from individual income taxes in fiscal year 1978, which totals about 39 percent of total receipts, or an estimated $171.2 billion.

Tax expenditures and subsidies, then, are responsible for short-circuiting a supposedly progressive income tax. We agonize over finding the funds to appropriate a few million dollars for various worthy programs, but do not bother to regularly review the system of hidden appropriations in the form of tax expenditures or tax subsidies.

These new studies speak eloquently of the need for tax reform, as do the economic problems of our country and the world. President Carter has promised a tax reform package to the American people before the end of 1977. The Congress will probably begin considering tax legislation early in 1978. While I do not pretend that tax reform, whether achieved by my plan or any other, will cure all our economic ills, I do insist that it be considered as a necessary component of current as well as long-range economic policy.

Despite the well-intentioned efforts of the Congress to achieve comprehensive tax reform last year and on a more limited basis earlier this year, we were hindered by the resistance to basic tax reform from many sectors. Item-by-item reform, in my opinion, is always doomed to failure. Beneficiaries of tax loopholes will continue to bring pressure to bear in order to protect laws that are advantageous to themselves.

For these reasons, Mr. President, I offer Simpliform as one solution to the failings of the individual income tax. I am leaving to others the needed reforms in the corporate income tax, the payroll tax, and the estate and gift taxes. My plan would complement efforts to reform these other taxes, as well as to overhaul our welfare and income maintenance programs.

For most people, Simpliform would substitute a four-line calculation for the present complex form 1040. It replaces 27 tax brackets with nine, and four tax tables with one. It provides one tax credit for adults in place of a series of exemptions under present law. No technical assistance would be needed in most cases to complete the tax forms, and the process of filing returns and receiving refunds would be quick and inexpensive.

The reform features of Simpliform are even more important than the simplification gains. The multitude of individual tax subsidies would be eliminated in favor of a lower, but progressive tax rate. While the personal tax credit would mean that a couple with income under $5,000 would pay no tax, the basic tax rate would be 10 percent for those with income above $5,000. As income moved above $10,000, the progressive feature would be implemented by means of a surtax, which would reach a total of 50 percent for incomes in excess of $1 million. While upper income people who have been benefiting from various deductions would be subject to more tax under Simpliform, their tax rate would not surpass 30 percent unless their income exceeded $50,000.

Simpliform would also achieve some profound gains in fairness and equity. Personal tax credits are much more equitable than exemptions, for they always carry the same dollar value. The present personal exemptions provide four times as much tax saving for the wealthy as for the lower-income person. Simpliform's restriction of credits to adults removes the tax disadvantage from the single and childless taxpayers. The advantages enjoyed by the homeowner over the renter are eliminated, at least from the tax law. While these and other tax advantages under present law may actually be consistent with American goals and values, the problem is that these deductions always benefit the wealthy more than the middle- and lower-income person. As in the case of personal exemptions, the person in the higher tax bracket gains more from deductions than the lower-income person.

There are those who are troubled at the thought of tampering with some tax subsidies, such as reduced rates for capital gains and deductions for charitable contributions. Actually, reduced rates for capital gains would no longer be necessary for most people, because their lower Simpliform rate would be comparable to the reduced capital gains rate.

The elimination of deductions for contributions to charitable organizations should not be seen as a threat to the many worthy causes benefiting from these deductions. In some cases, such as educational institutions and health agencies, support should be provided by means of the direct and responsible route, that of appropriations. This could be done without seriously increasing the tax burden of the average person. Those organizations which should not be directly subsidized, such as religious groups, would continue to rely on the voluntary contributions of their supporters. Those who deeply believe in the goals and values of such groups will not cease their support because of the loss of the tax deduction. Moreover, the typical taxpayer would have additional funds for such purposes, because of the tax savings under Simpliform.

A person can easily compare the effect of Simpliform on his own income tax obligation by a quick exercise in arithmetic and a comparison with his 1976 return. Simpliform is calculated by multiplying income by the appropriate tax rate and subtracting the number of $250 adult tax credits. While those now subtracting large deductions from an income over $20,000 will probably pay more tax, they can depend on the rate not exceeding a reasonable figure and are assured of fairness in the amount that they pay. The modest income family, the single person, and the typical senior citizen can count on paying less tax under Simpliform, and can also be assured of fairness in what they pay.

Mr. President, I submit Simpliform in the hope that it will be given thorough consideration. Other tax reform plans will be offered and I am happy to have them considered as well, hoping that they too will be thorough and simple. Let us not become so preoccupied with short-range economic solutions that we neglect the urgent goal of true comprehensive tax reform.

Mr. President, I ask unanimous consent that an article by Henry M. Wriston which appeared in the April 13, 1977, issue of the Christian Science Monitor entitled "The Scandalous Form 1040," as well as an article in the April 1977, issue of Harper's by Peter Meyer entitled "A Short History of Form 1040," appear in the RECORD at this time.

Mr. President, I also ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1969

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) this Act may be cited as the "Simpliform Tax Act".

(b) AMENDMENT OF 1954 CODE.—Except as otherwise expressly provided, whenever in this Act a reference is made (by way of amendment, repeal, or otherwise) to a section, chapter, or other provision, the reference shall be considered to be made to a section, chapter, or other provision of the Internal Revenue Code of 1954.

(c) TECHNICAL AND CONFORMING CHANGES.—The Secretary of the Treasury

or his delegate shall, as soon as practicable but in any event not later than 90 days after the date of enactment of this Act, submit to the Committee on Ways and Means of the House of Representatives a draft of any technical and conforming changes in the Internal Revenue Code of 1954 which are necessary to reflect throughout such Code the changes in the substantive provisions of law made by this Act.

EFFECTIVE DATE

SEC. 2. Except as otherwise provided the amendments and repeals made by this Act shall apply to taxable years beginning after the date of the enactment of this Act.

REPEALS

SEC. 3. (a) The following provisions in chapter 1 (relating to normal taxes and surtaxes) are repealed:

(1) Section 37 (relating to credit for the elderly).

(2) Section 41 (relating to contributions to candidates for public office).

(3) Part VI of subchapter A (relating to minimum tax for tax preferences).

(4) All sections in part III of subchapter B (relating to items specifically excluded from gross income), except—

(A) section 101 (relating to certain death benefits),

(B) section 102 (relating to gifts and inheritances),

(C) section 104 (relating to compensation for injuries or sickness),

(D) section 105 (relating to amounts received under accident and health plans),

(E) section 106 (relating to contributions by employer to accident and health plans),

(F) section 109 (relating to improvements by lessee on lessor's property),

(G) section 110 (relating to income taxes paid by lessee corporation),

(H) section 115 (relating to income of States, municipalities, etc.),

(I) section 118 (relating to contributions to the capital of a corporation),

(J) section 122 (relating to certain reduced uniformed services retirement pay), and

(K) section 124 (relating to cross references to other Acts).

(5) All sections in part IV of subchapter B (relating to standard deductions for individuals) except section 143 (relating to determination of marital status).

(6) Part V of subchapter B (relating to deductions for personal exemptions).

(7) Section 163 (relating to interest).

(8) Section 164 (relating to taxes).

(9) Section 170 (relating to charitable, etc., contributions and gifts).

(10) All sections in part VII of subchapter B (relating to additional itemized deductions for individuals) except—

(A) section 211 (relating to allowance of deductions),

(B) section 212 (relating to expenses for production of income), and

(C) section 215 (relating to alimony, etc., payments).

(11) Subchapter D (relating to deferred compensation, etc.).

(12) Section 911 (relating to earned income from sources without the United States).

(13) Section 6013 (relating to joint returns of income tax by husband and wife).

(b) All provisions of law (other than the provisions of subtitle A of the Internal Revenue Code of 1954, as amended by this Act), and all administrative regulations or rulings which exempt or exclude items of income of individuals from the tax imposed by such subtitle A shall have no force or effect for taxable years beginning after the date of the enactment of this Act.

RATE OF TAX ON INDIVIDUALS

SEC. 4. Part I of subchapter A of chapter 1 (relating to tax on individuals) is amended to read as follows:

"PART I—TAX ON INDIVIDUALS

"Sec. 1. Tax imposed.

"Sec. 2. Community property laws not to apply.

"Sec. 3. Cross references relating to tax on individuals.

"SECTION 1. TAX IMPOSED.

"(a) BASIC TAX.—There is imposed on the taxable income of every individual a tax of 10 percent.

"(b) SURTAX.—There is imposed on the taxable income of every individual a surtax in accordance with the following table:

"If the taxable income is:	The surtax is:
Over $10,000 but not over $15,000	5% of the excess over $10,000.
Over $15,000 but not over $20,000	$250, plus 10% of the excess over $15,000.
Over $20,000 but not over $25,000	$750, plus 16% of the excess over $20,000.
Over $25,000 but not over $50,000	$1,500, plus 20% of the excess over $25,000.
Over $50,000 but not over $100,000	$6,500, plus 25% of the excess over $50,000.
Over $100,000 but not over $500,000	$19,000, plus 30% of the excess over $100,000.
Over $500,000 but not over $1,000,000	$169,000, plus 35% of the excess over $500,000.
Over $1,000,000	$344,000, plus 40% of the excess over $1,000,000.

"(c) NONRESIDENT ALIENS.—In the case of a nonresident alien individual, the tax imposed by subsections (a) and (b) shall apply only as provided by section 871 or 877.

"SEC. 2. COMMUNITY PROPERTY LAWS NOT TO APPLY.

"For purposes of this subtitle, the income of a married taxpayer shall be determined without regard to the property laws of any State under which any part of the income of a married individual is treated as the income of his spouse.

"SEC. 3. CROSS REFERENCES RELATING TO TAX ON INDIVIDUALS.

"(a) OTHER RATES OF TAX ON INDIVIDUALS, ETC.—

"(1) For rates of tax on nonresident aliens, see section 871.

"(2) For computation of tax where taxpayer restores substantial amount held under claim of right, see section 1311.".

PERSONAL EXEMPTION CREDIT

SEC. 5. (a) Subpart A of part IV of subchapter A of chapter 1 is amended by adding before section 45 the following new section:

"SEC. 44B. PERSONAL EXEMPTION.

"(a) ALLOWANCE OF CREDIT.—There shall be allowed to an individual as a credit against the tax imposed by this subtitle for the taxable year an amount equal to—

"(1) $250 for the taxpayer,

"(2) $250 for the spouse of the taxpayer (unless such spouse files a separate return), and

"(3) $250 for each dependent of the taxpayer who is 18 years of age or older.

"(b) DEFINITION OF DEPENDENT.—For purposes of this section, the term 'dependent' means any of the following individuals over half of whose support, for the calendar year in which the taxable year of the taxpayer begins, was received from the taxpayer (or is treated under subsection (c) or (e) as received from the taxpayer):

"(1) A son or daughter of the taxpayer, or a descendant of either,

"(2) A stepson or stepdaughter of the taxpayer,

"(3) A brother, sister, stepbrother, or stepsister of the taxpayer,

"(4) The father or mother of the taxpayer, or an ancestor of either,

"(5) A stepfather or stepmother of the taxpayer,

"(6) A son or daughter of a brother or sister of the taxpayer,

"(7) A brother or sister of the father or mother of the taxpayer,

"(8) A son-in-law, daughter-in-law, father-in-law, mother-in-law, brother-in-law, or sister-in-law of the taxpayer.

"(9) An individual (other than an individual who at any time during the taxable year was the spouse, determined without regard to subsection (e), of the taxpayer) who, for the taxable year of the taxpayer, has as his principal place of abode the home of the taxpayer and is a member of the taxpayer's household, or

"(10) An individual who—

"(A) is a descendant of a brother or sister of the father or mother of the taxpayer,

"(B) for the taxable year of the taxpayer receives institutional care required by reason of a physical or mental disability, and

"(C) before receiving such institutional care, was a member of the same household as the taxpayer.

"(c) RULES RELATING TO DEFINITION OF DEPENDENT.—For purposes of this section—

"(1) The terms 'brother' and 'sister' include a brother or sister by the halfblood.

"(2) In determining whether any of the relationships specified in subsection (a) or paragraph (1) of this subsection exists, a legally adopted child of an individual (and a child who is a member of an individual's household, if placed with such individual by an authorized placement agency for legal adoption by such individual), or a foster child of an individual (if such child satisfies the requirements of subsection (b) (9) with respect to such individual), shall be treated as a child of such individual by blood.

"(3) The term 'dependent' does not include any individual who is not a citizen or national of the United States unless such individual is a resident of the United States, of a country contiguous to the United States, of the Canal Zone, or of the Republic of Panama. The preceding sentence shall not exclude from the definition of 'dependent' any child of the taxpayer—

"(A) born to him, or legally adopted by him, in the Philippine Islands before January 1, 1956, if the child is a resident of the Republic of the Philippines, and if the taxpayer was a member of the Armed Forces of the United States at the time the child was born to him or legally adopted by him, or

"(B) legally adopted by him, if, for the taxable year of the taxpayer, the child has as his principle place of abode the home of the taxpayer and is a member of the taxpayer's household, and if the taxpayer is a citizen or national of the United States.

"(4) A payment to a wife which is includable in the gross income of the wife under section 71 or 682 shall not be treated as a payment by her husband for the support of any dependent.

"(5) An individual is not a member of the taxpayer's household if at any time during the taxable year of the taxpayer the relationship between such individual and the taxpayer is in violation of local law.

"(d) MULTIPLE SUPPORT AGREEMENTS.—For purposes of subsection (b), over half of the support of an individual for a calendar year shall be treated as received from the taxpayer if—

"(1) no one person contributed over half of such support;

"(2) over half of such support was received from persons each of whom, but for the fact that he did not contribute over half of such support, would have been entitled to claim such individual as a dependent for a taxable year beginning in such calendar year;

"(3) the taxpayer contributed over 10 percent of such support; and

"(4) each person described in paragraph (2) (other than the taxpayer) who contributed over 10 percent of such support files a written declaration (in such manner and form as the Secretary may by regulations prescribe) that he will not claim such individual as a dependent for any taxable year beginning in such calendar year.

"(e) DETERMINATION OF MARITAL STATUS.—For purposes of this section—

"(1) the determination of whether an individual is married shall be made as of the close of his taxable year; except that if his spouse dies during his taxable year such determination shall be made as of the time of such death; and

"(2) an individual legally separated from his spouse under a decree of divorce or of separate maintenance shall not be considered as married.

"(f) CROSS REFERENCES.—

"(1) For definitions of 'husband' and 'wife', as used in subsection (c)(4), see section 7701(a)(17).

"(2) For deductions of estates and trusts, in lieu of the credit under this section, see section 612(b).".

(b) The table of sections for such part is amended by inserting before the item relating to section 45 the following:

"Sec. 44B. Personal exemption."

(c) Section 143(b)(1) is amended by striking out "deduction" and inserting "credit", and by striking out "section 152" and "section 151" and inserting in each place "section 42".

(d) Section 46(a)(4)(B) (relating to the investment credit) is amended to read as follows:

"(B) section 42 (relating to personal exemptions), and".

(e) Section 172(d)(3) (relating to net operating loss deduction) is amended to read as follows:

"(3) ESTATES AND TRUSTS.—No deduction shall be allowed for the personal exemption allowed an estate or trust under section 642(b).".

(f) Section 443(c) (relating to return for short period) is amended by striking out "a deduction under section 151 (and any deduction in lieu thereof)" and inserting in lieu thereof "as a credit under section 42 or a deduction under section 642(b)" and by inserting "Credit for" before "Personal" in the heading thereof.

(g) The last sentence of section 642(b) (relating to estates and trusts) is amended to read as follows: "The deductions allowed by this subsection shall be in lieu of the credits allowed under section 42 (relating to credit for personal exemptions).".

(h) Section 703(a)(2) (relating to partnership computations) is amended by striking out subparagraph (B).

(i) Paragraph (3) of section 873(b) (relating to non-resident aliens) is amended to read as follows:

"(3) CREDIT FOR PERSONAL EXEMPTION.—Except in the case of a nonresident alien individual who is a resident of a contiguous country, only one credit shall be allowed for exemptions under section 42.".

(j) Section 891 (relating to citizens of foreign countries) is amended by striking out "under section 151 and".

(k) Section 933(1) (relating to residents of Puerto Rico) is amended by striking out "(other than the deductions under section 151, relating to personal exemptions)".

(l) Section 1211(b)(3) (relating to deduction of capital losses) is amended by striking out "the deductions provided in section 151 (relating to personal exemptions) or any deduction in lieu thereof" and inserting in lieu thereof "any deduction allowed by section 642(b)".

(m) Section 1402(a) (relating to self-employment income) is amended by striking out paragraph (7).

GAINS AND LOSSES ON PROPERTY HELD AT DEATH OR TRANSFERRED BY GIFT

SEC. 6. (a) Part II of subchapter B of chapter 1 (relating to items specifically included in gross income) is amended by adding at the end thereof the following new sections:

"SEC. 85. GAINS AND LOSSES ON PROPERTY AT TIME OF DEATH.

"(a) IN GENERAL.—Upon the death of an individual, there shall be taken into account in computing taxable income for the taxable period in which falls the date of his death, a percentage (determined under subsection (c)) of the gains and losses which would have been realized and taken into account in computing taxable income (of the decedent or some other person) (if all the property (other than property described in subsection (b)) required to be included in determining the value of the decedent's gross estate under chapter 11 had been sold immediately before his death at the estate tax fair market value. This subsection shall not apply unless the aggregate amount of such fair market value exceeds $60,000.

"(b) EXCLUDED PROPERTY.—Subsection (a) shall not apply to—

"(1) property which passes or has passed from the decedent to his surviving spouse and which qualifies for the deduction provided by section 2056;

"(2) property which passes or has passed to a corporation, organization, or other entity described in section 2055 and which qualifies for the deduction provided by such section;

"(3) items of gross income in respect of a decedent described in section 691; or

"(4) any other property includable in the gross estate of the decedent under chapter 11 for which basis is not provided for in section 1014(a).

"(c) RULES FOR APPLICATION OF SUBSECTION (a).—For purposes of subsection (a)—

"(1) The estate tax fair market value of property is the fair market value of the property at the date of the decedent's death, or, in the case of an election under section 2032 or 2032A, its value at the application valuation date prescribed by that section.

"(2) If the aggregate adjusted basis of all property subject to the provisions of subsection (a) is less than $60,000, and the gains under subsection (a) (without the application of this paragraph) exceed the losses, then the aggregate adjusted basis of such property shall be increased to $60,000.

"(3) Losses shall be taken into account without regard to the provisions of section 1091.

"(4) The percentage of gains and losses taken into account shall be determined in accordance with the following table:

"For taxable years beginning:	The percentage is:
Less than 1 year after the date of enactment of the Simpliform Tax Act	0 percent
1 year or more but less than 2 years after such date	20 percent.
2 years or more but less than 3 years after such date	40 percent.
3 years or more but less than 4 years after such date	60 percent.
4 years or more but less than 5 years after such date	80 percent.
5 years or more after such date	100 percent.

"(d) TIME FOR FILING RETURN.—If subsection (a) applies to the taxable year, the time for filing the return for such year shall be the date 9 months after the date of the decedent's death if such date is later than the time prescribed in section 6072 for filing such return.

"(e) LIABILITY WITH RESPECT TO PROPERTY TRANSFERRED BEFORE DEATH.—If gain is taken into account under subsection (a) with respect to property transferred by the decedent during his lifetime, the executor shall be entitled, unless the decedent directs otherwise in his will, to recover from the transferee of such property the amount of income tax imposed with respect to such gain.

"SEC. 86. GAINS AND LOSSES ON INTER VIVOS GIFTS.

"(a) IN GENERAL.—In the case of the transfer of property by an individual by inter vivos gift, there shall be taken into account in computing taxable income for the taxable period in which the transfer was made, the gain or loss which would have been realized and taken into account in computing taxable income if the taxpayer had sold the property at its fair market value at the time of the transfer.

"(b) EXCEPTIONS.—

"(1) IN GENERAL.—Subsection (a) shall not apply to a transfer of property, to the extent that, at the time of the transfer, the aggregate fair market value of—

"(A) property (including the transferred property) held by the taxpayer, and

"(B) property previously transferred by the taxpayer after the date of the enactment of the Simpliform Tax Act,

does not exceed $60,000.

"(2) GIFTS TO SPOUSE.—Subsection (a) shall not apply to a transfer of property to the taxpayer's spouse.".

(b)(1) Section 1014(b) (relating to basis of property acquired from a decedent) is amended by striking out paragraphs (5) and (6).

(2) Paragraph (9) of section 1014(b) is amended by inserting "and" at the end of subparagraph (A), by striking out subparagraph (B) and by redesignating subparagraph (C) as subparagraph (B).

(3) Section 1015 (relating to basis of property acquired by gifts and transfers in trust) is amended by adding at the end thereof the following new subsection:

"(e) PROPERTY SUBJECT TO TAX UPON TRANSFER.—If the property was acquired by a gift in a transfer to which section 85(a) (relating to gains and losses on inter vivos gifts) applied, the basis shall be the fair market value of the property at the time of the transfer.".

(4) Section 6161(a) (relating to extension of time for paying tax) is amended—

(A) by inserting "or income tax for a decedent's final taxable period" after "estate tax" in paragraph (1),

(B) by inserting "AND INCOME TAX ON GAINS AT DEATH" after "ESTATE TAX" in the heading of paragraph (2), and

(C) by inserting after "chapter 11," in paragraph (2)(A) "or of any part of the tax imposed by chapter 1 attributable to the application of section 84,".

(5) Section 6166A (relating to extension of time for payment of estate tax where estate consists largely of interest in closely held business) is amended—

(A) by inserting "AND INCOME TAX ON GAINS AT DEATH" after "ESTATE TAX" in the heading, and

(B) by redesignating subsections (j) and (k) as (k) and (l), respectively, and by inserting after subsection (i) the following new subsection:

"(j) TAX ON GAINS AT DEATH.—Under regulations prescribed by the Secretary, the provisions of this section shall apply with

respect to so much of the tax imposed by chapter 1 as is attributable to the application of section 85 (relating to gains and losses on property at time of death) in the same manner as it applies to the tax imposed by section 2001.".

(c) Section 85 of the Internal Revenue Code of 1954 (as added by subsection (a)) and the amendments made by paragraphs (1), (2), (4), and (5) of subsection (b) shall apply with respect to decedents dying after the date of enactment of this Act. Section 86 of such Code (as added by subsection (a)) and the amendments made by paragraphs (3) of subsection (b) shall apply with respect to transfers of property by inter vivos gift after such date.

TREATMENT OF CAPITAL GAINS

SEC. 7. (a) Section 1201(b) (relating to other taxpayers) is amended by inserting "or an individual" after "other than a corporation".

(b) Section 1202 (relating to deduction for capital gains) is amended by inserting "or an individual" after "other than a corporation".

(c) Section 1211 (relating to limitation on capital losses) is amended by—

(1) inserting "or Individual" after "Corporations" in the heading of subsection (a) and inserting "or an individual" after "a corporation" in the text of subsection (a),

(2) inserting "or an individual" after "other than a corporation" in paragraph (1) of subsection (b), striking out subparagraph (B) of such paragraph, and redesignating subparagraph (B) as (C), and

(3) striking out paragraph (2) and redesignating paragraph (3) as (2).

SPECIFIC INCLUSIONS IN GROSS INCOME

SEC. 8. (a) Part II of subchapter B of chapter 1, as amended by section 6, is amended by adding at the end thereof the following new section:

"SEC. 87. SOCIAL SECURITY AND WELFARE PAYMENTS.

"There shall be included in gross income monthly insurance benefits paid under title II of the Social Security Act to the taxpayer and any other cash benefits paid (other than a lump sum payable on account of death) to the taxpayer under such Act or any other Act of the United States or of any State providing for the payment of money to individuals in order to enable them to purchase food, clothing, and shelter and otherwise provide for their general welfare.".

(b) The table of sections of such part is amended by adding at the end thereof the following new item:

"Sec. 87. Social security and welfare payments.".

(c) Section 74 (relating to prizes and awards) is amended to read as follows:

"SEC. 74. PRIZES AND AWARDS

"Gross income includes amounts received as prizes and awards, including amounts received as scholarships and fellowship grants.".

(d)(1) Section 274(a) (relating to entertaining, amusement, or recreation expenses) is amended to read as follows:

"(a) ENTERTAINMENT, AMUSEMENT, OR RECREATION.—No deduction otherwise allowable under this chapter shall be allowed for any item with respect to an activity which is of a type generally considered to constitute entertainment, amusement, or recreation, or with respect to a facility used in connection with such activity. For purposes of this subsection—

"(1) dues or fees to any social athletic, or sporting club or organization shall be treated as items with respect to facilities, and

"(2) an activity described in section 212 shall be treated as a trade or business.".

(2) Section 274(e) (relating to specific exceptions to application of subsection (a)) is amended by striking out paragraph (1) (relating to business meals).

MISCELLANEOUS AMENDMENTS

SEC. 9. (a) Section 62 (relating to adjusted gross income defined) is amended by striking out paragraphs (3) and (8) and redesignating paragraphs (4), (5), (6), (7), and (9) as (3), (4), (5), (6), and (7), respectively.

(b) The text of section 63 (relating to taxable income defined) is amended to read as follows: "For purposes of this subtitle the term 'taxable income' means gross income minus the deductions allowed by this chapter.".

WITHHOLDING

SEC. 10. (a) Section 3402 (relating to income tax collected at source) is amended by—

(1) striking out subsections (b), (c), (f), and (m), and

(2) amending subsection (a) to read as follows:

"(a) REQUIREMENT OF WITHHOLDING.—Every employer making payment of wages shall deduct and withhold upon such wages (except as otherwise provided in this section) a tax determined in accordance with tables prescribed by the Secretary.".

(b) Subsection (o) (relating to extension of withholding to certain payments other than wages) is amended by—

(1) striking "GENERAL RULE." in paragraph (1) and inserting in lieu thereof "SUPPLEMENTAL UNEMPLOYMENT COMPENSATION BENEFITS AND ANNUITIES.",

(2) redesignating paragraphs (1) through (3) as (2) through (4), respectively,

(3) striking "paragraph (1)" in paragraph (3)(A) (as redesignated by this Act) and inserting in lieu thereof "paragraph (2)", and

(4) inserting before paragraph (2) (as redesignated by this Act) the following new paragraph:

"(1) IN GENERAL.—Under regulations prescribed by the Secretary, any person making a payment of interest, a dividend, or any other payment subject to tax under chapter 1, shall deduct and withhold upon such payment a tax of 10 percent. For purposes of this chapter (and so much of subtitle F as relates to this chapter) any such payment shall be treated as if it were a payment of wages by an employer to an employee for a payroll period.".

[From the Christian Science Monitor, Apr. 13, 1977]

THE SCANDALOUS FORM 1040

(By Henry M. Wriston)

Income tax time invites rage. To be constructive anger should spark a concerted demand for fundamental reform. No thousand-page "amendment" will do; it only makes the taxpayer more frustrated. No draftsman can write so large a volume without providing many "loopholes."

The demand should be for clarity. The bill should raise taxes and avoid attempts at social engineering, which belongs, if anywhere, in separate legislation. The present law has so many purposes, some incongruous with others, that it makes the constructs of the late Rube Goldberg seem models of simplicity and elegance of design. In its present form the income tax law shows Congress to be the enemy of thrift, generosity, common sense and even good morals. It is as though Congress had purposely incorporated into law some of the widely advertised bad habits of certain members.

There is no excuse for a statute so long and so complex that its purported authors cannot expound it. Millions watching TV heard the director of the Internal Revenue Service admit that some passages were obscure to him. And the chairman of one of the responsible committees conceded that he found a passage he could not recall approving.

Most citizens are ready to render unto Caesar that which bears his image and superscription. We have a right, indeed a duty, to denounce a quagmire of needlessly involved requirements which expose to us to penalties for perjury, for lateness and other entrapments. It is intolerable, moreover, to face a law which virtually requires a retired teacher to employ a lawyer, an accountant, a banker or a wizard—or a team of them, to guide him through a legal maze so complex that even experts get confused. I have paid penalties for "errors" when I felt sure the IRS auditors were as likely to be wrong as my own experts were said to have been. The needless cost to the taxpayer arising from poor congressional draftsmanship is an unreasonable burden on the innocent. It is an added impost which arises from no fault of the citizen but from carelessness on the part of Congress.

The President of the United States told the senators and representatives in joint session assembled that, on the average, they each cost a million dollars a year for salary, staff, pension and other expenses. At that heavy price it is insufferable to have Congress enact a statute which confuses the taxpayer and endows an ever growing bureaucracy as well as a generation of lawyers, et al. who make a living out of penetrating obscurity.

Senators blather about the aged ad nauseum. "Senior citizens," they proclaim, must be treated with compassion. I am one of the aged who consider the scandalous stimulation of inflation by acts of Congress a heavy, needless burden upon those of us who are retired. Added to the weight of taxation it is unendurable. What we need is a law which we can read, understand, and obey at no extra cost occasioned by the ineptitude of costly Job's counselors in Washington.

While imposing unnecessary punishment upon the hapless citizen, Congress wonders why it is not held in high esteem. How can the public have confidence in legislators who turn out volumes of sticky flypaper and call the mess law? Each member took an oath to "perform to the best of my ability." Then they enact a tax statute that make a mockery of their oath. If that law is the best they can do they should all resign forthwith. At an annual cost of a million dollars apiece we have a right to demand clarity of language, readable prose. No senator can stand in his place (among the six or eight colleagues who normally attend) and assert he has met that elementary test. No representative (between Tuesday and Thursday, his normal week) can say "under penalty of perjury" that he has even tried to meet that modest obligation. No one who voted for this convoluted abomination can pretend he tried to be clear. Whatever else he had in mind, convenience of the taxpayer was not on the list.

The Congress voted a premium on immorality. President Carter, speaking in the Department of Agriculture, made the offhand comment that some in his audience were living in sin. That quaint expression clearly puzzled his hearers. When he clarified it by suggesting that those who were so living should get married, the response was laughter. Did not the President know that, by congressional ukase, marriage would result in a tax penalty? That was part of a "reform" bill. It was made the law of the land by a Congress which, in exchange for "30 pieces of silver" they were too craven to vote themselves, is now taking an exceedingly elementary course in "ethics," and making heavy weather of it.

Finally, consider the cost of this legislative monstrosity. It calls to mind a passage in the Declaration of Independence, he "has erected a multitude of New Offices and sent hither swarms of officers to harass our people and eat out their substance." The sheer bureaucratic cost of administering this atrocious caricature of "a government of laws, not of men" boggles the mind. When to this first cost is added the time and effort of the tax-

payer, his aides, and then the auditors, the cost of obedience to law is staggering.

The President characterized this law as a scandal. Too long we have submitted to taxation without lucidity. It is time for Congress to write a statute an honest citizen can understand.

[From Harper's—April 1977]

A SHORT HISTORY OF FORM 1040

On October 11, 1913, Edward S. Beach dashed off an angry letter to the New York Times. He called President Wilson "the father of spies," and thanked the "whole brood of predatory politicians for the coming espionage." Beach was convinced that the new tax law would unleash upon the country a whole "army of Federal spies whose nose will be stuck into the affairs of every man suspected of having an income of $3,000 or more a year."

Unfortunately for Beach, the vast majority of Americans earned much less than $3,000 a year in 1913. In fact, they welcomed a law which promised to police the incomes of the rich, a measure which would redistribute the wealth and equalize the tax burden. The week before Beach's letter, Congress had attempted to do just that.

With its newly acquired Sixteenth Amendment powers, Congress wrote the first income-tax law of the century, an appendage to the Underwood-Simmons Tariff Act which reduced the tariff to its lowest level since the Civil War. Rep. Cordell Hull, chief draftsman of the income tax, had called the tariff an "infamous system of class legislation." The new tax, he argued, would rectify the inequities of a system which was "virtually exempting the Carnegies, the Vanderbilts, the Morgans and the Rockefellers with their aggregated billions of hoarded wealth." Congressman Hull also boasted that the new law was brief. In less than fifteen pages, Congress spelled out the income-tax requirements for both corporations and individuals. Only on net incomes above $3,000 (roughly equivalent to $17,550 today), said Congress, would the "normal tax" of 1 percent be levied. An additional tax ranging from 1 to 6 percent was imposed on amounts in excess of $20,000 (about $117,000 today). In the first full year of enforcement of the new law, the tax burden fell to a scant 357,000 people—less than one-half of 1 percent of the population. Few could complain. At a time when the per capita annual income of the gainfully employed hovered near $900, the weight of the tax ballast fell clearly to those most able to pay.

On January 5, 1914, the Treasury Department unveiled the individual income-tax blank. Form 1040, together with its instructions—four pages in all—read like a Dick-and-Jane primer. It was short enough to be reproduced, instructions included, in four columns of a single page of the New York Times. (The next day two New Jersey gentlemen filed the Time's clippings, dutifully filled in, with their local revenue agent.) The original 1040 form is no less a relic of simpler times than the 1913 law itself. But the majority of the country, it seems, once granted a reprieve from taxation in 1913, sighed in relief and promptly fell asleep. From a perspective granted by six decades of tax increases and bureaucratic expansion, it appears that something has run amok.

Rep. Charles A. Vanik was born just a few months before the passage of the first income-tax law. He now sits on the House Ways and Means Committee, but believes that "there is an Alice-in-Wonderland quality in speaking of a voluntary tax system when nearly half of the nation's taxpayers feel that they must get or pay others to help them complete their own returns." The phenomenal proliferation of law, loophole, litigation, and juridical exegesis has spawned a huge tax industry. It gathers its capital from legal conundrums. "The tax system and support for it," as Vanik points out, "is being smothered by the endless forms, instructions, and complexities of present tax law."

During 1975 the weekly Internal Revenue Bulletin notified its subscribers of 576 revenue rulings, 66 revenue procedures, 27 public laws relating to Internal Revenue matters, 31 committee reports, 3 executive orders, 42 Treasury decisions, and a host of other addenda. What does this catalogue of IRS statistics and tax-law twists and turns do for taxpayers? It insures that millions of them run to the doors of their preparers each year for guidance.

But even this recourse is not safe. A report reluctantly released by the IRS last year revealed that the experts, too, are confused. Three out of four tax returns filed by paid preparers—attorneys, public accountants, CPAs, commercial preparers—for those with incomes between $10,000 and $50,000 contain mistakes. Even the IRS errs on 79 out of each 100 returns it completes for the middle-income taxpayer.

Altogether the IRS audits a couple of million returns each year. And each year the American taxpayer comes up short—$5.3 billion in 1975. Countless millions more contain mathematical errors, most of which increase the taxpayer's liability when corrected. (The word countless is a slight exaggeration because there are very few things which the IRS doesn't count.) The mistakes, whether made innocently or fraudulently, speak less than optimistically either about our ability to comprehend our tax responsibilities or our desire to tolerate them.

So Congress bemoans the muddle in the IRS while the service pleads for simplification of the law. Commissioner Donald Alexander once told a Ways and Means subcommittee that taxpayers couldn't "find their way through the maze that Congress intended for them." Though the Tax Reform Act of 1976 was the most extensive overhaul of the system since the Internal Revenue Code of 1954, it did little to de-maze the law. As a result, the commissioner was forced back to the drawing board to relay the good news to 1977 taxpayers. "Completing your return this year," he writes, "could be more difficult."

The instructions for page one of this year's 1040 comprise nearly four pages. If the taxpayer perseveres that far he will have already encountered 15 "cautions" and "notes," as well as 206 "if" clauses, and been referred to another 39 forms, schedules, and related IRS publications. If he had a question about estimated itemized deductions for alimony expenses, for example, and had a copy of the new law at hand he might turn to Code Section 3402(m)(2)(A) for explanation:

"The term 'estimated itemized deductions' means the aggregate amount which he reasonably expects will be allowable as deductions under chapter 1 (other than the deductions referred to in sections 141 and 151 and other than the deductions required to be taken into account in determining adjusted gross income under section 62 other than paragraph (13) thereof) for the estimation year."

As the figures show, most taxpayers will pay an expert to make their mistakes.

The code remains our basic tax document, a legal farrago that, as one IRS spokesman has said, "defies human understanding." Prior to last year's Reform Act it was barely compactible into a single bulky volume. The amending legislation is itself nearly 1,000 pages long. There are also volumes of Income Tax Regulations (the Treasury Department's interpretation of the code), volumes of revenue rulings (the IRS's interpretation of specific situations), and more volumes of court decisions. It's no wonder that such an imposing tax industry has risen to interpret, administer, and exploit that document.

How many different livelihoods depend on the legal tax jargon? Nine percent of the 218,146-member American Bar Association are considered tax specialists. The IRS itself employs more than 800 attorneys; some 200 lawyers work in the Justice Departments' Tax Division. Hundreds of commercial tax preparers (in the Manhattan Yellow Pages alone, seventy-five entries crowd under the "Tax Preparation" heading) vie for the $600 million that Americans pay annually for their services. H. & R. Block, "the income tax people," last year prepared 10 percent of the more than 85.5 million individual income tax returns. Twenty research centers across the country find sustenance in tax specializing, as do 14 tax associations and some 300 journals and periodicals. And not to be forgotten in the enumeration is the IRS and its 82,000 employees, 4,050 different forms, and hundreds of publications.

The latest development in the tax imbroglio industry is the electronic law libraries. Their services are increasingly valuable as a means of sorting through what otherwise would be reams of paper. The Lexis Library of Meade Data Central, Inc., for example, has nearly 300 subscribers throughout the country. In a matter of seconds any one of them may requisition the latest tax regulation or court decision from an IBM 370/155 computer. Not surprisingly, Meade's most frequent patron is the Internal Revenue Service.

It has taken less than sixty-four years to slide into a system which warrants Mr. Beach's wrath. In the meantime we seem also to have slipped "through the looking-glass" and come upon a system bereft of manageability, not to mention comprehensibility. But Lewis Carroll said it best. " 'Curiouser and curiouser!' cried Alice. . . . 'Now I'm opening out like the largest telescope that ever was! Good-bye, feet!' "

THEN AND NOW

	1914	1975	Percentage change

By Mr. PERCY:

S. 1970. A bill to establish the National Commission on Interfuel Competition; to the Committee on the Judiciary.

Mr. PERCY. Mr. President, in the wake of the many serious energy shortages in the United States and the world in the last few years, we are finally coming to grips with the realization that the days of cheap energy abundance and the freedom to use energy resources inefficiently are quickly becoming relics of the past.

Under these new conditions, and in conjuction with our development of a national energy policy, Americans are going to be faced with many changes in their everyday lives. Conservation will become a habit, even a necessity, as prices continue to increase and more energy-efficient technologies are developed.

The most dramatic shift, however, and the most significant for our economy as a whole, will be the transition from oil and gas to alternative fuels for a large percentage of our enery needs.

The petroleum age came about voluntarily, as oil and gas were found to be cheaper and cleaner than coal for most large-scale uses. Our national energy policy now must include special incentives and even outright restrictions on oil and gas consumption to spur the shift back to coal, and to insure more rapid acceptance of alternative energy sources.

The major oil companies have been accused of contributing to the onset of the energy crisis. The sheer size of the most successful companies and the dominance of the entire industry by these giants has most certainly had an effect on the rate of expansion and new production in the industry, energy prices in the international and domestic market, and the development of the current distribution system.

For a number of years there has been growing public concern over the impact that the increasing integration of the major petroleum firms into nonpetroleum energy resources is having on prices, supplies, and competition in the energy marketplace. Despite the potential significance of this trend, though, there has been little, if any, substantive analysis of the issues.

To date, most analyses of the subject have come from various petroleum companies, or have been funded at least in part by the petroleum industry. As might be expected, all of these studies tend to conclude that there is no significant anticompetitive problem caused by horizontal energy integration. Unfortunately, the general lack of independent studies of this issue prevents one from making a full appraisal of the soundness of such industry findings.

Numerous divestiture proposals, both vertically and horizontally directed, have been entertained in this body in the past few years.

The oil companies and their critics have been equally adamant in their opposing arguments on the question, and the lack of any definitive information on the subject has prevented the Congress from taking any action.

Senator KENNEDY, the very able chairman of the Subcommittee on Antitrust and Monopoly who has been studying the problem of competition in the oil industry for many years, introduced a bill a few days ago to require the oil companies to cease acquisition of uranium and coal properties, and to divest themselves of their current holdings. However, I personally find it impossible to either support or oppose this bill on the basis of currently available information.

The energy industries represent an extremely large, and rapidly expanding segment of our economy. A divestiture or non-divestiture decision involves many billions of dollars in American investment funds, hundreds of thousands of individual workers, and will have an effect on energy prices and availability far into the future.

We cannot afford to make this decision without adequate research into all of its possible ramifications.

For these reasons, I am today introducing legislation to establish a Presidentially-appointed National Commission on Interfuel Competition. The purpose of this Commission is to investigate all of these concerns and independently determine whether there are any grounds for legislative, administrative, or judicial action. It will be charged with the responsibility of reporting back a full and unbiased assessment of all the alternatives, and making whatever policy recommendations it deems appropriate.

The competence and independence of the Commission shall be derived from its stature and origins. Its three members will be drawn from the Federal service, the private sector, and the academic community, appointed by the President and confirmed by the Senate.

The thoroughness and accuracy of the report shall be insured by the powers of compulsory process, enforcement, and appeal, including subpena power, granted under the law, and through the cooperation of all departments and agencies of the Federal Government.

The Commission shall be granted 18 months in which to gather their data and prepare their report. The sooner this legislation can be enacted, the sooner this information will be available.

I urge all my colleagues in the Senate and in the appropriate committees to give this bill their most serious attention and support.

Mr. President, I ask unanimous consent that the text of the bill I am introducing be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1970

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Commission on Interfuel Competition Act".

SEC. 2. (a) There is hereby created the National Commission on Interfuel Competition (hereafter referred to as the "Commission") which shall be composed of three members of whom one shall be appointed from the Federal service, one from the private sector, and one from the academic community. Members shall be selected for their outstanding qualifications and demonstrated competence. The members of the Commission shall be appointed by the President, with the advice and consent of the Senate. One member shall be designated by the President, at the time of such appointment, as Chairman.

(b) The members of the Commission shall serve without compensation, as such, but shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in carrying out the duties of the Commission.

(c) Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made. Two members of the Commission shall constitute a quorum. The first meeting of the Commission shall be called by the Chairman within the sixty calendar day period following the date of the enactment of this Act.

SEC. 3. The Commission shall make a full and complete study for the purpose of recommending to the President and the Congress those policies which would help insure a maximum degree of interfuel competition. This study shall include, without being limited to, a determination of:

(1) the impact of Federal and State energy resource leasing policies, rules, statutes, and regulations on the structure and degree of interfuel competition among firms in the domestic energy industry;

(2) the impact of cross-ownership of competing forms of energy on the degree of interfuel competition and on the development of alternative energy supplies and systems; and

(3) the trends in ownership (or control), production, distribution, and marketing of energy resources and energy products derived from Federal, State, or private lands, in terms of their effect on the degree of interfuel competition.

SEC. 4. (a) In order to carry out the purposes of this Act, the Commission is authorized:

(1) to appoint and fix the compensation of such staff personnel as may be necessary, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates, but at rates not in excess of the maximum rate for GS-18 of the General Schedule under section 5332 of such title;

(2) to procure temporary and intermittent services to the same extent as is authorized by section 3109 of title 5, United States Code, at rates not to exceed $150 a day for individuals; and

(3) to hold public hearings, commission independent studies, solicit relevant studies, and gather relevant data.

(b) In the exercise of its duties and responsibilities under this Act, the Commission may exercise the same power of compulsory process and appeal as is granted to the Federal Trade Commission under the Federal Trade Commission Act and as is granted to the Attorney General of the United States under the Antitrust Civil Process Act.

(C) Each department, agency, and instrumentality of the executive branch of the Government, including independent establishments, is directed to furnish the Commission, upon request made by the Chairman, such relevant data, reports, information and other resources as the Commission deems necessary to carry out its functions under this Act.

SEC. 5. The Commission shall submit to the President and to the Congress a report with respect to its findings and policy recommendations no later than 18 months fol-

lowing the date of the enactment of this Act. Upon the expiration of the sixty day period following the submission of such report the Commission shall cease to exist.

SEC. 6. There is authorized to be appropriated such sum, not to exceed $2,000,000, as may be necessary to carry out the provisions of this Act.

By Mr. WILLIAMS:

S. 1971. A bill to remove excise tax on bus parts and accessories and to remove excise tax on certain items used in connection with intercity, local, and school buses; to the Committee on Finance.

BUS EXCISE TAX REPEAL ACT OF 1977

Mr. WILLIAMS. Mr. President, I am today introducing legislation designed to make Federal tax law more consistent with our goal of a comprehensive national energy policy.

Meaningful energy conservation requires the use of efficient, economical mass transit systems. Our success in coming to grips with our energy crisis depends to a significant degree on how well we succeed in encouraging people to leave their cars for other modes of transportation.

Our Nation's bus lines comprise a crucial component of mass transit. Millions of Americans daily depend on intracity and intercity buses to get them to work or shopping and back home again. Energy savings from operating buses in large cities as well as in small towns is well known and appreciated. Unfortunately, certain provisions of The Federal Tax Code interfere with the ability of privately owned bus companies to provide the best possible service by imposing on these companies a number of excise taxes.

At present, privately owned bus companies must pay Federal excise taxes on replacement parts and accessories, motor fuels, lubricating oil, highway tires, tread rubber, and inner tubes as part of the purchase price of these items. A manufacturer's excise tax of 8 percent exists for bus replacement parts and accessories. The tax on gasoline, diesel fuel, and other motor fuels is 4 cents a gallon, while lubricating oil is taxed at a rate of 6 cents a gallon. Highway tires and inner tubes are taxed at 10 cents a pound, and tread rubber for highway use carries an excise tax of 5 cents a pound.

Private, local transit companies are now eligible for a 50-percent refund or credit on their motor fuel taxes if at least 60 percent of their income from scheduled passenger service is "commuter fare revenue." The criteria for commuter fare revenue include the requirement that bus fares not exceed 60 cents. This requirement has remained unchanged for over 20 years, although the dramatic rise in transportation costs has forced bus fares in many areas to climb far above the 60-cent level. Because fares greater than 60 cents may not count as commuter fare revenue, bus companies across the country are losing their fuel tax exemptions as the proportion of their income from commuter fare revenue dips below 60 percent.

The Federal excise taxes relating to buses are outdated, burdensome, unfair, and should be repealed. These taxes are vestiges of the transportation policies of the mid-1950's and thus bear no relevance to the policies we must pursue today. Bus lines seeking to expand service or to upgrade the service they already provide find that their tax burdens would increase as a result. In effect, Federal tax law penalizes these companies for doing precisely what we want them to do.

State governments are also affected by Federal bus excise taxes. A large portion of our private bus companies must depend on State assistance in order to maintain current levels of service or to meet increasing service needs. This dependence means that the excise taxes imposed on transit companies can in many instances add to the financial strains on State government which are already faced with serious budgetary problems.

Federal bus excise taxes are also inequitably applied because they fall on only one segment of the Nation's bus companies—those that are privately owned. Publicly owned bus companies are exempt from these taxes. Furthermore, since a large number of bus lines are small operations, owning less than 5 buses each, the amounts they must pay in Federal excise taxes can mean the difference between financial trouble and financial independence. This is especially true for those small companies which have lost their eligibility for Federal fuel excise taxes.

In recognition of the need for a coordinated, consistent Federal approach to the encouragement of mass transit, the legislation I am offering today would repeal the excise taxes which privately owned bus companies must pay on fuel, lubricating oil, replacement parts and accessories, highway tires, tread rubber, and inner tubes. These taxes would be repealed for intercity and intracity buses as well as for privately owned buses used to transport schoolchildren. I hope removal of these taxes will help to maintain and improve the quality of bus service while helping to preserve existing fares.

The U.S. Treasury Department estimates that my legislation would save our private bus companies as much as $16 million in unnecessary taxes for taxable year 1978 and for each year thereafter. Legislation to repeal these taxes has been offered in the House by Representatives HELEN MEYNER, JAMES JONES, and RICHARD GEPHARDT and will be considered on the House floor later this week.

Mr. President, we are now carving out a national energy policy that we should be able to live with for many years to come. In doing so, we must make sure that all our laws are consistent with our energy aims. The excise taxes imposed on privately owned bus companies fly directly in the face of our energy conservation efforts, and I hope that they are promptly repealed. I ask unanimous consent that the full text of my bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1971

Be it enacted by the Senate and House of Repesentatives of the United States of America in Congress assembled, That this Act may be cited as the "Bus Excise Tax Repeal Act of 1977."

REMOVAL OF EXCISE TAX ON BUS PARTS

SEC. 2. (a) Exempt sales.—Subsection (e) of section 4221 of the Internal Revenue Code of 1954 (relating to special rules for certain tax-free sales) is amended by adding at the end thereof the following new paragraph:

"(6) Bus parts and accessories.—Under regulations prescribed by the Secretary, the tax imposed by section 4061(b) shall not apply to any part or accessory which is sold for use by the purchaser on or in connection with an automobile bus."

(b) Refund for certain sales of bus parts.—Subparagraph (I) of section 6416(b)(2) (relating to refund for specified uses and resales) is amended to read as follows:

"(I) in the case of any article taxable under section 4061(b), sold for use by the purchaser on or in connection with an automobile bus;".

(c) Effective date.—The amendments made by this section shall apply to sales on or after the first day of the first calendar month beginning more than 10 days after the date of the enactment of this Act.

REMOVAL OF EXCISE TAX ON CERTAIN ITEMS USED IN CONNECTION WITH INTERCITY, LOCAL, AND SCHOOL BUSES

SEC. 3. (a) Tires, tubes, and tread rubber.—

(1) In general.—Paragraph (5) of section 4221(e) of the Internal Revenue Act of 1954 (relating to school buses) is amended to read as follows:

"(5) Tires, tubes, and tread rubber used on intercity, local and school buses.—Under regulations prescribed by the Secretary—

"(A) the taxes imposed by paragraphs (1) and (3) of section 4071(a) shall not apply in the case of tires or inner tubes for tires sold for use by the purchaser on or in connection with a qualified bus, and

"(B) the tax imposed by paragraph (4) of section 4071(a) shall not apply in the case of tread rubber sold for use by the purchaser in the recapping or retreading of any tire to be used by the purchaser on or in connection with a qualified bus."

(2) Qualified bus defined.—Subsection (d) of section 4221 (relating to definitions) is amended by adding at the end thereof the following new paragraph:

"(7) Qualified bus.—

"(A) In general.—The term 'qualified bus' means—

"(i) an intercity or local bus, and

"(ii) a school bus.

"(B) Intercity or local bus.—The term 'intercity or local bus' means any automobile bus which is used predominantly in furnishing (for compensation) passenger land transportation available to the general public if—

"(i) such transportation is scheduled and along regular routes, or

"(ii) the passenger seating capacity of such bus is at least 20 adults (not including the driver).

"(C) School bus.—The term 'school bus' means any automobile bus substantially all the use of which is in transporting students and employees of schools. For purposes of the preceding sentence, the term 'school' means an educational organization which normally maintains a regular faculty and curriculum and normally has a regularly enrolled body of pupils or students in attendance at the place where its educational activities are carried on."

(3) Technical amendment.—Paragraph (2) of section 6416(b) (relating to specified uses and resales) is amended by striking out the period at the end of subparagraph (K) and

inserting in lieu thereof a semicolon and by inserting after subparagraph (K) the following new subparagraphs:

"(L) in the case of any tire or inner tube taxable under paragraph (1) or (3) of section 4071(a), sold to any person for use as described in section 4221(e)(5)(A); or

"(M) in the case of tread rubber taxable under paragraph (4) of section 4071(a), used in the recapping or retreading of a tire sold to any person for use on or in connection with a qualified bus (as defined in section 4221(d)(7))."

(b) Repayment of tax on lubricating oil used in intercity, local, or school buses.—

(1) In general.—Subsection (a) of section 6424 (relating to lubricating oil not used in the highway motor vehicles) is amended to read as follows:

"(a) Payments.—Except as provided in subsection (f), if lubricating oil (other than cutting oils, as defined in section 4092(b), and other than oil which has previously been used) is used—

"(1) otherwise than in a highway motor vehicle, or

"(2) in a qualified bus (as defined in section 4221(d)(7)), the Secretary shall pay (without interest) to the ultimate purchaser of such lubricating oil an amount equal to 6 cents for each gallon of lubricating oil so used."

(2) Technical and conforming amendments.—

(A) The section heading for section 6424 is amended by striking out "NOT USED IN HIGHWAY MOTOR VEHICLES" and inserting in lieu thereof "USED FOR CERTAIN NONTAXABLE PURPOSES".

(B) The table of sections for subchapter B of chapter 65 (relating to rules of special application) is amended by striking out "not used in highway motor vehicles" in the item relating to section 6424 and inserting in lieu thereof "used for certain nontaxable purposes".

(C) Paragraph (3) of section 39(a) (relating to certain uses of gasoline, special fuels, and lubricating oil) is amended by striking out "otherwise than in a highway motor vehicle" and inserting in lieu thereof "for certain nontaxable purposes".

(D) Sections 6504(9) and 6675(a) are each amended by striking out "not used in highway motor vehicles" and inserting in lieu thereof "used for certain nontaxable purposes".

(E) Paragraph (3) of section 209(f) of the Highway Revenue Act of 1956 is amended by striking out "lubricating oil not used in highway motor vehicles" and inserting in lieu thereof "lubricating oil used for certain nontaxable purposes".

(c) Repayment of tax on fuels used by public transit buses or school buses.—

(1) Gasoline.—Subsection (b) of section 6421 (relating to local transit systems) is amended to read as follows:

"(b) Intercity, Local, or school buses.—

"(1) Allowance.—Except as provided in paragraph (2) and subsection (i), if gasoline is used in an automobile bus while engaged in—

"(A) furnishing (for compensation) passenger land transportation available to the general public, or

"(B) the transportation of students and employees of schools (as defined in the last sentence of section 4221(d)(7)(C)),

the Secretary shall pay (without interest) to the ultimate purchaser of such gasoline an amount equal to the product of the number of gallons of gasoline so used multiplied by the rate at which tax was imposed on such gasoline by section 4081.

"(2) Limitation in case of nonscheduled intercity or local buses.—Paragraph (1)(A) shall not apply in respect of gasoline used in any automobile bus while engaged in furnishing transportation which is not scheduled and not along regular routes unless the seating capacity of such bus is at least 20 adults (not including the driver)."

(2) Other fuels.—Section (b) of section 6427 (relating to local transit systems) is amended to read as follows:

"(b) Intercity, local, or school buses.—

"(1) Allowance.—Expect as provided in paragraph 2 and subsection (g), if any fuel on the sale of which tax was imposed by subsection (a) or (b) of section 4041 is used in an automobile bus while engaged in—

"(A) furnishing (for compensation) passenger land transportation available to the general public, or

"(B) the transportation of students and employees of schools (as defined in the last sentence of section 4221(d)(C)),

the Secretary shall pay (without interest) to the ultimate purchaser of such fuel an amount equal to the product of the number of gallons of such fuel so used multiplied by the rate at which tax was imposed on such fuel by subsection (a) or (b) of section 4041.

"(2) Limitation in case of nonscheduled intercity or local buses.—Paragraph (1)(A) shall not apply in respect of fuel used in any automobile bus while engaged in furnishing transportation which is not scheduled and not along regular routes unless the seating capacity of such bus is at least 20 adults (not including the driver)."

(3) Technical amendments.—

(A) Subsection (d) of section 6421 is amended to read as follows:

"(d) Gasoline defined.—For purposes of this section, the term 'gasoline' has the meaning given to such term by section 4082(b)."

(B) Subsection (c) of section 4483 is amended by inserting "(as in effect on the day before the date of the enactment of the Energy Tax Act of 1977)" after "section 6421(b)(2)".

(d) Effective date.—The amendments made by this section shall take effect on the first day of the first calendar month which begins more than 10 days after the date of the enactment of this Act.

By Mr. PERCY:

S. 1972. A bill to insure adequate compensation to the United States for the use of Federal property for automobile parking purposes, to encourage the use of mass transportation and carpooling by Federal employees, and for other purposes; to the Committee on Environment and Public Works.

Mr. PERCY. Mr. President, on July 15, my distinguished colleague from the State of Colorado, Senator HART, introduced an amendment to the legislative appropriations bill which would have required congressional employees to pay for their parking privileges on Capitol Hill. This proposal, as might be expected, was not particularly popular on this floor, and was defeated by a considerable margin.

Several criticisms were leveled at the particular language of this amendment, including its selective application to congressional employees while other Federal workers continued to receive free parking, the fee schedule based primarily on employees' salaries rather than market-based rates, and the alleged "unique nature" of Capitol Hill life which supposedly necessitates free staff parking.

It is significant to note, however, that nobody on this floor attacked the basic premise of Senator HART's amendment: that in the interests of equity and in support of our own avowed energy conservation policies the taxpayers of the United States should not subsidize the use of private automobiles by congressional employees.

I am introducing a bill today which would institute a system of parking fees for all Federal employee parking. Entitled "The Federal Parking Act," this legislation requires the Administrator of the General Services Administration, the Director of the Administrative Office of U.S. Courts, and the Architect of the Capitol to develop procedures for identifying all Federal properties in the United States which are used primarily for private motor vehicle parking and determining parking fees for the use of those properties based on the rates charged for other public parking facilities in the immediate area.

Priority and eligibility for parking privileges may still be determined in accordance with current seniority systems and carpooling, vanpooling, and other energy saving plans.

Rates would be determined for each individual building, lot, or other parking location which would equate Federal employees' parking costs with those of private employees working in the same locality. In suburban or rural areas where no parking fees are customarily charged for any facilities, no fee would be required.

The only exception to these general rules would be for parking facilities for Federal employees' residential facilities. This exclusion is designed to protect military personnel and others who live on Federal property and need parking space for their cars even if they do not commute to work.

The justification for this bill is quite simple. We have been asking the American public to cut back on their driving, to use mass transportation whenever possible, and to conserve energy by a variety of means. Yet according to public opinion polls, many of our citizens either do not believe in or have never even heard of the energy crisis.

If we expect the citizens of the United States to cooperate in our national energy policies, we in the Congress must demonstrate our own sincerity and willingness to make the same sacrifices we ask of the public. Free Federal parking can only serve to undermine and contradict this endeavor.

I ask all my colleagues to consider the question of parking charges in terms of their personal responsibility to the public, and to lend their support to this bill.

Mr. President, I ask unanimous consent that the text of the bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1972

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The Federal Parking Act".

SEC. 2. (a) No real property located in the United States, which is owned or leased by, or otherwise under the jurisdiction of, the United States Government, which is principally utilized, as determined by the Ad-

ministrator of the General Services Administration, to provide parking facilities for privately owned motor vehicles in connection with employment, business, or visitation at Federal offices or installations, may be utilized for such purpose unless there is assessed against each such vehicle a charge or fee within the range of charges or fees generally applicable for public parking purposes in similar facilities in the same general locality.

(b) As used in this Act the term "similar facilities" shall refer to publicly available parking facilities in nearby business or commercial areas which are of the same kind (lot, garage, or on-street parking), convenience, and quality as that granted on the Federal property. If such similar facilities do not exist in nearby areas a fee shall be assessed which reflects fees charged in any public or private parking facility in a comparable area elsewhere in the United States.

SEC. 3. The restrictions imposed by Sec 2. of this Act shall not be applicable to parking facilities provided in connection with any Federal employee's residence, including, but not limited to, housing and visitation facilities at military bases and installations.

SEC. 4. The Administrator of the General Services Administration, the Director of the Administrative Office of United States Courts, and the Architect of the Capitol shall take such steps as may be necessary to coordinate the respective activities of the Executive, Judicial, and Legislative Branches of the Government in the implementation of the restrictions imposed under section 2 of this Act

SEC. 5. The provisions of this Act shall become effective upon its enactment; except that the restrictions imposed by section 2 of this Act shall become effective on the first day of the first month which begins more than 90 calendar days after the date of enactment of the Act.

SEC. 6. All revenues collected pursuant to the provisions of this Act shall be deposited in the Treasury of the United States as miscellaneous receipts.

By Mr. NELSON:

S. 1973. A bill to amend the Arms Export Control Act to change the method of determining the period of time for adopting a concurrent resolution of Congress objecting to a proposed sale under such act; to the Committee on Foreign Relations.

Mr. NELSON. Mr. President, this legislation extends the time period for congressional review of major arms sales proposals from 30 calendar days to 45 days in which Congress is in continuous session.

The ongoing debate in Congress concerning the executive branch's proposal to sell seven E–3A Airborne Warning and Control System (AWACS) aircraft to Iran for $1.2 billion has raised a number of very serious questions. Not least of the issues is the Congress ability to debate and consider responsibly and effectively major arms sales.

The AWACS sale to Iran is a classic case of Congress inability—given current time constraints—to consider the serious implications of the executive branch's arms sales policy.

By withdrawing the AWACS request, President Carter has temporarily defused the AWACS issue until Congress returns in September when he will resubmit his proposal. However, the matter of Congress severely limited time period for review is a chronic problem which has plagued us in the past and looms over us in the future.

Pursuant to legislation that I introduced in June 1973, the President is required to submit to Congress any proposed foreign military sale in excess of $25 million. Section 36(b) of the Arms Export Control Act provides Congress 30 calendar days to review and, if necessary, veto by concurrent resolution such major arms sales proposals of the executive branch.

My purpose in offering this legislation was to bring Congress for the first time into the decisionmaking process of the U.S. burgeoning foreign military sales program, through which this country has become far and away the world's leader in exporting arms. The Congress at that time had no real voice in the direction of our arms sales policy, which had become a major foreign policy tool with great consequences for the United States and recipients around the world.

Congress eventually adopted this measure and President Ford signed it into law in January 1975. As a result, Congress gradually began to assert its voice in the formulation of our arms transfers policy. However, the need I foresaw at that time for a sufficiently long period for congressional review—30 or more days of continuous session—has been demonstrated in the practical application of the congressional veto procedure since its passage. Today we are preoccupied with the AWACS sale to Iran. But the 1975 sale of Hawk missiles to Jordan constituted the first major test of this new statute. In that instance the congressional review mechanism forced committee debate on the important foreign policy ramifications of the sale, exposed serious disagreement within the administration on the wisdom of the sale as proposed, and in the end Congress extracted significant concessions in the form of assurances from the President that the weapons would not be transferred in such a way as to allow their use in an offensive capacity against Israel.

Those were not insignificant accomplishments. The Congress has, indeed, shown sensitivity to the concerns expressed by this legislation. In the words of Judith Miller of the Progressive magazine—

> Congress effectively served notice that it is able and willing to exercise supervisory authority in some cases over administration arms sale policy.

Senator HUBERT H. HUMPHREY, chairman of the Senate Foreign Assistance Subcommittee, asserts it is now "standard practice" for the subcommittee to hold hearings on arms sales which are controversial and deserve thorough analysis.

But the case of the Jordan Hawk missile sale also pointed out very serious shortcomings in the congressional veto procedure. At the very least, it became apparent that 20 calendar days—as the law then provided—was altogether too short a time for both Houses of Congress to consider adequately a significant and controversial arms sale proposal. Moreover, notification of the Hawk sale coming as it did shortly before the August recess, further dramatized the inadequacy of the review period. Nothing presently stops any administration from submitting a sale when Congress is not in session, thus precluding any congressional action.

Last year, Congress increased the time period from 20 to 30 calendar days. But 30 calendar days is still inadequate, considering that the 30-calendar-day provision in the law as currently written still makes no distinction between workdays and recesses.

Events in the closing days of the last session dramatically demonstrated the shortcomings of the 30-calendar-day period. On September 1, 1976—the eve of Congress traditional Labor Day recess—the President informed Congress of a decision to sell arms to 11 separate countries for a total dollar figure of $6.024 billion in 37 separate transactions. Starting from the moment Congress received the executive announcement, the clock began ticking toward the 30-day deadline. Failure to act meant that the sale would go through exactly as proposed by the President. The clock had ticked over the recess. When Congress returned from the Labor Day recess, it had only 24 days in which to act.

The AWACS controversy again presents us with the now familiar situation in which Congress simply lacks the time necessary to examine conscientiously foreign military sales questions, which call for major foreign and military policy decisions.

The legislation that I am introducing today would give the Congress a good deal more time in which to deliberate on the important domestic and international ramifications that inevitably accompany foreign military sales. Currently, Congress is allowed just 30 calendar days, whether it is in session or not. If adopted this measure would give the legislature 45 days of "continuous session" to consider major arms transfers. This formula means that no days during a recess of either House of more than 3 days would count against the overall review period, in effect extending it for a corresponding time. (The legislative precedent for the "continuous session" computation is now found in section 601 of the Arms Export Control Act of 1976.) This proposed change in the language of the law, then, would also prevent a situation in which an administration could report several proposed sales during the August recess, for example, and thus effectively prevent congressional review and a possible veto. This change would allow Congress a significantly longer time for its deliberation.

The Senate passed a "continuous session" provision back in 1973, when I first introduced legislation in this field, but Congress subsequently adopted the calendar day computation. Since then, I have repeatedly reintroduced legislation to extend the review period by proposing the "continuous session" formula. Specifically, on June 6, 1974; June 12, 1975; and again on April 26, 1977, legislation was introduced to extend the period of

time that Congress had to review significant arms sales. On September 21, 1976, at the time that the Ford administration sent up the $6.1 billion package of several dozen separate sales, I wrote the chairman of the Foreign Assistance Subcommittee, HUBERT HUMPHREY, that "experience * * * should make it clear that the timetable provided for congressional oversight is too short."

The change embodied in the legislation offered again today is demonstrably needed. The present time period of 30 calendar days for the passage of a concurrent resolution by both Houses is clearly inadequate. If Congress is to act responsibly, hearings must be held and adequate time allowed for genuine debate of the merits of each sale. It is simply not realistic to expect that a resolution of disapproval of a proposed arms sale, a matter which requires comprehensive review and hearings in both Houses, could possibly be passed in such a short time.

It should also be noted that since delivery time for an arms contract can extend over several months or years after a sale is agreed to, there is no reason to believe that a slightly extended period of time for congressional consultation would be onerous for the prospective arms buyer or for the State or Defense Departments. In fact, $32 billion worth of arms have been approved by the Congress but have not been delivered to their destined country. Indeed, the first AWACS aircraft is not due to be delivered to Iran until late 1981, and the entire delivery will extend an additional 2 years.

Had Congress already accepted the legislation offered to extend the period it would have had the time to consider and debate the AWACS proposal. Instead, it has found itself in the uncomfortable position of having to rely on the good will of the executive branch to withdraw the proposal and resubmit it at a later date.

TRENDS

It is now only too well documented that the United States is the world's leader in selling arms abroad. From 1966 to 1975, this country sold $34.9 billion worth of armaments to other countries, or more than the rest of the world's major suppliers combined. In fiscal 1975, the United States exported practically twice the amount that U.S.S.R. did. In the last fiscal year alone, the United States agreed to sell abroad military equipment and weapons worth over $14 billion.

The trends are disturbing. We have witnessed over the last several years an alarming growth in the volume of military equipment and arms sold abroad by the United States. As recently as 1970, our entire foreign military sales program accounted for less than $1 billion worth of equipment and weapons, this in stark contrast to last year's total, which represents nearly 14 percent of the dollar value of all U.S. foreign military sales in the last quarter century.

There has also been a dramatic change in the identity of those receiving our arms largess. A program originally designed to assist major NATO allies has become the chief means by which many nations of the so-called Third World acquire weapons. The developing countries bought over half—53 percent—their weapons from the United States during 1966–75. Our share of this market totaled $27.5 billion. This included 96 percent of their imports of air-to-surface and air-to-air missiles. More than half of our foreign military cash sales in recent years have been made to nations of the newly oil rich Persian Gulf and Mideast. By fueling local arms races, the United States advances the potential for the creation or exacerbation of regional tensions and conflicts, which in turn increase the likelihood of major-power confrontation.

In addition, the United States is selling increasingly destructive and sophisticated military equipment. In contrast to the days when the United States drew only on surplus stocks for foreign military sales, we now sell some of our most advanced missiles, warplanes, and electronic gear. This policy has deleterious effects on our own armed services readiness as well as our overall national security.

With the move away from U.S. military aid and toward payment by the recipient country for its arms, the recipients are more often demanding—and receiving—our most sophisticated armaments off the same assembly line that supplies our own forces, and sometimes before we are fully supplied. Foreign orders for highly advanced weaponry are made even before we proceed to their full-scale production. Maintenance of our technological superiority is threatened by such concurrent sales of advanced weaponry. This is especially so when sales are made to unstable regimes whose successors may not be friendly to the United States, or when such equipment falls into hostile hands in a regional conflict.

THE CARTER ADMINISTRATION

Mr. President, I am encouraged by President Carter's stance on restraining the heavy flow of arms abroad. His administration reflects a philosophy in refreshing contrast to that of recent administrations.

President Carter assured us on May 19 that—

> The United States will henceforth view arms transfers as an exceptional foreign policy implement, to be used only in instances where it can be clearly demonstrated that the transfer contributes to our national security interests. . . . The burden of persuasion will be on those who favor a particular arms sale, rather than those who oppose it.

This is not a partisan issue. It is a question of the constitutional need for adequate input by the legislative branch into the process by which this country relates to others. This requirement speaks to the proper congressional role which is independent of the Executive role.

It was the legislative branch which first recognized and focused on the significance of U.S. arms transfers, and brought the issue into the public forum. Foreign military sales constitute major foreign policy decisions involving the United States in military activities and potential de facto commitments without sufficient deliberation or participation by those outside the confines of the executive branch. These matters require serious consideration by the Congress in an institutionalized fashion, and should not be the exclusive domain of the executive branch.

The legislative branch should not wait to act merely at the will of the executive branch. If Congress is serious about exercising its full constitutional duty in the formulaiton of U.S. foreign policy, it must clearly fashion substantive tools with which to forge a responsible arms control policy.

Mr. President, I ask unanimous consent that the text of the legislation being introduced today be printed in the RECORD at this time.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1973

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the last sentence of section 36(b)(1) of the Arms Export Control Act is amended by striking out "thirty calendar days after receiving such certification" and inserting in lieu thereof "the first period of 45 days of continuous session of Congress after the date on which Congress receives such certification".

By Mr. NELSON (for himself and Mr. CULVER):

S. 1974. A bill to amend section 553 of title 5, United States Code, to improve Federal rulemaking practice by creating procedures for regulatory issuance in two or more parts; to the Committee on the Judiciary.

Mr. NELSON. Mr. President, today I am introducing the Regulatory Flexibility Act, a bill which amends the Administrative Procedure Act to eliminate some current inequities in Federal rulemaking. This bill would create different sets of regulations for smaller units of the regulated public whenever feasible.

Two key problems in current administrative practice are the heavy load that reporting requirements place on individuals and smaller enterprises, and the disproportionate cost of regulatory compliance to these persons and enterprises. These two problems are interrelated, and this bill addresses both.

In information-gathering, the bill puts added emphasis on privacy rights and the costs of information; in rulemaking, the bill establishes procedures to support the principle that regulations should fit the scale of those being regulated.

REPORTING REQUIREMENTS

Government information requests of the public should be guided by the principle of obtaining the least information necessary to execute the laws faithfully. The collection of information on the minutiae of everyday life, merely because that information is accessible and inexpensive to the Government, represents a dangerous movement toward unwarranted government surveillance of the public as well as disregard of our traditions of personal privacy. At present few constraints exist on the kinds of ques-

tions that are asked of the public, particularly business concerns and organizations, and the redundancy with which questions are asked. Public costs of reporting are not calculated in any systematic way. We do know that there are over 5,000 Federal forms distributed to the public, and more than 10 each year for every man, woman, and child in the country. Investigations by the Senate Small Business Committee, the Federal Paperwork Commission, and others, have turned up such examples of Federal information demands as these:

An elderly couple in Arizona, proprietors of literally a "mom and pop" auto business, testified that they spend an average of 15 hours a week preparing Federal reports.

An Army veteran made a 130-mile round trip to complete paperwork at a Veterans' Administration office, only to be told a few months later that he had to make the trip again to provide the same information for a different program.

The most needy Americans may be the least able to complete the paperwork necessary to get help, the Federal Paperwork Commission recently noted. "It may take as many as 60 forms to obtain comprehensive financial assistance," the Commission observed. "A not untypical 10-year-old case file in New York City contained over 700 separate documents."

A Harris poll indicates 34 percent of all Americans do not possess the reading and comprehension skills necessary to complete a medicaid application.

The owner of a machine shop in Iowa, who was unable to complete the Census Bureau's massive MA–200 report on pollution abatement expenditures without changing his entire accounting system, filled out the reports as best he could and offered to let the Bureau examine his books. The Bureau threatened punitive action if its specifications were not met in full.

Government agencies do not consciously set out to violate privacy rights or impose heavy reporting costs on the public. The real problem is that the design of the regulatory process encourages regulators to treat information as a free good. Thus, any effective solution to the paperwork problem must deal with Federal rulemaking practice as a whole.

REGULATORY INEQUITIES

Protecting our Nation's competitive marketplace requires precise rules which are sharply focused on key problems. Our present system abuses commonsense and good government by equating the resources of every individual and every enterprise. Our investigations of the impact of regulations on individuals and businesses of limited means turned up incidents such as these:

Oil jobbers in Oklahoma submitted the Federal Energy Administration's "petroleum company financial reporting system"—a system which lumps together Exxon and the smallest oil marketer—to an internationally-recognized auditing firm. The auditors concluded the PCFRS was "inapplicable and inappropriate to small business petroleum marketers."

Small airline companies have testified that Civil Aeronautics Board requirements have concentrated the airline industry in the hands of a few big carriers. One former CAB staffer, now a law professor at two California universities, testified that—

> The Board was attempting to create conditions, in my opinion, that made (the smaller carriers') operations nonviable, in the hopes they would go away.

Other witnesses have made similar charges regarding the Interstate Commerce Commission and the trucking industry.

The costs of regulatory delay add more than $18,000 to the price of a new home that would otherwise sell for $30,000, according to two recent studies. In some areas, delay caused by local, State, and Federal regulations in homebuilding now averages 3½ years between submission of plans and groundbreaking.

A number of small businesses using two-way radios were forced to hire consultants to interpret new FCC guidelines.

A small contractor in Wisconsin detailed 26 separate Federal regulations he had to comply with before he could break ground on a highway he had contracted to build.

The president of a rural Indiana feed and farm supply company testified that his firm now spends 80 bookkeeping days per year, 120 auditing hours, and 80 legal hours complying with regulations from the Departments of Agriculture, Commerce, Labor, and Transportation, as well as the FCC, the IRS, the EEOC, OSHA, the FDA, the Social Security Administration, and the Census Bureau. He also testified that, during the height of one harvest season, the Transportation Department demanded an exhaustive record of every shipping transaction his firm had made in a previous year—and then sent out an investigator when he did not comply at once. He later learned it was a "random survey."

Masonry contractors objected to proposed HUD regulations which would discriminate against the use of masonry in housing; the regulations were finalized without meetings ever having been held or testimony taken. The contractors then spent tens of thousands of dollars running tests and computer studies to show the HUD standards were not cost-effective when applied to masonry. HUD finally agreed to a cumbersome process of "local exemptions" from the standards, but the contractors then found the local HUD officials unwilling to depart from the national standards.

A pension plan in Montana with 12 members is subject to precisely the same informational and regulatory requirements as the 843,000 member Carpenters' Union pension plan.

The central dilemma of current regulatory practice, as far as many individuals and small enterprises are concerned, is this: The costs of compliance must be either absorbed, creating competitive disadvantages for smaller businesses, or passed on to consumers, creating in effect a regressive form of taxation. Either way, increased costs or increased prices, regulations ultimately work to the advantage of larger enterprises.

Dr. Milton Kafoglis, formerly senior economist of the Council of Wage and Price Stability, summed it up this way:

> There seem to be clear economies of scale imposed by the regulatory endeavors of the newly created agencies. Uniform application of the "standards" approach . . . thus seems to increase the size firm that can effectively compete. The cost curve of the firm is shifted upward and to the right with its minimum point (or the elbow in an L-shaped cost curve) occurring at a larger output. If one employs the well-known "dominant firm" model and introduces upward shifts in cost curves (the small firms' cost curve shifting more than that of the dominant firms), the share of the dominant firm will increase and concentration will have increased. This hypothesis has not been questioned and is consistent with most of the case analyses that have been completed.
>
> The usual paperwork and reporting burden whose total costs are invariant to output is the most obvious example of economies of scale imposed by regulation . . . Such costs raise the cost curves of all firms but place the small firm at a relative disadvantage on a unit cost basis. More importantly, the technology imposed by most regulations is subject to scale economies. . . . In establishing standards there seems to be a "bias" favoring technologies which generate economies of scale. Firms do not have the choice of paying a charge or developing new technology. For example, OSHA has insisted that noise levels be reduced by mechanical means rather than by personal protective devices, thus imposing a given technology and possibly thwarting the development of new processes and technologies. . . . Total modification costs are invariant to firm size. There is not to my knowledge a government regulation which (*if uniformly applied to all firms*) would generate diseconomies of scale and increase the number of firms in an industry, thus encouraging industrial deconcentration and increased competition.

Indeed, when the Small Business Administration surveyed the small business community in 1975, about 60 percent of the firms surveyed reported that they were unable to pass on costs mandated by Federal regulations, "strongly suggesting that the 'passthrough' assumption, sometimes made by Federal agencies should be reexamined."

When one assesses the rulemaking sequence—research, "public participation," and intervention—it becomes clear that the general public and small business is not well represented at any step in the sequence. This has resulted in charges of "capture" of regulatory agencies, for example in transportation, by the dominant firms. The bill I am introducing today will not solve this problem, but it will provide an important first step by inserting the Office of Program Analysis of the General Accounting Office and the Office of Advocacy of the Small Business Administration in the decisionmaking process. GAO will be able to assist in cost/benefit analysis and the examination of regulatory impact on market structures and competition. SBA will be able to assist in the determination of whether legal, consulting, accounting, and other costs necessitated by proposed rules would adversely affect individuals and small businesses.

The principal innovation of this bill is that it empowers and encourages agencies to issue different sets of rules—with varying informational demands, compli-

ance requirements, and timetables—for different segments of the regulated public.

This approach is not altogether novel, having long been implemented on a piecemeal basis. For example:

The IRS issues a "short form" for low- and middle-income taxpayers to use for filing their annual taxes.

ERISA now provides a "model plan" to shorten regulatory delay in approving pension plans for 10 or fewer employees.

OSHA recently exempted many nonhazardous small businesses from a number of OSHA regulations.

The NLRB is permitted to decline jurisdiction in a case when "the policies of the act would not be effectuated by assertion of jurisdiction."

The Federal Water Pollution Control amendments specify that the technology imposed by regulations under the law should represent "the maximum use of technology within the economic capability of the owner or operator."

What this bill creates is a permanent mechanism for the differing treatment of individuals and organizations of different economic size across the entire regulatory spectrum. This is a practical, affirmative approach to the paperwork problem and the associated inequities of the regulatory process.

Prof. Marver H. Bernstein, writing in the "Annals of the American Academy of Political and Social Science," summed up the need aptly:

> . . . the greatest need in administrative regulation today is to focus attention on strategies of regulation. The primary question that we must try to answer as systematically as possible is this: For a given set of objectives, what combination of statutory provisions, regulatory powers, processes, and techniques; incentives and sanctions; political leadership and administrative resources is likely to achieve results that approximate the goals of the regulatory program? After nearly a century of regulatory experience in an industrial economy, we are unable to identify . . . the requisites of acceptable administrative performance—given the objectives sought, the mix of parties in interest, the state of technology, the economic stakes and the number of firms subject to regulation, the strength of consumer interests, and the degree of danger to individuals.
>
> The talent and energy we have devoted to designing regulatory programs to protect the regulated from unfair procedures and to minimize effects adverse to regulated clienteles must now be targeted on the modest problem of designing and improving systems of regulation that have a fighting chance of achieving some useful public result.

Mr. President, I ask unanimous consent that a study of the legal standing of this approach to regulation, prepared by the American Law Division of the Congressional Research Service, be included in the RECORD at this point. I ask further consent that the section-by-section analysis of the bill, as well as the full text of the proposed legislation, also be included in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1974

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Regulatory Flexibility Act".

FINDINGS AND PURPOSES

SEC. 2(a)(1) The Congress finds that in numerous instances compliance with Federal regulatory and reporting requirements imposes inequitable demands and burdens on individuals of limited means and on small businesses and organizations.

(2) A regulatory dilemma has developed in which efforts to protect the Nation's health, safety, and economic welfare have created a burden of required legal, accounting, and consulting services which is causing economic harm to individuals and organizations of limited resources, and is adversely affecting competition in the marketplace.

(3) The sheer scope and volume of regulations already in place has created high entry barriers in many industries, and discouraged potential entrepreneurs from introducing beneficial products and processes.

(4) The practice of treating all regulated individuals, organizations, and businesses as equivalent, for purposes of regulatory and paperwork requirements, has led to inefficient use of regulatory agency resources, enormous enforcement problems, and in some cases a tendency to lose sight of the legislative intent of health, safety, and economic welfare objectives.

(5) Government information collection has not adequately weighed the privacy rights of individuals and enterprises against the government's need-to-know because the design of the regulatory process has encouraged regulators to treat information as a free good.

(6) The deep public dissatisfaction with the regulatory process has stemmed in large part from a public perception of burdensome regulations failing to correct key national problems.

(b) It is the purpose of this Act to establish as a principle of regulatory issuance that regulatory and informational requirements fit the scale of those being regulated, that fewer, simpler requirements be made of individuals, small organizations and small businesses, and that to achieve these ends agencies be empowered and encouraged to issue regulations which apply differently to different segments of regulated populations, industries, and activities.

ADMINISTRATIVE PROCEDURE

SEC. 3. Section 553 of title 5, United States Code, is amended by adding at the end thereof the following:

"(f)(1) Prior to the issuance of a proposed substantive rule, the agency shall conduct an analysis for the purpose of making a determination, based on the amount of public information collection the proposed rule would necessitate, the amount, if any, of legal, consulting, and accounting costs to the public which would be so necessitated, and the overall cost of compliance with the rule, averaged, for each person, business concern, and organization affected by it, as compared with the importance of the public policy to be achieved, whether such rule should apply (at all or in the same manner) to persons, business concerns, and organizations of various sizes and resources.

"(2) The head of each agency preparing any such proposed substantive rule (a) shall—

(A) submit such substantive rule to, consult with, and obtain comments of, the Office of Advocacy of the Small Business Administration, and such office shall provide such comments with respect to the impact on smaller enterprises resulting from the promulgation in final form of such proposed substantive rule;

(B) include such statement and comments of the Office of Advocacy in the records made in connection with the proposed rule;

(C) make available such statement and comments of the Office of Advocacy to each officer or employee of the United States who, after such date, reviews such rules;

(D) make available such statements and comments of the Office of Advocacy to the public pursuant to section 552 of this title;

(E) publish a summary of such statement and comments of the Office of Advocacy with the final notice of proposed rulemaking in the Federal Register.

"(3) Paragraph (2) shall not apply to any rule if such agency head, with the concurrence of the Office of Advocacy of the Small Business Administration, determines such rule will not, if implemented, have a substantial effect on any significant number of small businesses. Notice of such determination shall be published in the Federal Register.

"(4) Whenever the results of any such analysis by an agency, and such statement and comments by the Office of Advocacy of the Small Business Administration, indicate the desirability and feasibility of promulgating rules which differ with respect to their applicability to various segments of the regulated industries, activities, or populations, the agency shall issue the new rule in two or more parts, with each part containing varying requirements for performance or reporting, as appropriate to persons, business concerns, and organizations of varying economic sizes and resources.

"(5) In establishing segments of regulated industries, activities, or populations for the purposes of this subsection, agencies shall establish objective, and to the maximum extent feasible, uniform criteria to facilitate determinations by such populations, activities, and industries, of the applicability of rules issued hereunder.

"(6) Each agency shall, during the 5-year period beginning with the date of enactment of this subsection, review its substantive rules which are in effect on such date and make the determinations referred to in paragraphs (1) through (5) with respect to each rule.

"(7) The Office of Program Analysis of the General Accounting Office is authorized to furnish, upon request, advice and assistance to agencies making determinations under this subsection.".

THE LIBRARY OF CONGRESS,
CONGRESSIONAL RESEARCH SERVICE,
Washington, D.C., July 25, 1977.

To: Hon. Gaylord Nelson, Attn: Jim Morrison.

From: American Law Division.

Subject: Constitutionality of Legislation Which Classifies Businesses by Some Criterion of Size for Purposes of Regulation.

This is in response to your inquiry whether legislative classification of businesses by a criterion of size for the purpose of regulation would be constitutional. You have particular reference to proposed legislation by Senators Nelson and Culver which would incorporate such a scheme.

The traditional standard of review of equal protection challenges of classifications developed largely though not entirely in the context of economic regulation. It is still most validly applied there.

Mr. Justice Frankfurter once noted "The Fourteenth Amendment enjoins 'the equal protection of the laws'; and laws are not abstract propositions. They do not relate to abstract units, A, B, and C, but are expressions of policy arising out of specific difficulties, addressed to the attainment of specific ends by the use of specific remedies. The Constitution does not require things which are different in fact or opinion to be treated in law as though they were the same." *Tigner* v. *Texas,* 310 U.S. 141, 147

(1940). The mere fact of classification will not void legislation, then, because in the exercise of its powers a legislature has considerable discretion in recognizing the differences between persons and situations *Barnett* v. *Indiana*, 229 U.S. 26 (1913). "Class legislation, discriminating against some and favoring others, is prohibited; but legislation which, in carrying out a public purpose, is limited in its application, if within the sphere of its operation it affects alike all persons similarly situated, is not within the amendment." *Barbier* v. *Connolly*, 113 U.S. 27, 32 (1885). Or, more succinctly, "statutes create many classifications which do not deny equal protection; it is only 'invidious discrimination' which offends the Constitution." *Ferguson* v. *Skrupa*, 372 U.S. 726, 732 (1963); *Williamson* v. *Lee Optical Co.* 348 U.S. 483, 489 (1955).

Economic regulation under a state's police power has rarely been held unconstitutional under the equal protection clause. "[T]he Fourteenth Amendment permits the States a wide scope of discretion in enacting laws which affect some groups of citizens differently than others. The constitutional safeguard is offended only if the classification rests on grounds wholly irrelevant to the achievement of the State's objective. State legislatures are presumed to have acted within their constitutional power despite the fact that, in practice, their laws result in some inequality. A statutory discrimination will not be set aside if any state of facts reasonably may be conceived to justify it." *McGowan* v. *Maryland*, 366 U.S. 420, 425–426 (1961). These principles apply equally, of course, to federal economic regulation. See, generally, *Weinberger* v. *Wiesenfeld*, 420 U.S. 636, 638 n. 2 (1975); *Frontiero* v. *Richardson*, 411 U.S. 677, 680 n. 5 (1975); *Richardson* v. *Belcher*, 404 U.S. 78, 81 (1971).

With particular reference to precedents dealing with regulations classifying on the basis of size, the Supreme Court in a number of instances has upheld such legislation against equal protection attack. Thus in *McClean* v. *Arkansas*, 211 U.S. 539 (1909), the leading case in this area, the Court upheld as reasonable an exemption of coal mines employing less than ten percent from a law pertaining to measurement of coal to determine a miner's wages. The Court stated (211 U.S. at 551–552):

"The law is attacked upon the further ground that it denies the equal protection of the law, in that it is applicable only to mines employing ten or more men. This question is closely analogous to one that was before this court in the case of *St. Louis Consolidated Coal Co.* v. *Illinois*, 185 U.S. 203, wherein an inspection law of the State was argued to be clearly unconstitutional by reason of its limitation to mines where more than five men are employed at any one time, and in that case, as in this, it was contended that the classification was arbitrary and unreasonable, that there was no just reason for the discrimination. Of that contention this court said (185 U.S. 207):

"This is a species of classification which the legislature is at liberty to adopt, provided it is not wholly arbitrary or unreasonable, as it was in *Cotting* v. *Kansas City Stock Yards Co.*, 183 U.S. 79, in which an act defining what should constitute public stock yards and regulating all charges connected therewith was held to be unconstitutional, because it applied only to one particular company, and not to other companies or corporations engaged in a like business in Kansas, and thereby denied to that company the equal protection of the laws. In the case under consideration there is no attempt arbitrarily to select one mine for inspection, but only to assume that mines, which are worked upon so small a scale as to require only five operators, would not be likely to need the careful inspection provided for the larger mines, where the workings were carried on upon a larger scale or at a greater depth from the surface, and where a much larger force would be necessary for their successful operation. It is quite evident that a mine which is operated by only five men could scarcely have passed the experimental stage, or that the cautions necessary in the operation of coal mines of ordinary magnitude would be required in such cases. There was clearly reasonable foundation for discrimination here.

"This language is equally apposite in the present case. There is no attempt at unjust or unreasonable discrimination. The law is alike applicable to all mines in the State employing more than ten men underground. It may be presumed to practically regulate the industry when conducted on any considerable scale. We cannot say that there was no reason for exempting from its provisions mines so small as to be in the experimental or formative state and affecting but few men, and not requiring regulation in the interest of the public health, safety or welfare. We cannot hold, therefore, that this law is so palpably in violation of the constitutional rights involved as to require us, in the exercise of the right of judicial review, to reverse the judgment of the Supreme Court of Arkansas, which has affirmed its validity. The judgment of that court is *Affirmed*."

The *McLean* precedent has subsequently been applied by the court in upholding analogous regulatory legislation. See e.g. *Carmichael* v. *Southern Coal Co.*, 301 U.S. 495, 510–512 (1937) (upholding state unemployment compensation act which taxed employers employing eight or more persons for 20 or more weeks in the year and also exempted particular classes of employers such as those employing agricultural laborers, domestic servants, seamen, among others); *Middleton* v. *Texas Power and Light Co.*, 249 U.S. 152, 159 (1919); *Jeffrey Mfg. Co.* v. *Blagg*, 235 U.S. 571, 576 (1915) (employers of five or more included within workmen's compensation act); *Booth* v. *Indiana*, 237 U.S. 391, 397 (1915). See also, *Asbury Hospital* v. *Cross County*, 326 U.S. 207 (1945).

Finally, the Court most recently reaffirmed the continuing vitality of the foregoing principles in *New Orleans* v. *Dukes*, 427 U.S. 297 (1976). There the Court upheld against an equal protection attack a local regulation which banned all street food vendors from the Vieux Carre except those who had been doing business for eight years prior to 1972. The grandfather clause was contested by a vendor who had been in business for only two years prior to 1972. The Court found that the city's classification rationally furthered its purpose of preserving "the appearance and customs valued by the Quarter's residents and . . . tourists," noting that (427 U.S. at 303–304):

"When local economic regulation is challenged solely as violating the Equal Protection Clause, this Court consistently defers to legislative determinations as to the desirability of particular statutory discriminations. See, *e. g., Lehnhausen* v. *Lake Shore Auto Parts Co.*, 410 U. S. 356 (1973). Unless a classification trammels fundamental personal rights or is drawn upon inherently suspect distinctions such as race, religion, or alienage, our decisions presume the constitutionality of the statutory discriminations and require only that the classification challenged be rationally related to a legitimate State interest. States are accorded wide latitude in the regulation of their local economies under their police powers, and rational distinctions may be made with substantially less than mathematical exactitude. Legislatures may implement their program step by step, *Katzenbach* v. *Morgan*, 384 U. S. 641 (1966), in such economic areas, adopting regulations that only partially ameliorate a perceived evil and deferring complete elimination of the evil to future regulations. See, *e. g., Williamson* v. *Lee Optical Co.*, 348 U.S. 488–489 (1955). In short, the judiciary may not sit as a superlegislature to judge the wisdom or desirability of legislative policy determinations made in areas that neither affect fundamental rights nor proceed along suspect lines, see, *e.g., Day-Brite Lighting, Inv.* v. *Missouri*, 342 U.S. 421, 423 (1952); in the local economic sphere it is only the invidious discrimination, the wholly arbitrary act, which cannot stand consistently with the Fourteenth Amendment." See, *e.g., Ferguson* v. *Skrupa*, 372 U.S. 726, 732 (1963).

A pertinent situation arising under the Taft-Hartley Act, 29 U.S.C. 141 et seq., may be noted. Under that Act the National Labor Relations Board's general jurisdiction extends to "labor disputes," which include representation questions and unfair labor practices, "affecting" interstate commerce. In fact, the plenary scope of the Board's jurisdiction has never been fully exercised, for the Board, it has been held, may properly decline to take jurisdiction of a case, with certain exceptions, because "the policies of the Act would not be effectuated by assertion of jurisdiction." *NLRB* v. *Denver Bldg. Trades Council*, 341 U.S. 675, 684 (1951). The Supreme Court observed in *Polish National Alliance* v. *NLRB*, 322 U.S. 643, 648 (1944): "Congress . . . left it to the Board to ascertain whether proscribed practices used in particular situations adversely affect commerce. . . ." In 1959 Congress amended the Act to specifically delineate the scope of the Board's discretion as follows: (20 U.S.C. 164(c)(1):

"The Board, in its discretion, may, by rule of decision or by published rules adopted pursuant to the Administrative Procedure Act, decline to assert jurisdiction over any labor dispute involving any class or category of employees where in the opinion of the Board, the effect of such labor dispute on commerce is not sufficiently substantial to warrant the exercise of its jurisdiction: *Provided*, That the Board shall not decline to assert jurisdiction over any labor dispute over which it would assert jurisdiction under the standards prevailing upon August 1, 1959."

Under present practices, the Board has issued standards which govern the exercise of its jurisdiction over various types of enterprises. Thus, for example, with regard to retail establishments, the Board will exert jurisdiction where there is a gross business volume of at least $500,000 per year and substantial purchases from or sales to other states on a direct or indirect basis. But where non-profit private educational institutions are involved, the Board will assert jurisdiction only when there is showing that the institution has a gross annual revenue of at least $1,000,000 for operating expenses.

In conclusion, it would appear that legal precedent would generally support the type of regulatory classification you are proposing.

MORTON ROSENBERG,
Legislative Attorney.

SECTION-BY-SECTION ANALYSIS

Section 1. Short title.

Section 2. (a) Findings. The special burden reporting and regulatory requirements impose on individuals and enterprises of limited resources.

(b) Purpose. To achieve a fit between the scale of requirements and the scale of those being regulated.

Section 3. Amends Administrative Procedures Act to provide for:

(1) agency determination of the economic impact of regulatory and paperwork requirements on various segments of the regulated public, and agency determination of whether proposed rules should apply equally to all segments of the regulated public.

(2) submission of proposed substantive rules to the Office of Advocacy of the Small Business Administration for statement and comments on small business impact; public availability of such statements and comments; publication of such statement and comments in the Federal Register with final notices of proposed rules.

(3) exemption from (2) for rules which do not affect small business substantially.

(4) promulgation of rules with varying requirements, based on these determinations.

(5) maximum possible uniformity and objectivity of criteria for establishing segments of the regulated public.

(6) retroactive determinations in accordance with paragraphs (1) through (5) of existing regulations.

(7) GAO assistance in agency determinations.

CULVER SPONSORS REGULATORY REFORM ACT

Mr. CULVER. Mr. President, the bill that Senator NELSON and I are introducing today, the Regulatory Flexibility Act, addresses one of the most serious problems that small businesses face in dealing with the Federal Government—the problem of complying with a never-ending stream of complex and expensive regulations.

While this bill does not stop that stream, it aims at reducing the flow significantly for many individuals, small businesses, and small organizations who have been increasingly overburdened by the requirements of regulatory compliance.

This legislation has two main objectives. One is to create an awareness in the agencies issuing these regulations that information is not a free good—that there should be greater respect for privacy and for the costs of gathering information. The second objective is to establish a regulatory principle that the scale of regulations ought to fit the scale of those being regulated.

The costs of regulation can often be substantial both in terms of financial outlay and in terms of the time and effort required to comply. Recent testimony before the Small Business Committee and letters that I, and most likely all of us in this body, receive daily contain example after example of the hardships imposed by regulatory action by the Federal Government.

Only last week the Federal Commission on Paperwork reported that paperwork requirements cost business $32 billion a year. This cost, of course, must be passed on to consumers in higher prices. If it cannot be passed on a business will soon find itself out of operation; and further costs, through lost production, unemployment, and idle capital, will accrue to society as well as to the individuals who are affected directly.

While much of the information gathered as a result of Federal regulation is necessary to protect American workers, consumers, and businessmen themselves, it has become increasingly evident that we must weigh more carefully the costs as well as the benefits of obtaining the information.

In addition to increased paperwork, many other costs are imposed on business, and thereby consumers, by additional regulatory requirements. I am convinced that more often than not these regulations, at least over the long run, make a net positive contribution to the quality of life in our society. It is not the aim of this bill to allow the persistence of practices that are, for example, dangerous to workers or to the environment. The bill's chief aim is to approach the regulation of such practices in a manner which minimizes the cost of regulation on those least able to bear that cost; that is, the small business operator. This bill is an attempt to shape our regulatory procedures so as to recognize the wide diversity in the American economy and the broad range of needs and abilities that characterize our economic system.

The Regulatory Flexibility Act would direct Federal agencies to study the economic impact of compliance with new regulations on small businesses and organizations before those regulations are issued. The agencies would then be charged with weighing this economic impact against the economic and social objectives to be achieved by the proposed rules to determine whether partial, or perhaps full, exemptions ought to be granted.

While this bill may increase somewhat the cost of Federal review and design of regulations, the savings, in terms of reduced paperwork that must be generated and processed and through the elimination of unwarranted requirements on small businesses, will likely far outweigh the additional administrative costs.

It is my firm belief, Mr. President, in light of the evidence presented before the Small Business Committee, that the simplified regulation envisioned by this bill is the best solution to the current climate of regulatory overkill. We do not present it as a panacea. There is much yet to be done in the area of regulatory reform. It is, however, a critical step in providing relief for those who are perhaps most seriously affected by the growing demands of regulatory compliance.

By Mr. DOLE (for himself, Mr. TALMADGE, Mr. HUMPHREY, Mr. INOUYE, Mr. MATSUNAGA, Mr. SARBANES, and Mr. RIEGLE):

S. 1975. A bill to amend title XVIII of the Social Security Act to provide coverage for the services of optometrists related to the treatment of aphakia; to the Committee on Finance.

Mr. DOLE. Mr. President, today I am introducing legislation to provide part B medicare reimbursement for the services provided by optometrists to aphakia patients. Certain diseases of the eye result in surgical removal of the lens of the eye. The resulting condition, that is, absence of the lens of the eye, is known as aphakia. Very often, surgery necessary for the treatment of cataracts is the cause of this condition.

Vision is a precious commodity that we often take for granted. Yet, those elderly persons who suffer from various disabilities that alter their vision find day-to-day living a difficult and often dangerous experience.

Elderly patients are likely to suffer from multiple symptoms with underlying disease that is complex and that requires a range of diagnostic and therapeutic care services. These health conditions are usually complicated by corresponding social, economic, and psychological circumstances.

The elderly population accounts for a disproportionate share of vision/eye problems. It is estimated that in 1972 somewhat over 300,000 surgical operations were performed for cataract extraction, with the largest proportion occurring among the elderly.

Under present medicare law, many of the services presently eligible for reimbursement are only covered if performed by doctors of medicine or osteopathy. In addition to physicians, optometrists are reimbursed under the program for services to aphakia patients. These reimbursable services are limited, however, to dispensing services in connection with the actual fitting and provision of the prosthetic lenses.

Section 109 of Public Law 94–182 is an amendment I sponsored requiring the Department of Health, Education, and Welfare to conduct a study concerning the appropriateness of medicare reimbursement for optometrist services related to aphakia not presently covered, but within the scope of optometric practice. The report was transmitted to the Congress on January 12, 1977. HEW recommends that those covered services related to aphakia and within the scope of optometric practice be reimbursable under part B medicare.

Mr. President, the study provided us with a good deal of information as relates to this group of professionals. I would like to share with my colleagues one particularly important aspect, access to care.

As I noted earlier, the management of these patients requires a broad range of services apart from surgery. Specifically, lack of access to these services may create another obstacle for patients. The study points out that it is clear that currently covered vision/eye care services related to aphakia and cataract conditions can be made more accessible to the medicare-eligible population by including services provided by optometrists. At a minimum, greater financial equity can be extended to those medicare beneficiaries who currently obtain necessary health services from optometrists without medicare reimbursement.

This conclusion is principally supported by analyzing the distributional patterns of optometrists and ophthalmologists. It should be noted that ophthalmologists are not the only physician group rendering vision/eye care services and included under medicare provisions. Among physicians, however, it is reasonable to infer that ophthalmologists provide the bulk of overall vision/eye care services.

In 1973, there were approximately two active optometrists for every active ophthalmologist in the United States. Respective active supply estimates numbered 19,300 and 10,500. On a comparative basis, the supply of optometrists was more evenly distributed across the country. The HEW study utilized data assembled from American Medical Association records, the 1972–73 optometry inventory conducted by the American Optometric Association, as well as sta-

tistics collected by HEW's National Center for Health Statistics to examine overall supply and distributional patterns between the two provider groups.

Active ophthalmologists exceeded the number of active optometrists in only two areas of the Nation, Maryland and the District of Columbia. In seven States, in contrast, there were greater than three times as many optometrists than ophthalmologists.

The Bureau of Health Manpower projects the overall number of active ophthalmologists in the United States to rise to 13,300 in 1980 and to 18,400 by 1990; this compares with projected levels of 22,000 and 28,200 for optometrists in the same time intervals. The proportion of ophthalmologists as a percent of total professional vision care manpower is projected to grow from 35 percent in 1973 to 38 percent in 1980 and 39 percent in 1990. In rural areas, the distribution factor is of vital importance. The accessibility of health professionals in these areas is of serious concern to many of us.

The legislation I am introducing today would bring us that much closer to the goal of high-quality and accessible eye care for elderly citizens.

By Mr. CRANSTON:

S. 1976. A bill to add certain lands to the Redwood National Park in the State of California, to strengthen the economic base of the affected region, and for other purposes; to the Committee on Energy and Natural Resources.

Mr. CRANSTON. Mr. President, I am introducing today for appropriate reference the administration's proposed legislation to enlarge Redwood National Park.

As you know, Mr. President, the Senator from Washington (Mr. JACKSON), chairman of the Committee on Energy and Natural Resources, requested a drafting service from the Department in April regarding the expansion of the Redwood National Park. The bill I am introducing today is in response to that request.

I am introducing the administration's bill for two major reasons: first, to expedite Senate action on the Redwoods issue so that final approval hopefully can be achieved before adjournment this year; and second, to express my support for the efforts this bill represents by the Carter administration to resolve a controversial issue of many years' standing.

The bill authorizes additional land acquisition totaling 48,000 acres. It also establishes authority for the Secretary of the Interior, where necessary to protect the Park, to regulate activities on nonfederal lands upstream from the Park. It further authorizes $12 million for a rehabilitation program in the Redwood Creek watershed. For land acquisition purposes, the bill authorizes such sums as may be necessary from the Land and Water Conservation Fund. Secretary Andrus has indicated that the anticipated total cost to acquire the additional lands is $359 million.

The existing 58,000-acre Redwoods National Park in Humboldt and Del Norte Counties in northern California was established by Public Law 90-545 on October 2, 1968:

To preserve sign'ficant examples of the primeval coastal redwood (Sequoia sempervirens) forests and the streams and seashores with which they are associated for purposes of public inspiration, enjoyment, and scientific study.

The 1968 law fused three existing State parks into a 50-mile long national park through the addition of some 28,000 acres of privately-owned lands. The existing park occupies portions of three major streams and several minor coastal drainages. Portions of the Lost Man Creek watershed, the Mill Creek watershed and the Redwood Creek watershed were included in the 1968 park.

Nowhere is the danger of partial watershed protection more apparent than with Redwood Creek. The 1968 act acquired a narrow strip of land straddling Redwood Creek, one-half mile wide and 7½ miles long along the alluvial portion of the lower watershed in order to include the tall trees grove in the park. This strip of land—the so-called worm—has been the focus of the continuing controversy which has raged since 1968. On either side of the creek active logging operations have subjected the park to physical damage and the visitor to the sights and sounds of commercial timber harvesting.

The additional land acquisition authorized by this administration bill accomplishes two main purposes: to provide protection to the "worm" area of the existing park by acquiring adjacent lands from ridge to ridge; and second, to provide a more manageable and attractive park unit.

In my initial explorations of the redwood park expansion issue, I endeavored to identify a land acquisition option that, by acquiring less than 48,000 acres, might have lessened the potential adverse economic impact of this expansion. I have now concluded, however, that 48,000 acres is the minimal acreage that can accomplish my overall objectives for the park itself of protecting the redwoods, especially the tall trees grove, rehabilitating the Redwood Creek watershed, and putting together a more manageable and attractive national park that can attract many new visitors.

But I have been equally concerned about the loss of jobs—and the possible decline in the economies of nearby communities—because of reduced logging. Hopefully the tourist lure of a truly attractive park ultimately will help offset any economic loss the economy of the area might suffer because of somewhat reduced logging. I am not entirely satisfied that the administration has come up with the full answer for finding suitable jobs and for helping the affected communities, and I will be exploring this subject further during Senate hearings in September.

Other provisions of the bill include a directive that the Secretary convey rights-of-way to the State of California for a bypass highway around the park, with reconstruction to be achieved by the State. Also, the bill calls for claimants for compensation to bring their claims before the U.S. District Court, rather than before the Court of Claims as is now the case. The bill includes down timber personal property to be acquired in the legislative taking. It further provides for a revesting of title by the Secretary subject to certain conditions in order to minimize payment of severance damages and to allow for the orderly removal of down timber; or to sell down timber that can be removed without damage to the park.

In addition, the bill contains a number of measures designed to mitigate the adverse effects on the local economy that might result from the expansion of the national park. These include the expression that Congress intends to provide employment opportunities to those individuals affected by this taking; a directive to the Secretary to analyze appropriate Federal actions to mitigate adverse economic impacts to the economy and to report back to the Congress by September 30, 1977; authorization to appoint and fix compensation for personnel to achieve protection and enhancement of park values and for maximum visitor use and enjoyment; and authorization for payment in lieu of taxes to local governments for lands taken for inclusion within Redwood National Park. Finally, the Secretaries of Commerce and Labor are directed to take all appropriate actions to implement available authority to mitigate adverse unemployment and economic impacts resulting from park expansion.

Furthermore, the bill enhances the authority of the Secretary to protect the resource value of Redwood National Park by authorizing him to carry out a land rehabilitation program on lands upstream and adjacent to the park. Contracts or cooperative agreements would be authorized to initiate, develop, and implement such a program on lands contributing significant sedimentation because of past land use practices and to reduce risk of further damage to streamside areas adjacent to Redwood Creek.

The Secretary is also authorized to establish zones where regulations are needed to protect the park resources from activities and interference occurring on non-Federal lands, and to enforce reasonable timber harvesting, land rehabilitation, and management practices where the existing State of California regulations are found insufficient to achieve the necessary protection. Secretary Andrus, in his transmittal letter to the Congress, noted in this regard that these steps were considered necessary because of the extraordinarily fragile ecology of the Redwood Creek watershed, particularly the Tall Trees Grove. The Secretary further noted, however, that this grant of authority would not be viewed as establishing a precedent for Federal regulation of private lands adjacent to other parks in the absence of equally exceptional circumstances.

Mr. President, I am pleased to introduce the administration's bill to add 48,000 acres of land to the Redwood National Park and to strengthen the economic base of the affected region. Naturally, I reserve the right to amend the bill—especially on more effective ways to

provide suitable alternative work for loggers and others who may lose their jobs—in light of further study and what may be developed at Senate hearings. Senator ABOUREZK, chairman of the Parks and Recreation Subcommittee, has assured me that hearings will be set in September and that these hearings will focus primarily on how best to enhance job opportunities. I completely agree with him that they should, and I have urged that hearings be set as early in September as possible so that final action can be achieved on this legislation before October adjournment.

ADDITIONAL COSPONSORS

S. 79

At the request of Mr. HELMS, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 79, relating to gold clause contracts.

S. 1297

At the request of Mr. MATSUNAGA, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 1297, to guarantee that individuals receiving both veterans' pension and social security not suffer reduction of either benefit because of cost-of-living increase in the other.

S. 1540

At the request of Mr. TOWER, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 1540, to amend the Davis-Bacon Act.

S. 1644

At the request of Mr. PACKWOOD, the Senator from Delaware (Mr. ROTH) was added as a cosponsor of S. 1644, to give tax equity to parents without partners.

S. 1692

At the request of Mr. MELCHER, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 1692, to reform the Postal Service.

S. 1868

At the request of Mr. MELCHER, the Senator from Louisiana (Mr. JOHNSTON) was added as a cosponsor of S. 1868, the National Crude Oil Supply Act of 1977.

S. 1923

At the request of Mr. ROTH, the Senator from Oregon (Mr. HATFIELD) was added as a cosponsor of S. 1923, to amend the Consolidated Farm and Rural Development Act.

S. 1935

At the request of Mr. ROBERT C. BYRD (for Mr. JACKSON), the Senator from Wyoming (Mr. HANSEN), the Senator from Colorado (Mr. HASKELL), and the Senator from New Mexico (Mr. DOMENICI) were added as cosponsors of S. 1935, to provide emergency drought relief.

AMENDMENTS SUBMITTED FOR PRINTING

NATIONAL ENERGY POLICY—S. 1469

AMENDMENT NO. 746

(Ordered to be printed and referred to the Committee on Energy and Natural Resources.)

Mr. PERCY. Mr. President, since the turn of the century, electric companies have given the public more reliable service and ever-lower rates by building larger electric grids and generating stations. They have provided electric service unmatched in the world, and have fueled the growth of this Nation's economy.

In the last 5 to 10 years the economies of scale in the utility industry have ended. To expand production of electricity costs up to twice as much as the average cost of power. Central generating technology gives us a choice among expensive new oil imports, pollution problems with coal, or possible safety dangers from the atom.

We may be at the beginning of a new era in electric power production. There now exists an array of promising new small energy-producing technologies, all of which would supply electric power in small amounts, be operated locally, and be owned by individuals or small companies instead of by central electric utility companies. Preliminary assessments indicate they will have minimal environmental and safety problems. The systems include small-scale hydroelectric dams, cogeneration of industrial process steam and electricity, wind, and solar power.

Dow Chemical Co. and others calculate that cogeneration could by 1985 provide generating capacity equal to 40 to 60 large coal or nuclear powerplants. Existing dams could provide the equivalent of up to 2 dozen such plants, according to the Federal Power Commission. Mr. President, I ask that the full text of an article from the Chicago Tribune dated July 22, 1977 on the small hydroelectric work of Dr. David Lilienthal be printed in the RECORD at the end of my statement.

There is one institutional difficulty which could impede the implementation of these small technologies. Small dams, windmills, and other systems cannot replace central electric grids. Traditional utilities are needed to complement onsite power by providing backup power and by purchasing surplus power.

Some electric utilities, unfortunately, are uneasy about this new source of competition. Many are worried about the effects that technically unreliable equipment might have on their systems. Some fear solar generators would require expensive backup arrangements for critical peak periods, while eroding demand most of the time. For these reasons some utility companies refuse to interconnect with small power systems, or charge prohibitive electric rates. The most vivid recent example occurred in New York City. The State public service commission needed to issue a special order to Consolidated Edison Co. to connect with a windmill.

The Public Utility Holding Company Act and the Federal Power Act both make it difficult for a firm to sell electricity as a sideline to its main line of business. Moreover, the burden and cost of paperwork associated with filing as a public utility before State and Federal regulatory agencies could be prohibitive for many small power producers.

The Carter administration has taken note of these difficulties in its National Energy Plan legislation, S. 1469. The President's bill provides suitable remedies for these problems for one type of small-scale technology: the cogeneration of industrial process steam and electricity. I commend the administration for its foresight in this area.

Unfortunately, cogeneration is only one of several frontier electric technologies. Protection must be given to the full array of new small-scale systems now being tested, lest unreasonable barriers block economically and technically effective technologies from commercial application. Our deteriorating energy situation mandates that we encourage all possible solutions.

For these reasons, Mr. President, I am submitting today an amendment to the National Energy Plan, S. 1469, which provides for all small electric power producers the protections which the President recommends for cogenerators. It also guards the interests of existing electric utilities.

My amendment contains the following provisions:

First. Electric utilities are required to provide power to small power producers, and purchase surplus power. The Secretary of Energy will establish rules governing these sales;

Second. Cost of service is mandated as the criterion for rates. This explicitly establishes that special treatment of small-scale power producers is permitted when electric companies can justify rates based on cost;

Third. Small-scale power producer is defined as any small electric facility whose owner is not primarily in the electric energy business. Technologies include, but are not limited to, cogeneration, small-scale hydroelectricity, solar electric systems, windmills, solid-waste facilities, and electric storage operated in conjunction with any of the above;

Fourth. The Secretary of Energy is allowed to exempt small power producers from provisions of Federal and State public utility law as is necessary to encourage these technologies;

Fifth. The Secretary of Energy is required to prescribe technical standards for small power systems. This protects electric utilities against poorly designed or unreliable equipment;

Sixth. The administration's requirement that small power producers allow the electric utility to operate the facility is deleted. This may be anticompetitive, and does not significantly add to the technical standards protection;

Seventh. The amendment extends to all small power producers a guarantee—which is in the administration plan for cogenerators—that electric utility companies will transmit their power to third parties.

I note that this legislation will not preempt the authority of State regulators once the new regulations are promulgated. Case-by-case implementation of the rules will proceed on the State level. My amendment merely sets minimum standards, as do the other administration utility provisions; it shifts the burden of proof in rate discrimination cases from the small producer to the electric utility company.

Mr. President, I ask unanimous consent that the text of the amendment, together with the article mentioned earlier, be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMENDMENT. No. 746

On page 3, section 522, strike out "Cogeneration" and insert in lieu thereof "Small power producers.".

On page 75, line 10, strike out "cogenerator" and insert in lieu thereof "small power producer".

On page 75, line 15, strike out "cogenerator" and insert in lieu thereof "qualifying small power producer".

On page 76, beginning with line 14, strike out all through line 3 on page 78 and insert in lieu thereof the following:

"SMALL POWER PRODUCERS

"SEC. 522. (a) Not later than one year after the date of enactment of this Act, the Administrator shall, after consultation with representatives of State regulatory authorities, prescribe rules requiring electric utilities to offer to sell electric energy to any qualifying small power producer and to offer to purchase electric energy from any qualifying small power producer. Such rules shall insure that rates for such sales and purchases do not discriminate against small power producers except as such rates are justified by the cost of providing service to small power producers, as determined in accordance with sections 512 and 515 of this Act. Such rules may, in order to carry out the purposes of this Act, include provisions exempting qualifying small power producers in whole or in part from the Federal Power Act, the Public Utility Holding Company Act, and from State laws and regulations respecting electric utility regulation, if the Administrator determines such exemption is necessary to carry out the purposes of this section.

"(b) For the purposes of this section, the term—

"(1) 'small power production facility' means a facility owned by a person not primarily engaged in the generation or sale of electric power, which facility produces electric energy. Such term includes, but is not limited to:

"(A) cogeneration of electric energy and other forms of useful energy (such as steam or heat);

"(B) hydroelectric dams;

"(C) solar electric systems;

"(D) wind systems;

"(E) production of electric energy from solid waste;

"(F) electric energy storage facilities operated in connection with such a small power production facility.

"(2) 'qualifying small power production facility' means a small power production facility which the Administrator determines meets such requirements (including requirements respecting fuel use, fuel efficiency, and technical reliability) as the Administrator, by rule, prescribes.

"(3) 'qualifying small power producer' means any person who is, or will be, the owner or operator of a qualifying small power production facility.".

[From the Chicago Tribune, June 27, 1977]

PATERSON, N.J., REHARNESSES WATER POWER . . .

(By John Cunniff)

NEW YORK.—A contract was awarded this month to begin redeveloping a small hydroplant on the Passaic River at Paterson, N.J., that was abandoned after a 1968 flood.

At that time it was decided that spending $120,000 on repairs would not be economical, especially since electricity could be provided by a modern, powerful central generating plant.

But when this work is completed, Paterson, a city trying to recapture the energy that made it an industrial center before the 19th Century, will have an installation of perhaps 4,500 kilowatts, tiny by modern standards, but significant.

As one of those involved in the project said, "It's enough to keep an industry from leaving town."

That comment was made by David Lilienthal, who once subscribed to the engineering concept that big is beautiful and efficient, and who seemed to apply that view—he might argue with you—as head of the Tennessee Valley Authority.

Lilienthal, whose company, Development and Resources Corp., is planning the Paterson project, now believes the nation has gone too far toward a belief in centralization, as it pertains to generating power and locating the people who need that power.

Small hydropower now appears competitive at least in the Northeast, in terms of unit investment costs and operation-maintenance costs. There is no shortage of sites; there appear to be thousands of them.

The tumbling waters of New England's streams, which turned the gears of factories since colonial days, are perhaps the most abundant source. But reservoirs, locks, navigational dams, even irrigation canals, offer other opportunities everywhere.

Municipal leaders, factory owners, utility managers, and federal officials are showing interest in sites long abandoned, left behind by the supposed march of progress.

A Federal Power Commission survey of potential sites almost ignores those of less than 5,000 kilowatts, or roughly enough to serve a city of 5,000 population. But President Carter recently asked for, and soon will receive, a report on such possibilities.

An investigation by the Mitre Corp. confirmed the economic feasibility of restoring a 300-kilowatt hydroplant at Wareham, Mass. On the Nubanusit River at Harrisville, N.H., a manufacturer is restoring a 180-kilowatt site.

Lilienthal, who also served as the first chairman of the Atomic Energy Commission, believes the potential of other sites is obvious, providing leaders have adapted to the realization that power need not be centralized. Sites of as little as 500 kilowatts, and sometimes even less, might be feasible, he said.

On his desk is a report that 25 small dams in Minnesota have been withdrawn by the Northern States Power Co. in the last 20 or 30 years.

A particularly fine example, he said, is the Coon Rapids Dam at Brooklyn Park, on the Mississippi River near Minneapolis. The power equipment was removed in 1966 and the dam transferred to the Hennepin County Park Reserve District.

If restored, that same facility might provide 6,500 kilowatts, or about $1.35 million a year in power. Most likely it would not interfere with recreational facilities. Most likely it would not offend conservationists.

Lilienthal's company has designed large-scale, integrated, agricultural-industrial-human redevelopment projects around the world, but in recent months his contagious enthusiasm has centered on small power.

Since he first spoke out a year or so ago he has been deluged with inquiries. "I am not used to pioneer ideas being accepted quickly. This comes as close as any," he said.

Among other virtues, small power returns power to the people, he said. It permits the people to decentralize and retain local autonomy. Big power helped bring centralization, he said, but now "decentralization is a worldwide feeling."

To Lilienthal, perhaps more philosophical than ever in his 70s, decentralization is associated with the spirit of independence, initiative, and enterprise. He said these concepts are practicalities rather than abstractions in local communities.

"The fact that people poured into the cities was not because they wanted to go to the cities but because of forces at work that made small cities less attractive economically," he said.

"Once you change that, people will prefer to go to the small cities," he said, suggesting that youth is well aware of this.

"I take my cue from younger people. They know what is about to happen, as well as what has happened."

PUBLIC FINANCING OF SENATE ELECTIONS—S. 926

AMENDMENT NO. 747

(Ordered to be printed and to lie on the table.)

Mr. SCOTT submitted an amendment intended to be proposed by him to the bill (S. 926) to provide for the public financing of primary and general elections for the U.S. Senate.

AMENDMENTS NOS. 748, 749, AND 750

(Ordered to be printed and to lie on the table.)

Mr. ALLEN submitted three amendments intended to be proposed by him to the bill (S. 926), supra.

ADDITIONAL STATEMENTS

SENATE IS JEOPARDIZING U.S. ROLE AS HUMAN RIGHTS LEADER

Mr. PROXMIRE. Mr. President, in his historic American University speech of June 1963, President John F. Kennedy emphasized what is a profound truth of our age: the indivisibility of peace and human rights. The furnaces of war have been manned by those who have been driven by the ideology of hate and violence, by those that hold man and his dignity in utter contempt.

For men of good will everywhere, the new world that was to emerge in the aftermath of the Auschwitz ovens and the holocaust of World War II was to be one ruled by international law, and a law instilled with a profound respect for the rights of man.

At the United Nations, legally binding conventions designed to guard human rights were painstakingly hammered out. In one convention, acts committed with an intent to destroy in whole or in part an ethnic, racial, or religious group were branded an international crime—the crime of genocide.

It was hardly surprising that the United States would, in the immediate postwar years, champion the efforts to create a new legal order, dedicated to the advancement of human rights. With Mrs. Eleanor Roosevelt acting as our representative and chairing the Commission on Human Rights, the United States had an eloquent and forceful spokesperson rallying other nations around a human rights crusade.

In some ways, Mrs. Roosevelt was more successful in rallying the legislative bodies of other nations than that of her own. It is indeed peculiar that

during the 28 years since President Truman transmitted the Genocide Convention to the U.S. Senate, the convention has been ratified by almost every nation except the United States. This body's failure to act on this important treaty is an embarrassment to the American people who have long been recognized as the international leaders of the fight for human rights.

I urge the Senate to ratify the convention immediately and bring this embarrassment to an end.

SOVIET OCCUPATION OF CZECHOSLOVAKIA

Mr. PERCY. Mr. President, we shall soon mark the anniversary of the fateful events of August 21, 1968, when Soviet-led armies of the Warsaw Pact occupied Czechoslovakia and brought to an end the Czechoslovak experiment in liberalization. It was a sad day for the peoples of Czechoslovakia and for the cause of freedom.

Now, 9 years later, the peoples of Czechoslovakia are still deprived of the blessing of liberty. This situation is especially distressing to those of us who in our youth came to revere the names of Masaryk and Benes, and for those of us who are aware of the constructive citizenship of the Czechs and Slovaks in this country.

It is important that Members of Congress take note of this anniversary and speak out, so that the plight of Czechoslovakia will not be forgotten.

COMPUTERS RAISE LEGAL QUESTIONS

Mr. RIBICOFF. Mr. President, Robert P. Bigelow, who practices law in Boston, has written books and articles on problems caused in law by the advent of computer technology.

Mr. Bigelow wrote an article entitled, "Attorney for the Computer User," in the July 1977 edition of the American Bar Association Journal.

Legal problems associated with computer technology were examined in a staff report issued February 2, 1977, by the Senate Governmental Affairs Committee. The report, "Computer Security in Federal Programs," was part of the committte's yearlone investigation into computer security in Federal programs and private industry. The investigation resulted in a bill, The Federal Computer Systems Protection Act of 1977 introduced June 27, 1977.

Mr. President, I ask unanimous consent that Mr. Bigelow's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATTORNEY FOR THE COMPUTER USER

(By Robert P. Bigelow)

In May of 1966 this Journal published its first article on the legal problems caused by the computer (Bigelow, "Counseling the Computer User," 52 A.B.A.J. 461), and in June of that year the first book to discuss these questions, Computer and the Law—An Introductory Handbook, appeared under the aegis of the American Bar Association Committee on Electronic Data Retrieval, now the Section of Science and Technology.

Since 1966 the literature has expanded substantially. The committee book has appeared in a second edition. Several one-volume treatments of one or several aspects of the field have appeared, and a nine-volume treatise of text and cases, Computer Law Service, has been published. Computer law is now a field recognized by the Association's Law Lists Committee.

The 1936 article looked at problems faced by counsel to the computer user in five areas—corporate, contractual, insurance, liability, and evidence. In the first area it was suggested that in acquiring a computer a board of directors should consider business need, competition, labor problems, and liability for not using a computer. These questions are still valid, but little law has been made except in the labor field.

Computer personnel have organized into unions and sometimes find themselves in the same bargaining unit as nonc.mputer personnel. Boeing Company v. Seattle Professional Engineering Employees Association, 3 C.L.S.R. 542 (N.L.R.B. 1972). Since computer people sometimes think they are "better," this could cause morale problems and labor troubles. The Labor Department also has ruled that systems analysts and computer programmers are generally not exempt employees, although in certain cases they may exercise discretion and independent judgment. 29 C.F.R. 541, Section 207(c)(7). Cases have been decided both ways, for example, Pezzillo v. General Telephone and Electronics Information Systems, Inc., 414 F. Supp. 1257 (M.D. Tenn. 1976); Horne v. Singer Business Machines, Inc, 413 F. Supp. 52 (W.D. Tenn. 1976); and Zacek v. Automated Systems Corporation, 541 S.W. 2d 516 (Tex. Civ. App. 1976).

In the area of contracts there has been some litigation between manufacturers and users on whether the computer system the maker supplied is what the user thought he was getting. The results have been mixed. In some cases the court has relied strongly on the parol evidence rule and the entire contract clause, for example, Bakal v. Burroughs Corporation, 343 N.Y.S. 2d 541 (Sup. Ct. 1972); Farris Engineering Corporation v. Service Bureau Corporation, 276 F. Supp. 643 (D. N.J. 1967), affirmed, 406 F. 2d 519 (3d Cir. 1969) (services) In other cases these rules have been narrowly construed, or the court has found misrepresentation by the supplier. A case of the first variety is I.B.M. v. Catamore Enterprises, Inc., 1 C.L.S.R. 1025 (D. R.I. 1975), in which I.B.M. obtained judgment for the rented system and the jury awarded Catamore $11.4 million as damages for breach of the contract. This case was reversed for a new trial, 5 C.L.S.R. 1409 (1st Cir. 1976). A case of the second type is Clements Auto Company v. Service Bureau Corporation, 298 F. Supp. 115 (D. Minn. 1967), modified, 444 F. 2d 169 (8th Cir. 1971).

Computer systems are supplied under a standard contract prepared by the manufacturer. In recent years, however, there appears to be a trend by the manufacturers toward a willingness to negotiate variations from the standard form for bigger customers, if not for everyone. The biggest customer of all, the federal government, has its own standard forms. Counsel who negotiates a contract for the user may find a study of these provisions helpful. Several of these contract forms appear in 2 Computer Law Service, Appendix 3–6e.

SCOPE OF INSURANCE COVERAGE CAN CREATE DISPUTES

Insurance coverages for data processing equipment and services still are not generally satisfactory, although improvements have been made from the user's point of view. The scope of coverage can create disputes. In one case, *Datatab, Inc.* v. *Saint Paul Fire and Marine Insurance Company*, 347 F. Supp. 36 (S.D. N.Y. 1972), a water main broke in the basement of the building occupied in part by the computer user. This caused damage to several water pumps, which in turn rendered the air conditioning system inoperative. Datatab turned off its computers to prevent damage to them. Judge Lasker held Saint Paul, the user's insurer, liable under a business interruption policy, although the location of the injury to the water main was in premises beyond the control of the computer company.

Liability based on the misuse of the computer has not been the subject of many court cases. An article in this journal in 1975 (Nycum, "Computer Abuses Raise New Legal Problems," 61 A.B.A.J. 444) discussed intentional torts and the nature of the tortfeasor. The Ford Motor Company has lost three reported cases for excessive reliance on the accuracy of its computerized account records,[1] and a service bureau in Illinois has been sued by a school district whose building burned down and was allegedly underinsured because the service bureau failed to make proper statistical calculations.[2]

The admissibility into evidence of records kept on computer has been considered in a number of cases under both common law and the Uniform Business Records as Evidence Act. In general this evidence has been admitted, provided a proper showing is made that the computer was employed as a usual part of the company's business. Rule 1001 of the new Federal Rules of Evidence specifically provides that the terms writings and recordings include 'magnetic impulse, mechanical or electronic recording, or other forms of data compilation." The advisory committee's report clearly indicates this contemplates the use of computers.

The admissibility of summaries prepared by computers of statistical data is covered by a somewhat different rule. Here the underlying information must be available for examination by other parties. A thorough discussion of this rule is in D & H Auto Parts Company, Inc. v. Ford Marketing Corporation, 341 F. Supp. 989 (1973), written by the late Judge Orrin Judd of the Eastern District of New York, who was active in the Section of Science and Technology. The point also is considered in Rule 1006 of the Federal Rules of Evidence. A good discussion of admissibility problems in the computer age is found in Section 2.71 of The Manual for Complex Litigation.

Counsel who are considering either the liability or the evidentiary problems of the computer should heed the words of Judge Vincent Biunno of the United States District Court for the District of New Jersey, one of the first lawyers to consider the computer as a tool for legal research, and perhaps the most knowledgeable member of the Judiciary on the subject of computers. In Neal v. United States, 402 F. Supp. 679 (1975), he wrote: "The computer is a marvelous device that can perform countless tasks at high speed and low cost, but it must be used with care. This is because it can also make errors at high speed. Those who use computers for record and accounting purposes, including the government, are accordingly obliged to operate them with suitable controls to safeguard the reliability and accuracy of the information."

[2] Independent School District No. 454, *Fairmont, Minnesota*, v. *Statistical Tabulating Corporation*, 359 F. Supp. 1095 (N.D. Ill. (1973).

In the last ten years legal problems involving computers have arisen in a number of legal fields. Four of these—taxation, proprietary rights, privacy, and data communications—are of particular interest to counsel for the user. Some computers, because of the nature of their business or their size, are also concerned with problems that have arisen in particular contexts, such as electronic fund transfer systems, electronic stock transfer, point of sale systems in retailing, and the peculiar problems of automating hospital records.

Computer hardware generally has not caused many tax problems. But the programs that instruct the computer system have been the source of considerable difficulty because the function of software (as programs and their associated documentation and manuals often are called) has not been well defined. The Internal Revenue Service in Revenue Procedure 69–21 concluded that for income tax purposes the cost of developing software resembles research and experimental expenditures and should receive a similar accounting treatment. When the user purchases software for a separately stated price, the buyer must treat the software as intangible and ordinarly amortize the cost on a straight-line basis over a period of not less than five years. If the user acquires a computer system, however, and the price of the software is not separately stated from the hardware, the buyer may depreciate the system over its useful life, using one of several methods. This hastens the taxpayer's recapture of cost and decreases its net income.

PROBLEMS ALSO EXIST IN PATENT, COPYRIGHT FIELD

Sales, use, and property taxes are assessed by the states on tangible property. The state tax authorities have been quick to rule that separately purch sed software is goods and subject to sales tax and that it is an integral part of the computer system and subject to the property tax.

The valuation of computer systems for property tax purposes is also a matter for counsel's consideration. A computer properly maintained will continue to function for many years, and some major manufacturers so refurbish their equipment that they can sell used equipment at the same price s new. But computers tend to become obsolete within a short period of years, and the market value may fall substantially below the depreciated book value. Occasionally some models of a used computer become popular and in scarce supply. Then the price can rise almost to list. This situation usually lasts only until the specific demand is filled, at which time the secondhand market value plummets.

The tangible or intangible nature of software also has caused problems in the patent and copyright field. The Copyright Office ruled in 1964 that computer programs can be registered if certain requirements are met. The current rules are set out in Circular 61 of the Copyright Office. Major computer manufacturers rely on copyright licenses to customers as the primary method of protecting properietary programs. One of these companies advised its customers that the basic operating programs of its computers are proprietary, that the owner's right to sell the computer secondhand does not include the right to transfer these basic programs, and that the user who buys a secondhand computer from anyone other than the manufacturer must obtain a license from the manufacturer. Since the license fees run into hundreds or thousands of dollars, the effect of this policy, if enforceable, on owners and potential buyers of this company's equipment is dramatic.

A computer frequently can be instructed to accomplish a specific result either by the insertion of a program encoded on a magnetic tape or disk or by the actual hard wiring one to the other of the various parts of the computer. The latter procedure may give rise to a patentable invention, but there has been no final determination whether the former procedure is patentable. The United States Supreme Court declined to consider this general question in *Dann* v. *Johnston*, 425 U.S. 219 (1976), although the commissioner of patents in his brief requested a determination of "whether programs for existing general purpose digital computers, however claimed, are patentable under present law."

Because there has been no judicial validation of copyright protection and because of the uncertain status of patentability, many software developers (including computer users who find a market for their own internally developed programs) have turned to the law of trade secrets for proprietary protection. For a time there was doubt as to the validity of this state-enforced doctrine, but these were set to rest in Kewanee Oil Company v. Bicron Corporation, 419 U.S. 470 (1974).

The ability of the computer to handle and analyze vast quantities of data with tremendous speed has served as a catalyst in alerting the American citizen to the possibility of an invasion of his privacy through the development of massive personal data banks. As a practical matter, the economics of computer acquisition and operation have prevented any major data accumulation, but the need for succinctness in personal data entries on computer has encouraged the use of abbreviated records that often may lack the accuracy of a detailed discussion.

On January 1, 1975, the Privacy Act of 1974, the first broad federal enactment of the subject, became effective. The act is applicable primarily to federal agencies, although certain government contractors are covered, and all levels of government are prohibited from requiring disclosure of an individual's social social security number unless authorized by federal statute or pursuant to a regulation adopted before January 1, 1975.

Section 3 of the Privacy Act which requires each federal agency to establish records on all their personal data systems and, subject to limited exceptions, to permit an individual to find out the information about him therein, became effective September 27, 1975. Publication during the last five months of 1975 of notices of regulations and systems required by the act consumed 4,815 pages of the Federal Register. The publication cost alone exceeded $800,000.

The Privacy Act established a seven-member Privacy Protection Study Commission to determine the need for additional regulation, particularly at the state and local levels and for private industry. This commission must render its report by June of 1977. Several states have enacted regulations covering state and local data systems and, while no state laws now cover private systems, bills pending in Congress and several state legislatures would regulate both computerized and noncomputerized privately maintained personal data banks.

A computer system is not only a group of black boxes sitting in one corner of an office building. It is frequently a network of processing units connected to other pieces of equipment—terminals, printers, and other computers in other buildings, cities, states, and even foreign nations. Private telephone lines, the public switched telephone network, microwave systems, radio, and satellites can connect this equipment. Most of these communication services are provided by common carriers, regulated in the United States by the Federal Communications Commission.

The interplay of unregulated computers and regulated communications has developed a number of interesting legal problems. In the fall of 1966 the F.C.C. began an inquiry into this relationship and concluded (40 F.C.C. 2d 293) after numerous submissions, studies, interim rulings, appellate court decisions, and mountains of paper that in fact it had jurisdiction over data processing when connected to the communications network but would not exercise this jurisdiction; that it would continue to control communications common carriers; and that it would rule case by case in the in-between area it called "hybrid data processing." This has not proved successful, and in August, 1976, the commission began a new inquiry into the computer-communications interface.

The efficient transfer of computer data from one point to another has led to the emergencies of specialized common carriers and new technical methods that are more cost effective than the use of the telephone voice network. New companies have appeared both as carriers and as suppliers of terminal equipment for connection to the network. I.B.M., the major computer manufacturer, has joined Aetna Life Insurance Company and Comsat to establish a satellite network emphasizing service to the data processing industry.

COMPUTER WILL HAVE PERVASIVE EFFECT

State regulatory authorities conflict both philosophically and politically with the Federal Communications Commission, and the scope of the federal preemption under the Communications Act of 1934 is the subject of several pending cases. While users' counsel may have little effect on communications law, general familiarity with the subject can be helpful when dealing with the client.

The computer as a practical machine is less than thirty years old. Pocket calculators now available will accomplish most of the arithmetical operations that could be done on the early machine. It has been estimated that by 1975 the computer industry represented almost $30 billion of the gross national product, and that by 1980 its share of the G.N.P. will be larger than that of the automobile industry.

The computer does not have the consumer visibility of the automobile and the airplane, but its effect on American life will be as pervasive as any invention in history. While a majority of a lawyer's contact with computers will be as a member of the public, each of us is likely to have at least one case during our professional life in which an understanding of the computer—and the policy and legal problems it has created—will be needed.

CURRENT U.S. POPULATION

Mr. PACKWOOD. Mr. President, I wish to report that, according to U.S. Census Bureau approximations, the total population of the United States as of August 1, 1977 is 217,435,879. In spite of widely publicized reductions in our fertility levels, this represents an increase of 1,655,964 since August 1 of last year. It also represents an increase of 192,401 since July 1, 1977, that is, in just the last month.

Over the year, therefore, we have added enough additional people to fill the combined cities of Honolulu, Hawaii, El Paso, Tex., St. Paul, Minn., Norfolk, Va., and Rochester, N.Y. And in just 1 short month, our population has grown enough to more than fill the city of Shreveport, La.

TVA

Mr. SASSER. Mr. President, today the Committee on the Environment and

Public Works held a hearing on the nomination of S. David Freeman to be a member of the board of directors of the Tennessee Valley Authority. I testified at that hearing. With the indulgence of my colleagues and because TVA is so important to the State of Tennessee, I would like to take this opportunity to express my feelings about TVA and its future.

In four decades the people of the Tennessee Valley have seen TVA grow into the largest public power facility in the world. During that time, TVA has been traditionally at the forefront of public power. The Tennessee Valley committed itself to TVA and has reaped its benefits.

We have been supplied with inexpensive electrical power and a reliable source of energy. TVA has provided countless jobs for the people of the Tennessee Valley, jobs which will continue as TVA maintains its leadership in the energy field.

Now the time has come to renew the pioneer spirit of TVA. TVA was a true pioneer in energy when it began serving as the yardstick of power companies years ago. It has lost its place as the yardstick; it can regain it quickly with bold, fresh ideas and aggressive implementation of technology and manpower. But, as a citizen of the State of Tennessee and as an elected Representative of the people of that State, I am anxious about the direction TVA will take in the future.

I have some concerns, concerns of and for the people of the Tennessee Valley. My most pressing concern is that TVA continue supplying electricity to the people of the valley at the lowest cost possible considering all the circumstances in which we find ourselves in this energy deficient time.

We need the best possible service at the lowest possible cost. Because of TVA's aggressive merchandising of electricity, the dependence of households and business in the Tennessee Valley is greater than anywhere else in the country. Because of TVA, we use more electricity than other regions of the country. Therefore, large rate increases disproportionately affect all users, and especially the poor and the elderly of the region. Having encouraged the extensive use of electricity, TVA has an obligation to provide it at the lowest cost, given the circumstances.

I am also concerned that the people of the valley and TVA have developed, in some areas, an adversary relationship. This can be changed. TVA was established to serve the people and the people must have faith in TVA's direction, in its integrity, and in its honesty.

TVA should take steps to restore publice confidence in its ability to serve the people. The members of the board of directors make decisions which affect people in seven States.

The impact of these decisions is widespread. The slightest hint of deception is easily perceived. There can be no appearance of deception. TVA, like the Federal Government of which it is a part, must be honest and open.

Many people in Tennessee perceive TVA as another monolithic, uncaring, unresponsive bureaucracy incapable of serving them and uninterested in bargaining aggressively for them in an attempt to hold down the cost of coal and other components of the production process. There are several means by which TVA can assist the consumer rather than oppose him.

It is possible for TVA to drive hard bargains for the consumers, not against them.

It is possible for TVA to consider well their projects so that the consumers do not pay for questionable and costly activities.

It is possible for TVA to revise its rates so that individuals who have been encouraged by TVA to own all electric homes will get a better break at bill paying time.

It is possible for TVA to show compassion for the poor and the elderly who must use TVA's product but cannot afford it during winters like this year's.

One attitude which will improve TVA's image is a reminder that each member of the board of directors has, just as I have and just as every Member of the Senate has, a natural constituency which must be served. Some say this fact has been overlooked in recent years.

The board members do, however, represent directly every person who uses TVA power. These users, in a very real sense, own the Authority. It is the investment of the American people which created TVA and they deserve dividends in the form of responsive, aggressive, and compassionate leadership. They want to have the opportunity to assist the directors in the decisionmaking processes. They want to feel as if their advice is welcome. They want to be assured that the people of the TVA are working for them, not against them.

Changing attitudes is a hard process and the erosion of TVA's image is, I'm sorry to say, deep. I hope that it is not too deep that the image of TVA's first 30 years cannot be reclaimed. Now is the time that the reclamation must occur.

Also I'm concerned that, while TVA should again become the showcase of public power, the people of the valley not be forgotten in this process. TVA must not become a showcase at their expense. TVA's primary purpose is the production of power as inexpensively as possible under the existing circumstances. Even though there may be some circumstances which are beyond our control, there are others which are controllable. Such control can lead to the more efficient production of electrical power. This will be fairer to the people of the Tennessee valley who have no alternative but to use TVA's product.

Furthermore, I am concerned about the possibility of experimentation at TVA at the expense of the consumer. Any testing of new technology must be done cautiously and deliberately to insure that the consumers of the Tennessee Valley do not have to pay for unnecessary governmental mistakes. I do not mean that TVA should not be innovative. It certainly should be; it must be. And it must be innovative in ways beneficial to the people of the Tennessee Valley.

In keeping with the needs of the people, TVA should embark solidly and surely on a course of providing more service in the form of insulation and weatherization advice, in the form of assistance to industry in coal conversion and waste heat recovery techniques. TVA should continue its leadership and move vigorously in utilizing new technologies like magnetohydrodynamics and fluidized bed combustion.

The Energy Research and Development Administration was established in 1975 to consolidate Federal activities relating to research and development of sources of energy.

ERDA has worked toward developing energy sources that will meet the needs of present and future generations. What ERDA, soon to be part of the Department of Energy, needs most, however, is a place where these ideas can be developed on a large scale. I would like to see the Department of Energy and TVA working together in an effort to make use of such technologies as solar power, improved geothermal power, and cogeneration. I am convinced that TVA can and should be at the forefront of utilization of alternative sources of energy.

But I do not feel that the Authority should carry the burden of this country's energy future. That burden must be carried by all Americans.

The eyes of the Nation will be watching TVA closely. As a model for our energy future it will be central in developing programs for other parts of the country. I expect that Congress will want to oversee the process of TVA and its programs. I am studying means of increasing congressional oversight of the activities of TVA.

I feel this is very important if TVA is going to be central to our national energy plan. I also expect a great deal of cooperation between TVA, Congress, and the people of the Tennessee Valley. Without cooperation, our energy plans will fail.

The Senate will soon vote on the confirmation of a new director for the Tennessee Valley Authority. The fact that we will be filling this position at this time is significant. The individual that is to be selected director is going to play an important role in the future of TVA. As I have stated on other occasions, a Director of TVA has to be committed to providing electricity to the consumers of the Tennessee Valley at the lowest possible cost. The Directors of the TVA will also have to cooperate with the energy mandate of Congress.

I am concerned about energy conservation; I am concerned about the environment; and I am concerned that we continue to supply low-cost electrical energy in the Tennessee Valley to future generations. The people of the Tennessee Valley share these concerns.

PAN AMERICAN AND ITS EMPLOYEES SUPPORT AIRLINES REGULATORY REFORM

Mr. PERCY. Mr. President, another major airline and its employees have decided to support the Airline Regulatory Reform Act of 1977. Pan American, the Nation's largest international air carrier,

recently announced its endorsement of this important legislation.

In addition to the 19 cities within the United States which Pan American services, it flies to 63 countries across the globe. It employs 20,180 workers in the United States alone. Its many charter flights, which last year carried 156,300 passengers from Chicago's O'Hare International Airport, makes it the largest carrier of international passengers from Chicago. It is significant that the unionized employees as well as the corporate management of Pan American support this bill.

Many of those who oppose the measure are concerned with the adverse impact which a more competitive airline industry might have on their job security. However, Ms. Nancy Hafner, chairman of the Pan American employees group, says Pan American employees have no problem supporting airline regulatory reform. Hafner notes:

We endorse the majority of the language of the bill, knowing it establishes the opportunity to compete for our jobs. Pan American employees are more aware than any other group in the U.S. air industry of the circumstances which have threatened our careers. The Cannon-Kennedy Regulatory Reform Bill is the first legislation introduced since the CAB was formed in 1938 which can lend some stability to our airline and our jobs.

According to Hafner, all four of Pan American's unions—the Air Line Pilots, Flight Engineers, the Teamsters, and the Transport Workers—have accepted the awareness committee's stand. As Hafner points out, the flight engineers and the airline pilots have protested to their internationals on their position against passage of this bill.

The Pan American employees group has an interesting history of involvement with political issues bearing on the airline industry. The group was formed 2½ years ago when Pan Am's bankruptcy seemed imminent. It labored successfully for the enactment of the Fair Competitive Practices Act of 1975 and has worked consistently for what Hafner calls "political relief of Pan American's problems." In light of this history, it is notable that an employee group, so acutely sensitive to the impact on employment levels of airline legislation, would support airline reform.

Pan American Airways has traditionally been in the vanguard of an airline industry effort to serve air travelers more efficiently and more economically. Juan Trippe, Pan American's founder, has been described by a New York Times article as "a prophet of the doctrine of cheap mass air travel." Under Trippe's leadership, Pan American changed the course of international civil aviation after World War II. Rather than cater to a small market comprised of the well-to-do, who could afford the luxury of first class travel, Trippe chose to develop a broad new tourist market. As the Times article notes:

Overriding the opposition of other international carriers, Pan Am became the first airline to offer an over-the-water discount fare, on its Mainland to San Juan flights in 1948. Four years later, Mr. Trippe won his battle to operate tourist-class flights between the United States and Europe, and a revolution in international travel began.

Most recently Pan American has endeavored to lower fares for Midwest and New England air travelers. A Civic Aeronautics Board decision late last year allowed Pan American to offer, on a 6-month trial basis, standby fare for the Detroit to Boston portion of its Detroit-Boston-Europe flights. The standby fare costs $50, as opposed to the normal one-way coach fare of $74 offered on competing lines. Before this CAB ruling, passengers traveling on Pan American flights from Detroit could not buy tickets to Boston, or vice versa. The results of this new fare have been astounding. In March 1977, 704 domestic passengers flew on Pan American flights between Boston and Detroit. Of that number, 323 were on a standby basis. It was found that most were not business travelers, but rather college students who would travel by other means of transportation or not at all. Pan American was not diverting the traffic from other airlines, as some had feared.

I think the sensitivity to the consumer of both Pan American management and employees is admirable. I ask unanimous consent to have printed in the RECORD the Pan American employee's announcement supporting airline regulatory reform.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

PAN AM EMPLOYEES SUPPORT REGULATORY REFORM

The Pan Am Employees Awareness Committee, speaking for Pan Am employees worldwide, supports the Cannon-Kennedy Regulatory Reform Legislation.

Again, as when petitioning for passage of the International Air Transportation Fair Competitive Practices Act of 1975 (FCPA) Pan Am employees wish your support. This time, in total agreement with Congress and the Administration, our effort seeks meaningful and prompt air transportation industry regulatory reform.

We disagree with the Mail section of the bill. It is inconsistent with the mail provision of the existing law as set forth in the FCPA. We helped to pass that law which directed that Universal Postal Union mail rates be considered to protect U.S. flag carriers from foreign competition.

We are extremely encouraged to see come our way, after 33 years domestic fill-up rights, domestic route entry, and expedited procedures.

We endorse the majority of the language of the bill, knowing it establishes the opportunity to compete for our jobs.

Pan Am employees are more aware than any other group in the U.S. air industry of the circumstances which have threatened our careers. The Cannon-Kennedy Regulatory Reform Bill is the first legislation introduced since the CAB was formed in 1938 which can lend some stability to our airline and our jobs.

We wish to enlist your support for the Cannon-Kennedy Bill.

We need you.

All we have ever asked of our government is equity of job opportunity. Nothing has changed.

Thank you.

CONGRESS AND THE MEDIA

Mr. MUSKIE. Mr. President, Joe McCaffrey, a veteran of 33 years reporting in Washington, paused recently to analyze the uneasy relationship between Congress and the media, and to reflect on the causes of public discontent with the Congress. As always, I found his thoughts well stated and to the point. To share his recent commentary on WMAL radio with my colleagues, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the commentary was ordered to be printed in the RECORD, as follows:

VOICE FROM THE CAPITAL

(By Joseph McCaffrey)

Congress is very nervous about the media, and the media is becoming very nervous about Congress.

It is a "Which came first, the chicken or the egg?" sort of thing.

Did the media bring about the Congressional nervousness, or did Congress make the media nervous and the media in turn paid back the Congress?

Congressman David Obey made a speech in May to the Western Wisconsin Press Association in which he talked about the relationship between Congress and the media. Some reporters thought this was the beginning of a vendetta against them.

Now, shaking his head in disbelief, Obey says the only thing that was reported in detail about the speech was his listing of the free perquisites provided to newspeople covering the Congress.

"But that was not my point," Obey says, "I only used the media perks as an example to expand on my concern about cheap shots by members of the press and also some members of the Congress."

Obey sees a growing tendency in Congress and in the media to pander to popular prejudices, providing in overexpanding quantity information "more of a muckraking nature and not of an analytical nature."

I would agree with the Wisconsin House member. The Washington reporting corps is off with the hounds in the search of the "jazzy" story. For example, in covering the very complicated story of the Labor-Hew appropriations bill most all the attention, or at least 98% of the attention, was focused on the abortion issue. Yet there were items in that bill, funding for the cancer program for one example, which were of greater and more significant importance.

This is the fault of television. Television reporting focuses most of its attention below the belt no matter what the subject. The "grabber" is the big thing in television news reporting, substance comes last, if it comes at all.

The ideal television news story is a mad gunman holed up in an apartment building, accessible to the cameras. This is meat for TV news, and it almost seems as if TV news directors say a prayer that the next day will bring one of these deranged people into their net.

So too the coverage of the Congress is, in the minds of some desk editors, and many reporters, the bed romps of a few members, rather than the committee and floor work of most members.

One reporter said the other day that the only story she enjoyed reporting was when she "had someone by the short hair." How many such stories she had been able to develop I did not ask.

But there is a wide difference between reporting shortcomings on the Hill on the part of members and staff, and the taking of "cheap shots."

The other day there was a widely reported story about an Ohio Congressman who had his staff trucking discarded books from the Library of Congress to his office for, in most cases, his own personal use, although the provision is that such books are to be sent

to libraries and schools which could use them. Thousands of books were involved.

On the night this was reported the newspaper lay open to that story on my desk. Someone stopped at my desk and pointing to the story asked, "Joe, is there anyone up there who is honest?"

For a minute I was shocked at the question, but then I realized this was probably a normal reaction for anyone who knew the Hill only from TV and newspapers and did not know its people. My answer is, most of them are honest, very honest, but they are over-shadowed by those who fall by the wayside.

The library book story helps build a negative image of Congress.

Whose fault is it? Not, certainly the fault of those who researched and wrote the story.

No, the fault lies right inside the Congress itself. The actions of a Wayne Hays, or of a Neal Gallegher were not forced by the news media. They were naturally, reported by the media.

But then, it may be too much to expect 535 men and women to stay on the straight and narrow, temptations being what they are.

Once someone strays, the only way we know about it, usually, is because the sinner is caught by the media.

I seriously doubt if Congress makes any attempt to restrict reporters on Capitol Hill, and I also doubt that reporters will be less vigilant in watching members of Congress. Regretfully, I would also say I doubt if the cheap shot artists will refrain from their speciality.

REVENUES RESULTING FROM REPEAL OF THE SOCIAL SECURITY EARNINGS LIMITATION AT AGE 65

Mr. GOLDWATER. Mr. President, for several years now, it has been my aim to get the earnings limit of the Social Security Act repealed for all workers 65 or older. Basically, I think the law has the effect of robbing senior citizens of their money at this age since they and their employers have paid taxes into the social security system all during their working lifetimes. The earnings limit puts a condition on the receipt of their social security checks which these workers have paid for themselves, and it is most unfair as well as being totally lacking in logic.

Mr. President, the major reason used by opponents of eliminating the test is its supposed cost. But we never hear about the revenue offsets which will flow into the Treasury or the social security system as a result of repeal.

For years, I have been asking the Social Security Administration to give me an estimate of the additional social security payroll taxes and Federal income taxes that will be paid after the earnings limitation is abolished, but they have persistently refused to do so saying it cannot be done.

Fortunately, there are several economists outside of the Social Security Administration who are doing independent studies relative to the effect of the earnings limitation upon workers' decisions to retire and upon the economy, and it is not necessary to wait for the Social Security Administration to come up with revenue estimates that they say they will never produce anyway. Based on these new economic studies, some of which were just published this year, and with the help of certain reports, both published and unpublished, prepared by the U.S. Bureau of the Census, it is now possible to compute an estimate of the total tax revenues resulting from repeal of the earnings limit. I can today announce that these tax revenues will be in excess of $1 billion.

In fact, the total revenues gained by repeal of the earnings limit at age 65 will likely reach $1.3 billion.

Mr. President, what we must keep in mind is that repeal of the earnings test will primarily benefit persons who are presently nonworking and already receive all their social security benefits. It will not cost anything in additional benefits for these retirees to return to work. Once they do decide to go back to work, however, they will pay additional social security taxes, and their employers will pay an equal amount of taxes for them. Moreover, some of them will move into income levels that generate additional income taxes.

For example, if just one retiree is induced to return to work by repeal of the earnings limit and should earn $10,000, this will be a gain of $1,170 in OASDI taxes. This is the combined total of the taxes paid by both the worker and employer.

Multiply this amount by the 2 million or more older persons who will either decide to return to work or increase their earnings above the exempt amount if the earnings limitation is removed, and you can get a rough idea of the potential for additional tax revenues that will arise from eliminating the earned income test.

Mr. President, I am pleased today to release a report identifying exactly where these additional revenues will come from and how much new revenues can be anticipated as a result of repeal of the earnings limit at age 65. To my knowledge, this is the first paper of its type covering both retirees who are presently nonworking and social security beneficiaries who are presently employed, but with earnings below the exempt amount.

Mr. President, this report refutes the allegations that repeal of the earnings test will be unduly expensive. The report demonstrates that repeal will actually generate revenue offsets that recover approximately half of the claimed cost of repeal.

Cost can no longer be used as an excuse for failing to repeal the earnings limit, and I hope the Congress will soon get about the job of sending to the White House, S. 146, legislation which I and 33 other Senators have introduced to do just that.

Mr. President, I ask unanimous consent that the report of revenue offsets resulting from repeal of the earnings test for workers age 65 or older be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

INCREASED REVENUES RESULTING FROM REPEAL OF EARNINGS LIMIT AT AGE 65

A. REVENUES FROM BENEFICIARIES PRESENTLY NONWORKING WHO ALREADY RECEIVE ALL THEIR BENEFITS AND WHO WILL DECIDE TO RETURN TO WORK

	Total persons returning to work [1] (thousands)	Mean earnings [2]	Revenues		
			OASDI [3] (millions)	Income tax [4] (millions)	Total (millions)
High estimate:					
Total	2,000		$1,014.8	$207.0	$1,221.8
Males	1,200	$6,070	736.0	180.0	916.0
Females	800	3,040	278.0	27.0	305.8
Low estimate:					
Total	1,500		784.4	155.0	939.4
Males	900	6,070	575.3	135.0	710.3
Females	600	3,040	209.1	20.0	229.1

B. REVENUES FROM BENEFICIARIES PRESENTLY EMPLOYED WHO ALREADY RECEIVE ALL THEIR BENEFITS AND WHO WILL INCREASE THEIR EARNINGS ABOVE EXEMPT AMOUNT

	Total Persons increasing earnings [1] (thousands)	Mean earnings over $3,000 [2]	Revenues		
			OASDI [3] (millions)	Income tax [4] (millions)	Total (millions)
High estimate:					
Total	500		$77.4	$14.7	$92.1
Males	300	$3,070	76.7	12.0	88.7
Females	200	40	.7	2.7	3.4
Low estimate:					
Total	300		58.0	11.0	69.0
Males	180	3,070	57.5	9.0	66.5
Females	120	40	.5	2.0	2.5

C. TOTAL REVENUES GAINED BY REPEAL OF EARNINGS LIMIT AT AGE 65

	Billions
High estimate	$1.3
Low estimate	1.0

[1] The analysis takes account of the fact that the labor force participation rate of men is greater than that of women in the age group 65–71. See U.S. Dept. of Commerce, Bureau of Census, *Current Population Reports—Consumer Income*, Series P–60, No. 105, June 1977, table 49, at pp. 216–219.

[2] Source: Unpublished working paper, U.S. Dept. of Commerce, Bureau of Census (June 1977). For purposes of computing OASDI and income taxes, this analysis assumes the potential earnings of workers will fall within the same range as the actual range of earnings, from wages or salaries only, of persons 65 or older who were employed in 1975, as reported in such working paper.

[3] The analysis includes the combined amount of OASDI taxes imposed both on employees and employers (5.85%+5.85%) and takes account of the fact that such taxes apply only to income up to $16,500.

• Beginning with the 1977 tax year, taxpayers must use a new "tax table income" feature, which incorporates a flat "standard" deduction and other new concepts, in order to determine their tax liability. Although the IRS has not yet published the new tax tables, the analysis projects a conservative estimate of the likely tax revenues based upon the provisions of H.R. 3477, P.L. 95–30 and assumes that earnings will fall within the same range proportionally as the incomes from wages or salaries *only* of persons 65 or older, as reported by the U.S. Bureau of Census for 1975. This under-estimates tax revenues since the *total* income of such employed older persons actually was much greater than their earnings from wages or salaries alone, causing their incomes to be pushed into higher tax brackets than those used for computations in this analysis.

THE HIGH ACCIDENT RATES IN MINES

Mr. CHURCH. Mr. President, the Comptroller General of the United States has just sent a report to the Congress describing how the safety in our Nation's metal mines can be improved. He indicates in his report that little improvement has been made in the safety record of noncoal mines since the Metal Act was enacted in 1960.

The GAO report notes that Congress is currently considering major revisions in Federal regulation of mine health and safety. As a cosponsor of the Senate version of this legislation (S. 717) and a strong proponent of effective mine safety legislation, I am pleased to discover that the GAO feels that S. 717, as passed by the Senate, "contains a number of provisions which, if enacted, should help correct some of the problems" identified in the GAO study. S. 717 is presently in conferences in the two versions of this legislation.

This report adds to the overwhelming evidence that our Nation's mines can be made much safer, particularly our metal mines. Idaho's miners have waited far too long for effective Federal legislation establishing a strong health and safety program for metal mines. Too many lives have been lost due to an enforcement program without "teeth" and the lack of mandatory health and safety standards.

I am hopeful that strong legislation will emerge from the House and Senate conference. Our Nation's metal miners deserve no less.

Mr. President, I ask unanimous consent that the digest of the Comptroller General's report to the Congress on the Metal Act be printed in the RECORD.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

[Comptroller General's Report to the Congress]

AFTER YEARS OF EFFORT, ACCIDENT RATES ARE STILL UNACCEPTABLY HIGH IN MINES COVERED BY THE FEDERAL METAL AND NONMETALLIC MINE SAFETY ACT

DIGEST

Mining operations that produce nonfuel mineral commodities—classified as metallic ores, nonmetallic ores, and construction materials (such as crushed stone, sand, and gravel)—involve virtually every mineral except coal and usually are referred to as the "noncoal mining industry."

During 1976 there were over 12,600 active mines employing almost 248,000 persons in this industry.

The Mining Enforcement and Safety Administration (part of the Department of the Interior) compiled statistics showing that little improvement was made in the safety record of noncoal mines between 1966 and 1974, although in 1975, for the first time, progress was reported. However, the agency's program could be more effective in reducing injuries and illnesses.

The agency measures the industry's safety record primarily by the number of injuries per million hours worked that caused death or permanent injury or that prevented a person from doing regular duties for a full day beyond the day of injury. Although the agency's statistics are not completely accurate, they are the only ones available.

A few mines accounted for a large part of the reported overall reduction in injury rates in 1975, and the extent that Federal involvement was responsible for the reported reductions is uncertain. (See pp. 13 to 15.)

Other factors that contributed to reduced rates at these mines included reductions in hours worked, decreased numbers of inexperienced miners, and the failure of some operators to report all injuries. (See pp. 15 to 20.)

The Congress is considering legislation which, if enacted, should help correct some of the problems identified in this report. (See pp. 10 to 11.) This legislation would also transfer primary Federal responsibility for most aspects of mine health and safety from the Department of the Interior to the Department of Labor. If this legislation is enacted, GAO's recommendations to the Secretary of the Interior will apply to the Secretary of Labor.

REPORTING AND ANALYSIS OF ACCIDENTS, INJURIES, AND ILLNESSES CAN BE IMPROVED

Occupational illnesses are difficult to identify, and reporting of them has been minimal. (See pp. 23 to 24.) The agency's instructions to mine operators do not prescribe clear criteria for determining which injuries must be reported, and mine operators do not report add injuries as required. (See pp. 24 to 25.) The agency does not effectively analyze injury and accident information reported by mine operators and its own inspectors. (See pp. 27 to 33.) As a result, the agency's statistics are not complete and accurate and its efforts to identify specific causes of accidents and illnesses and to develop techniques to reduce them have not been based on all available information.

The agency should change its system for obtaining and analyzing accident, injury, and illness information so data will be complete and accurate. The agency should also analyze its data more efficiently and effectively. (See pp. 35 to 36.)

HEALTH AND SAFETY STANDARDS NEED IMPROVEMENT

Hundreds of major hazards are not adequately covered by the agency's mandatory standards. GAO recommends, and the agency agrees, that the agency needs additional mandatory standards to effectively prevent these hazards. (See pp. 37 to 49.)

Mandatory standards covering these hazards have been proposed by the agency (between October 1973 and August 1976) but have not been issued. At least 339 proposed standards and definitions were backlogged in various stages as of April 1977.

Issuing of standards has been delayed unnecessarily because of the agency's manner of processing. The agency said inadequate staffing also resulted in unwarranted delays. (See pp. 40 to 45.)

Hundreds of other hazards are covered only by advisory standards to which mine operators are not required to comply. GAO and the agency believe these should be replaced by mandatory standards. (See pp. 45 to 47.)

To speed up processing of mandatory standards already proposed, the agency should carry out, as soon as possible, its plans to (1) stop processing standards in large groups and (2) assign enough staff to process the standards. (See pp. 48 to 49.)

Also, to help eliminate other hazards, the agency should evaluate, as soon as possible, the merits of all existing advisory standards and upgrade them to mandatory status as appropriate. (See p. 49.)

IMPROVEMENTS NEEDED IN THE AGENCY'S ENFORCEMENT AUTHORITY AND ACTIVITIES

The agency's enforcement authority has not permanently reduced health and safety hazards in the noncoal industry.

Hazards must be identified and corrected continuously if they are to be permanently reduced. Since agency inspectors cannot be at a mine every day, mine operators must do this.

Most of the mines visited, however, were cited repeatedly for violating mandatory standards on the same types of hazards, and violation notices and noncompliance closure orders (orders withdrawing employees from the mine or affected area) were virtually useless in preventing this. (See pp. 50 to 54.) Except in situations of imminent danger, closure orders cannot be issued unless the operators fail to correct a cited hazard within the allotted time. As long as this is done, an operator can violate the same standard again. The agency can do nothing more than require correction by issuing another violation notice. Obviously, this process can be continued indefinitely with little or no disruptive effect on the operation.

The Congress should amend the Federal Metal and Nonmetallic Mine Safety Act to give the agency authority to levy appropriate penalties, such as on-the-spot closure orders and/or fines, in cases where mine operators repeatedly violate the same agency standards. (See p. 80.)

Agency inspectors look for different things during inspections and vary in their ability to identify and evaluate the severity of similar hazards. (See pp. 54 to 72.) Also, during inspections the agency has not sufficiently emphasized enforcement of health and training standards. (See pp. 73 to 79.)

The agency should:

Provide inspectors guidance on the basic procedures necessary to guarantee thorough inspections,

Place greater emphasis on enforcing mandatory health and training standards, and

Assess the quality of its enforcement activities at least annually, by analyzing inspection statistics relating to various organizational units. (See p. 80.)

MORE ACCIDENT PREVENTION TRAINING NEEDED

Accident prevention training is the most effective type of training for reduced injury rates, especially when it is directed toward specific hazards and individual jobs. (See pp. 82 to 83.) Accident prevention training for the noncoal industry is not required by the agency's mandatory standards but is recommended by an agency advisory standard.

Most agency-sponsored training in the noncoal industry involves mandatory courses: first aid, use of the self-rescuer (emergency breathing apparatus used in underground mine fires), and mine emergency and rescue procedures. Although important, this training focuses on problems resulting from accidents rather than the problems that cause accidents. For 55 high-injury mines, only 4 percent of the employees had received accident prevention training. Meanwhile, the accident rates at these mines continued to increase. (See pp. 83 to 85.)

The agency will be issuing mandatory accident prevention training standards, but they will not become effective for some time. The agency should—

Issue mandatory standards requiring mine operators to provide accident prevention training to all employees, and

Encourage voluntary accident prevention training until the mandatory standards become effective. (See p. 88.)

ROLE OF RESEARCH IN MINE HEALTH AND SAFETY

To achieve the greatest possible degree of protection for miners, the Mining Enforcement and Safety Administration develops and enforces standards and provides technical assistance to mine operators to help them comply with standards. The Bureau of Mines conducts a research program to develop technology to help carry out these activities.

The Bureau's noncoal mine research projects had—

Not led to the enactment of standards,

Assisted the Mining Enforcement and Safety Administration only slightly in enforcing standards, and

Assisted mine operators only slightly in complying with standards. (See pp. 91 to 95.)

The research program's ineffectiveness resulted from a lack of coordination and cooperation between the Bureau and the Mining Enforcement and Safety Administration in establishing project priorities, monitoring progress of projects, transferring resulting technology to mine operators and from low funding and budget priorities. (See pp. 95 to 102.)

The Bureau and the Mining Enforcement and Safety Administration agreed that the low funding severely limits the research program. Repeated attempts by Bureau officials to substantially increase funding were rejected by the Department of the Interior, until recently.

According to the Department, the noncoal research program has low funding because the Congress has not specifically ordered more funds.

The Secretary of the Interior should:

Instruct the agencies to set up and use procedures for coordinating transfer of technology between them, as they have agreed to do.

Watch how the agencies put into practice agreed-upon procedures for coordinating the program.

Continue the Department's recent efforts to increase the funding of the Bureau's research program. (See pp. 102 to 103.)

To clarify the scope of Federal noncoal mine health and safety research, the Congress should enact legislation specifically authorizing the types of research and the funding they should get. (See p. 103).

NEW APPROACH TO IMPROVING THE INDUSTRY'S HEALTH AND SAFETY RECORD

The Mining Enforcement and Safety Administration's Program in Accident Reduction, designed to reduce injuries at operations with significant safety problems, began late in 1975. It recognizes that only a few operations account for most reported injuries. (See pp. 105 to 107.)

The Program in Accident Reduction is still relatively new and improved approaches and techniques undoubtedly will develop. The program is a crucial test of whether the agency can fulfill its mandate to improve the health and safety of noncoal workers.

Results of the new program through September 1976 have been mixed. Eleven of the 30 operations in the program reported no reduction in their injury rates, 5 reported only marginal reductions, but the remaining 14 reported large and, in some cases, dramatic reductions. (See p. 107 to 110.)

The agency's expansion into areas other than its traditional compliance inspections and training activities can be effective. Improved guidance and training for those conducting the program is needed. (See pp. 110 to 114.)

AGENCY COMMENTS AND GAO'S EVALUATION

The Department of the Interior agreed with GAO's recommendations and said that some had already been implemented by Department agencies. It said GAO's review had already served as the basis for improvements in its noncoal mine health and safety program and anticipated that GAO's report would be of considerable value to its program in the future.

However, the Department questioned the validity of some of the analyses presented in GAO's report and conclusions derived therefrom. The Department's comments and GAO's evaluation, when appropriate, are discussed on pp. 20, 21, 36, 49, 81, 89, 103, 104, and 115.

UNION-MANAGEMENT COOPERATION FOR PRODUCTIVITY IMPROVEMENT

Mr. PERCY. Mr. President, responding to the general concern that the pace of economic recovery may be slowing down, it is my conviction that we can bolster our economic security and insure our standard of living by substantially increasing productivity in industry and commerce.

Productivity improvement has been a longstanding interest of mine, and I have been particularly interested in union-management cooperation in areas and concerns beyond the collective bargaining boundaries as a means of increasing productivity.

According to Milton Derber, professor of labor and industrial relations at the Institute of Labor and Industrial Relations, University of Illinois, such cooperation can be found as far back as the 1920's.

In an article published in the "Annals of the American Academy of Political and Social Science," in May of this year, Professor Derber explains that, while the history of such cooperation dates back half a century, many of these early efforts have not survived.

The National Center for Productivity and Quality of Working Life, established by Congress with my full support, and that of my colleagues Senator JAVITS and Senator NUNN, has sought to encourage such cooperative effort. Professor Derber reports that the National Center has sponsored union-management conferences and distributed popularly written reports and pamphlets publicizing labor-management committee operation.

Among such plans publicized by the National Center, Professor Derber notes, were the Employment Security and Productivity Committee established in the basic steel industry as a result of the collective bargaining agreement of 1971; the relatively long-established Scanlon Plans which provide for group bonus participation in productivity gains; the joint cooperative committees in the Tennessee Valley Authority; the Jamestown, N.Y., community program begun in 1971; the labor-management cooperation arrangements developed through the initiative of the Federal Mediation and Conciliation Service; the national joint labor-management committees in the retail food and interstate trucking industries, and in other industrial and mining enterprises.

In my own State, such committees have been established, both in the public and private sectors, including the city of Chicago, where the Chicago Construction Coordinating Committee has been functioning since 1973. The city of Champaign and AFSCME Local 47, with the help of the university's institute, have organized joint committees to deal with problems of mutual concern.

A listing of these committees, State by State, is included in a "Directory of Labor-Management Committees," published by the National Center in October 1976, and which I am informed is presently being updated. This is a useful report for anyone who wants to find out from others how to organize a labor-management committee.

Significantly, I have noted through my work on the Foreign Relations Committee that cooperative labor-management initiatives have extended to many of the industrial nations of Europe, and in some nations the labor movement has sought greater participation in functions traditionally seen as management.

The leaders of the American labor movement have maintained a firm ideological attachment to collective bargaining as the main route to industrial democracy. The establishment of labor-management committees in this country has been as an adjunct to the collective bargaining process, with joint-committees mainly confining themselves to areas of labor-management concern outside of collective bargaining issues.

Such cooperation, properly organized and motivated, can lead to improvement in productivity, as has been shown in initiatives recently undertaken.

Mr. President, I ask unanimous consent that the full text of Professor Derber's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLECTIVE BARGAINING: THE AMERICAN APPROACH TO INDUSTRIAL DEMOCRACY

(By Milton Derber)

Abstract: Collective bargaining is the American route to industrial democracy. Some unionists and others, however, have advocated a widening and deepening of the participative role of workers and unions in managerial decision making. Examples of union-management cooperation outside of the conventional collective bargaining boundaries can be found as far back as the 1920s. But only a small number of cases have survived to the present day. Since 1970 the federal government has encouraged joint union-management committees and autonomous work group experiments to improve productivity and the quality of working life. A National Center for Productivity and Quality of Working Life has been established by Congress. A number of companies have, independently or in cooperation with unions, introduced job enrichment programs, flexible work schedules, and semi-autonomous work groups. Many companies have taken advantage of tax law benefits to adopt profit-sharing and employee stock ownership plans. Union leaders have generally been suspicious of such management schemes as well as productivity plans unless safeguards are provided for worker job security and employ-

ment conditions. They have rejected the German codetermination system of worker-directors. There appears to be little prospect of dramatic change during the foreseeable future although collective bargaining may gradually extend worker participation in managerial decision making.

In contrast to European developments, the theme of industrial democracy has evoked relatively little discussion in the United States in recent decades. This condition is not attributable to a lack of interest on the part of unionists or weakness in the labor movement. It is due, rather, to the predominant view that industrial democracy in the United States has been widely achieved through the system of collective bargaining. Imperfections and limitations of collective bargaining are recognized, but only a small minority of labor activists call for new routes to industrial democracy, such as German co-determination, Yugoslav workers councils, or Scandinavian autonomous work groups.

COLLECTIVE BARGAINING: THE AMERICAN ROUTE

The American idea of collective bargaining as industrial democracy is the product of more than a century's experience. Since I have treated this evolution in a book-length analysis,[1] I shall not attempt even a short sketch here. It is important to note only that the collective bargaining system emerged out of fierce competition with numerous alternatives: individualism; socialism; profit-sharing, stock-ownership, co-partnership; company employee representation plans; syndicalism; producers cooperation; scientific management; and others.

The essence of collective bargaining as industrial democracy is as follows: (1) employees have the right to form, belong to, and govern labor organizations of their own choice without employer interference; (2) employers and their managerial staffs have the right to form their own representative organizations and to manage the operations of their enterprise; (3) wages, hours, and other terms and conditions of employment are codetermined through the process of collective bargaining, and the agreement is reduced to writing in a signed and legally enforceable contract; (4) employee grievances and complaints over the implementation of the contract and claims to fair treatment are subject to due process through a formal grievance procedure specified in the contract; (5) neither the managers nor the union officers may discriminate against an employee (or potential employee) because of race, sex, age, national origin, or religion; (6) the strike or lockout is a legitimate tool in the determination of the contractual rules governing the relationship, although the parties may voluntarily abstain from or relinquish its use; (7) in the resolution of grievances the strike is generally replaced by binding arbitration; (8) the personal dignity of all employees, whether part of a minority or majority group, is respected, their freedom of speech is protected, and they are treated as equal citizens with equal opportunities at the work place and in their union.

This model of industrial democracy, like the counterpart model of political democracy, is rarely achieved in its entirety and is often seriously abused. The federal and some state governments have sought through legislation, administration, and adjudication to safeguard and promote its principles.

BEYOND COLLECTIVE BARGAINING

Since the 1930s, most trade unionists and their leaders, as well as most large employers, have been content to work and live under the collective bargaining system. Some, however, have desired to extend the scope of union-management interaction beyond its conventional boundaries. In particular, they have advocated a widening and deepening of the participative role of workers and the union in managerial decision making. This approach was epitomized several decades ago by a work entitled *Organized Labor and Production: Next Steps in Industrial Democracy*,[2] jointly authored by Philip Murray, then head of the Steel Workers Organizing Committee and vice-president of the Congress of Industrial Organizations, and Morris L. Cooke, a kell-known consulting engineer and advocate of scientific management. The imaginative work envisaged a comprehensive integration of unionism and scientific management in the enterprise and the industry, the full sharing of business and industrial information, and even the seating of one or more union officials on company boards of directors. At the national level, unions, management, and government would cooperate in close harmony to achieve a stable and growing full-employment economy based on collective bargaining, civil rights for employees, and scientific control of industrial relations.

Although the Murray-Cooke dream of industrial democracy was largely ignored, a small minority of unionists and managers did develop schemes of union-management cooperation outside the normal collective bargaining boundaries. Examples[3] can be found as far back as the 1920s in the railroad and garment industries, but the best-known programs developed just before and after World War II are the Tennessee Valley Authority joint cooperative committees to eliminate waste, increase efficiency, stimulate training, safeguard health, and generally improve employee morale, and the Scanlon Plan, a system of joint worker-supervisor suggestion committees combined with a cost-saving plant-wide bonus. In both cases, the cooperative arrangements were carefully kept separate from the collective bargaining process.

During World War II, some 5,000 joint management-labor production committees were set up under government sponsorship to help increase productivity and to boost morale, but only a few hundred were estimated to have made any significant contributions to productivity and virtually all of them disappeared after the war.[4] In the late 1950s and early 1960s, several major union-management agreements revived interest in developing new collective bargaining institutions for the furtherance of productivity, the protection of employee job rights, and the enhancement of cooperative relations. Among these were the Armour Automation Plan (1959) in which Armour and Company and the then two major meat packing unions attempted to ease the displacement effects of a major company reorganization involving the shutdown of about a dozen obsolete plants and the opening of several new plants in different geographical locations; the Mechanization and Modernization Agreement of the West Coast Longshore Industry (1960), in which the Pacific Maritime Association bought out a complex of restrictive work rules with work and income guarantees; and the Basic Steel Human Relations Committee (1959), which was an outgrowth of the 116-day steel strike and which established joint union-management subcommittees to study problems and potential conflict issues during the period between contract negotiations. All three of these programs and most of the others like them had a limited life but made important contributions during their existence.[5]

THE NATIONAL CENTER FOR PRODUCTIVITY AND QUALITY OF WORKING LIFE

A new stage in the evolution of methods to extend union-management relations beyond traditional collective bargaining limits was presaged by the establishment of the National Commission on Productivity by President Richard M. Nixon in July 1970.[6] As its name indicates, the orginal purpose of the commission was to revitalize a slackening productivity and to "achieve a balance between costs and productivity that will lead to more stable prices."[7] In December 1971, an amendment to the Economic Stabilization Act (Public Law 92–210) gave the commission statutory recognition and enlarged the scope of its functions and responsibilities, including encouragement and assistance in the establishment of "labor-management-public committees."

In 1973, when the Stabilization Act expired, the Senate passed a bill that would have expanded the commission's objectives to include "to help improve the morale and quality of work for the American worker." It was also proposed to change the name of the agency to the National Commission on Productivity and Work Quality. This bill was disapproved in the House, objections being voiced to its $5 million cost, and only by executive order was the curtailed commission able to survive as the Office of Productivity under the Cost of Living Council.

In the spring of 1974, however, the House reversed its earlier vote and a new law was enacted and signed on June 8, 1974, establishing the National Commission on Productivity and Work Quality under the chairmanship of Vice-President Nelson Rockefeller with a one-year appropriation of $2.5 million. In November 1975, still another law was passed (Public Law 94–136) which repealed its predecessors and transferred the staff and functions of the commission to a new National Center for Productivity and Quality of Working Life. The center was to be governed by a board of directors composed of 27 members, appointed by the president, from labor, business, the general public, state and local government, and the federal government. In addition to its prior functions of fostering productivity and work quality, it was directed to work closely with federal departments and agencies to help improve their productivity. It was given an appropriation of $6.25 million for the period to September 30, 1976, and $5 million for each of fiscal 1977 and 1978, thus assuring a continuity of nearly three addtional years. The word "center" instead of "commission" was apparently intended to emphasize the agency's continuing role.

This brief, rather erratic experience was reflective of two incongruent forces. In the one hand, there was a widespread feeling in many influential circles (the media, academe, and segments of industry workers were becoming increasingly discontented with work and work relations and that the productivity of American producers was falling behind that of their competitors in Europe and Japan. This sentiment, whether wholly accurate or not, was fostered by the widely publicized strike of General Motors workers at the company's new and highly automated assembly plant at Lordstown, Ohio, in early 1972; by the report of a Task Force of the Secretary of Health, Education, and Welfare published in December 1972 under the title, *Work in America* and European publications and conferences on worker alienation, the "new working class," job enrichment and enlargement, and humanization/democratization of the work place.

As a brake on the over-zealous proposals of some proponents of a new industrialized order, spokesmen for organized labor expressed reservations and conditions. In cases such as Lordstown, they noted that the factors involved were no different from those in disputes of prior years over the speedup and other unsatisfactory working practices. On the productivity front, they reaffirmed a long-held position that productivity gains must not be made at the expense of worker employment, pay levels, or conditions of work. At the same time, they made it clear that if steps were to be taken to spur worker productivity and to humanize the work place, they wanted to be consulted.

Footnotes at end of article.

The intended consequences of these dual forces were, as noted above, a continued and ultimately successful pressure for the establishment of a permanent center and a readjustment of the objectives and structure of the center (1) to balance employer interests in greater efficiency and competitiveness with labor interests in improved working conditions and (2) to assure that programs stimulated or assisted by the center would be based on union-management agreement and, where feasible, joint committees. In the course of these developments, the boundaries of the system of industrial democracy, based on collective bargaining principles and procedures, were enlarged.

It is too early to try to evaluate the contributions of the center and its predecessors since 1970 to American industrial democracy. Moreover, both before and since 1970, some of the more progressive corporations, occasionally in cooperation with unions, have conducted autonomous experiments and developed innovative programs without the commission's or center's involvement. Some illustrations from both categories may illuminate the paths for possible future development.

COMMISSION/CENTER HIGHLIGHTS [8]

The principal contribution of the commission was to encourage and support joint committee programs through publicity in the media, the issuance and distribution of popularly-written reports and pamphlets, and union-management conferences. Supplementing these efforts on a very limited scale, the commission helped to initiate and sometimes to finance joint committee systems as well as some experiments in autonomous work groups.

Among the plans which the commission widely publicized were the Employment Security and Productivity Committees established in the basic steel industry as a result of the collective bargaining agreement of 1971; the relatively long-established Scanlon Plans and the joint cooperative committees in the Tennessee Valley Authority (TVA); the Jamestown, New York, community program begun in 1971; several labor-management cooperation arrangements developed through the initiative of the Federal Mediation and Conciliation Service (FMCS) and utilizing its Relations by Objectives (RBO) technique; [9] the national joint labor-management committees in the retail food and interstate trucking industries fostered by the Cost of Living Council and the FMCS; the quality of work demonstration project at the Cleveland plant of the Eaton Corporation; and the autonomous work group experiment at the Rushtown Coal Mine of Philipsburg, Pennsylvania. In addition to these largely private sector plans, the commission/center has focused attention on the use of joint committees in the federal and local governments.[10] The origins, objectives, and procedures of these plans varied significantly. A brief description of three of them may indicate the range of thinking and practice.

In the steel industry, for example, the 10 major corporations and the United Steelworkers of America agreed in 1971 that in order to improve the international competitive position of American steel and thereby to protect jobs and profits, joint labor-management employment security and productivity committees would be set up at the plant level. The committees were to be composed, for the union, of the local union president, the chairman and secretary of the grievance committee, and the grievance committeemen most concerned with the agenda problems to be discussed, and for management, of the plant manager, the superintendent of industrial relations, the plant industrial engineer, and the area superintendent. Although final decisions on operations changes were left to management, the latter often adopted union ideas. When they did not, they discussed with the unionists the reason for not acting.

According to the National Center report, some 250 plant committees had been established by 1975 with widely varying results. Workers in some plants continued to be suspicious that productivity gains would be at the expense of speedup and job loss. On the other hand, examples of successful committees were cited to illustrate that by reducing costs and improving quality, job security was enhanced and worker morale was strengthened. Union President I. W. Abel credited the committees with contributing to more mature collective bargaining relationships throughout the industry. There were dissenters in the union, however, who thought the workers' interests had been sacrificed.

The Jamestown, New York, program illustrates a community-wide effort to restore economic health to a depressed and conflictful industrial city through union-management cooperation. The initiative came from the mayor with the assistance of a representative of the Federal Mediation and Conciliation Service. About two years after the Jamestown Area Labor-Management Committee had been established and had demonstrated notable progress in increasing productivity and reducing strife in its 36 member enterprises, it received financial assistance from the National Commission on Productivity and Work Quality and the Economic Development Administration of the U.S. Department of Commerce to intensify its program at the plant level. A full-time professional coordinator was appointed to get plant union-management committees started or restarted, to help implement skill development training of workers and managers, and to extend committee activities to work redesign, communication, grievance handling, and safety. No attempt was made to standardize in-plant committees. The parties in each plant determined their own structure, procedures, and problem priorities. In some plants, the committees almost failed because of insufficient or ineffective communication with rank and file workers. But overall, the leaders of the program felt that substantial progress had been made.

Perhaps the most far-reaching experiment sponsored by the National Commission was the autonomous work group program in the Rushton Coal Mine, Philipsburg, Pennsylvania, modeled after European examples, with the agreement of the United Mine Workers of America. The experiment took the form of an action-research project initiated by the private National Quality of Work Center, with the research team drawn from the University of Pennsylvania and Penn State University. A local union-management committee, known as the Steering Committee, collaborated with the research team in designing, developing, and implementing the project.

Initially a 27-member work group, consisting of volunteer miners, was trained to peform a variety of jobs in a section; pay and classification differences were eliminated: and the three crew foremen were limited to planning and safety functions. The work group was given full responsibility in mining the coal. Collaboration replaced competition among the workers, interest in the work and worker satisfaction grew measurably, accidents declined, and productivity jumped. The experiment encountered many difficulties, but these were gradually overcome and the experiment was extended to the entire mine, after the plan was modified to take into account some worker objections and ideas.[11]

As noted above, the Rushton experiment was initiated by a unit originally known as the Quality of Work Program. This unit originated in the Federal Price Commission in 1972, was transferred the following year to the National Commission on Productivity and Work Quality, and in April 1974 was transformed into the private, non-profit Washington-based National Quality of Work Center in close association with the University of Michigan's Institute of Social Research. The center's goals are to develop and seek funding for demonstration projects, such as Rushton, in order to improve productivity, the quality of working life, and labor-management relations.[12]

INDEPENDENT COMPANY EXPERIMENTS [13]

In the decade or so prior to the establishment of the first commission, a number of leading companies had introduced, more or less independently, a variety of schemes designed to improve employee morale and boost productivity. Some of these schemes involved simply the redesign (enlargement, enrichment, rotation) of jobs and work practices; a few were more farreaching, emphasizing greater participation of workers in management decision making and alteration of supervisory structures and styles. Virtually all were initiated by management, often as a result of some academician's or consultant's theories or suggestions. Most, but not all, were conducted in non-union plants or among non-union groups of employees.

Among the participative programs that received particular attention was one established in 1971 at a new Pet Food plant (General Foods Corporation) in Topeka, Kansas. All 70 of the employees were organized into relatively autonomous work groups (from 8 to 12 members) responsible for a production process. Group members were trained to perform all requisite tasks. Supervisors were replaced by team leaders, who were ultimately expected to be unnecessary. Parking lot, cafeteria, locker rooms, and other facilities were available to all on an equal basis. It was estimated that the 70 produced as much as a conventional plant of 110. But the Pet Food approach has not been widely imitated, and the General Foods Company has been cautious in extending ideas gained from this experiment to its other plants.[14]

A number of other major companies have developed self-management work groups or redesigned jobs to make them less boring, including AT&T, Polaroid, Texas Instruments, Monsanto Chemical, and Kaiser Aluminum, but these have mostly been confined to small sections or groups. No large-scale changes in company practice have been reported. For the most part, it may be suggested, these job enrichment and worker participation schemes are a late twentieth-century revision of Taylorism, a new model of scientific management based on recent psychological theories about job satisfaction and communications instead of engineering concepts. Like the earlier scientific management models, they have rarely been adopted in a total system but rather have been applied in selected parts.

OTHER APPROACHES

Contemporary with the foregoing programs were scattered company experiments with other ideas about the humanization of work, the improvement of worker morale, and increases in productivity, efficiency, and profitability. One set of ideas focused on work schedules, another on financial incentives.

Experiments with unconventional work schedules reflected the belief that workers would be happier and more productive (these qualities are not necessarily correlated in practice) if they had more flexibility in coming to or leaving work or if they had a prolonged weekend.[15] The former typically provided a band of starting and finishing hours between, say, 7 and 9 A.M. and 3 and 5 P.M., maintaining the same number of hours in a work day or work week while allowing employees to avoid rush-hour traffic, carry out domestic and personal errands, or get children off to school. The latter lengthened the

Footnotes at end of article.

work day from eight to ten hours while reducing the work week from five to four days, thereby giving employees a longer weekend and cutting down on travel time. Both schemes appeared to achieve their aims to the mutual satisfaction of some employers and employees.

In other enterprises, however, the experiments were unsuccessful either because of the nature of production or, in the extended workday case, because of opposition to a lengthening of the historic eight-hour day. Unions, in particular, objected to the latter scheme. Instead, they proposed a shortening of the work week to 36 or 35 hours and the elimination or reduction of overtime. In 1973 one of the major issues in the lengthy Chrysler strike was compulsory overtime, and the compromise settlement provided that production employees may not be required to work more than nine hours a day, six days a week, or two consecutive Saturdays except during the annual model changeover period and at key parts plants. In 1976 a central issue of the Ford strike was an increase in the number of paid days off, and the three-year settlement provided for 13 additional paid nonwork days (over the three years, not per year) beyond the existing paid vacations and holidays. But this step toward reduced work time was designed to spread work and increase job opportunities rather than to make the work situation more palatable to employees.

Since the last quarter of the nineteenth century, one of the paths to democratization of industry as well as to higher productivity advocated by some reformers was to give employees either a share in current profits or in stock ownership. In either event, it was felt that the tie of employees to the enterprise would be strengthened and their productive effort would be enhanced. Neither profit sharing nor stock ownership made a great deal of headway, however, until after World War II. Changes in the tax law gave profit sharing a tremendous impetus with the result that between 1947 and 1965 the number of plans approved by the Internal Revenue Service rose from under 2,000 to nearly 43,000. Parallel tax law changes in 1974 and 1975 promised to have a comparable effect on stock ownership. A particular beneficiary was a plan developed and long advocated by lawyer Louis O. Kelso under the label ESOP (employee stock ownership plan). ESOPs have been used to enable companies to make capital investments at reduced interest and tax rates. In some cases, they have led to employee ownership of financially distressed companies. Although most of the ESOP users are comparatively small, an increasing number of major firms are exploring the feasibility and desirability of its adoption.

Whether profit sharing or stock ownership increases employee loyalty or productivity remains a debatable question.[16] There is very little hard evidence thus far that employee participation in decision making has advanced. For the most part, unions have been suspicious and antagonistic, fearing that successful schemes will weaken employee attachment to their union and unsuccessful ones will bring criticism on cooperating union leaders. Others are critical on the grounds that whatever financial benefit accrues to companies and employees will be at the expense of taxpayers and the U.S. Treasury.

UNION ATTITUDES

Throughout the swirl of discussion and experimentation during the 1960s and 1970s in the United States and Europe, the leaders of the American labor movement have maintained a firm ideological attachment to collective bargaining as the main route to industrial democracy.

This view was clearly and succinctly expressed by Thomas R. Donahue, executive assistant to the president of the AFL–CIO, in a speech delivered at an international conference in Montreal on May 26, 1976.

"We do not seek to be a partner in management—to be, mostly likely, the junior partner in success and the senior partner in failure.

"We do not want to blur in any way the distinctions between the respective roles of management and labor in the plant.

"We guard our independence fiercely—independent of government, independent of any political party and independent of management.

". . . We've watched co-determination and its offshoot experiments with interest, and will continue to do so, but it is our judgment that it offers little to American unions in the performance of their job unionism role (given our exclusive representative status and our wide-open conflict bargaining) and it could only hurt U.S. unions as they pursue their social unionism functions—seeking through legislation, political action, community involvement and a host of other approaches, to improve our members' lot by improving society generally." [17]

William W. Winpisinger, general vice-president of the International Association of Machinists and Aerospace Workers, put labor's position about job enrichment more bluntly.

"I can think of no better way to sum up my opinion of job enrichment than to say that it's nothing more than good old "job evaluation" and "time and motion study" in sheep's clothing. Any time industrial engineers and management get together, the workers end up getting it in the neck." [18]

A somewhat more sanguine view has been expressed by Irving Bluestone, a top official of the United Automobile Workers Union.

". . . American unions move to meet practical problems with practical solutions. It is highly improbable that they will approach the problem of worker participation in decision making via fierce ideological struggle founded in socioeconomic theory. . . . When workers feel victimized, they combine their forces to correct the situation, case by case, problem by problem. Gradual persistent change, not revolutionary upheaval, has marked the progress of the American worker." [19]

Bluestone went on to note that decisions regarding purchasing, advertising, selling, and financing, or the selection of a board chairman, are far more remote from the immediate problems facing the worker than are job-related decisions. He foresaw, as areas of possible confrontation between union and management, decisions about plant shutdowns and relocations, subcontracting of work or shuffling of work among facilities in a multiplant corporation, production scheduling and standards, technological innovation, and calls for excessive overtime. Beyond the immediate job level, however, he envisaged controversy about the double standard for managers and workers with regard to hourly and salaried pay and the use of time clocks, "paneled dining rooms" versus "spartan cafeterias," privileged parking facilities, and organizing the work schedule to enable the worker to manage his personal family and home chores. Responding, in effect, to the Lordstown publicity, he stated that one of the essential tasks of the union movement is to "humanize the work place." But he also warned that humanizing the work place "must not become simply another gimmick designed essentially to 'fool' the worker by having as its primary goal or hidden agenda an increase in worker productivity." [20]

As to the sentiments of the mass of union members on the subject of industrial democracy, John Carmichael, executive secretary of the Newspaper Guild of Minneapolis and St. Paul, suggests:

". . . many trade union leaders in this country have underestimated the interests of their members in this kind of development [that is, worker participation in the decisions of the work place]. It may not have surfaced yet in a volatile way, but I am convinced the interest is there. You don't have to be an alienated, dissatisfied worker to be interested in worker participation. Some of the most productive, responsible workers . . . are interested in workplace decision-making and will participate." [21]

Carmichael's view is given some reinforcement by a report issued by a group of some 50 California trade unionists, members of a wide variety of unions, attending a university conference on "The Changing World of Work." The report starts out with the assertion: "This first Western Assembly of Workers calls for a major extension of democratic principles in the workplace. While our individual needs vary widely, we have the strong conviction that we as workers generally have too long been ignored in making critical decisions affecting our work life." [22] The report continues, however, with an expression of strong support for the collective bargaining system, and the belief that it is compatible with a broader worker participation role. It calls, in particular, for experiments with worker-elected supervisors, without disciplinary powers, whose primary function would be coordination.

PROSPECTS

Predicting the future course of social change is a dubious project. The history of American industrial democracy, however, suggests little prospect of dramatic change in the work place during the foreseeable period ahead. Partly out of concern with domestic problems including high turnover and absenteeism, ineffective discipline, and slackening productivity growth, and partly in response to publicity about recent European industrial relations developments, American managers and unionists have displayed increasing sensitivity to methods of extending worker participation in decision making, making the work place more satisfying, and reducing job boredom. But the approaches that have been adopted in most quarters have reflected the traditional pragmatic, nonideological spirit, and collective bargaining, despite its recognized limitations and imperfections, seems certain to retain its dominant role.

Indeed, the strength of collective bargaining has been its pragmatic quality in response to changing conditions, and needs. It has never been constant or static, as even a superficial review of bargaining structure and scope, contract administration, and dispute settlement procedures demonstrates. Most of the recent innovations in job redesign, employee-supervisor relations, flexible work schedules, and incentive pay schemes are compatible with collective bargaining. Joint union-management productivity and work quality committees have many forebears. Neither profit sharing nor stock ownership is novel, and recent versions, largely stimulated by tax law benefits, do not appear to promise a fundamental change in the management of most enterprises. Finally, there is little current evidence that American workers or unions desire to assume managerial responsibilities apart from the codetermination of job-related terms and conditions.

RULES OF THE SPECIAL COMMITTEE ON AGING

Mr. CHURCH. Mr. President, section 133B of the Legislative Reorganization Act of 1970 requires Senate committees to publish their rules of procedure in the CONGRESSIONAL RECORD. As chairman of the Senate Special Committee on Aging, I submit the rules of the committee. I ask unanimous consent that these rules, as amended and agreed to by committee members, be printed in the RECORD.

There being no objection, the rules were ordered to be printed in the RECORD,

RULES OF THE U.S. SENATE SPECIAL COMMITTEE ON AGING

(As originally adopted June 12, 1963, as amended February 28, 1973, and as amended further February 28 and March 11, 1977)

RULE 1

Convening of meetings. The Committee shall meet at the call of the Chairman, to the extent practicable, at least four times a year to (1) plan future activities, (2) evaluate progress on projects already under way, and (3) discuss use of Committee funds.

Special meetings may be called by a majority of Committee (or any subcommittee designated by the Committee) [1] upon written notice to the Clerk of the Committee. The Clerk shall, to the extent practicable, give at least 24 hours notice to every member of the meeting, time, and place.

RULE 2

Presiding officer. The Chairman of the Committee (or any subcommittee designated by the Committee)[1] or, if the Chairman is not present, the ranking Majority member present shall preside at all meetings.

RULE 3

Quorum. A majority of the Committee, or any subcommittee designated by the Committee) [1] shall constitute a quorum sufficient for the conduct of business at executive sessions. One member shall constitute a quorum for the receipt of evidence, the swearing of witnesses, and the taking of testimony at hearings.

RULE 4

Subcommittees. Subcommittees may be established and their size determined by vote of a majority of all members of the Committee. The Chairman of the full Committee and the Ranking Minority Member shall be ex-officio members of all subcommittees. Party membership of each subcommittee shall be proportionate to Party membership on the full Committee. Each subcommittee is subject to these rules and any limitations imposed by the full Committee and is authorized (a) to hold and report hearings; (b) to conduct business within its jurisdiction; and (c) to require by subpoena or otherwise the attendance of witnesses and the production of documentary evidence.

RULE 5

Agenda and voting at meetings. The business to be considered at any meeting of the Committee (or any subcommittee designated by the Committee)[1] shall be determined by its Chairman and any other measure, motion, or matter substantive or procedural within the jurisdiction of the Committee or (or any subcommittee designated by the Committee)[1] shall be considered at such meeting and in such order as a majority of the members of such Committee indicate by their votes or by presentation of written notice filed with the Clerk. Voting by proxy shall be permitted in the full Committee (or any subcommittees designated by the Committee).[1]

RULE 6

Right to Counsel. Any witness subpoenaed to a public or executive hearing may be accompanied by counsel of his own choosing who shall be permitted, while the witness is testifying, to advise him of his legal rights.

RULE 7

Amendment of Rules. The rules of the Committee may be changed, modified, amended, or suspended at any time, provided, however, that not less than a majority of the entire membership so determine at a regular meeting with due notice, or at a meeting specifically called for that purpose.

RULE 8

Reports. Committee (or any subcommittee designated by the Committee) [1] reports offering Committee (or any subcommittee designated by the Committee) [1] findings and recommendations shall be printed only with the prior approval of a majority of the full Committee (or any subcommittee designated by the Committee).[1] The printing, as Committee (or any subcommittee designated by the Committee) [1] documents, of materials prepared by staff for informational purposes or the printing of materials not originating with the Committee (or any subcommittee designated by the Committee)[1] or staff shall require consultation with Minority staff; these publications shall have the following language on the cover of the document: "Note: This document has been printed for information purposes. It does not offer findings or recommendations by this Committee" (or any subcommittee designated by the Committee).[1]

Wherever feasible, staff reports shall be coordinated and produced in cooperation with other appropriate Congressional units.

[1] Committee members on March 11, 1977, decided to conduct business and hearings as a Committee as a whole, without subcommittees. However, the option to establish temporary subcommittees at any time for special purposes remains.

THE NORMALIZATION OF RELATIONS WITH THE CHINESE COMMUNISTS WOULD CONTRADICT THE ADMINISTRATION'S AVOWED COMMITMENT TO HUMAN RIGHTS AND MORALITY

Mr. GOLDWATER. Mr. President, it is understandable how this administration's repeated avowal of its support for the advancement of human rights around the world has encouraged the Chinese people living on Taiwan to see a contradiction between those statements and recent remarks announcing the administration's goal of pursuing

"full normalization of relations" with Red China. There is probably no government on the face of the Earth which has ever committed such atrocities on a massive scale as have the Chinese Communists; and the idea of legitimizing their atrocities at the expense of one of our country's most dependable allies, the Republic of China on Taiwan, would expose professions of morality in foreign policy as having been mere rhetoric without any substance.

Mr. President, an interesting editorial on this very subject appeared in the China Post of July 2, 1977, and so that my colleagues may see this concise analysis of the contradictions between morality and normalizing relations with mainland China, I ask unanimous consent that the editorial may be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

U.S. SECRETARY CYRUS VANCE'S SPEECH

U.S. Secretary of State Cyrus Vance's speech before the Asia Society on June 29 reflected much of the muddled thinking in Washington which does not help in stabilizing the Asian situation. It opened up the possibility for the United States to be submitted to all sorts of Communist united front maneuvers and even blackmail.

Secretary Vance professed at a press conference one day before his speech on June 29, that U.S. China policy was not decided yet and a final decision "will not be taken until shortly before I go to Red China in August." In the much heralded speech, Vance said that the United States considers friendly relations with mainland China "a central part of our foreign policy". He continued by saying that "We want to explore ways to normalize further our bilateral relationship. Red China's role in maintaining world peace is vital. A constructive relationship with (Red) China is important not only regionally but also for global equilibrium."

Those positive statements are far from indecision. They represent some major premises of U.S. foreign policy toward Asia, especially on the China question. In stating that the United States will pursue "full normalization of relations" with the Communist nations, he admitted that: "We will also place high importance on the peaceful settlement of the Taiwan question by the Chinese themselves".

The essential implications of his remarks left no doubt that the United States has finally and officially discarded the containment policy of President Dwight Eisenhower and John Foster Dulles. It proposes now to embrace all former enemies who killed countless numbers of American soldiers, including the North Vietnamese, who betrayed the United States' good faith in signing the Paris ceasefire Agreement. In assigning the Chinese Communists the role of maintaining world peace, the United States seemed to ask Asia's number one gangster, robber and arch criminal to act as a policeman to safeguard and maintain peace. It contradicted President Jimmy Carter's profession of a foreign policy of morality, confidence and human rights. The contradiction is patently clear.

Secretary Vance failed to refer to the Chinese Communist position on these vital issues. He certainly must be well aware of the recent attacks on the U.S. position by Chinese Communist leaders, Chi Teng-kuei and Li Hsien-nien. They were aimed at intimidating the United States in order to prepare for the United States to capitulate before the Chinese Communists at the negotiating table in Peiping. Secretary Vance's positive statements on the Chinese Communist role in world peace would merely embolden the Chinese Communists to make even harsher demands upon the United States as a price of their cooperation.

The revelation by a senior State Department official that the administration would be prepared to establish "full diplomatic relations" with Peiping immediately were it not for the concern with the people of the Republic of China, describing this situation as the "logjam", did not help matters either. This was further compounded by Vance's failure to mention the name of the Republic of China in his lengthy speech.

All these misgivings were not much clarified by President Carter's press conference remarks on June 30 leaving the final decision on U.S. policy until after Vance's visit to Peiping. But the U.S. President openly professed hopes to work out with mainland China to establish full "diplomatic relations".

It is quite clear that the United States is on the verge of adopting a drastic new policy in Asia which will open the door wide to Communist influence and penetration. The people of the Republic of China should be alert to more adversities such a new policy will bring. The United States has not only failed to distinguish between friends and foes but considers foes as friends. It will play right into the Chinese Communist design of creating big disorder in the world and will make another catastrophe in Asia inevitable.

JUSTICE DEPARTMENT LEGAL MEMORANDUM ON ABORTION

Mr. BAYH. Mr. President, tomorrow the House of Representatives will once again vote its wishes on the emotional issue of denying medicaid funds for abortions. The House will be voting on whether to sustain its position denying Federal funds for abortions for the poor. Before this vote takes place, I think that it is extremely important that each member be aware of a legal memorandum prepared by the Justice Department's Office of Legal Counsel at the request of Secretary Califano detailing how HEW would interpret language similar to that being considered by the Labor-HEW appropriations conference committee.

As most of us are aware, the position of the Congress on the issue of medicaid funds for abortions has never been a clear one. Last year, the Congress enacted a statutory ban on medicaid funds except where the life of the mother was endangered. While the statutory language was clear on its face, the Congress wrote conference report language to accompany the ban which provided a broader conflicting interpretation. Under the conference report language, abortions were to be provided in cases of rape, incest, multiple sclerosis, renal disease, and ectopic pregnancies. Many Members of Congress voted for the strict ban in the bill, confident that HEW would look to the conference report as a guide in its interpretation of the ban on funds.

At the time the conference committee deliberated the report language last year, I attempted to point out to my colleagues that I thought HEW would interpret the language based upon the statutory construction alone. This language was clear on its face, and necessitated no further search for legislative intent by the Congress. I understand that this indeed is the position taken by the Justice Department in its memorandum to Secretary Califano. I was informed that the Justice Department's interpretation would provide abortions only in cases where the mother's life was endangered despite the conference committee report language.

In other words, if House language is sustained denying funds for abortions except where the life of the mother is endangered, subsequent conference report language using Senate language permitting funds for abortions for pregnancies resulting from rape or incest, and where otherwise medically necessary, will have no effect on the House statutory language prohibiting abortions.

Many of us will differ on our positions relating to medical funds for abortions, but I think that it is vital that we all know the consequences of what we are voting on. I know that many Members of Congress feel that the language which denies funds for all abortions except those to save the life of the mother is too narrow. Some of these Members are deeply concerned about the incidences of rape and incest; others are concerned about incidences of a debilitating disease; others the alarmingly high rate of teenage pregnancies. I think we must all recognize that if we want to have these exceptions the statutory language we support must say so, and say so clearly.

MARTIN DIAMOND

Mr. PERCY. Mr. President, on July 22, at a hearing of the Senate Judiciary Committee's Subcommittee on the Constitution, one of this Nation's great scholars, Prof. Martin Diamond, suddenly suffered a fatal heart attack. He had just finished his testimony on electoral college reform.

I had known Marty Diamond for nearly 20 years and appreciated his insightful and skillful formulations of national problems in their historical context. He had a first-rate mind, a capability to get to the roots of controversies, a deep devotion to the Nation and its founding principles, and the humor to leaven the most intense intellectual discussions.

At the age of 57, Professor Diamond was moving from Northern Illinois University to take an endowed chair on the Foundation of American Freedom at Georgetown University. In fact, at the time of his seizure, the movers were hauling his furniture into his new home in Spring Valley. His abrupt death at this moment has been a terrible shock to his wife Ann, as we can all appreciate.

The loss of Marty Diamond will be deeply felt by academicians and students and public men who listened to him. Had he survived, his presence in Washington would have enabled him to continue his important studies on the origins of our American democracy and to counsel in greater depth with the men and women who make policy in this capital. It is a shame that his studies and counsel will now be denied to us.

REAR ADM. HUGH H. HOWELL, JR., USNR (RETIRED), ADDRESSES NEWLY NATURALIZED CITIZENS

Mr. NUNN. Mr. President, it is my privilege to bring to the attention of my colleagues, an excellent and patriotic speech delivered by Rear Adm. Hugh H. Howell, Jr., USNR, retired, as he addressed a group of newly naturalized citizens at naturalization and immigration ceremonies in Atlanta.

I commend it to your reading, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE REMARKS OF RADM. HUGH H. HOWELL, JR., JAGC, USNR (RET.)

NATURALIZATION

It is a great pleasure for me to have this opportunity to share these joyous and historic moments with you—as you become citizens of our great country.

How fitting and proper that these naturalization ceremonies be held here in a court room—a room of law. It is proper because our country is a country ruled by law—not by the gun.

How fitting and proper that these naturalization ceremonies be conducted by this distinguished jurist, Judge Frank Hooper, a gentle and learned man whose public and private life has been an inspiration to all of us who know him. It has now been some 30 years ago that I was first admitted to practice law here in Atlanta. One of my very first classes was before Judge Hooper. He has always been a source of strength and integrity and encouragement.

It is with honor that I too extend to you the warm hand of friendship and welcome you to our great country.

George Washington, our great first President, said in 1783: "The bosom of America is open to receive not only the opulent and respectable stranger, but the oppressed and persecuted of all nations and religions. Whom we shall welcome to a participation of all our rights and priviliges if, by decency and propriety of conduct, they appear to merit the enjoyment."

That was true 200 years ago, it is true today.

When we try to describe our country and what it is, most of us end up with saying something like: This is a country of hard working, freedom loving people who like to sing and play and worship, and work and eat hot dogs and go to ball games.

Steven Vincent Benet expresses it much plainer when he wrote: "This is a country of hope, this is a country of freedom. This is a country where all sorts of different people, drawn from every nation in the world, get along together under the same big sky. They belong to any church they choose—Catholic, Protestant, Jewish, Mohammedan, Buddhist—and no man may be persecuted here for his religion. The men and women of this country elect the people they wish to govern them, remove those people by vote—not by revolution— if they feel their representatives have done badly, speak their minds about their government and about the running of their country at all times, stay themselves and yet stay loyal to one cause, one country, and one flag."

The flag is the stars and stripes. The country is the United States of America. The cause is the cause of democracy.

You and I know we have a truly great country but we also know it is not an earthly paradise. It is not a garden of eden or a perfect state. It does not pretend to be any of these things.

Read our daily newspapers and listen to the radio or watch the television and you can see that our country has not solved every problem of how men and women should live. It has made mistakes in its own affairs, mistakes in the affairs of the world. But friends, it looks to the future always—to a future of free men and women, where there shall be bread and work, security and liberty for the children of mankind.

It does not want to rule the world or set up an American empire in which Americans will be the master race and other people subject races. If you ask any real American whether he believes in a master race, you will get a long stare or a long laugh; Americans do not believe in master races.

It is a fighting country, born in battle, unified in battle, ready and willing always to fight for its deep beliefs. It has never lost a war. But it does not believe that war and the martial spirit are the end and goal of man. It honors the memory of its great soldiers—men like Washington and Lee and Grant and McArthur and Eisenhower—as it honors the names of those who have fought for it more recently. But every one of those men fought for something more than conquest. When the wars were done, they said:

"Let us have peace, let us build up the land. Let us make something, build something, grow something that was not there before. Let us try to make a good country—a place where people can live in friendship and neighborliness."

In your studies of the United States, haven't you run across the words: "We, the people" many times.

The 39th President of the United States is now in the White House.

The 95th Congress of the United States is now in session.

They were put there by the will of the people. And, since the constitution of the United States was first adopted, the people have stayed in power and the will of the people has ruled. Always, since the first, the American people have had a chance to use their own judgment, make their own mistakes, correct them and go ahead. And "the people", in America, does not mean a class, a caste, or a specially appointed set of men. It means you and me and the man next door—the butcher, the baker, the farmer, the workman, the lawyer, the doctor, the woman who keeps her house. It means everybody.

To our enemies, the United States is a country entirely composed of millionaires, gangsters, weaklings, movie stars, corrupt politicians, idle women, and a starved and selfish proletariat. We Americans do not mind their saying any of those things. Our enemies can make no harsher or sterner criticisms of the country we believe in and love than have already been made by loyal and devoted Americans, living and dead.

When disaster strikes abroad, you and I see American doctors and nurses and medicines and food going to help out the victims of floods and fires and earthquakes. Our country and our people do these things because we believe we should.

Ever since you have been in our great country, you have probably met many Americans. We hope they have been kind to you. You probably have met just plain average Americans, brought up in freedom. They are tall and short, dark and fair, talkative and silent—men who work with their hands, men who work with their heads—men who come from little towns and big cities and quiet farms—all sorts of men, but behind them all, whether they are able to talk about it or not, there is a spirit. A spirit and an idea.

As new citizens you too will get that spirit and be very proud of it. We call it patriotism, Patriotism to your new country—the United States. Patriotism that will grow in you to the point you will want to tell some of our critics to "love our country—or leave it".

You—like I—will develop a true patriotism. Not the patriotism of the sentimentalist who may deem that love of country to be an attachment to the hills and valleys, the mountains and the bubbling springs, the rivers and glens, and while absorbed in these things looses the real meaning of patriotism.

Real love of the United States exists not in love of the soil, the climate, the scenery, because these may be found in other countries. Neither does it consist in an attachment to governments, constitution and laws, but patriotism does consist of a brotherly affection and an extensive love toward the whole of a nation.

These are the things the spirit—the idea—patriotism to your new home—the United States—mean.

President Franklin D. Roosevelt spoke and wrote of the four freedoms . . . . freedom of speech, freedom of worship, freedom from war, freedom from fear.

That is what we all are after. That is what our flag means. It means freedom and it means hope. It means a good neighbor—not a master. It means men making their own destiny and running their own government. It means peaceful men who can fight with God's own wrath in them when their country is assailed. It means a nation and a people who believe in man and man's future and the free world that man can make.

It is to these things my friends that I take honor to extend to you a hearty congratulation and a warm handclasp of friendship and encouragement.

SCIENCE POLICY: A WEAPON AGAINST ECONOMIC PROBLEMS

Mr. SCHMITT. Mr. President, the issue of science and technology policy as an economic weapon has remained hidden from serious consideration for too long. We have seen our fellow lawmakers year after year, Congress after Congress, resort to Federal spending programs and hasty, albeit well-intentioned, fiscal policy changes in order to combat the economic problems of inflation and unemployment. Most will agree that the Congress, as well as the administration and the Federal Reserve System, must use these economic weapons, but few understand that there are attractive and historically proved alternatives.

One of these attractive alternatives is the carefully planned application of research and development funds. The combination of fiscal and monetary policy to help stabilize the economy, of investment to fuel the economy, and of research and development for new economic growth provide the only real promise for long term and equitable improvements in our standard of living. Science and technology policy is a particularly powerful weapon in the United States because scientific and technological innovation is what Americans do best. History has shown this is true in industry, agriculture, communications, electronics, space, energy, medicine, and many other areas.

Proponents of stimulative fiscal and monetary policy will argue that science is too slow. But that is precisely why it is such a good weapon; enhanced technological progress increases productive capacity and provides job opportunities which have a multiplying effect in the

job market and a stabilizing effect on the economy. More traditional economic weapons have long been criticized—and rightly so—because they bring about short term, unstable economic impacts. Why are they used? Because they provide a visible sign that politicians are trying to do something about one crisis or another.

William D. Carey recently wrote an editorial for Science magazine entitled "The Blind Side of Science Policy," that draws our attention to this "new" alternative. He correctly states the frustration which is felt by our dwindling scientific community. I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BLIND SIDE OF SCIENCE POLICY

(By William D. Carey)

In the on-again, off-again chronology of the President's Office of Science and Technology Policy there has been at least one consistency: it never has had a voice in the economic policy circles of a President. Unlike other advanced nations, both democratic and authoritarian, the United States has not seen fit to make explicit the role of science and technology in mapping economic strategy. We are likely to regret it.

In last year's presidential race, both Mr. Ford and Mr. Carter were questioned about their positions on government spending for research and development. Mr. Carter thought that both public and private R & D should grow as the economy grows, but that it would be wrong to tie R & D spending to any fixed fraction of any macroeconomic indicator, "for R & D is a microeconomic factor." President Ford argued not that R & D promotes the national economy but that a strong economy is a necessary precondition for science and technology.

These views reflect a consensus of opinion across the otherwise contentious spectrum of our political economy. It would be hard to argue that R & D should drive the national economy. But the absence of *any* explicit R & D component in macroeconomics flags a significant and puzzling flaw in our national policy machinery.

It is conventional wisdom to say that we see science and technology as only parts of a large family of forces which influence the quality of the national economy. We subordinate their roles to more important elements: skilled management, product diversification, market satisfaction, modernization, entrepreneurship, ingenious infrastructure, and career self-selection. If these elements are not in place and working, R & D is insufficent by itself. On the whole, the thesis stands up. The trouble is that while it has served to explain the past, it may not be good enough to produce a future.

America's macroeconomic goals are not hard to capture and describe. They are to maintain a high standard of living, to confine unemployment within a range of 4 or 5 percent of the work force, to secure a favorable international trade balance, to minimize extreme swings of the business cycle, to produce enough to meet demand without inflation, and to generate enough real growth to create the jobs needed for a growing labor force. These are consensus objectives.

But it is noticeable that when the economic script goes wrong, we invariably grab for the emergency cords of money and credit policy, tax policy, and spending policy. It is doubtful that it ever occurred to an economic czar that an explicit public policy to strengthen public and private technological drive would contribute something of value to long-term stabilization and growth.

There are signs that the vitality of growth-producing technological effort in the United States is not what it used to be. In industry, despite the impressive dollars assigned to R & D, the mix of spending has shifted strongly away from innovation and toward defensive research and development. The U.S. economy cannot count on much of a future if this scenario continues, resting content with old beliefs in the strictly *micr*economic role of R & D.

Down at the White House, reorganizers are busy with plans to shape up the sprawling Executive Offices. Someone should be thinking hard about new assumptions as to how the Office of Science and Technology Policy can make a real difference in policy planning. Seen from here, an important difference could be made if the science adviser were linked not only to the President's budgetary staff but also to the Council of Economic Advisers. The time has come to deal with the blind side of science policy.

TRIBUTE TO DR. JACK NIX, GEORGIA SUPERINTENDENT OF SCHOOLS

Mr. NUNN. Mr. President, on July 31, a great Georgian and American retired from public service. Dr. Jack Nix, Georgia Superintendent of Schools for the last 11 years and a public servant and educator for 34 years, left his post. There is no question that Dr. Nix has made a lasting contribution to public education in Georgia and the Nation and will leave a legacy of dedication and excellence for others to follow. The Atlanta Constitution paid tribute to Dr. Nix in an editorial last week, and I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A DISTINGUISHED CAREER

When Jack Nix took over as Georgia's superintendent of schools in 1965 he set himself and the school system a series of high goals.

He wanted to improve teacher salaries. He wanted more teachers for fewer pupils—a pupil-teacher ratio of 20–1—so that both would benefit. He wanted improvements in teacher education and certification, driver education, expanded high school vocational education programs in the less skilled areas, more exploratory and orientation opportunities in the upper elementary grades and early high school, minimum standards for elementary and high schools, financing the school building program on a current basis, utilizing school buildings during summer months, instructional services across county lines. He wanted all those things for Georgia's schools—and more.

He wanted and fought for a statewide kindergarten program.

And he worked to achieve these and other goals during trying times for Georgia's schools. Gov. Busbee put it this way:

"Jack Nix has pulled public education in Georgia through its most difficult period. He held education together through the trying times of desegregation and saw to it that Georgia complied with federal law and court decisions with the least possible disruption. . . . Despite the turbulent times during which Jack Nix headed public education in Georgia, we have made steady advances in all areas of education."

Gov. Busbee spoke of Dr. Nix's accomplishments when announcing Monday that Nix was retiring. He mentioned the 15 goals Nix set for public education when he was appointed by Gov. Sanders. "During his tenure as superintendent 11 of those goals have been met or partially accomplished," Gov. Busbee said. He called Nix "the father of vocational education in Georgia."

Dr. Nix won election to three four-year terms, running twice unopposed and winning a contested election 3–1. He was nationally known and respected by educators and served as president of the Council of Chief State School Officers, an organization of state school heads from 50 states and six other jurisdictions. A native of White County, he served in the infantry in the Pacific in World War II, became a vocational education teacher in Banks County in 1946 and was vocational education administrator of Georgia's schools when appointed superintendent.

Dr. Nix's contributions to his state and his fellow citizens have been outstanding, his record distinguished. We wish him well on his retirement from public office.

TWA AND SKYSTREAM ANTICIPATE REFORM: LOWER FARES

Mr. PERCY. Mr. President, I am pleased to call attention to a recent decision by the Civil Aeronautics Board which approved a Trans World Airlines proposal to offer a reduced one-way "super coach" fare of $99 between Chicago and Los Angeles; a 37-percent reduction from the current $159 fare. This decision marks an important victory for supporters and cosponsors, like myself, of the Airline Regulatory Reform Act of 1977.

It is clear that the CAB's willingness to approve this important test case was affected by the strong bipartisan support for this bill and by the encouraging prospects for its passage in the Senate. In fact, shortly after the CAB announced its decision in the Trans World Airlines case, Continental Airlines announced that it would be applying to the Board for an $89 fare to Los Angeles. American Airlines, which opposes this legislation, protested to the CAB against approval of the TWA fare. It now says that possible fare reductions on its own flights are under study.

In order to implement the "super coach" fare, TWA will remodel its Boeing 707 aircraft to seat more passengers and cut the number of flights between Chicago and Los Angeles from five to two a day.

Although TWA itself has not yet joined the ranks of United Air Lines, Hughes Airwest, Pan American World Airways, and Frontier Airlines, which are promoting reform, its proposal is a good example of the type of price flexibility and competitive marketing which we are seeking to develop with the proposed legislation.

Donald M. Casey, senior vice president for marketing for TWA, commented that:

TWA is offering the consumer what he has long desired, a low-priced choice with no restrictions. For years the airlines have been urged to come up with a simple, efficient, cost-based service for the traveling public. The airlines have gamely responded with a varied array of discounted fares that have come close to hitting the mark. Super Coach goes the whole route.

Not only will the consuming public benefit from the proposed fare reduction, but the airlines themselves stand to gain. TWA's current service between Chicago and Los Angeles is typical of much airline service throughout the

Nation: empty planes, low-passenger growth, and too-frequent flights have generally characterized the airline industry under current regulation. The innovative TWA proposal, and others which might be developed in a more competitive airline industry, would utilize airline resources more productively and more economically.

The Justice Department's appraisal of the current airline industry corroborates this view. In response to other airlines' complaints about the TWA proposal, the Justice Department found that:

> The absence of price competition on major scheduled service routes has led to inefficient forms of competition, including low density seating configurations, low load-factor operations resulting from excessive scheduling, and inflated expenditures on advertising, reservation systems, and a broad variety of in-flight amenities. TWA proposes to reverse several of these tendencies by offering a high-density, high load-factor, low-fare service.

The Justice Department called upon the CAB to "give maximum encouragement" to TWA's proposal.

The experience of Skystream Airlines, a small Midwestern commuter airline operating outside the auspices of the CAB, exemplifies the new type of service which the Justice Department praises. This small airline formerly flew virtually empty planes between Chicago and both South Bend and Detroit. In May, it announced a low-price standby fare of $7—$18 less than other airlines, for its service to South Bend from Chicago, and in June of this year, it announced a $20 standby fare between Chicago and Detroit compared with the normal fare of $39. The airline flies directly into Miegs Field and is convenient to travelers seeking easy access to downtown Chicago.

Ms. Pat Pond, president of Skystream, expects that the new service will generate profits in excess of $300,000 during the coming year. Already, of the 240 seats available during 1 day's flights between Chicago and Detroit and Chicago and South Bend, 91 of the seats are filled by standby passengers.

Not only does the Skystream plan aim to use the airline's own resources more efficiently, but it also seeks to take advantage of certain existing underutilized, airport facilities in the Chicago Metropolitan area. These are among the goals embraced by the Airline Regulatory Reform Act of 1977.

Mr. President, recently, the Ad Hoc Committee on Airline Regulatory Reform presented an all-day seminar in the Senate caucus room, on the need for passage of this bill. Judging from the standing room only audience of 250 congressional staff members who voiced their opinions, I am convinced this legislation enjoys wide support. The seminar assembled airline regulatory reform advocates ranging from the American Conservative Union, to Common Cause, to the Civil Aeronautics Board itself.

During that seminar, my distinguished colleague, Senator EDWARD KENNEDY of Massachusetts, joined Senator CANNON and myself in calling for expeditious action on this legislation. I should hope that, in doing so, we give serious thought to the position of the Justice Department in the TWA case and to the practical experiences of airlines such as Skystream.

THE DIESEL FUEL AND GASOLINE CONSERVATION ACT OF 1977

Mr. JOHNSTON. Mr. President, on June 15, 1977, I introduced S. 1699, the Diesel Fuel and Gasoline Conservation Act of 1977, a bill that seeks to encourage backhauling in the trucking industry. On June 27, I chaired a hearing on this legislation in the Subcommittee on Energy Conservation and Regulation of the Committee on Energy and Natural Resources. Since then I have received quite a number of letters on this bill, the great majority in favor of S. 1699.

I want to share with my colleagues some of the responses that I have received since that hearing because these views are from people who would be affected by enactment of S. 1699. Who better than they can discuss the merits or demerits of this legislation? I ask unanimous consent that the letters from the National Industrial Traffic League, the American Retail Federation, the Cooperative Food Distributors of America, the Contract Carrier Conference, and the National-American Wholesale Grocers' Association be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE NATIONAL
INDUSTRIAL TRAFFIC LEAGUE,
Stamford, Conn., July 20, 1977.

Hon. J. BENNETT JOHNSTON,
Chairman, Senate Energy Committee's Subcommittee on Energy Conservation and Regulation, Dirksen Senate Office Building, Washington, D.C.

DEAR CHAIRMAN JOHNSTON: In behalf of The National Industrial Traffic League I would like to submit the following remarks for the record of hearings on S. 1699, the "Diesel Fuel and Gasoline Conservation Act of 1977."

The League is a voluntary organization of 1,800 shippers, shippers' associations, boards of trade, chambers of commerce and other entities concerned with rates, traffic and transportation services of all carrier modes. It is the only shipper organization which represents all types of shippers nationwide. Its members include large, medium and small shippers who use all modes of transportation and who ship all types of commodities. The League is not a panel or committee of a trade group, or a spokesman for a particular commodity or transportation point of view, and does not permit carrier membership.

The League's primary concern is to provide for the nation and all its shippers a sound, efficient, well-managed transportation system, privately owned and operated.

To arrive at positions reflective of the broad range of shipper interests within the League, the League membership at its annual and special meetings considers, debates and votes on actions to be taken. During its seventy years of existence, the League has frequently been the spokesman for the nation's shippers before Congress on proposed transportation and regulatory reform legislation.

S. 1699, has as its purpose to provide energy conservation by alleviating current and continuing fuel waste, to reduce empty vehicle movements, and to increase efficiency in transporting goods by motor carrier which will ultimately benefit consumers.

Section 2 of S. 1699 amends Section 382 of the Energy Policy and Conservation Act of 1976 (42 U.S.C. 6201) by adding a paragraph (d) to read as follows:

"(d) It shall not be unlawful for a seller of goods, wares, or merchandise pursuant to a uniform zone delivered pricing system to grant back haul allowances to a buyer where the back-haul function is actually performed by the buyer or an authorized carrier serving the buyer, where the allowance is no greater than the actual savings in delivery costs to the seller and where the allowances are available to all the seller's customers on a nondiscriminatory basis."

Although League members have not had an opportunity to thoroughly consider S. 1699, they do support the purpose of the bill in removing regulatory limitations causing energy waste and inefficiency. Strictly speaking, of course, S. 1699 does not address itself to the regulatory actions of the Interstate Commerce Commission under its basic statute. It involves an effort to modify the administrative interpretation of the Robinson-Patman Act by the Federal Trade Commission. Nonetheless, this interpretation has prevented the implementation of transportation practices which could save energy resources. The League has a number of policies and positions which fully support elimination of regulatory policies which waste energy. The League's policy *M-1 Productivity*, states: Transportation must obtain greater productivity from its use of fuel including the minimization on fuel inefficiencies of: economic regulations; consignor or consignee loading/unloading practices; and labor practices—and with due consideration to environmental and safety requirements.

Secondly, in addressing commodity and route restrictions, the League supports elimination of gateway restrictions for irregular route and regular route carriers and an increase in the circuity factor. The League also strongly supports elimination of unneeded restrictions in existing operating rights that cause excessive energy use.

Thirdly, in regard to private and contract carriers, the League members fully support liberalization of the present ban on "within the family" hauling. The new League policy E-1 applies the principle of "freer entry" to both common and contract carriers. Also, conglomerates should be considered as a single shipper for purposes of contract carriage.

Finally, regarding private carrier equipment leases to common carriers, the League members recently voted on a proposal prohibiting the ICC from regulating the duration of all vehicle leases whether by common or private carrier (in addition to the present exemption with respect to lease duration on vehicles used for hauling agricultural products). The League members voted to support the intent of this proposal to permit trip leasing of private carrier equipment.

The League appreciates this opportunity to present its views on S. 1699 supporting the purpose of the bill to abolish regulatory limitations which cause inefficiency and energy waste.

Thank you for including the League's statement in the record of hearings as well.

Sincerely,

J. ROBERT MORTON,
President.

AMERICAN RETAIL FEDERATION,
Washington, D.C., June 27, 1977.

Hon. J. BENNETT JOHNSTON,
Chairman, Subcommittee on Energy Conservation and Regulation, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: The American Retail Federation supports legislation which would clarify the conditions under which private carriage may be used, such as the provisions in S. 1699. The Federation's transportation policies support an interpretation of private

carriage so that a shipper or retailer may engage in the transportation involving movement of merchandise incidental to carrying on his own business.

Under Advisory Opinion No. 147, dated March 28, 1975, the Federal Trade Commission reaffirmed a previous interpretation under the Robinson-Patman Act which would curtail the use of private motor vehicles by the purchaser under certain conditions of selling terms in a delivered price basis. The FTC ruling did not deal with the basic price of the merchandise sold, but with the transportation cost involved thereon and would not permit the seller, without radical changes in the pricing structure, to allow the purchaser the cost he would have otherwise incurred had not the private carriage of the purchaser been used in lieu of common carriage.

The Federation supports the view that the use of private motor carriage in such instances in no way contravenes the intent of the Robinson-Patman Act as to discriminatory pricing of goods sold, but has as its purpose a more efficient utilization of motor equipment. Passage of the proposed legislation will encourage energy-saving practices of retailers utilizing private equipment in the transportation of their goods. We urge approval of S. 1699.

Sincerely,

LOYD HACKLER.

CFDA, COOPERATIVE
FOOD DISTRIBUTORS OF AMERICA,
Des Plaines, Ill., July 8, 1977.

Hon. J. BENNETT JOHNSTON, Jr.,
Chairman, Energy Conservation and Regulation Subcommittee, Energy and Natural Resources Committee, U.S. Senate, Washington, D.C.

DEAR SENATOR JOHNSTON: Our association, Cooperative Food Distribtuors of America (C.F.D.A.), is a national food trade association representing the retailer-owned form of food distribution. Our sixty-four members in the United States operate eighty-five distribution centers, with annual sales of approximately $8 billion. These wholesalers are owned by some 28,000 independent food retailers whose estimated annual volume is approximately 20% of all food sold at retail in America.

C.F.D.A. supports the principle of any legislation which would clarify the legality of granting full backhaul allowances which would be equal to actual savings in delivery cost to the seller. We strongly support your efforts to enact this energy-saving legislation.

Sincerely,

EARL E. MASON,
President.

CONTRACT CARRIER CONFERENCE,
Washington, D.C., July 15, 1977.

Re: S. 1699—Diesel Fuel and Gasoline Conservation Act of 1977.

Hon. J. BENNETT JOHNSTON,
Chairman, Subcommittee on Energy Conservation and Regulation, U.S. Senate, Washington, D.C.

DEAR SENATOR JOHNSTON: I am writing you to express the support of the Contract Carrier Conference for the subject legislation. The Contract Carrier Conference is a trade association representing the interests of contract carriers throughout the country. The Conference is affiliated with the American Trucking Associations.

Contract carriers are trucking companies licensed by the Interstate Commerce Commission to haul freight in interstate commerce. There are approximately 4,000 contract carriers in the country the vast majority of which are independently, as opposed to publicly, owned. Contract carriers are fully regulated with respect to safety, financial responsibility and scope of operating authority.

Contract carriers differ from common carriers in that they offer a specialized transportation service that is not held out to the public. A contract carrier offers this service generally in one of two ways: (1) by dedicating his equipment to the exclusive use of a shipper; or (2) by providing a transportation service designed to meet a distinct need of the shipper. Contract carriage is the logical alternative for a shipper who does not want to invest the time and money to acquire and run his own fleet of trucks but has needs that cannot be met by a common carrier who, by law, must hold himself out to the general public.

Many contract carriers serve food stores like A&P, Shop Rite, and the like. As we understand the subject legislation, a purchaser of goods in a uniform zone delivered pricing system would be able to get a reduction in the price of the goods purchased (not to exceed the vendor's cost of delivery) if he picks up the goods at the seller's place of business.

Presently, many contract carriers are operating at less than capacity when they return to their contracting shipper's warehouse after making deliveries. If the proposed legislation is enacted, there will be an economic incentive on the part of the purchaser to utilize his contract carrier to pick up purchased goods from his vendors located in the area of the carrier's last deliveries for return haul to the purchaser's warehouse. While the purchaser gets the reduction in price to reflect the money he saves the vendor, the carrier obtains more freight and operates in a more fuel efficient manner.

Indeed, it is our understanding that some vendors in a uniform zone delivered pricing system do offer a discount to purchasers who pick up the purchased goods while others do not citing the Robinson-Patman Act to justify their refusal. Consequently, enactment of the proposed legislation will clarify this somewhat uncertain area.

We respectfully request that this letter be included in the hearing record on the subject legislation.

Very truly yours,

THOMAS A. CALLAGHAN, Jr.

NAWGA, NATIONAL-AMERICAN
WHOLESALE GROCERS' ASSOCIATION,
New York, N.Y., July 11, 1977.

Hon. J. BENNETT JOHNSTON,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR JOHNSTON: Please consider these observations in support of S. 1699. They supplement testimony delivered June 27.

Arguments for S. 1699 include:

1. Significant diesel fuel and gasoline savings—the 100 million gallon estimate is challenged but that is not really important. We made no quantity estimate but it is apparent that major and unnecessary fuel waste can be corrected by S. 1699.

2. No conflict with Robinson-Patman—A critically important concern for us. We represent small wholesalers and their customers.

3. Benefit accrue to the consumer—We can speak only for the food industry but competition in all industries should force benefits to consumers.

4. Small business has equal opportunity—buyers with only one truck or an authorized carrier can backhaul.

5. Cost savings—savings in fuel not consumed and other savings resultant from one truck run replacing two truck runs.

6. Increased Productivity—control of timing maximizes utilization of equipment and, in the buyer's warehouse, it helps to balance workloads.

7. Increased Control—over sanitation and damage and security because the buyer is handling his own mechandise in his own trucks.

Arguments against S. 1699 include:

1. *"Special interest bill for profiteering major food chain."* Simply untrue. S. 1699 will benefit wholesalers and retailers, large and small as well as chains large and small. Consumers will get food price benefits. The nation will save fuel. Profiteering allegations have been disproved repeatedly in recent years. There is no windfall in S. 1699 or any other backhaul option unless it is the cost savings that may be retained by sellers who are paid for delivery but do not provide it. Nevertheless we are sincerely grateful to Mr. Rothwell for leaping to the defense of Robinson-Patman.

2. S. 1699 "substantially weakens and modifies the Robinson-Patman Act." Mr. Rothwell states that S. 1699 "rewards remoteness and punishes proximity" an "overt and incongruous discrimination." The uniform delivered price system itself, not S. 1699, "rewards remoteness and punishes proximity but neither the FTC nor Robinson-Patman consider that a discrimination. And S. 1699 offers a compensating factor. In the real world shorthaul costs more per mile or per weight than longhaul by a sizeable margin.

On the "actual cost savings" credit basis of S. 1699 the closer buyers can be paid more per mile or per weight for their backhaul service than remote buyers. It is also a fact that most buyers will have a combination of remote and close-in backhaul opportunities that tend to be compensating. Also both close-in and remote buyers may be large or small, chain or wholesale.

The other reference to possible Robinson-Patman violation was made by Mr. Owen Johnson who left FTC three days after the hearing. He said the views in his testimony were "not those of the Commission or any Commissioner." He also confessed to personal "skepticism toward delivered price systems generally." Then he said that FTC advisory opinions and clarifications of backhauling in uniform delivered price situations avoided Robinson-Patman concerns without discouraging backhaul. He went further to recommend that S. 1699 be made mandatory to demonstrate FTC support for backhaul. However, he also said that S. 1699 created a new condition wherein a distant buyer could "deduct more from the uniform delivered price than his competitor, a close-in buyer, resulting in a variance in the pickup, or f.o.b. price, and a discrimination which may violate the Robinson-Patman Act."

Mr. Johnson's statement raises the question of where and when and how determinations of discrimination are made. The "Mill Net Theory" measured price equality at the seller's dock for merchandise only, holding that transportation costs were an accident of geographic location. FTC once embraced that doctrine in interpreting Robinson-Patman, at the seller's dock whether the sale is "less freight" or "freight included." In fact we still have f.o.b. uniformity measured but FTC has apparently shifted [1] to a new principle which measures the "actual price" paid by the buyer including merchandise and delivery and possibly other factors. This new system describes uniform delivered price system and it definitely moves the point of equity measurement to the buyer's receiving dock.

Mr. Johnson reverts to the seller's dock and f.o.b. price to frame his question about a possible Robinson-Patman violation au-

---

[1] Anti-trust law developments prepared by the Section of Anti-trust law of the American Bar Association.

thorized by S. 1699 despite the fact that S. 1699 is very clearly limited to uniform delivered price situations. The question is invalid for that reason.

A careful examination of the current pricing systems and purchasing options approved by FTC under Robinson-Patman law reveals that the impact of S. 1699 is to modify current and acceptable differences. Therefore S. 1699 is clean in the legal sense of conformity with Robinson-Patman and, equally important, it promotes equity at the buyer's receiving dock.

3. Mr. Donn D. McMorris of American Trucking Associations, Inc. said that S. 1699 backhaul will "adversely tamper with regulated carriers balance of multi-directional movements." We suspect this to be true to some extent because distributors suffer constantly from delivery delays caused by regulated carriers' attempts to limit service to minimize cost. It is hard to conceive that the relatively minor shift of freight hauled to backhaul handling can unbalance the enormous trucking industry. Carriers' share of wholesalers' inbound tonnage increased twice as much as backhaul over the last ten years. Carriers currently deliver 63% of our inbound compared to 15% that is backhauled. As food wholesalers, our economic function is lowest cost distribution. Backhaul lowers total system costs and saves energy. S. 1699 will encourage backhaul in one limited sector of delivered price sales.

4. "It isn't true that 100 million gallons of fuel could be saved with enactment of this bill." The question is not whether it is 78 million or 118 million gallons. It's not really important. The big difference is between could and would. I don't share Mr. McMorris' access to the "genesis of the estimate" but I do recognize that the difference between potential and actual is far more significant than guesstimates of absolute gallons.

5. Mr. McMorris is also misinformed about the nature of the limited application of backhaul covered by S. 1699. Hauling one's own merchandise in one's own truck is emphatically not an opportunity limited to a few giants "seeking competitive advantage and not a reduction in fuel usage." That "most firms cannot afford to have trucks away from their base and primary source of business and extra time and distance involved in backhauling" is untrue. It has been proven arithmetically many thousands of times. That is not to say that buyers' trucks always operate more efficiently than carrier trucks but rather that the circumstance which make the backhaul more efficient should be encouraged for the benefit of energy savings and lower food costs to consumers.

Respectfully submitted.

GERALD E. PECK,
President.

TAKING AIM AGAINST MEDIA BIAS

Mr. GARN. Mr. President, few Americans will deny the necessity of a free press as an essential foundation of a free society. Yet because the news media today is heavily composed of people from one side of the political spectrum, frequently the public's right to know is seriously infringed. No one is more aware of the fact that a free press does not guarantee absence of bias than Reed J. Irvine, head of Accuracy in Media. He and others at AIM serve as a watchdog for the American public by identifying and seeking to correct instances of distorted reporting by the news media. The murder of Orlando Letelier last September in a Washington bomb-blast is a case in point.

Letelier, a former member of the Chilean Cabinet under the Marxist junta of Salvador Allende, fled to the United States in 1974 when the Communists were overthrown. He soon became closely associated with Washington's Institute for Policy Studies and other leftwing groups. He sought out and maintained contact with many influential people in Washington including academic, congressional and administrative staffers, Senators and Congressmen. Letelier's numerous contacts on Capitol Hill and within the executive branch gave him potential access to sensitive U.S. intelligence information and a possible influence over decisionmaking.

The media, of course, treated the Letelier murder as a major news event. But 3 months elapsed before the American people were informed that Letelier's attaché case, which had survived the blast, contained incriminating documents which suggest that Letelier had indeed been using and manipulating his Washington contacts. This delay alone is troubling, considering the aggressive investigations conducted by the news media in the recent past on other subjects. Even as the nature of the documents became apparent, the editor of the New York Times made it clear that the only important thing about Letelier was who had killed him and why. A spokesman for the Washington Post concurred. "The important thing about Letelier," he said, "is that he is dead." The national media's reluctance to pursue the matter became even more apparent as Reed Irvine and AIM sought to disclose the wider implications of the Letelier documents.

Through the effort of Representative LARRY MCDONALD of Georgia the contents of Letelier's attaché case have been published in the CONGRESSIONAL RECORD of June 24, 1977. They reveal that Letelier aided the Cuban intelligence service and probably supported Soviet and East German intelligence undertakings as well. In particular he was working to overthrow the present anti-Communist government in Chile.

Included in the attache case was a letter to Letelier from Beatrice Allende Fernandes, daughter of Salvador Allende and the wife of a top Cuban intelligence official. She informed Letelier that payment to support his work had been approved and that he was to be paid $1,000 each month to finance his activities in the United States. According to one note in the case a U.S. Congressman was given $380, from the fund of a Soviet-based Communist front in Helsinki, to attend a conference inquiring into crimes of the Chilean military government. This meeting, held in Mexico City in February 1975, had been planned in part by a handful of liberal U.S. Senators and Congressmen. Letelier's strategy as he describes it was to "mobilize the liberals" by defining issues in terms of human rights and concealing the Communist ideology which in reality motivated his efforts. He was, in short, duping representatives of the American people to further the Communist movement in the Western Hemisphere.

Letelier's activities may or may not have posed a threat to U.S. interests. This dispute is tangential to the real issue at hand. The question, properly posed is, should a small number of men who control the major organs of the news media judge Letelier's activities or should the American people? Clearly the public has a right to know whose money Letelier was receiving, the nature of the services he was performing, and the manner in which his presence influenced their representatives.

The leaders of the news media apparently think otherwise. The wire services demonstrated only mild interest when AIM brought the neglect of the story to their attention. The first prominent mention of the significance of the Letelier documents was a December 30 column by Jack Anderson and Les Whitten. This was followed by a Rowland Evans and Robert Novak article on February 16. The next day the Washington Post published an inaccurate and misleading article concerning the Letelier incident which skipped over the important implications of the case. The superficial investigation was conducted by a reporter whose ability to read the documents was limited because they were written in Spanish. The Post then ran a letter on the op-ed page written by an apologist for Letelier from the IPS.

At this point AIM stepped into the picture. AIM asked that their critique of the Post's article be printed and was refused. Compelled to inform the readers of the Post in another manner, AIM sought to place a paid ad in the Post on February 28 setting forth their criticism of the story.

The Post frustrated AIM's effort to do this, and at the same time refused to print a second Evans and Novak column on the subject on the grounds that the issue had been sufficiently covered. AIM then turned to the Washington Star and the New York Times but each of these newspapers violated their advertising policy, as had the Post, and declined to print the ad. Because neither of the columns which dealt with the Letelier documents appeared in the Times, readers of that newspaper have yet to be informed of their significance. To conclude this scenario, on March 5 NBC ran a segment on Letelier on the program "Weekend" without mentioning the documents or the facts revealed by the columnists.

What the Letelier incident suggests is not that there is a conspiracy among the major organs of the news media to deny the American people information. Rather it points to a more insidious form of censorship by selective omission. With the great mass of news items from which the media must choose, certain stories cannot command the same aggressive investigation as others and some must be ignored altogether. When a single ideology and persuasion alone determines what is deleted and what remains in the major organs of our news media, then the public's right to know is compromised and even denied. This is a result that Reed Irvine and Accuracy in Media valiantly seek to prevent. I salute Mr. Irvine for his efforts.

Human Events recently printed an interesting story on Mr. Irvine and AIM presenting some of the details I have been

discussing. I would like to share it with my colleagues at this time. Mr. President, I ask unanimous consent that the article, "Taking AIM against Media Bias" be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Human Events, July 2, 1977]

TAKING AIM AGAINST MEDIA BIAS

(By M. Stanton Evans)

On first encounter, Reed J. Irvine of Accuracy in Media appears to be a modest, unassuming fellow.

On closer acquaintance, however, Mr. Irvine and his colleagues at AIM turn out to be a bunch of tigers. They have tackled the enormous task of playing ombudsmen to the major media—correcting errors, proving bias, calling for a greater sense of fairness. Their bi-weekly publication, *AIM Report*, is a tough compendium of media gaffes and oversights that must be a source of acute embarrassment to the New York *Times*, the Washington *Post*, and other pillars of the establishment.

Irvine and AIM are not content, however, simply to document and complain. They have developed a method of seeking corrective action that is proof of their tenacity and enterprise. Since the major media are large, publicly-held corporations, Irvine and his colleagues have purchased shares and taken to showing up at stockholder's meetings to ask the management thorny questions.

In recent weeks, Irvine and Co. have hied themselves off to the annual meetings of CBS, NBC, the *Times* and the *Post*.

Among the topics canvassed in their questions were media coverage (or non-coverage) of the Communist genocide now going forward in Southeast Asia, excessive gentleness toward Communist dictator Mao Tse-tung, media contributions to the scare over food additives, the NBC deal with Moscow for coverage of the 1980 Olympics, lopsided handling of the nuclear power issue, and so on.

The result of this procedure is that the grandees of the media world have suddenly found themselves on the receiving end of the treatment they routinely serve to others. By and large, they don't seem to be handling the matter very well—as witness the recent exchange between Mr. Irvine and Philip Geyelin, editorial page editor of the Washington *Post*. The topic of their discussion was Orlando Letelier, the left-wing former diplomat from Chile who was murdered in a bomb blast last September.

In the aftermath of the slaying, Letelier's briefcase was found to contain all manner of documents linking him to Havana and suggesting he was using money from Cuba to finance attempted manipulations of the U.S. Congress. Irvine wanted to know why the Post had killed the second of two columns on this subject by Rowland Evans and Robert Novak. Geyelin's answer was that the column was "scurrilous" and that the Letelier documents should not have been leaked—the latter statement paraphrasing the previously rendered editorial judgment of the Post: "The disturbing thing is that the leaks appear to be coming from some of the very quarters charged with investigating the crime."

Considering the fact that the Post is the newspaper that employs Bob Woodward and Carl Bernstein of Watergate-leakage fame, and that it defends such massive leaks of data as the publication of the Pentagon Papers, this is a breathtaking assertion. The irony is well developed in the Irvine-Geyelin exchange:

"Geyelin. What is scurrilous about that second column in my view is what is scurrilous in a general way about hounding a man into the grave who is unable to defend himself, for purposes which escape me, without having access to these documents that you have access to, and which, in fact, you shouldn't have access to.

"Irvine. We shouldn't have access to them? Why is that?

"Geyelin. Because that briefcase was taken by the authorities purely for the purpose of investigating that murder, and it was leaked all over town by the authorities and subsequently. . . .

"Irvine. The Washington Post is opposed to leaks now?

"Geyelin. Not a bit. Not a tiny bit.

"Irvine. Then it would be all right if the Washington Post had the documents and we didn't? If we offered them to you, would you accept them?

"Geyelin. I'm saying as a matter of principle these documents should not have been leaked.

"Irvine. Well, no documents should be leaked, should they? The Pentagon Papers shouldn't have been leaked.

"Geyelin. No, that's not true.

"Irvine. Oh, they should have been leaked.

"Geyelin. Well they shouldn't. . . . No, that is not my point. My point is that once they went into the public domain, then we had every right to find out what we could about them.

"Irvine. Well, these are now in the public domain. [Jack] Anderson has them. Evans and Novak have them. Why do you say that I shouldn't have them?

"Geyelin. Maybe you should. I didn't say you shouldn't, in theory. . . ."

And so forth and so on, including other questions—and inadequate responses—about some submachine guns that Letelier had acquired, and the refusal of the *Post* to accept an ad on this general subject from AIM although it has run ads from Communist North Korea and recently ran an ad proposing "normalized" relations with Red China signed by two registered agents of the Peking government (see Human Events, May 14, 1977, page 10).

In the case of the submachine guns, Irvine noted, the *Post* omitted to tell its readers that Letelier had secured a couple of these to take back to Chile in 1973, a curious step for an alleged political idealist. The North Korean newspaper ads asserted, among other things, that "our national sovereignty is still being trampled underfoot by foreign aggressors in one half of our country."

This bald untruth by a Communist dictatorship, Irvine observed, was considered acceptable as an advertisement in the *Post*, but AIM's own ad detailing the unsavory background of Letelier, and the *Post's* mishandling of that issue, were verboten. Game, set, and match to Mr. Irvine.

HOSPITAL COST CONTAINMENT

Mr. SCHMITT. Mr. President, the effects and implications of the administration's hospital cost containment proposal on the delivery of health care in New Mexico are vast and alarming.

Placing an arbitrary "cap" on health care costs is not going to keep actual costs from rising. It is going to take some innovative and imaginative uses of modern management techniques such as those in use in New Mexico to actually cut costs of health care. Some exciting New Mexico experiments include the establishment of rural clinics tied to crisis care facilities through modern transportation and communication systems, such as the Phelps Dodge system; modern group management review techniques, such as those practiced by Presbyterian Hospital; and efficient State malpractice legislation, such as we have working for us now in New Mexico. In addition, increasing the use of local rest home facilities for long-term care to decrease hospital bed load should help relieve health care costs.

Mr. President, I ask unanimous consent that the letters from the New Mexico Nurses Association, Presbyterian Hospital, the New Mexico Hospital Association, the New Mexico Medical Society, and Bernalillo County Medical Center be printed in the RECORD as an indication of what some of our medical professionals in New Mexico feel is wrong with the proposed hospital cost containment legislation.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

NEW MEXICO NURSE ASSOCIATION,
Albuquerque, N.M., June 22, 1977.

Hon. HARRISON SCHMITT,
Dirksen Senate Office Building,
Washington, D.C.

DEAR SENATOR SCHMITT, The New Mexico Nurses' Association would like for you to know our position on President Carter's cost containment bill. We do support the objectives of the bill, but have serious questions about certain aspects of the proposed legislation. To correct rapidly rising costs and to promote quality health care requires more than such a simplistic solution. Only by resolving underlying problems of inflation can hospital revenues be contained and the needs of the people met. To attack only one segment—hospitals—will not be a long-term solution.

We believe attention must be given to altering the system of reimbursement which is inefficient and offers little incentive for effective management control. The third party system for reimbursement encourages institutional care which is very costly, but does not include reimbursement for primary care nurses who can and are able to keep people out of institutions. To attack the acute care inpatient services without providing opportunities to develop and expand alternative approaches to inpatient care can, at best, be of only a temporary benefit.

We also believe that the cap of hospital revenue as now proposed will adversely affect the quality of health care. The bill carries a section (113) for an admission load formula which is inadequately conceived, and will reduce the quality and quantity of services required for safe care of in-patients.

All of these points are covered in greater length in a statement prepared by the American Nurses' Association for the Senate Subcommittee on Health and Scientific Research of the Committee on Human Resources. If you will be in New Mexico for a summer break, I will be happy to discuss this with you.

Sincerely,

(Mrs.) JUDITH BROWN, R.N.,
Executive Director.

PRESBYTERIAN HOSPITAL,
Albuquerque, N. Mex., June 24, 1977.

Sen. HARRISON SCHMITT,
United States Senate,
Washington, D.C.

DEAR SENATOR SCHMITT: The two basic arguments against the President's hospital revenue "cap" proposal are that hospitals suffer from inflation like all businesses and individuals, and hospital costs increase because of expanded and improved technology and service.

To provide you with additional information, we compiled fiscal data comparing our 1976 and 1977 fiscal years, and our depart-

ment heads compiled services and procedures we now routinely offer our patients that were not offered ten years ago. Many items on the list have only been offered in the last five years.

I contend that "hospital inflation" defined as increased costs of what we purchase, rises at a rate significantly greater than "general inflation" or the gross national product deflator. Our fiscal study demonstrates a 14.5 percent "hospital inflation" increase in 1977 over 1976 for 70 percent of our expenses compared to the 6 percent GNP deflator for the same time period and is used in calculating the 9 percent "cap".

In fiscal year 1977, Presbyterian Hospital inpatient days increased 2½ percent over 1976, and outpatient visits increased 24 percent. To provide this service, expenditures at Presbyterian Hospital for the fiscal year ended March 31, 1977, increased $4.9 million or 21 percent over the previous fiscal year. The major categories of expense are shown in the following table:

	Operating expenses		Total increase	
	Fiscal year 1977	Fiscal year 1976	Amount	Percent
Salaries and benefits	$15,015,794	$12,285,790	$2,730,004	22.2
Professional fees	1,633,032	1,386,853	246,179	17.8
Supplies and purchased services	8,481,939	6,819,837	1,662,102	24.4
Insurance	715,631	471,214	244,417	51.9
All other	345,531	477,718	(132,187)	(27.7)
Total	26,191,927	21,441,412	4,750,515	22.2
Depreciation and interest	1,494,991	1,364,918	130,073	9.5
Total	27,686,918	22,806,330	4,880,588	21.4

Of the total increase, approximately 15 percent was due to inflation. The overall rate of inflation was determined by examining the changes in volume which had occurred in certain large expense areas in the two fiscal years. The areas examined are shown on the attached table and represent more than 70 percent of the total expenses excluding the fixed costs of depreciation and interest.

In the area of Supplies and Purchased Services, the sample items listed account for 37 percent of the total expenditures for this category. The Supply and Purchased Services sample items increased 16.8 percent, including inflation and volume, compared to 24.4 percent overall increase in this category. The sample increase was expected to be lower since it included the high volume items that are sometimes amenable to cost containment by aggressive purchasing.

It is interesting to note that the only decreases (unemployment taxes, IV solutions, food and X-Ray film) were the result of an active ongoing cost containment program. The only changed purchasing practice in the four areas of savings affected IV solutions.

Because of Presbyterian's pioneering efforts in founding an offshore mutual insurance company, general liability insurance was held to a 50.2 percent increase compared to 100 percent plus increases nationally. Many of the other increases, excluding salaries, were mandated by law, regulation, or a sole supplier.

The services we offer today that were unavailable to our patients ten years ago include:

Coronary Care Unit
Total hip & joint replacement
Oxytocin Challenge Testing
Dialysis
Amniocentesis
Fetal Heart Monitoring
Cardiac Catheterization Laboratory
EKG Telemetry
Pressure Monitoring
Ultrasound
Nuclear Medicine
Pulmonary Function Studies
Cardiopulmonary Resuscitation Team
Home Care Planning
Patient Education Programs
Patient Assistance & Counseling
Hyperbaric Chamber
Interaortic Balloon Pump
Intensive Care Unit
Retinal Surgery
Therapeutic Drug Levels
Laminar Flow
Infection Surveillance Nurse
Enterostomal Therapy
Blood Gases
Professional Standards Review Organization
Open Heart Surgery
Emergency Department fulltime M.D. coverage
Day Surgery Unit
Ambulance Company
Laparoscopy
Micro-surgery
Malpractice monitoring
Blood Component Therapy
Patient Representatives
Newborn Intensive Care Unit
Intravenous Therapy Team

The hospital cost spiral is explainable. The real issues of how we allocate our national health resources and the cost benefit analysis of improving the quality of a life, or even extending it, are ignored in the President's proposal.

I am particularly distressed that the President's proposal will inevitably stifle innovation and responsiveness to patient needs. Presbyterian Hospital Center has an enviable record of striving to meet the health needs of its constituents. We have successfully weathered other storms and learned to balance aspirations with fiscal realities, but I see the current proposal before Congress as one that will inevitably result in marked reduction of services in community hospitals like our rural affiliates and in regional hospital centers like Presbyterian.

Especially disquieting is the fact that individuals, regardless of their income, will not be allowed to obtain health care above certain minimum levels mandated by the government formula regardless of their desire or ability to purchase care, because hospitals will be prevented from selling services above the mandated levels. Citizens are allowed to obtain private education, but the "cap" proposal would eliminate this alternative in health care. I urge your opposition to this poorly conceived legislative proposal.

Thank you, as always, for your understanding and consideration. Please let me know if we can provide additional information.

Sincerely,

RICHARD R. BARR,
Administrator.

Problems With the Hospital Cost Containment Act of 1977 (S. 1391—Kennedy—approved by the NMHA membership at its May 12, 1977, meeting)

The New Mexico Hospital Association opposes the Cost Containment Act of 1977 for the following reasons:

1. The formula on increase in revenues will eliminate technolcgical innovation. Although the formula was designed to allow for changes in services and intensity, the GNP Deflator understates the effect of inflation on hospitals since hospitals intensively use rapidly increasing cost items such as utilities, plastic products, foods, postage, etc.

2. With limited resources, hospitals must make policy decisions on allocation of resources and who obtains what care. These policy decisions are better made as a part of a national health policy. The federal government appears unwilling to make these difficult decisions and is forcing these decisions upon the Board of Trustees, medical staffs and administration of hospitals.

3. The allocation of capital expenditures, strictly by population, may discriminate against New Mexico, with its small, rural, and widely dispersed, but rapidly growing, population. The plan does not recognize the greater needs of rural citizens for health care. Approximately $12-million would be available for New Mexico, which would not pay for the full costs of updating current facilities, let alone provide additional services necessary. Such limitations also would impede or cancel planned consolidation of services or other innovations which could lead to short and long-run cost containment. Thus, such an allocation, in effect, is contrary to the stated intent of this legislation of avoiding duplicative hospital facilities.

4. Individuals, regardless of their source of income, will not be allowed to obtain health care above certain minimal levels. Citizens are allowed to obtain private education regardless of cost, but this proposal would eliminate this alternative in health care. Due to the limitations on income, which discourage increased admissions, a hospital will have several alternatives, all of which are bad. Among these alternatives would be to discontinue admissions after the revenue limit has been reached and/or limit admissions during the year. This could lead to inappropriate shifting of patients to other facilities which may not be appropriately equipped to care for the patients' needs.

5. No incentives are included within this proposal. Only disincentives and punitive actions are included.

6. It does not reward hospitals which have kept their costs down. A hospital with high charges is allowed a larger increase than the hospital that has kept its prices low.

NEW MEXICO MEDICAL SOCIETY,
Albuquerque, N. Mex., May 12, 1977.

Hon. JACK SCHMITT,
U.S. Senate, Senate Office Building, Washington, D.C.

DEAR SENATOR SCHMITT: At the Annual Meeting of the New Mexico Medical Society in Albuquerque on May 6, the House of Delegates unanimously passed the enclosed Resolution and I was instructed to forward this to you with the House of Delegates request that you use your efforts in defeating these poorly conceived bills.

The medical profession views bills of this type as very dangerous to the entire health industry, and we hope that you will vigorously use your influence to oppose passage of this type legislation.

The House of Delegates also went on record to notify the U.S. Senators and Representatives of the discrimination that exists in the federal laws and regulations which require review of private hospitals from which federal hospitals are excluded. The profession

is very much disturbed over the scrutiny placed on our private hospitals. They feel that the same professional review should be carried out with all health facilities and that government institutions should not be excluded.

Best wishes,

RALPH R. MARSHALL,
Executive Director.

RESOLUTION

Whereas, at the request of the Carter administration, Senator Kennedy and Representatives Rogers and Rostenkowski have introduced identical bills into the Eightieth Congress titled "Hospital Cost Containment Act of 1977", Senate Bill 1391—H.R. 6575, and

Whereas, these bills limit hospitals' revenue from in-patient services to approximately a 9-percent increase, and

Whereas, hospitals are facing ever-increasing costs in energy, insurance premiums, food, labor, and other goods and services through inflation, and

Whereas, the national Consumer Price Index (CPI) has risen 10 percent in the first quarter of 1977, and

Whereas, the 9-percent ceiling would discriminate against the health care industry in placing them under wage-price controls without equal controls over the rest of the economy, and

Whereas, this legislation's limitation on capital expenditures based strictly on population discriminates against New Mexico's widely dispersed, small population and their greater needs for rural health care facilities, and which would stifle developing new technologies and plant modernization, and

Whereas, these limitations could compromise a physician's judgement in ordering necessary, but expensive, diagnostic and/or therapeutic services, and would reduce the quality and quantity of health care, and

Whereas, the most serious penalties are placed on the health care industry for noncompliance, and

Whereas, these laws may contribute to the closure of needed hospitals in New Mexico, and

Whereas, these bills' exclusion of Federal hospitals discriminates against all other hospitals, and

Therefore, be it resolved that the New Mexico Medical Society House of Delegates does hereby urge that the Congress of the United States defeat these bills which are poorly conceived efforts at cost containment and which would place great hardship on the entire health care industry and the health of the people of New Mexico.

BERNALILLO COUNTY MEDICAL CENTER,
Albuquerque, N. Mex., May 23, 1977.

Hon. HARRISON SCHMITT,
U.S. Senator,
Albuquerque, N. Mex.

DEAR SENATOR SCHMITT: I am writing you to oppose the Hospital Cost Containment Bill H.R. 6575 and S. 1391. In my opinion, this bill will be a total disaster for the American hospital system.

As you know, Bernalillo County Medical Center is the University teaching hospital and, in addition to the service impact on the hospital, this bill would probably have a serious education impact since we would have to reduce expenses and, in effect, become a second or third rate hospital.

My fiscal director estimates that we would have to cut expenses by $1.3 million if this bill were to be passed in its present form. BCMC lagged behind in raising rates to cover costs and was on the verge of bankruptcy when my predecessor took over in January 1976. He adjusted rates to more accurately reflect costs and as a result, if that period became a base year, it would have disastrous effects on this hosptial. I am sure there are other hospitals in the country that have a similar situation.

The Administration's claim that this legislation is "simple" and "fair" is a total misrepresentation. It is such bad legislation that I would recommend total defeat rather than attempt to amend it to make it acceptable. If passed, it will have a serious adverse effect on the health care furnished your constituents.

I stand ready to do all in my power to contain cost but feel that this approach is certainly not the way to go.

I hope that you will share this view.

Sincerely,

WILLIAM M. WEGNER,
FACHA Administrator.

BENJAMIN HOOKS HEADS NAACP

Mr. SASSER. Mr. President, today, August 1, 1977, the Reverend Benjamin Lawson Hooks becomes head of the National Association for the Advancement of Colored People. The State of Tennessee and the people of our great country are justifiably proud of the contributions made by this man. I would like to express my own appreciation for the valuable service Ben Hooks has rendered throughout his long career.

Today, Benjamin Hooks becomes the ninth chief executive of the largest civil rights organization in the world, a 67-year-old institution that has been a leading force in the most sweeping social movement of our time. Judge Hooks will bring to the organization the kind of energy and experience necessary to lead the NAACP through these troubled times.

Judge Hooks has been a trailblazer and an outspoken social advocate, but he has also been that rare man whose balanced judgment earns the respect of his staunchest opponent.

Born January 31, 1925, in Memphis, Tenn., Judge Hooks attended Lemoyne College and later went to Howard University. After serving his country in World War II, with the predominantly black 92d Infantry Division, he took his law degree at DePaul University and returned to the city of his birth.

From 1949 to 1965, Judge Hooks practiced law in the city of Memphis. In his words:

> . . . I came back to change things in the South, that was part of my mission in life. And I've been working at it 28 years now, in the South first and then in the country.

He was a local leader in a budding social movement that would later grip our entire Nation. In the courtroom and in the pulpit of the Middle Baptist Church, Benjamin Hooks was not afraid to speak out for the cause of social justice.

In 1965, he was appointed the first criminal court judge in the history of Tennessee, and became the first of his race to head a court of public record in the South. Seven years later he became the first black man to serve on the Federal Communications Commission.

These were important "firsts," but the personal excellence Benjamin Hooks exhibited in these positions of public trust outshines the fact that he happens to be a black American.

For the last 5 years, Judge Hooks has compiled an exemplary record as Commissioner of the FCC. He has brought a new perspective to this regulatory agency that plays an increasingly important role in the life of every American. Many regret that Judge Hooks is leaving the FCC. I share that feeling, but at the same time fully expect him to reach new heights in public service. As he answers his latest "call," I know that Benjamin Lawson Hooks will continue to remain dedicated to the cause of social justice. His contributions will continue to strengthen our American democracy. I wish him well and I offer my help.

SENATOR SCHMITT COSPONSORS GOLD CLAUSE FREEDOM BILL

Mr. HELMS. Mr. President, I ask unanimous consent that the distinguished Senator from New Mexico (Mr. SCHMITT) be added as a cosponsor to S. 79. This bill would effectively repeal the joint resolution of June 5, 1933, which declared unenforceable gold clause contracts.

These contracts were widespread at that time. One estimate I have seen indicated that $135 billion of outstanding financial obligations carried gold clauses. Without any attempt to compensate the contract holders, the Federal Government abrogated this important clause in the contracts. It was an unfortunate chapter in our history.

At that time, of course, there was a firm link between gold and the dollar. At that time, too, the problem the Nation faced was not one of inflation. It was one of deflation—declining prices. Gold was revalued upward in an effort to provide inflationary stimulation.

Today, gold no longer has any official tie with the dollar. The restrictions against gold ownership were repealed in 1973 and there is no reason not to repeal the restrictions against gold clause contracts.

Recently, the Institute on Money and Inflation provided me with a copy of a letter received from Mr. Samuel M. Robbins concerning this matter. The institute has done considerable work on this topic for me and they have provided the facts and figures I have utilized in my efforts to get the gold clause freedom restored.

Mr. Robbins points out the savings that might be made available to individuals, business, and Government if gold clauses were put into bonds and other debt instruments. He proposes a gold clause in Federal securities, a device which some feel would provide an official Government imprimatur to such contracts. It is my view that we should first restore the freedom and then look at the experience others gain from it. Since gold is considered a "commodity" by the Federal Government, it would seem to be inconsistent for the Government to utilize gold in its financial instruments any more than soy beans or tin or other freely negotiated homogeneous commodities.

Individuals can, of course, utilize nongold commodity clauses in their contracts, but until S. 9 is passed, clauses calling for payment in gold or in dollars

measured in gold are not enforceable in the courts.

Mr. President, I ask unanimous consent that the letter from Mr. Samuel M. Robbins to the Institute on Money and Inflation be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ROBBINS PLANNING CO.,
West Newton, Mass., June 24, 1977.

INSTITUTION ON MONEY AND INFLATION,
Washington, D.C.

DEAR SIRS: I hear that you are doing research on the possible effects of gold clauses which might be used in contracts in this country.

I have studied this issue in some depth.

To me the net effect of having gold clauses legalized would be to lower interest rates and to facilitate the raising of capital. The latter problem of course needs all the help it can get.

To put it simply, which would you rather invest your money in: A long term bond with a 5 percent coupon, due let's say in the year 2,000, but at maturity the amount of principal due and payable would be adjusted by the price of gold, as compared to what the price of gold was at the time of issuance. If we assume that the free-market price of gold adjusts over time to rates of inflation, if we accept the notion that gold tends to maintain its "real" value over the years, then a bond indexed to gold would offer the bond investor some reasonable prospect of protecting his capital from the inroads of inflation. Thus as long as an investor knows that he is going to get income equal to what he could get in the savings bank, but that at maturity he will get back his "real" principal, a whole new avenue to financing industrial expansion will have been opened up.

The alternative is what we have now. Presumably an 8 percent coupon, payable in a fixed number of dollars at maturity. Such a bond really is a certificate of confiscation of wealth, since long term inflation destroys much of the original meaning of the capital invested.

The result is that in today's world it is extremely difficult for corporations to raise substantial sums of long term money. The rates of interest are obviously considerably higher than need be, to compensate the investor not only for the true interest he feels he deserves for the use of his money, but to allow him a factor to cover the cost of inflation.

Thus in today's world the corporation suffers the impact of an immediately higher cost of interest, whereas a goldclaused bond would postpone the day of reckoning to maturity. To be sure the total costs to the corporation at maturity may well have been the same, but for a long period of years the company enjoyed the use of lower cold funds with which to make money, to create wealth, to build new plant and so on.

Also this means that borrowers would have a stake in lowering inflation. Right now, borrowers figure that inflation will lessen the difficulties in paying off bonds at maturity many years from now when inflation will have theoretically reduced the real value of the bonds. Thus our present system encourages borrowers to see a certain value in inflation. Inflation ultimately destroys the long bond market.

This might not be so bad except that Uncle Sam happens to be one of the biggest borrowers of them all.

If the U.S. Government started to issue gold-indexed bonds, they could probably lower the coupon to 3%. Meanwhile they would have good reason to try to lower the rates of long term inflation—they would have to pay out less at maturity.

Thus from one little clause, an awful lot of good can flow to this country over the years.

Take note that the insertion of gold clauses in contracts, notes and bonds does not require corporations or governments to have vast quantities of gold bullion on hand. It simply ties the maturity value of the bond to the price of gold.

Nor would investors require the borrower to pay them in raw gold at maturity. They don't really want all that bulk. All they want is the protection that gold affords. Hence it is not even necessary to legalize the payment of obigations in raw gold. It is only necessary to allow the bond to be indexed to gold prices.

America could solve some of its most destabilizing problems at the stroke of a pen.

It's as simple, and as complicated, as that.

Yours very truly,

SAMUEL M. ROBBINS.

PS. I call to your attention that there is no long term market for bonds in Brazil. All financing must be financed on a short term basis, even long term financing!

COLLEGE REPUBLICANS ENDORSE SCHWEIKER TUITION TAX RELIEF ACT OF 1977

Mr. SCHWEIKER. Mr. President, at its recent meeting, the College Republican National Committee, representing the large and growing number of young Americans who are finding in the Republican Party the reflection of their values and the enunciation of their ideals, approved a section of its platform endorsing S. 834, a bill which I have introduced to provide tax credits or deductions for tuition. This legislation has already won broad bipartisan cosponsorship; and a similar bill (H.R. 3403) has been introduced in the House of Representatives by Congressman JAMES DELANEY, the chairman of the House Rules Committee.

I am pleased to have the additional support of the college Republicans, many of whom are experiencing firsthand the difficulties of financing their college education at a time when inflation has undermined their families' income and Federal regulations have driven up their college expenses. Present Federal programs provide relief to only a limited portion of those paying for tuition.

I ask unanimous consent that their platform's endorsement of S. 834 be printed in the RECORD.

There being no objection, the endorsement was ordered to be printed in the RECORD, as follows:

COLLEGE REPUBLICAN NATIONAL COMMITTEE PLATFORM 1977

Over the past few years, the cost of education at all levels has risen dramatically. While inflation has driven wages, salaries, food and fuel prices, and other expenses up and eroded the value of scholarship funds, the recent recession has depleted most schools' endowments and has discouraged alumni contributions. This has made it increasingly difficult for many Americans to afford the cost of educating their children at college, and has denied to others the choice of sending their children to private school.

The existing system of federal grants to colleges has created significant complications at the expense of both taxpayers and tuition payers. Last year, it cost American colleges nearly $2 billion to comply with H.E.W. regulations. Furthermore, H.E.W. has perniciously used these grants to deprive colleges of their autonomy.

Legislation has been proposed (S. 834, H.R. 3403) granting a 50% tax credit of up to $250 or a $1,000 deduction for tuition payments. The College Republican National Committee heartily endorses the passage of this bill as a step in the right direction.

MINORITY OPPRESSION IN ROMANIA

Mr. HEINZ. Mr. President, many nations still oppress minorities and ethnic groups despite a worldwide movement to insure human rights. Often this oppression is overt, but some countries employ subtle methods of discrimination to achieve their oppressive ends. A prime example, and one which I believe we should recognize, is the discrimination against minority groups in Romania.

There are 2.5 million Hungarians living in Romania, as well as 400,000 Germans, and sizable numbers of Ukrainians, Jews, Serbs, Greeks, and Turks. Yet Government policy has insisted on the forcible assimilation of these people into a national Romanian culture, violating United Nations and Helsinki agreements protecting minority rights. Romania is a signatory to these international pacts, however, and remains answerable to the world community for human rights transgressions.

The degree of discriminataion in Romania must not be underestimated. The April 17, 1977, Sunday Times of London concluded, "Romania's unstated but unmistakable aim is to become a state without minorities." Romania forbids the use of the Hungarian language in government; Hungarian universities have been eliminated by a strict Romanian education system; the archives of religious communities are confiscated for purposes of "protection." Even the publication and number of pages of Hungarian-language newspapers has been forcibly curtailed. Six Hungarian newspapers formerly published daily are now allowed to appear only weekly. Children's books, journals, and professional publications appear less and less in minority languages. Ethnicity is systematically being worn away in Romania, and the people have been unable to alter the Government's campaign of cultural genocide.

Discrimination is also a part of the ruling structure. Hungarians are proportionally represented in Government only in those state and party organs which are not allowed to exercise real power. Of the 25 members of the Council of Ministers, for example, only 1 is Hungarian. In several primarily Hungarian counties, Hungarian representation is completely excluded from the party bureaus.

It is apparent that Romania's policy toward its minority citizens is calculatedly deceptive and harsh. By ignoring international treaties, Romania has denied basic freedoms. The United States should recognize and condemn Romania's policies against minorities; millions of people are being denied their heritage and freedom while the Western world stands idly by.

THE PRESIDENT'S CONSUMER REORGANIZATION

Mr. JAVITS. Mr. President, President Carter this afternoon announced his proposal for eliminating or merging 26 units

of the Federal Government which would overlap or duplicate functions proposed to be created in the new Agency for Consumer Protection.

As reported by the Governmental Affairs Committee, S. 1262—the Consumer Protection Act of 1977—provides that the President must submit a reorganization plan to Congress within 180 days after enactment to achieve that objective.

By releasing the substance of this plan today, the President has both emphasized his determination and commitment to cut back on inefficient and bureaucratic government, and given the Congress an excellent opportunity to consider the specific offices and functions which would be eliminated by enactment of the Consumer Protection Act.

We are advised by Ester Peterson—the President's very able and effective Consumer Affairs Adviser—that this reorganization involves units currently spending $11.6 million annually, and employing more than 200 people.

The President also announced today that the executive departmental consumer representation plans which were developed last year would be rescinded, at a cost saving of $8.5 million annually.

I strongly endorse these actions—they will make more than $20 million available for reallocation.

The new Agency for Consumer Protection will operate with a first year budget of only $15 million. Enactment of this bill will therefore, not only reduce the overall size of the Federal Government, but also bring about a saving to the American taxpayer.

Mr. President, as the Senate knows, with Senators RIBICOFF and PERCY, I have been working for enactment of a consumer protection agency bill for more than seven years. I believe we have been responsive to the concerns of our colleagues in the Congress and those of the American business community. We have always contended that it will help honest business, will not be meddlesome with a host of protections in the bill to assure these objectives, and will only consolidate the consumer functions of the Federal Government and not proliferate them. The President's proposal of today makes that crystal clear.

The Consumer Protection Agency will be a small, effective organization designed for advocacy—not meddling. It will genuinely open up our governmental process to allow the interests of consumers to be articulated and heard on an institutionalized basis for the first time. It is long overdo. The enactment of this legislation will increase public confidence in Government and materially improve the administrative process by facilitating agency and court consideration of major consumer interests.

THE PROTESTANT IRISH HERITAGE IN AMERICA

Mr. KENNEDY. Mr. President, one of the most difficult challenges in the continuing search for peace in Northern Ireland is to build effective bridges between the Catholic and Protestant communities. The development of a greater sense of mutual trust and respect between the two communities will help to enhance the prospects of a negotiated settlement that respects the rights of both sides and that can bring a permanent end to the present tragic conflict.

Throughout the current conflict, the Irish-American community has tended to be closely identified with the Catholic community in Northern Ireland. Those ties are close because of the strong Irish Catholic heritage and tradition in the United States, the natural sympathy which Irish American Catholics feel for the problems of their fellow Catholics in Northern Ireland, and the oppression, discrimination, and violations of human rights which the Catholic community in Northern Ireland has suffered.

It is clear, however, that the search for peace cuts across sectarian lines in Northern Ireland. The spontaneous origin and the dramatic success of the peace movement last year, for example, demonstrated the powerful desire for peace with justice by the overwhelming majority of the ordinary citizens of Northern Ireland, both Protestant and Catholic.

We have tried to do our share in the United States, by condemning the violence on both sides, and by urging Irish Americans to renounce any action that supports or encourages the violence.

In this sensitive period, it is important for Irish Americans in the United States to do what we can to reassure the Protestants in Northern Ireland that they have nothing to fear from the Irish American community, and that we are as concerned to reach a settlement that respects their basic rights as we are to secure the basic rights of the members of the Catholic community.

An effective way to demonstrate the good will of Irish Americans toward the Protestant community in Northern Ireland to recall the Protestant Irish heritage in America. That heritage is a major strand in the Irish tradition in the United States, and it has played a key role at critical periods in American history, particularly in the Revolutionary War era. Yet it is a strand that has not been well enough appreciated or recognized in modern times.

For that reason, I requested the Library of Congress to conduct a study of the Protestant Irish heritage in America. The Library's report, which I am releasing today, presents an excellent and readable analysis of this neglected part of America's Irish heritage.

Few Irish Americans, I suspect, are aware of the major role that Irish Protestants played in the Revolutionary War. It is well known, for example, that John F. Kennedy was the first Irish Catholic President of the United States. But few are aware that one of our most famous Presidents, Andrew Jackson, was an Irish Protestant President, or that 12 other Presidents also share that Irish Protestant heritage.

The Library of Congress study is a valuable reminder of this important aspect of our past. As Irish Americans, we are proud of the twin pillars of our Irish heritage. And as Irish Americans, we wish both the Protestant and the Catholic communities well in Northern Ireland, as persons of good will on both sides carry on their search for peace.

A day will come when the guns and bombs and inflammatory words are quiet, when the people of Northern Ireland will live together in peace and mutual understanding, when the two communities will be as proud of the twin strands of their own fine Irish heritage as we are of our heritage in the United States.

Mr. President, I believe that the Library of Congress study will be of interest to all of concerned about the tragic situation in Northern Ireland, and I ask unanimous consent that the study may be printed in the RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

THE PROTESTANT IRISH HERITAGE IN AMERICA

(By Peter B. Sheridan, Analyst in American National Government, Government Division, Congressional Research Service, Library of Congress, July 21, 1977).

Most Americans, when they think of the Irish in American history, think of the famine immigrants, the Gaelic-speaking Catholics from Southern Ireland, the "Paddies" of the railroads, the canals, and the mines. There were other Irish, however, who were here long before the famine years. These were the Irish Protestants, generally, but not always, from Northern Ireland, who began arriving in the colonies in great numbers as early as 1717–18, a time of great economic distress in Northern Ireland. Some had, of course, come earlier, for example, James Logan, the Quaker from Armagh, who arrived as secretary to William Penn, founder of Pennsylvania, in 1699. Logan later became a member of the provincial council, mayor of Philadelphia, governor, and, chief justice of Pennsylvania. Other waves of immigrants from Northern Ireland arrived in 1725–29, 1740–41, 1754–55, and 1771–75, after which the tide, for all practical purposes, ceased. Each of these periods coincided with a time of economic difficulty (drought, poor crops, high taxes, increased rent on leased land, and evictions) in Northern Ireland.[1]

These Irish Protestants were, in the main, the result of several "plantations" by the British early in the seventeenth century, particularly the Plantation of Ulster, in an effort to establish a loyal and stable population in Ireland and, it was hoped, to prevent any further acts of rebellion on the part of the native population. Many of these settlers were Lowland Scots, predominately Presbyterian, although there was a sprinkling of other denominations as many Irish Protestants in the seventeenth century were of English descent, others were of French

[1] Throughout this paper I have used the term Irish Protestant rather than the commonly used, but erroneously designated, "Scotch-Irish," as not all Irish Protestants were of Scottish origin, and they did not all come from Northern Ireland. Moreover, it is a matter of historical record that no distinction was made among the Irish immigrants in the colonial period. They were all considered, and thought of themselves, regardless of sectarian differences, as Irish. The fictitious designation, "Scotch-Irish," as a general application to the Irish Protestant, did not make its appearance in the United States until the 1840's. In common with some recent historians, I have followed the historically accurate concept of considering all emigrants from Ireland as possessing common nationality.

extraction, and some were of Welsh, German, Dutch, or Scandinavian origin.

These successive plantations were not, however, as extensive or as successful as was once widely assumed. Despite the wish of the British to remove the native Irish, it was soon discovered that they constituted a source of labor and were, in the absence of enough settlers, needed as tenants and workers on the new lands. Even under the harsh decrees of Cromwell, there was no total displacement of the native population. Those native Irish remaining in Ulster after the plantations lived, to be sure, in a precarious position, surrounded as they were by people of varying faiths and dispositions. Many of the native Irish adopted the religions of the new settlers, perhaps not by choice as much as by a sense of necessity, since their own religion was proscribed and severe penalties were inflicted for any variance from the law. To what extent the new settlers intermarried with the native stock is a moot question. No records exist to support adequately a claim for or against such occurrences. It would appear that, subsequent to the Reformation, the new settlers kept to themselves. At the same time, it would seem plausible, considering the remarkable absorptive quality of the Irish, that some intermarriages must have taken place. It is, after all, one of the great themes of Irish history that all would-be conquerors have been conquered in turn by mixing with the native population and adopting native customs and manners. This was the case with the Normans, the Danes, and several other invaders. In any event, it was not long before the new arrivals became "Hiberniores Hibernicis ipsis"—more Irish than the Irish.

This turning against the British was brought about by several economic and religious measures which were directed against the thriving Protestants of Ireland. The details of these restrictive and oppressive measures are not important except that they caused a mass migration of these Irish to the colonies, especially to the frontier regions of Pennsylvania, Virginia, and the Carolinas, where land was, if not free, cheap. By 1730, Pennsylvania had townships named Derry, Donegal, Tyrone, Coleraine, and Fermanagh. In 1722, Londonderry, New Hampshire was founded, and in 1770, Belfast, Maine was established. Derry, New Hampshire, once part of Londonderry, was founded by Irish Protestants in 1827. Similar Irish settlements occurred in Virginia where some areas were known simply as the "Irish Tract" and the "Irish Settlement."

Irish settlers were found in almost every colony, but it was the frontier regions of Pennsylvania, Virginia, and the Carolinas that received the greatest number. The Irish Protestants, according to Paul A. W. Wallace, author of *Pennsylvania: Seed of a Nation*, "moved across the ranges in full self-reliance, felling trees and Indians with equal aggressiveness, running up log houses, schools, and churches, distilling whiskey as a medium of exchange." Between 1739 and the Revolution it is estimated that 65,000 Irish had settled in the mountainous area of North Carolina, and between 1728 and 1776 it is estimated that eighty-five thousand Irish were in Pennsylvania. In 1790, when the first census was taken, there were about a hundred thousand in Pennsylvania and more than 200,000 in the nation had Ulster origins. Exact figures are impossible to obtain but it has been estimated that of a total white population of 3,172,444 in 1790, at least 6.0 per cent were from Northern Ireland (Ulster), and 3.7 percent from Southern Ireland.

So numerous were these Irish that soon several societies were formed to assist the new immigrant. One of the most interesting of these societies was the Charitable Irish Society of Boston, founded in 1737 by twenty-six members of the Presbyterian Church of Long Lane. Among the early members, who described themselves as "of the Irish nation," were the father and the uncle of General Henry Knox, Chief of Artillery during the American Revolution and, later, the first United States Secretary of War. The general and his son later became members. General Knox was also a member of the Friendly Sons of St. Patrick of Philadelphia. It is of further interest to note that in 1833 Andrew Jackson, the seventh President of the United States, and the son of immigrants from County Antrim, visited Boston and was greeted by the Society. Jackson's reply was as follows: "I feel grateful, sir, at the testimony of respect shown me by the Charitable Irish Society of this city. It is with great pleasure that I see so many of the country men of my father assembled on this occasion. I have always been proud of my ancestry and of being descended from that noble race." It should also be noted that Jackson joined the Hibernian Society of Philadelphia in 1819.

Another Irish society was the Friendly Sons of St. Patrick of Philadelphia, founded on March 17, 1771. The first president was Stephen Moylan, whose brother was a Catholic bishop. The second president of the society was John M. Nesbitt, an Ulster Presbyterian. Among the early members were generals Richard Butler from Dublin, Edward Hand from King's County, and William Irvine from Fermanagh. John Dunlap of Strabane, County Tyrone, printed to the Continental Congress and the first to print the Declaration of Independence, was also a member. In 1780, the Friendly Sons raised $103,500 for the purchase of supplies for the Continental Army. In 1803 the Benevolent Hibernian Society of Baltimore was established. The first president was Dr. John Campbell White, an Episcopalian who fled Belfast after the failure of the United Irishmen in the revolt of 1798.

When the American Revolution began, the Irish Protestants, with their long memories of British injustices, were in the forefront of opposition, not only in the colonies, but also in Ireland. In June of 1776, for example, Horace Walpole declared that "all Ireland is America mad," and Lord Shelburne wrote from his estate in Kerry that the customary toast of the Protestant Irish was "Success to the Americans." Irish enlistments in the Continental Army reached such proportions that General Henry Lee is said to have remarked that the Line of Pennsylvania should be called the Line of Ireland. Officers of Irish birth soon appeared in the army and some rose to high rank. General Andrew Lewis, for example, the victor of the Battle of Point Pleasant in 1774, was born in Donegal, as was General Richard Montgomery, who was killed leading the attack on Quebec in 1776.

Other generals of Irish birth include William Thompson of Londenderry, William Irvine of Fermanagh, and Edward Hand of King's County. Irish-born officers of lesser rank abounded. One of the most interesting of these was Colonel Thomas Proctor of Longford, who raised the first artillery company in Pennsylvania and was, next to Knox, the most distinguished artillery officer of the Revolution. Proctor also had the somewhat dubious distinction of being satirized by Major Andre in his poem "The Cow Chace":

> Sons of distant Delaware
> And still remoter Shannon,
> And Major Lee with honor rare,
> And Proctor with his cannon.

Many of the Continental officers were descendants of Irish emigrants. General Henry Knox's ancestors came from County Antrim and "Mad Anthony" Wayne's parents came from Ulster. The leader of the American forces at the Battle of King's Mountain in 1780 was Col. William Campbell, whose family came from Ulster. In several other actions on the frontiers, the Irish, who did not particularly care for the military discipline of the regular army, excelled in what was essentially guerrilla warfare. There was, for example, a large proportion of Irish among the members of the George Rogers Clark expedition into the Illinois country in 1778–79. The expedition captured several important British posts and halted, at least temporarily, Indian raids along the frontier.

Irish Protestants were equally as active in the political sphere. In several colonies the first overt political resistance against the British came from the Irish Protestants. In May 1775, for example, the Irish Presbyterians of Mecklenburg County, North Carolina, adopted a resolution which was tantamount to a declaration of independence. In May 1775 the Irish in Hannastown, Pennsylvania, adopted the Westmoreland Declaration, a statement of protest and opposition to the acts of the British. On July 4, 1776, the Irish at Pine Creek, Pennsylvania, adopted their own declaration of independence. In Virginia, the Irish sent supplies to the beseiged port of Boston and issued resolutions supporting the American cause.

Many of these Irish became members of provincial councils, committees of various kinds, and, in at least a few cases, the Continental Congress. Four of the signers of the Declaration of Independence were born in Ireland: George Taylor of Pennsylvania, an Episcopalian, was born in Ulster; James Smith of Pennsylvania, a Presbyterian, was born in Ulster; George Thornton of New Hampshire, a Congregationalist, was born in Derry; and Charles Thomson, the "perpetual secretary" of the Continental Congress, was born in Derry. Several other signers of the Declaration were of Irish ancestry: Robert Treat Paine of Maine, Thomas Lynch of South Carolina, Thomas Nelson of Virginia, George Read of Delaware, and Edward Rutledge of South Carolina.

So prevalent was the participation of the Irish Protestants in the Revolution, especially that of the Presbyterians, that it is no wonder that King George is said to have remarked that the American Revolution was "a Presbyterian war." With a little more humor, Horace Walpole once said in Parliament that "there is no use crying about it. Cousin America has run off with a Presbyterian parson, and that is the end of it."

The Constitutional Convention of 1787 again saw the participation of Irish Protestants. From Maryland came the Presbyterian James McHenry, born in Balymena, County Antrim. From New Jersey came the Presbyterian William Paterson, born in County Antrim, and from South Carolina came the Episcopalian Pierce Butler, born in County Carlow.

Emigration from Ireland was brought to a halt with the outbreak of the American Revolution. In 1783, emigrant traffic once again flowed from Irish ports, although not in the same volume as before. The reasons for emigrating remained largely the same, that is, economic and religious. To these was added a third, political discontent, and emigration reached a peak with the collapse of the 1798 revolt of the United Irishmen. Irish emigration continued for several years but was once again stopped by the entry of the United States into the War of 1812.

Unlike their predecessors, these Irish remained in the cities where they began to exert a political influence by joining the newly formed Democratic-Republican party of Thomas Jefferson. Hostility to Great Britain remained, however, and some of the most vociferous opposition to the Jay Treaty of 1794 came from Irish immigrants. The alliance of the immigrants, especially the Irish, with the Jeffersonians, soon convinced the Federalists that some measures would have to be taken to curb the influence of the new voter. Harrison Gray Otis of Massachusetts thought that unless means were taken to prevent the "indiscriminate admission of wild Irishmen and others to the right of suf-

frage" there would "soon be an end to liberty and property." Uriah Tracy, a Connecticut Federalist, put it a little more forcefully when he characterized the Irish as "United Irishmen, Free Masons, and the most God-provoking Democrats this side of Hell."

Federalist hostility to the new immigrants and their allegiance to the Jeffersonians resulted in the passage in 1798 of the Alien and Sedition Acts. These acts attempted to curb the influence of the Irish and other immigrants at the polls and in the press. Several editors and others were imprisoned under these acts, including Matthew Lyon of County Wicklow, William Duane of County Tipperary, and John Daly Bank.

These acts, however, resulted only in further entrenching the Irish and other immigrants in the Democratic-Republican party, and it is thought that the influence of the Irish may have been a decisive factor in electing Jefferson in 1800. In New York City in particular, Jefferson received the support of almost all the Irish and French voters. Irish participation in politics continued with some variations as the parties developed. In 1812, for example, the chief spokesman for the Democratic-Republican Madison, fourth President of the United States, was Thomas Addis Emmet, a Presbyterian from Cork. Madison's rival, the Federalist De Witt Clinton, later governor of New York, was supported by John Binns, an Irish Protestant from Dublin.

In some ways the War of 1812 marked a turning point in the history of Irish emigration. The Irish were, of course, loyal to the American cause. Memories of the abortive 1798 revolt and the practice of impressment reinforced the tradition of hostility to Great Britain. Many Irish had by this time considered themselves Americans and had dropped any reference to national origins. The one distinguishing factor among all the Irish, new and old, was "A common loyalty to America."

One other characteristic of the Irish at this time is worth mentioning, and that is that "immigrants from every part of Ireland shared a sense of fellow-feeling." They were "content to be simply Irishmen, collaborating in politics, sharing newspapers like the New York *Shamrock*, and joining in such benevolent organizations as the Friendly Sons of St. Patrick." This group-consciousness was noted years later, in 1897, by Rev. J. Gray Bolton, a Presbyterian clergyman of Philadelphia, when he said that "The Irish Catholic and the Irish Presbyterian have more than once stood together for liberal government in Ireland. And the Irish Presbyterian and the Irish Catholic stood together here when Washington was leading the people from the yoke of oppressive taxation without representation."

A glance at the ancestries of American presidents reveals three whose parents were born in Ireland. Andrew Jackson, the first of these presidents, was the Presbyterian son of parents born in County Antrim. James Buchanan was a Presbyterian whose father came from Donegal. Chester Arthur was an Episcopalian whose father came from County Antrim. This list of presidents of Irish Protestant ancestry could be extended (depending on how far back one wanted to count national origins, how important one considered any trace of Irish origin, or how much weight one assigned to a tincture of Irish Protestantism) to include James K. Polk, Andrew Johnson, Ulysses Grant, Grover Cleveland, Benjamin Harrison, William McKinley, Woodrow Wilson, Warren Harding, Harry Truman, and Richard Nixon.

Considering the extent and length of Irish Protestant immigration, it would be a fairly simple matter to amass a list of notable achievers with at least some of this background. In truth, however, this would be a mixture of the good, the bad, and the indifferent. In the final analysis, the heritage of the Irish Protestants lies not in the mere listing of individual achievements, some of dubious importance, as much as it does, in a broad and sometimes intangible sense, in the influence of this group on American education, religion, and politics.[2]

The Irish have always had a keen appreciation of the importance of education, and the Irish Protestants were no exception. This deep interest in learning was especially true of the Irish Presbyterians. In 1726, for example, Rev. William Tennent of County Armagh established the famous "Log College" at Neshaminy in Bucks County, Pennsylvania. This educational forerunner of many similar institutions was designed to provide a trained ministry for the burgeoning Presbyterian population and has been termed "the first literary institution above the common schools in Pennsylvania." Presbyterian zeal in education is further evidenced by the fact that they were instrumental in founding 49 of the 207 permanent colleges established in the United States before the Civil War.

The Irish Presbyterians were especially active in tending to the spiritual needs of the new immigrant. In 1706, Francis Makemie of County Donegal organized the first Presbytery in Philadelphia. Makemie is considered to be the founder of Presbyterianism in America. Other Presbyteries were soon established as, for example, the first New England Presbytery (Londonderry) in 1729, and the Pennsylvania Presbytery (Donegal) in 1732.

Other Irish Protestants were equally as active in establishing religious institutions. In 1768 a group of Irish Methodists, led by Philip Embury of Ballingrane, County Limerick, established the Wesley chapel in New York City, the first Methodist Church in America. Embury was a descendant of German Protestants who came to Ireland to escape the persecution of Loius XIV. In 1792, James O'Kelly seceded from the Methodist Episcopal Church and established the first Republican Methodist Church in Virginia and North Carolina.

Irish Protestants were also in the vanguard of many moves toward a liberalization of society. In 1780, for example, George Bryant, a Dublin Presbyterian and a Pennsylvania delegate to the Continental Congress, was one of the main authors of the Pennsylvania law freeing the slaves. Years before the beginning of the abolition movement, slaveholders were denied communion by the Reformed Presbyterians of South Carolina and east Tennessee.

Perhaps the story of the Irish Protestant in America can best be summarized by the epitaph, in Latin, on the tombstone of Captain Henry Parkinson, quartermaster of Stark's Regiment during the American Revolution and teacher, of Canterbury, New Hampshire:

"Hibernia begot me, Columbia nurtured me, Nassau Hall taught me. I have fought, I have taught. I have labored with my hands."

[2] I have refrained from compiling a list of each and every Irish Protestant who happened to achieve some rank or importance in the Congress, the courts, State legislatures, or governors' offices. To do so would be, in the words of James G. Leyburn, author of *The Scotch-Irish: A Social History*, "misleading," as it assumes "their achievement resulted from some mysterious genetic quality transmitted from generation to generation" or that their "culture was so uniform and integrated that it necessarily resulted in political leadership." An additional danger is, again according to Leyburn, that "Some of the officials catalogued in the eulogies have actually been more notable for their deficiencies than for their laudable qualities; moreover, other ancestral strains had long since intermixed . . . and might easily be claimed as causative."

ORDER FOR RECESS UNTIL 3 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, when the Senate completes its business today, it stand in recess until the hour of 3 o'clock tomorrow afternoon.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

APPOINTMENT BY THE VICE PRESIDENT

The PRESIDING OFFICER. The Chair, on behalf of the Vice President, pursuant to Senate Resolution 221, 95th Congress, appoints the following Senators to the study on U.S. economic and security interests in Latin America: The Senator from South Carolina (Mr. HOLLINGS), chairman; the Senator from Nevada (Mr. CANNON); the Senator from Texas (Mr. BENTSEN); the Senator from Illinois (Mr. STEVENSON); and the Senator from Virginia (Mr. SCOTT).

ORDER OF PROCEDURE

Mr. ROBERT C. BYRD. Mr. President, I inquire whether or not there are any Senators who wish to speak further today on the pending matter.

Does the distinguished acting minority leader know of anybody on his side?

Mr. TOWER. I know of nobody on our side.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene tomorrow at 3 p.m. At 4 p.m., the clerk will establish a quorum under the rule. Following the establishment of a quorum, the automatic rollcall vote will occur on the motion to invoke cloture.

RECESS

Mr. ROBERT C. BYRD. If there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until the hour of 3 p.m.

The motion was agreed to; and, at 5:31 p.m., the Senate recessed until tomorrow, Tuesday, August 2, 1977, at 3 p.m.

NOMINATIONS

Executive nominations received by the Senate August 1, 1977:

DEPARTMENT OF JUSTICE

Juan G. Blas, of Guam, to be U.S. marshal for the district of Guam for the term of 4 years, vice John T. San Agustin.

Wallace P. Bowen, of Oregon, to be U.S. marshal for the district of Oregon for the term of 4 years, vice Everett R. Langford, term expired.

Bernal D. Cantwell, of Kansas, to be U.S. marshal for the district of Kansas for the term of 4 years, vice Jack V. Richardson.

Donald D. Forsht, of Florida, to be U.S. marshal for the southern district of Florida for the term of 4 years (reappointment).

Carl W. Gardner, of Oklahoma, to be U.S. marshal for the northern district of Oklahoma for the term of 4 years, vice Harry Connolly.

James I. Hartigan, of Massachusetts, to be U.S. marshal for the district of Massachusetts for the term of 4 years, vice John A. Birknes, Jr., resigned.

Louis J. Soscia, of New York, to be U.S. marshal for the eastern district of New York for the term of 4 years, vice Benjamin F. Butler, resigned.

SECURITIES AND EXCHANGE COMMISSION

Roberta S. Karmel, of New York, to be a member of the Securities and Exchange Commission for the term expiring June 5, 1981, vice A. A. Sommer, Jr.

IN THE ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. George Gordon Cantlay, [redacted], U.S. Army.

Maj. Gen. Charles Calvin Pixley, [redacted] Army of the United States (brigadier general, Medical Corps, U.S. Army) for appointment as The Surgeon General, U.S. Army, with the grade of lieutenant general, under the provisions of title 10, United States Code, section 3036.

The following-named Army Medical Department officers for temporary appointment in the Army of the United States, to the grades indicated, under the provisions of title 10, United States Code, sections 3442 and 3447:

To be major general, Medical Corps

Brig. Gen. Spencer Beal Reid, [redacted], Army of the United States (colonel, Medical Corps, U.S. Army).

Brig. Gen. George Ivan Baker, [redacted], Army of the United States (colonel, Medical Corps, U.S. Army).

Brig. Gen. William Sinclair Augerson, [redacted] Army of the United States (colonel, Medical Corps, U.S. Army).

To be brigadier general, Medical Corps

Col. Quinn Henderson Becker, [redacted], Medical Corps, U.S. Army.

Col. William Raymond Dwyre, [redacted], Medical Corps, U.S. Army.

Col. Edward James Huycke, [redacted], Medical Corps, U.S. Army.

The following-named Army Medical Department officers for appointment in the Regular Army of the United States, to the grades indicated, under the provisions of title 10, United States Code, sections 3284, 3306 and 3307:

To be major general, Medical Corps

Maj. Gen. William Albert Boyson, [redacted] Army of the United States (brigadier general, Medical Corps, U.S. Army).

Maj. Gen. Charles Calvin Pixley, [redacted] Army of the United States (brigadier general, Medical Corps, U.S. Army).

To be brigadier general, Medical Corps

Brig. Gen. Spencer Beal Reid, [redacted], Army of the United States (colonel, Medical Corps, U.S. Army).

Brig. Gen. George Ivan Baker, [redacted], Army of the United States (colonel, Medical Corps, U.S. Army).

Maj. Gen. Kenneth Ray Dirks, [redacted], Army of the United States (colonel, Medical Corps, U.S. Army).

IN THE AIR FORCE

The following-named officers for promotion in the Regular Air Force, under the appropriate provisions of chapter 835, title 10, United States Code, as amended. All officers are subject to physical examination required by law:

LINE OF THE AIR FORCE

First lieutenant to captain

Abadie, Peter J., [redacted].
Aberle, John R., [redacted].
Abrami, John R., [redacted].
Abshere, Philip M., [redacted].
Acquaviva, James F., [redacted].
Acuff, Gregory M., [redacted].
Adams, Terry R., [redacted].
Adams, Wayland K., [redacted].
Adams, Wiley F., [redacted].
Agnew, Richard H., Jr., [redacted].
Ahern, Edward J., [redacted].
Albright, Kenneth R., Jr., [redacted].
Alexander, Dana L., [redacted].
Alexander, John W., [redacted].
Alford, Truman G., Jr., [redacted].
Alford, William L., [redacted].
Allen, Danny R., [redacted].
Allen, Lindsey E., [redacted].
Allen, Michael D., [redacted].
Allen,(Robert K., [redacted].
Allison, Kenneth L., [redacted].
Allison, Michael W., [redacted].
Allison, Steven R., [redacted].
Allyn, Ronald C., [redacted].
Almond, Daniel L., [redacted].
Alonso, Francis A., [redacted].
Altobelli, Anthony, [redacted].
Amos, David E., [redacted].
Anderl, Robert S., [redacted].
Andersen, Paul C., [redacted].
Anderson, Donald C., [redacted].
Anderson, Glenn E., Jr., [redacted].
Anderson, Mark C., [redacted].
Anderson, Nolan H., Jr., [redacted].
Anderson, Robert D., [redacted].
Andrew, Myron C., [redacted].
Angle, George M., Jr., [redacted].
Apel, William A., [redacted].
Armbrust, Gregory N., [redacted].
Armstrong, Russell A., [redacted].
Arnold, Andrew L., [redacted].
Arnold, Carlton L., [redacted].
Ashcraft, Joe C., [redacted].
Ashura, Patrick J., [redacted].
Atkinson, John M., [redacted].
Atwood, Eugene G., [redacted].
Austin, Robert A., [redacted].
Autry, Larry D., [redacted].
Avallone, Joseph A., [redacted].
Avramovich, Jim L., [redacted].
Ayres, Harrison G., Jr., [redacted].
Bach, Michael J., [redacted].
Bachman, Robert G., [redacted].
Backlund, Donald R., [redacted].
Bachman, Stephen M., [redacted].
Bader, Walter L., Jr., [redacted].
Baethge, Jonathan D., [redacted].
Bagley, Ronald L., [redacted].
Bagwell, Terry D., [redacted].
Bailey, Burnell W., [redacted].
Bailey, Jefferson M., [redacted].
Bailey, Larry A., [redacted].
Bailey, Marcus D., [redacted].
Baker, Glenn F., [redacted].
Baker, Jack T., [redacted].
Baker, Robert D., [redacted].
Baker, Robert F., [redacted].
Baker, Robert W., [redacted].
Baker, Rodney W., [redacted].
Baker, William P., [redacted].
Bakken, Lloyd A., [redacted].
Balcom, Cecil G., [redacted].
Ballard, Michael W., [redacted].
Ballas, Richard D., [redacted].
Baltzer, Robert L., [redacted].
Bang, Stephen B., [redacted].
Bangs, Daniel P., [redacted].
Banks, Dale M., [redacted].
Banks, Reginald I., [redacted].
Banks, Robert K., [redacted].
Banner, Clifden A., [redacted].
Bante, Thomas M., Jr., [redacted].
Baptiste, Samuel J., [redacted].

Rivas, Bernice N., xxx-xx-xxxx
Robishaw, Linda K., xxx-xx-xxxx
Roe, Barbara J., xxx-xx-xxxx
Schaub, Christine B., xxx-xx-xxxx
Schermerhorn, Linda C., xxx-xx-xxxx
Slater, Janet L., xxx-xx-xxxx
Smith, Janice A., xxx-xx-xxxx
Stone, Donna M., xxx-xx-xxxx
Strobel, Evelyn A., xxx-xx-xxxx
Stroup, Reeda M., Jr., xxx-xx-xxxx
Thompson, Esther A., xxx-xx-xxxx
Toms, Carol A., xxx-xx-xxxx
Tubac, Gregory, xxx-xx-xxxx
Vallot, Harold J., Jr., xxx-xx-xxxx
Weatherford, Edith E., xxx-xx-xxxx
Weckerle, Lynnette C., xxx-xx-xxxx
Wesolowski, Jean A., xxx-xx-xxxx
Widmer, Ann K., xxx-xx-xxxx
Woehr, Elsie L., xxx-xx-xxxx

MEDICAL SERVICE CORPS

Adams, Donald D., Jr., xxx-xx-xxxx
Agler, William B., III, xxx-xx-xxxx
Barrett, John F., xxx-xx-xxxx
Barton, Donald E., xxx-xx-xxxx
Bezanson, Robert H., xxx-xx-xxxx
Camacho, David A., xxx-xx-xxxx
Chamberlain, Richard T., xxx-xx-xxxx
Coleman, James L., xxx-xx-xxxx
Deel, David I., xxx-xx-xxxx
Didio, Nicholas, II, xxx-xx-xxxx
Evans, John E., xxx-xx-xxxx
Ferguson, Richard W., xxx-xx-xxxx
Grabfelder, Michael I., xxx-xx-xxxx
Hart, Gregory P., xxx-xx-xxxx
Havel, Glenn E., xxx-xx-xxxx
Jones, Ronald D., xxx-xx-xxxx
Lamarine, David A., xxx-xx-xxxx
McKee, Timothy C., xxx-xx-xxxx
Myers, Robert P., xxx-xx-xxxx
Noblett, Allan J., xxx-xx-xxxx
Paul, Samuel J., xxx-xx-xxxx
Paulsen, Norman W., xxx-xx-xxxx
Peedin, Floyd R., xxx-xx-xxxx
Phillips, Roger D., xxx-xx-xxxx
Power, John D., xxx-xx-xxxx
Ray, Norman S., xxx-xx-xxxx
Rupp, Joseph L., Jr., xxx-xx-xxxx
Rutherford, Randy J., xxx-xx-xxxx
Schmitt, Karl F., xxx-xx-xxxx
Scott, Jerry L., xxx-xx-xxxx
Shaw, William D., xxx-xx-xxxx
Snell, George O., xxx-xx-xxxx
Soltman, Donald J., Jr., xxx-xx-xxxx
Storey, Richard C., Jr., xxx-xx-xxxx
Young, Charles R., xxx-xx-xxxx

VETERINARY CORPS

Bakarich, Alexandra C., xxx-xx-xxxx
Dencon, Daniel A., Jr., xxx-xx-xxxx

BIOMEDICAL SCIENCE

Adams, Thomas R., xxx-xx-xxxx
Artiglia, Edward W., xxx-xx-xxxx
Ashby, Willard E., xxx-xx-xxxx
Biery, Terry L., xxx-xx-xxxx
Binovi, Robert D., xxx-xx-xxxx
Bojarski, Richard J., xxx-xx-xxxx
Bonillalinero, Francisco, xxx-xx-xxxx
Edwen, Corinne K., xxx-xx-xxxx
Braedlein, Russell G., Jr., xxx-xx-xxxx
Brocks, Robert N., xxx-xx-xxxx
Burchfield, Brian A., xxx-xx-xxxx
Burdick, Robert W., xxx-xx-xxxx
Clapper, Roy L., xxx-xx-xxxx
Clark, Dwight E., xxx-xx-xxxx
Crosby, Ray M., xxx-xx-xxxx
Dennis, Richard J., xxx-xx-xxxx
Duncan, Bernard J., xxx-xx-xxxx
Erickson, Bruce E., xxx-xx-xxxx
Fate, William H., xxx-xx-xxxx
Hale, Forrest B., xxx-xx-xxxx
Hall, Doreen N., xxx-xx-xxxx
Hartgraves, Stanley L., xxx-xx-xxxx
Hill, Ronald C., xxx-xx-xxxx
Jenkins, Leslie G., xxx-xx-xxxx
Kleinkort, Joseph A., xxx-xx-xxxx
Maloney, David W., xxx-xx-xxxx
Marshall, Franklin L. III, xxx-xx-xxxx
McCloy, David L., xxx-xx-xxxx
Miller, Robert E. II, xxx-xx-xxxx
Neill, Marvin W., xxx-xx-xxxx

Adams, Eural E., xxx-xx-xxxx
Adams, Paul L., xxx-xx-xxxx
Adcock, Thomas G., xxx-xx-xxxx
Addicott, Charles W., xxx-xx-xxxx
Aicken, Larry B., xxx-xx-xxxx
Ainsworth, Robert L., xxx-xx-xxxx
Akin, George H., xxx-xx-xxxx
Akiyama, Frank M., xxx-xx-xxxx
Albright, Anthony F., xxx-xx-xxxx
Aldrup, Earl W., xxx-xx-xxxx
Alexander, Joseph E., xxx-xx-xxxx
Allen, Robert C., xxx-xx-xxxx
Allen, William L., xxx-xx-xxxx
Allison, Robert H., xxx-xx-xxxx
Alsheimer, Robert H., xxx-xx-xxxx
Amaral, David J., xxx-xx-xxxx
Ambrosino, Richard, xxx-xx-xxxx
Amerson, Hinton S., xxx-xx-xxxx
Anderson, Curtis E., xxx-xx-xxxx
Anderson, David P., xxx-xx-xxxx
Anderson, Ralph O., xxx-xx-xxxx
Andreacchio, Nichol, xxx-xx-xxxx
Anglin, Richard C., xxx-xx-xxxx
Annette, Robert W., xxx-xx-xxxx
Apperson, Jack A., xxx-xx-xxxx
Archer, Caleb J., xxx-xx-xxxx
Archer, James H., xxx-xx-xxxx
Areheart, Henry W., xxx-xx-xxxx
Armstrong, Hart R., xxx-xx-xxxx
Armstrong, James S., xxx-xx-xxxx
Arnold, Bruce D., xxx-xx-xxxx
Ault, James W., xxx-xx-xxxx
Austin, Thomas A., xxx-xx-xxxx
Aylward, James J., xxx-xx-xxxx
Bachmann, Robert R., xxx-xx-xxxx
Baeb, David E., xxx-xx-xxxx
Bailey, Robert S., xxx-xx-xxxx
Baird, Richard J., xxx-xx-xxxx
Baker, Roger M., xxx-xx-xxxx
Baldwin, George R., xxx-xx-xxxx
Baldwin, Richard B., xxx-xx-xxxx
Banner, Thomas A., xxx-xx-xxxx
Barborak, Franklin, xxx-xx-xxxx
Barisano, Louis, xxx-xx-xxxx
Barker, Bob L., xxx-xx-xxxx
Barber, Rex N., xxx-xx-xxxx
Barlow, Donald J., xxx-xx-xxxx
Barnes, James M., xxx-xx-xxxx
Barnes, John L., xxx-xx-xxxx
Barnum, Robert C., xxx-xx-xxxx
Barrett, Jonathan R., xxx-xx-xxxx
Barron, James B. xxx-xx-xxxx
Barry, Arthur A., xxx-xx-xxxx
Bartlett, Gerald T., xxx-xx-xxxx
Bates, Donald E., xxx-xx-xxxx
Bayruns, Paul C., xxx-xx-xxxx
Beasley, Benjamin B., xxx-xx-xxxx
Beatty, Robert C., xxx-xx-xxxx
Beben, Joseph A., xxx-xx-xxxx
Bedsole, William K., xxx-xx-xxxx
Behm, Peter S., xxx-xx-xxxx
Beitz, Charles A., xxx-xx-xxxx
Bell, William E., xxx-xx-xxxx
Bellamy, Bruce M., xxx-xx-xxxx
Bennett, Ferrell R., xxx-xx-xxxx
Bennett, Lester E., xxx-xx-xxxx
Beran, Joseph J., xxx-xx-xxxx
Berg, George A., xxx-xx-xxxx
Bergson, Richard W., xxx-xx-xxxx
Bernd, Roy B., xxx-xx-xxxx
Berner, John J., xxx-xx-xxxx
Bernstein, Donald I., xxx-xx-xxxx
Berry, William W., xxx-xx-xxxx
Best, Darrell E., xxx-xx-xxxx
Bethke, Gerald H., xxx-xx-xxxx
Betke, Herman R., xxx-xx-xxxx
Betters, Richard B., xxx-xx-xxxx
Bickley, James B., xxx-xx-xxxx
Bieri, Leon D., xxx-xx-xxxx
Biesenbach, Donald, xxx-xx-xxxx
Bird, Max R., xxx-xx-xxxx
Bisch, Frederick R., xxx-xx-xxxx
Bisping, Jack F., xxx-xx-xxxx
Bizzell, Word G., xxx-xx-xxxx
Black, Calvin D., xxx-xx-xxxx
Black, Clinton H., xxx-xx-xxxx
Blakeley, David C., xxx-xx-xxxx
Blanck, John E., xxx-xx-xxxx
Blascak, Donald W., xxx-xx-xxxx
Bloomfield, John E., xxx-xx-xxxx
Blubaugh, Thomas C., xxx-xx-xxxx
Boddie, Raymond B., xxx-xx-xxxx
Boiani, Peter J., xxx-xx-xxxx
Boivin, Arcade G., II, xxx-xx-xxxx
Bokovoy, Jon E., xxx-xx-xxxx
Boll, Albert F., xxx-xx-xxxx
Bonner, Benjamin J., xxx-xx-xxxx
Bonta, Stanley G., xxx-xx-xxxx
Boone, Howard, xxx-xx-xxxx
Boose, Howard R., xxx-xx-xxxx
Boren, Charles M., xxx-xx-xxxx
Borer, Robert S., xxx-xx-xxxx
Borgstrom, Richard, xxx-xx-xxxx
Bostancic, James F., xxx-xx-xxxx
Bourland, James M., xxx-xx-xxxx
Bowden, John J., xxx-xx-xxxx
Bower, George L., xxx-xx-xxxx
Bowman, Donald C., xxx-xx-xxxx
Boyd, Eugene T., xxx-xx-xxxx
Boyd, Richard F., xxx-xx-xxxx
Boyle, Ernest W., xxx-xx-xxxx
Boyle, James A., xxx-xx-xxxx

Braa, Emery W., xxx-xx-xxxx.
Brackett, John R., xxx-xx-xxxx.
Brannen, Barney L., xxx-xx-xxxx.
Brassfield, Bobbie, xxx-xx-xxxx.
Brasuell, Perry T., xxx-xx-xxxx.
Brazeale, Charles R., xxx-xx-xxxx.
Breen, James H., xxx-xx-xxxx.
Briggs, Charles F., xxx-xx-xxxx.
Briggs, Richard S., xxx-xx-xxxx.
Brill, James H., xxx-xx-xxxx.
Brill, Ronald R., xxx-xx-xxxx.
Bringham, John L., xxx-xx-xxxx.
Britt, Albert S., xxx-xx-xxxx.
Brittain, Richard T., xxx-xx-xxxx.
Brock, Jeffrey D., xxx-xx-xxxx.
Brockway, Lawrence, xxx-xx-xxxx.
Bronson, Richard M., xxx-xx-xxxx.

*Ad Interim.

HOUSE OF REPRESENTATIVES—*Monday, August 1, 1977*

The House met at 12 o'clock noon.

The Reverend Samuel A. Stanley, Jr., Walker Chapel, United Methodist Church, Arlington, Va., offered the following prayer:

Great God, we give thanks that You have called us to serve You in the service of our fellow man; that the challenges of each day call for our best in response; that the opportunities for the enrichment of life are ever present.

This day help us to feel Your presence offering guidance as we deal with the issues before us.

Grant us the understanding and wisdom necessary to respond to the needs of one another, of the Nation, and of the peoples of the world in a way that is constructive and supportive.

So lead us, we pray, this day and always, through Jesus Christ who is our Lord and Master. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 317. Concurrent resolution providing for an adjournment of the House from August 5 until September 7, 1977 and an adjournment of the Senate from August 6 until September 7, 1977.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R.

7558) entitled "An act making appropriations for Agriculture and Related Agencies program for the fiscal year ending September 30, 1978, and for other purposes," and that the Senate agreed to the amendments of the House to the amendments of the Senate numbered 2, 17, 71, 75, 91, 93, 98, and 99 to the foregoing bill.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 705. An act to amend the Public Health Service Act to revise and strengthen the program under that Act for the regulation of clinical laboratories.

The message also announced that the Vice President, pursuant to Public Law 95–24, appointed Mr. PROXMIRE and Mr. GARN to be members, on the part of the Senate, of the National Commission on Neighborhoods.

THE REVEREND SAMUEL A. STANLEY, JR.

(Mr. TRIBLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TRIBLE. Mr. Speaker, I know we have all been inspired by the beautiful prayer just offered by our visiting chaplain, the Reverend Samuel Allen Stanley, Jr., and on behalf of my colleagues I want to express my appreciation to Reverend Stanley for getting us off to such a good start on a week that is sure to be onerous, at best, important to the future of this Nation.

Reverend Stanley has very recently come to the Capitol area from a ministry with the First United Methodist Church in Hampton, Va., where he was held in fond esteem by many of my constituents. He was called to the Walker Chapel United Methodist Church in Arlington a few weeks ago. However, Reverend Stanley, or "Sam," as he asks everyone to call him, is a native of Roanoke, Va., and I express these greetings on behalf of my colleague, Representative CALDWELL BUTLER, who regretted that he could not be here to do it in person.

Reverend Stanley's wife, the former Ruth O. Smith, his mother, Mrs. Eva Margaret Stanley of Roanoke, and other members of the family, can take justifiable pride in this great moment in Reverend Sam's life of Christian commitment.

Mr. Speaker, I ask unanimous consent to revise and extend my remarks, and I ask the same permission for all other Members who may care to.

CONSENT CALENDAR

The SPEAKER. This is Consent Calendar Day. The Clerk will call the only bill on the Consent Calendar.

DIRECTING THE SECRETARY OF THE INTERIOR AND THE ADMINISTRATOR OF GENERAL SERVICES TO CONVEY CERTAIN PUBLIC AND ACQUIRED LANDS IN THE STATE OF NEVADA TO THE COUNTY OF MINERAL, NEV.

The Clerk called the bill (H.R. 4979) to direct the Secretary of the Interior and the Administrator of General Services to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nev.

There being no objection, the Clerk read the bill as follows:

H.R. 4979

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the officer of the United States who has the primary responsibility for the administration of the real property described in this section shall issue to the county of Mineral, State of Nevada, a patent or other instrument of conveyance for such real property, or any portion thereof, upon payment into the Treasury of the United States the appraised value of the parcel to be conveyed: *Provided,* That any of the land described in this section which remains unconveyed to the county of Mineral on and after five years from the date of approval of this Act shall remain the property of the United States and shall no longer be subject to conveyance under this Act.

(1) The following described lands situated in the State of Nevada are hereby made subject to this Act: The west half of the northwest quarter of section 26, township 8 north, range 30 east; the part of the northwest quarter of the southwest quarter of section 26, township 8 north, range 30 east, that is north of the highway 95 right-of-way.

(2) The northwest quarter of the northeast quarter and the east half of the east half of section 25, township 8 north, range 29 east; all of sections 29 and 30, township 8 north, range 30 east.

(3) The part of section 21, township 7 north, range 30 east, that is west of Nevada State Highway Route 31; the north half of the northwest quarter and the southeast quarter of the northwest quarter of section 28, township 7 north, range 30 east; the part of the northeast quarter of section 28, township 7 north, range 30 east, that is west of Nevada State Highway Route 31; the part of section 27, township 7 north, range 30 east, that is west of Nevada State Highway Route 31; the east half of the northwest quarter and the north half of the southeast quarter of section 34, township 7 north, range 30 east; the part of the northeast quarter of section 34, township 7 north, range 30 east, that is west of Nevada State Highway Route 31; the part of section 35, township 7 north, range 30 east, that is west of Nevada State Highway Route 31.

SEC. 2. Upon receipt of a request from the county of Mineral, State of Nevada, for the purchase of a tract of the lands described in section 1 herein, the officer of the United States having primary responsibility for the administration of such lands shall immediately cause the same to be appraised and, upon completion of such appraisal shall notify the county of Mineral of the appraised value of such tract and the county shall have six months from the date of such notice to complete the purchase of such tract by payment of the appraised value into the Treasury of the United States whereupon a patent or other instrument shall be issued conveying such tract to such county subject to valid existing rights and subject to any reservation necessary to protect the continuing use by the United States of real property owned by the United States which is adjacent to the tract conveyed.

SEC. 3. All moneys received from the conveyance of lands under the terms of this Act shall be disposed of in the same manner as moneys received from the sale of public lands, except that moneys received as reimbursement for costs of appraisal, surveys, and extinguishing adverse claims may be used by the Secretary for said purposes without appropriation.

SEC. 4. The lands described in section 1 and subject to conveyance under the terms of this Act shall be segregated from all forms of appropriation under the public land laws including the mining and mineral leasing laws, from and after the date of approval of this Act, until the officer of the United States having primary jurisdiction for the administration of such lands shall provide otherwise as to any interest remaining in the United States by publication of an order in the Federal Register.

With the following committee amendments:

Page 1, strike all of lines 3 and 4 and through "section" on line 5 and insert in lieu thereof: "That the Secretary of the Interior, hereinafter referred to as the 'Secretary',".

Page 2, lines 2 and 3, strike the words "shall remain the property of the United States and".

Page 2, line 14, strike the word "east." and insert in lieu thereof: "east; the north half of the southeast quarter of section 28, township 7 north, range 30 east."

Page 3, lines 7 through 9, strike the words "the officer of the United States having primary responsibility for the administration of such lands" and insert in lieu thereof: "the Secretary".

Page 3, line 17, after the word "rights" insert "and easements of record".

Page 4, strike all of lines 8 and 9 and insert in lieu thereof: "Secretary provides otherwise".

The committee amendments were agreed to.

(Mr. SANTINI asked and was given permission to revise and extend his remarks.)

Mr. SANTINI. Mr. Speaker, H.R. 4979 authorizes the conveyance of approximately 2,620 acres of land to Mineral County, Nev. The lands were previously withdrawn by Executive order for a Naval Ammunition Depot; however, in 1972 the Navy declared the lands to be excess to their needs and requested the Interior Department to return the land to the Bureau of Land Management.

On June 24 the subcommittee received testimony from the BLM. The Associate Director testified that the lands may be difficult and uneconomic to manage if they are returned to BLM and there is no need for the lands for any BLM programs.

Mineral County would like to have the land for resale to attract commercial and industrial business. Since the county is approximately 98 percent federally owned, there is little space available for expansion.

H.R. 4979 would give Mineral County 5 years after the date of enactment in which to purchase portions of or all the parcels described in the bill. At the end of the 5-year period, any lands which were not conveyed would no longer be subject to conveyance under H.R. 4979. By allowing a 5-year period to pur-

chase the lands, the county would not be placed in a financial burden. The county would notify the Secretary of Interior when it wanted to purchase a specific tract, and the Secretary would have the tract appraised. The county would have 6 months after the appraisal to purchase the tract at the fair market value.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "To direct the Secretary of the Interior to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nevada."

A motion to reconsider was laid on the table.

PERMISSION FOR SUBCOMMITTEE ON OVERSIGHT AND INVESTIGATIONS OF COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE TO SIT ON TUESDAY, AUGUST 2, 1977, AND WEDNESDAY, AUGUST 3, 1977, WHILE HOUSE IS IN SESSION

Mr. WAXMAN. Mr. Speaker, I ask unanimous consent that the Subcommittee on Oversight and Investigations of the Committee on Interstate and Foreign Commerce may be authorized to hold hearings solely for the purpose of taking testimony on August 2 and 3, 1977, while the House is in session.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

PERMISSION TO FILE CONFERENCE REPORT ON H.R. 7589, MILITARY CONSTRUCTION APPROPRIATION ACT, 1978

Mr. McKAY. Mr. Speaker, I ask unanimous consent that the managers may have until midnight tonight to file a conference report on H.R. 7589 making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Utah?

There was no objection.

REPORT ON CONCURRENT RESOLUTION PROVIDING FOR PRINTING OF ADDITIONAL COPIES OF REPORT ENTITLED "THE ROLE OF THE FEDERAL GOVERNMENT IN NUTRITION EDUCATION"

Mr. HAWKINS, from the Committee on House Administration, submitted a privileged report (Rept. No. 95–550) on the privileged concurrent resolution (H. Con. Res. 263) providing for the printing of 3,000 additional copies of the report by the Subcommittee on Domestic Marketing, Consumer Relations, and Nutrition of the Committee on Agriculture entitled "The Role of the Federal Government in Nutrition Education," which was referred to the House Calendar and ordered to be printed.

REPORT ON CONCURRENT RESOLUTION PROVIDING FOR PRINTING OF ADDITIONAL COPIES OF SUBCOMMITTEE PRINT ENTITLED "GIVE YOURSELF CREDIT: GUIDE TO CONSUMER CREDIT LAWS"

Mr. HAWKINS, from the Committee on House Administration, submitted a privileged report (Rept. No. 95–551) on the privileged concurrent resolution (H. Con. Res. 241) providing for the printing of 100,000 additional copies of the subcommittee print of the Subcommittee on Consumer Affairs of the Committee on Banking, Finance and Urban Affairs entitled "Give Yourself Credit: Guide to Consumer Credit Laws," which was referred to the House Calendar and ordered to be printed.

REPORT ON CONCURRENT RESOLUTION AUTHORIZING PRINTING OF REVISED EDITION OF "OUR AMERICAN GOVERNMENT" AS A HOUSE DOCUMENT

Mr. HAWKINS, from the Committee on House Administration, submitted a privileged report (Rept. No. 95–552) on the privileged concurrent resolution (H. Con. Res. 205) to authorize the printing of a revised edition of "Our American Government" as a House document, which was referred to the House Calendar and ordered to be printed.

REPORT ON CONCURRENT RESOLUTION AUTHORIZING PRINTING OF REVISED EDITION OF "OUR FLAG" AS A HOUSE DOCUMENT

Mr. HAWKINS, from the Committee on House Administration, submitted a privileged report (Rept. No. 95–553) on the privileged concurrent resolution (H. Con. Res. 204) to authorize the printing of a revised edition of "Our Flag" as a House document, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVIDING FOR REPRINTING OF HOUSE REPORT 94–1688 AND HOUSE REPORT 94–1757

Mr. HAWKINS, from the Committee on House Administration, submitted a privileged report (Rept. No. 95–554) on the privileged resolution (H. Res. 490) to provide for reprinting of House Report 94–1688 and House Report 94–1757 which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVIDING FOR PRINTING OF FINAL REPORT OF AMERICAN INDIAN POLICY REVIEW COMMISSION

Mr. HAWKINS, from the Committee on House Administration, submitted a privileged report (Rept. No. 95–555) on the privileged resolution (H. Res. 608) providing for the printing of the final report of the American Indian Policy Review Commission, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION AUTHORIZING PRINTING AS A HOUSE DOCUMENT OF COMMITTEE PRINT OF SUBCOMMITTEE ON THE CITY OF COMMITTEE ON BANKING, FINANCE AND URBAN AFFAIRS

Mr. HAWKINS, from the Committee on House Administration, submitted a privileged report (Rept. No. 95–556) on the privileged resolution (H. Res. 654) authorizing the printing, as a House document, of a certain committee print of the Subcommittee on the City of the Committee on Banking, Finance and Urban Affairs, which was referred to the House Calendar and ordered to be printed.

PRINTING OF A BROCHURE ENTITLED "HOW OUR LAWS ARE MADE"

Mr. HAWKINS. Mr. Speaker, by direction of the Committee on House Administration, I call up a privileged concurrent resolution (H. Con. Res. 190) to provide for the printing of the brochure entitled "How Our Laws Are Made."

The Clerk read the concurrent resolution, as follows:

H. CON. RES. 190

Resolved by the House of Representatives (the Senate concurring), That the brochure entitled "How Our Laws Are Made", as set out in House Document Numbered 94–509 of the Ninety-fourth Congress, be printed as a House document, with a suitable paperback cover of a style, design, and color, to be selected by the chairman of the Committee on the Judiciary of the House of Representatives, with emendations, and with a foreword by the Honorable Peter W. Rodino, Junior; and that there be printed two hundred and forty-six thousand additional copies, of which twenty-five thousand shall be for the use of the Committee on the Judiciary and the balance prorated to the Members of the House of Representatives.

Mr. HAWKINS. Mr. Speaker, this concurrent resolution provides for the printing of a brochure entitled "How Our Laws Are Made" as a House document. I ask for its approval.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

AUTHORIZING PRINTING OF REVISED EDITION OF "THE CAPITOL" AS A HOUSE DOCUMENT

Mr. HAWKINS. Mr. Speaker, by direction of the Committee on House Administration, I call up a privileged concurrent resolution (H. Con. Res. 222) to authorize the printing of a revised edition of "The Capitol" as a House document.

The Clerk read the concurrent resolution, as follows:

H. CON. RES. 222

Resolved by the House of Representatives (the Senate concurring), That there be printed as a House document a revised edi-

tion of "The Capitol", revised under the direction of the Joint Committee on Printing.

SEC. 2. In addition to the usual number of copies, there shall be printed five hundred and seventy-five thousand additional copies, of which four hundred and forty-two thousand copies shall be for the use of the House of Representatives, one hundred and three thousand copies shall be for the use of the Senate, and thirty thousand copies for the use of the Joint Committee on Printing.

Mr. HAWKINS. Mr. Speaker, the purpose of this resolution is to print a revised edition of "The Capitol" as a House document.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

PRINTING OF REVISED EDITION OF "THE CONSTITUTION OF THE UNITED STATES OF AMERICA"

Mr. HAWKINS. Mr. Speaker, by direction of the Committee on House Administration, I call up a privileged concurrent resolution (H. Con. Res. 217) to provide for the printing of a revised edition of "The Constitution of the United States of America."

The Clerk read the concurrent resolution, as follows:

H. CON. RES. 217

Resolved by the House of Representatives (the Senate concurring), That there is printed as a House document a revised edition of "The Constitution of the United States of America", revised under the direction of the Committee on the Judiciary.

SEC. 2. In addition to the usual number of copies, there shall be printed two hundred and ninety eight thousand additional copies, of which twenty thousand shall be for the use of the Committee on the Judiciary, two hundred and twenty-six thousand five hundred copies for the use of the House of Representatives, and fifty-one thousand five hundred for the use of the Senate.

With the following committee amendment:

Strike out all after the resolving clause and insert:

That there be printed as a House document a revised edition of "The Constitution of the United States of America, as amended", revised under the direction of the Committee on the Judiciary.

SEC. 2. In addition to the usual number of copies, there shall be printed two hundred and ninety-eight thousand additional copies, of which twenty thousand shall be for the use of the Committee on the Judiciary, two hundred and twenty-one thousand five hundred copies for the use of the House of Representatives, fifty-one thousand five hundred for the use of the Senate, and five thousand copies shall be for the use of the Joint Committee on Printing.

The committee amendment was agreed to.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

PRINTING AS A HOUSE DOCUMENT OF PAMPHLET ENTITLED "BLACK AMERICANS IN CONGRESS"

Mr. HAWKINS. Mr. Speaker, by direction of the Committee on House Administration, I call up a privileged concurrent resolution (H. Con. Res. 182) providing for the printing as a House document of the pamphlet entitled "Black Americans in Congress."

The Clerk read the concurrent resolution, as follows:

H. CON. RES. 182

Whereas black Americans have been among this Nation's leadership; and

Whereas this Nation's black leadership has received only limited recognition; and

Whereas the forty-five black Americans who have been elected to Congress over the past century brought with them an impressive array of professional, technical, and political skills; and

Whereas black Americans in the United States Congress have constituted a representative cross section of its total membership—in essence, a Congress in microcosm; and

Whereas black Americans who have served and are serving in the United States Congress are outstanding in their demonstrated ability as public servants and zealous in their constitutional pursuit of justice and equality of opportunity for all, without reference to race, creed or national origin; and

Whereas black Americans in the United States Congress have directed their energies toward promoting the public welfare by developing, introducing, supporting and enacting legislation designed to meet the needs of neglected persons; and

Whereas this corps of black Congresswomen and Congressmen inspires by its precept a deep and basic sense of racial pride and individual worth; and

Whereas the black Members of the House of Representatives conceived and launched the congressional Black Caucus to "promote the public welfare", a function which it has, and continues to, faithfully discharge: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That there be printed as a House document the pamphlet entitled "Black Americans in Congress". Except as provided in section 2 of this concurrent resolution, the document shall be identical to the original pamphlet published pursuant to H. Con. Res. 682, adopted August 30, 1976.

SEC. 2. The material on the inside front cover of such original pamphlet shall be deleted and a copy of this concurrent resolution, excluding this section and sections 3 and 4, shall be printed in lieu thereof. The inside front cover of the document printed pursuant to this concurrent resolution shall be identical in format to the inside front cover of such original pamphlet. The inside back cover of such document shall contain a list of the cosponsors of this concurrent resolution and of any companion concurrent resolutions introduced by the sponsor of this concurrent resolution. In such listing, the party affiliation and the State of residence of each such cosponsor shall be indicated.

SEC. 3. There shall be printed, in addition to the usual number of copies, three hundred twenty-three thousand four hundred copies, of which two hundred sixty-three thousand four hundred copies shall be for the use of the House of Representatives, and sixty thousand copies shall be for the use of the Senate.

SEC. 4. Copies of such document shall be prorated to each Senator and Representatives in, or Delegate or Resident Commissioner to, the Congress for a period of sixty days, after which the unused balance shall revert to the respective Senate and House document rooms. During the sixty-day period beginning on the date the unused balance reverts to the respective document rooms, any Senator and Representative, in or Delegate or Resident Commissioner to, the Congress may draw on the unused balance of the House in which such individual serves for additional copies of the document, but the aggregate number of additional copies drawn during such period by any such individual may not exceed the individual's pro rata share of the unused balance. After that period, any such individual may draw on any unused balance of either House for additional copies of the document without limitation on the number of copies which may be so drawn.

With the following committee amendment: Strike out all after the resolving clause and insert:

That there be printed as a House document the pamphlet entitled "Black Americans in Congress". Except as provided in section 2 of this concurrent resolution, the document shall be identical to the original pamphlet published pursuant to H. Con. Res. 682, adopted August 30, 1976.

SEC. 2. The material on the inside front cover of such original pamphlet shall be deleted and a copy of this concurrent resolution, excluding this section and sections 3 and 4, shall be printed in lieu thereof. The inside front cover of the document printed pursuant to this concurrent resolution shall be identical in format to the inside front cover of such original pamphlet. The inside back cover of such document shall contain a list of the cosponsors of this concurrent resolution and of any companion concurrent resolutions introduced by the sponsor of this concurrent resolution. In such listing, the party affiliation and the State of residence of each such cosponsor shall be indicated.

SEC. 3. There shall be printed, in addition to the usual number of copies, two hundred and thirty-eight thousand six hundred copies, of which one hundred and seventy-six thousand eight hundred copies shall be for the use of the House of Representatives, and sixty-one thousand eight hundred copies shall be for the use of the Senate.

SEC. 4. Copies of such document shall be prorated to each Senator and Representative in, or Delegate or Resident Commissioner to, the Congress for a period of sixty days, after which the unused balance shall revert to the respective Senate and House document rooms. During the sixty-day period beginning on the date the unused balance reverts to the respective document rooms, any Senator and Representative in, or Delegate or Resident Commissioner to, the Congress may draw on the unused balance of the House in which such individual serves for additional copies of the document, but the aggregate number of additional copies drawn during such period by any such individual may not exceed the individual's pro rata share of unused balance. After that period, any such individual may draw on any unused balance of either House for additional copies of the document without limitation on the number of copies which may be so drawn.

Mr. HAWKINS (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendment be considered as read and printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. BRECKINRIDGE. Mr. Speaker, will the gentleman yield?

Mr. HAWKINS. I yield to the gentleman from Kentucky.

Mr. BRECKINRIDGE. Mr. Speaker, I thank the chairman, the gentleman from California (Mr. HAWKINS), for yielding to me.

Mr. Speaker, I rise in support of House

Current Resolution 182, which provides for the printing as a House document, "Black Americans in Congress."

Black Americans have long contributed to this Nation's leadership, and more particularly, to the Congress since 1870, when the racial barriers to congressional membership were finally broken down by the election of Hiram R. Revels to the U.S. Senate. However, the congressional leadership which our black colleagues have accorded the Congress and the Nation has received only limited recognition, and this story has been encapsulated in the brochure, "Black Americans in Congress."

Forty-five black Americans have been elected to Congress over the past century, bringing with them an impressive array of professional, technical, and political skills, which has, in fact, constituted a cross section of its total membership—in essence, a Congress in microcosm.

Those who have served, and are serving in the U.S. Congress are outstanding in their demonstrated abilities as public servants, zealous in the constitutional, pursuit of justice and quality of opportunity for all without reference to race, creed, or national origin. They have directed their energies toward promoting the public welfare by developing, introducing, supporting, and securing the enactment of legislation designed to meet the needs of the neglected.

This corps of black Congresswomen and Congressmen inspires, by its precept, a deep and basic sense of racial pride and individual worth, and I am indeed proud to be able to reintroduce this pamphlet for additional dissemination originally printed as a bicentennial document, only a limited number were made available for distribution by the Members. Additional distribution of these booklets be sent to black leaders in our districts, to our social science teachers, and to the political and history departments in our colleges and universities in order to better acquaint our students with the contributions of our black leadership to our Nation.

I take great pride in presenting this pamphlet, which includes biographical notes and portraits, to serve as a historical guidepost for those who do not know about these black Congressmen's and Congresswomen's contributions to the Congress and to the Nation at large, because I feel such a publication will serve as a source of inspiration for all, I urge the Congress to pass this measure by unanimous consent.

The committee amendment was agreed to.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 2176, FEDERAL BANKING AGENCY AUDIT ACT

Mr. BOLLING, from the Committee on Rules, submitted a privileged report (Rept. 95-557), on the resolution (H. Res. 728) providing for the consideration of H.R. 2176 to amend the Accounting and Auditing Act of 1950 to provide for the audit, by the Comptroller General, of the Federal Reserve Board, the Federal Reserve banks and their branches and check clearing, wire transfer, and security facilities, the Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency, which was referred to the House Calendar and ordered to be printed.

NATIONAL ENERGY ACT

Mr. ASHLEY. Mr. Speaker, pursuant to the provisions of House Resolution 727, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 8444) to establish a comprehensive national energy policy.

The SPEAKER. The question is on the motion offered by the gentleman from Ohio (Mr. ASHLEY).

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. CHARLES H. WILSON of California. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were— yeas 365, nays 12, answered "present" 1, not voting 55, as follows:

So the motion was agreed to.

The result of the vote was announced as above recorded.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 8444) to establish a comprehensive national energy policy, with Mr. BOLAND in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Ohio (Mr. ASHLEY) will be recognized for one-half of the debate on this legislative day and the gentleman from Illinois (Mr. ANDERSON) will be recognized for one-half of the debate on this legislative day.

The Chair recognizes the gentleman from Ohio (Mr. ASHLEY).

Mr. ASHLEY. Mr. Chairman, this is a momentous occasion for the House of Representatives. Today we begin consideration of an omnibus energy bill, which for the first time in our country's history will establish a rational, comprehensive national energy policy. Never before in the annals of this House has there been considered in one bill subject matter which encompasses 113 separate legislative initiatives involving the jurisdiction of five major standing committees of the House. Never before has this body considered legislation of more direct and vital interest to the future of our Nation.

Today the energy future of our Nation is very uncertain and very insecure. It is uncertain because of the widening gap between energy supply and demand in the United States and it is dangerously insecure because of increasing reliance on foreign oil to bridge this gap. Americans—the Congress included—have been slow to realize that our domestic production of oil and natural gas peaked in the early 1970's and has been on the decline since that time. Only about 1 out of every 2 Americans realize that we import oil and only 1 out of 10 understands that these imports now constitute nearly 50 percent of the oil we consume.

But the facts are there and they present dangers which are undeniable. This heavy and increasing reliance on insecure foreign sources of oil poses a constant and growing threat to our domestic economy and to the security of our country. The threat comes not alone from the possibility of higher OPEC prices, another embargo, or the ability of an enemy to interdict foreign oil supplies destined for the United States. It comes as well from the certain knowledge that world production of oil will peak sometime in the 1980's and that thereafter world supplies will increasingly fall short of world demand. For the United States this means that even without higher OPEC prices, an embargo, or interdiction, there simply would not be, as there is now, the availability of foreign oil to bridge that widening gap between our own production and consumption of oil and natural gas.

This is what the energy crisis is all about. Today our factories are producing, crops are being harvested, homes are air-conditioned and there is plenty of gasoline for summer vacation trips. Yet our energy supplies are dangerously insecure and in the absence of prompt and decisive action will become more so with each month and year that passes.

The choice we face is clear. We can rob the Nation of options now available by deluding ourselves that the energy problem is of no urgency, and by so doing invite the economic disruption and peril to our security that could be thrust upon us from external sources. Or we can adopt policies now which allow time for our economy to make an orderly transition from an era of cheap energy resources to one which inevitably will be more costly.

The legislation before us today is the first essential step in establishing an energy policy responsive to the security and well-being of our own generation of Americans and those to follow. It is neither an all-encompassing policy nor is it cast in stone. The energy policy of our country must and will be an evolving policy constantly being modified to meet both the short and intermediate term needs as well as our longer range requirements.

H.R. 8444 is vitally important because it establishes a policy framework for the present and future, and because it provides an initial set of strategies to achieve the energy goals set by the President.

Both the national energy plan and the legislation before us are based on three fundamental predicates: First, the need to become less wasteful in the way we use energy and to effect substantial conservation particularly with respect to the consumption of oil and natural gas; second, the need to convert from use of the energy sources being most rapidly depleted—oil and natural gas—to coal, nuclear, and renewable sources; and, third, the need to provide adequate incentives for continued exploration and production of domestic sources of energy.

In the process of developing the legislation before us, there has been no real dispute over these major policy cornerstones. Specific strategies, as was to be expected, have involved controversy and disagreement and it now falls upon this body, resolved into the Committee of the Whole House on the State of the Union, to decide the issues which so importantly will shape our country's future.

Perhaps it is worth noting as we undertake this task that some 200 Members of the House already have played a role in shaping the energy bill that we are now considering. Five committees of jurisdiction and the Ad Hoc Committee on Energy have worked with a sense of commitment and cooperation that speaks proudly for the House of Representatives.

Pursuant to its charge contained in House Resolution 508, the ad hoc committee has provided a forum for review of the standing committees' recommendations, a forum to insure that the many components fit together into a sensible whole. In addition, it has proposed a number of amendments on its own initiative which we believe strengthen the overall product.

Some 40 amendments in all were considered by the Energy Committee; about half were adopted. In such subject matter areas as residential and commercial conservation, transportation, coal conversion, and public utility regulatory policies, significant changes were agreed to. Most important of all was the amendment adopted involving the price and definition of new natural gas. In the President's energy plan, it was proposed that new natural gas should be defined as gas produced from wells at least 2½ miles from existing onshore producing wells, from new reservoirs 1,000 feet deeper than current producing wells within the 2½-mile radius/or produced from Outer Continental Shelf Federal lands leased after April 20, 1977. New gas was to be subject to a ceiling price equal to the Btu equivalent of the average refiners' acquisition cost of all oil produced in the United States—now about $1.75 per mcf.—with authority for higher prices for high-cost production.

The ad hoc committee's definition of new natural gas is somewhat more liberal. It adds to the new gas discovered outside the 2½-mile, thousand-foot cylinder, gas discovered within that cylinder in a new reservoir. That new gas, too, qualifies for the top ceiling price, beginning at $1.75.

It is the strong majority view of the Energy Committee that the proposed definition and price of new natural gas will provide ample incentive for needed new production and at the same time furnish protection to the consumer of natural gas against runaway prices and unwarranted profits. We are convinced that the Brown amendment proposing immediate price deregulation and a definition of new natural gas that includes any gas newly committed to Interstate Commerce, will result in an immediate escalation of prices and profits that will severely and adversely impact on consumers and the general economy.

Mr. Chairman, this may be the most important, but it is only one of many issues that have been considered by the Energy Committee and will be debated fully before being decided by a vote of this body.

When our work is completed, later this week, I hope and trust that each of us will be able to share a sense of having participated in the shaping of a comprehensive national energy policy that will serve the urgent needs of our country in the years ahead.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, as I am sure those who were present for the debate on the rule on this legislation observed last Friday, we are considering it under rules of procedure that are unusual, if not unprecedented, in the history of this House. One of the interesting features of the rule is that it makes H.R. 8444 in order under a rule whereby we will consider it in terms of general debate for a legislative day, rather than for the normal period of

hours, where we usually quantify general debate in terms of 2, 4, 6 hours.

It occurs to me that a single legislative day is not really a vast amount of time, given the complexities of the subject before us.

I am reminded of that Old Testament story of Joshua, who on one occasion when he was engaged in battle with the Philistines, prayed to Jehovah that the Sun stand still, which it did, in order that the battle could be completed within a single day. And we might really need the intervention of divine providence before this day is over. We would indeed were we to gain universal agreement on the features of this legislation.

Let me say at the very outset, Mr. Chairman, as I proceed to consider and discuss the legislation before us, that I am going to take a position that is quite different from that which has just been enunciated by the able and distinguished chairman of the Ad Hoc Energy Committee, the gentleman from Ohio (Mr. ASHLEY). That does not mean in any way that I want to detract from the idea that the gentleman from Ohio (Mr. ASHLEY) has presided with great dignity and, I think, with essential fairness during the 3 long days of markup that were spent on H.R. 8444. My differences with the gentleman—and they are many, both procedural and substantive—certainly do not in any way detract from my admiration—yes, even my affection—for the gentleman from Ohio as one who is sincerely dedicated to his cause.

The energy bill that we proceed to debate today, Mr. Chairman, can perhaps most accurately be described as a half a loaf. Unfortunately, we cannot go on to complete that old proverb or adage which goes on to say that "a half a loaf is better than none." In this case I think that a half a loaf, if adopted in the form that it was reported to the floor of this House, would not be good for the future of our country. Let us make no mistake about it, the policies which the majority seek to lay down with this legislation would affect this country not just in the coming year or in even the coming decade. The policies that would be laid down in this legislation will, I think, have an impact well into the next century.

Our country has been blessed with ample supplies of easily obtained oil and natural gas. When those first discoveries were made a century ago and as the clear advantages of oil and natural gas over other fossil fuels such as coal became clear, as oil and gas rapidly began to displace fuels that we found were not as convenient, not as clean, and not as easily transportable, in addition we discovered a wide range of other uses for these new sources of energy.

By far, the largest uses of the two fuels that I have mentioned, oil and gas, were in the field of transportation. Oil and gas also found extensive uses in the industrial field. And finally, they became virtually indispensable for the heating and the cooling of millions of American homes, offices, and commercial establishments.

The industry that produced oil and gas was able to find ample supplies of this form of energy and to get it to market cheaply. Only in 1965 did our excess capacity for producing oil fall below our imports.

However, since that time we have seen a very, very rapid disintegration in the situation to the point where we have come all the way to a place where virtually 50 percent of our consumption of oil is coming from imported oil.

What has also happened during the years past, which I have all too briefly described, is that the American people and American industry have been accustomed to low prices. As a result, industrial processes, home heating systems, our automobiles, and essentially all the capital stock of the country have been built in a manner where they did not use energy efficiently for the simple reason that it really did not pay to go to the extra expense and to make the added effort to make them more energy efficient.

Our homes, for example, are not as well insulated as they should be. Indeed, they are not as well insulated as the homes that are to be found in much of northern Europe. Our industry has not been obliged to be as energy efficient in the use of energy in connection with industrial processes as some of our competitors in Western Europe. Over the years we have, as a result, drawn down our reserves of oil and gas very rapidly. We were able to find enough each year to provide the kind of supply-and-demand balance that kept prices either stable or even trending downward.

It is clear, however—and in this respect I do agree with what my distinguished friend, the gentleman from Ohio (Mr. ASHLEY), said just a few moments ago—that this era of cheap and abundant energy has ended. We cannot expect to find within the borders of this great Nation of ours the kind of supplies at the cost at which we have been able in the past. New supplies will be available. I believe that. New supplies must be developed, but it is going to be at a higher cost; and this is the crux of our energy policy problem. The problem is basically one of balancing expectations with reality. While we might expect to be able to continue our wasteful and, yes, even our prodigal ways, the reality of our energy supply profile today is that we cannot rest content in the same old way; and the longer we procrastinate in making necessary decisions to change our ways, the more danger there is that we will move our country into a position where we will face truly monumental problems in national security as well as economic problems of untold magnitude.

I believe, as I look at the four corners of H.R. 8444, that the Carter administration and the majority party in the Congress have not done their best to fashion a comprehensive energy policy that will address the problems to which I have just referred.

I said the other day when I was discussing the rule before the Committee on Rules that it does not help to throw a drowning man a 10-foot rope when he is 20 feet away from the dock. That is what has happened with H.R. 8444. It is my view that in it we have some good beginnings, to be sure. No one can dispute that in its embrace of the idea and the concept of a new conservation ethic, this bill has made a good start. However, I repeat that it goes only halfway.

I must say now with some considerable regret that the job required of this House as we sit here today in the Committee of the Whole has been made somewhat more difficult by the rush that has been placed on this bill by the leadership and by the procedures that were ordained for the ad hoc committee to follow as they marked up and reported H.R. 8444.

Frankly, Mr. Chairman, I never could understand why it was that the majority leadership in this body placed such a premium on having final action on an energy bill of this magnitude, of some 580 pages in length, of having all of that very sensitive and important action completed by a date certain. Why were we unwilling to take the few extra days that might have been required to hold some hearings? I regret to say that one of the matters in which this bill is most deficient is that it does not go into the very important question of oil pricing policy. The changes in oil pricing that Congress made in 1975 in the Energy Policy and Conservation Act raise an important question: Have these policies succeeded in reversing the declining trend of domestic production of oil and gas in the United States, or have they exacerbated that trend?

I wrote to the distinguished chairman on the 24th of June and I pleaded with the gentleman that we hold some hearings by the Ad Hoc Energy Committee. The Committee on Interstate and Foreign Commerce has not done it. No other committee of the House has duplicated that effort. It was my view that we at least hold a few days of hearings and go into that very sensitive and important area that so obviously impacts the energy policies of our Nation.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield myself 5 additional minutes.

Unfortunately, Mr. Chairman, that request was not granted.

We held 3 days of hearings. We heard Mr. Schlesinger, Mr. Brown, Mr. Blumenthal, Mr. Schultze, and Mr. Lance, but, other than those very estimable gentlemen who, after all, were speaking on behalf of the administration which drafted this legislation and which brings it to the floor today, as I say, other than those, we have not heard other witnesses either from the administration or from people from the private sector on either the President's bill or the bill that has been reported as the bill of the standing committees, H.R. 8444. Rather we found that in order to avoid lengthy debate, and I do not believe that 3 days in the ad hoc committee was an excessive amount of time to spend in debating this enormous bill or in considering, as the chairman said, two score of amendments to that bill, we had to markup the entire bill completely in only 3 days. Granted that those were long days, nevertheless we found that the tendency on the majority side of the aisle was to retreat to

a caucus behind closed doors and then to troop out into the Chamber to mow down the Republican amendments to the bill and to adopt almost in every instance the amendments that had been agreed to in that caucus.

I suppose those streamlined procedures worked to avoid some of the public bitterness that might otherwise have erupted on the majority side of the aisle. They might have worked to streamline the procedure and the amount of time that we took in considering this bill, but I believe the question has to be asked: Was all of that saving of time really in the public interests, or could we have given more time and have worked out the more sensitive and more comprehensive policies, or set of policies, had we been allowed to adopt a less abbreviated procedure?

As I said a moment ago, Mr. Chairman, one of the things that I find distressing about this legislation is that it does not go into the very important question of oil pricing. I would call your attention to the fact that the majority report on the National Energy Act in volume 1, at page 9, has the following to say:

> The Nation must, therefore, encourage increased exploration and development of our remaining oil and national gas resources. However, because consumption of these fuels is central to the health of the Nation's economy, allowing price increases which do not produce additional supplies would not be sound policy.

And yet this bill is going to increase prices at least 7 to 9 cents a gallon at the pump. And how is it going to do it? It is going to do it by imposing a crude oil equalization tax that is going to flow into the coffers of the Federal Government.

It is going to do it by imposing a crude oil equalization tax that is going to flow into the coffers of the Federal Government. It is not going to go into the hands of producers to encourage additional exploration and development. Yet they have said in their report they do not think the price increases, which do not produce additional supplies, would be sound policy.

I find a sad contradiction between the words of the majority report and the language as contained in the sections and the parts of this bill that deal with the crude oil equalization tax.

Mr. GRADISON. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I am pleased to yield at this point to my friend and distinguished member of the Committee on Ways and Means, the gentleman from Ohio (Mr. GRADISON).

Mr. GRADISON. I thank the gentleman for yielding.

I have asked the gentleman to yield for the purpose of propounding a question to him. It seems to me that we have a situation as the gentleman just indicated, that is really the worst of both worlds from the point of view of the consumer—higher prices but no asurance that those higher prices are going to bring adequate supplies of energy. I would appreciate the gentleman's comments on that.

Mr. ANDERSON of Illinois. I think the gentleman has hit the nail precisely on the head. We are going to have higher prices at the pump, and this is leaving aside for the moment the fact that the administration has now put its blessing on the so-called Howard amendment which will be offered later in these proceedings whereby we would increase the present four cents Federal gasoline tax to nine cents a gallon, courageously enough in 1979 after we are safely past the next congressional elections, I would note. But leaving that aside, in addition to that, with a crude oil equalization tax on lower-tier oil and upper-tier oil, they are going to extract between now and 1985 an estimated $70 billion from the American consumer in the form of higher prices at the pump that is going to have to be paid for petroleum products. Yet that is not going to go to encourage increased exploration and development.

I note with interest that that philosophy is not confined to the Members on the minority side of the aisle. I have before me an article which appeared over the weekend which is quoting the President of the United States directly. I think I should spend just a minute or two calling to the Members' attention what he had to say in an interview which took place on Friday of this week, and it was on the record. The President of the United States characterized the deregulation argument as urging that we should have extremely high prices to be established by the oil and gas companies without constraint and accept their proposition that exploration would go forward by leaps and bounds, and that we would have unlimited supplies of oil and natural gas as a result. In the first place, no one is suggesting that even given the incentive that will be offered in a Republican substitute, H.R. 5555, we cannot promise unlimited supplies of oil and gas. We realize that eventually the age of oil and gas will come to an end. But, Mr. Chairman, as my friend, the genteman from Wisconsin, will point out in a few minutes, it is perfectly reasonable to postulate that given the added reasonable incentives for exploration and development in the substitute bill, we can certainly look forward to, rather than a continuation of the present declining trend in production, an increase of perhaps 2 million barrels a day by 1985.

Just think what that would mean. Even at today's prices, and of course by 1985 any reasonable person has to assume that prices will have increased, that would mean savings of more than $10 billion a year in import payments. That ought to mean something to a country that is concerned over the fact that last month we saw the deficit in our balance of payments soar to $2.8 billion, and that in the first 6 months of 1977 alone that deficit is more than in all of 1977.

I frankly cannot understand the economic reasoning of an administration that professes not to be concerned by the fact that the American dollar is depreciating today on foreign exchange markets as against the yen, as against the mark, as against the Swiss franc, as against the French franc, and as against almost all the other convertible currencies of the world, and we are paying out perhaps as much as $40 billion.

Would it not make more sense to pay a higher price for domestically produced oil and know that some of that higher price was going to be plowed back into discovering new supplies of oil and gas than to sit back with hands folded, very complacently accepting, as this administration seems to do, the notion that we go on endlessly paying out our Treasury to the Arab potentates of the Middle East to the tune of $40 billion a year?

I hope when the time comes to present the substitute to this committee bill that Members will listen very carefully as we explain in even greater detail the advantages of an oil pricing policy that will give some encouragement, some incentive to the production of indigenous sources of energy.

I am not going to take any more time or a great deal more time this afternoon, although I think that in view of the fact that we have an entire day at our disposal it is warranted because I do agree with the President that this is the most serious problem that will confront him during his administration. I do agree with the President that it is absolutely crucial and critical that we address the problem, and that is why I voted for a rule on this bill.

I think the distinguished chairman of this ad hoc committee will say that in my capacity as the ranking minority Member I did nothing to obstruct or delay a decision by that committee on this issue. I want action as much as anyone in this Chamber. It is not my purpose merely to delay. But I would hope that we would take the time, that we would be sufficiently patient in listening to and trying to understand the amendments and the explanations that will be offered and that we would be willing to accept the solemn responsibility that is ours to fashion the kinds of policies that will give us not only a comprehensive energy policy but one that we can live with in the years to come.

I am not going to take the time at the moment because I am sure it will be available subsequently to go over all of the features of the substitute legislation. But I think I should very, very quickly outline what its major features are.

It would retain the insulation programs that are recommended by the administration. We do believe that a sound Presidential conservation program, weatherization, and insulation tax cuts, and so on are necessary to save energy.

We have some differences with the administration on such things as the preparation of lists, and more will be said about that later.

We believe that something ought to be done to restrain people in the purchase of large automobiles that are not energy efficient, and so we have retained the recommendations of the Ways and Means Committee as they relate to the so-called gas guzzler tax.

We have retained the idea that there ought to be a tax on those industrial

users of natural gas and oil who do not convert but in some very important amendments, that will be discussed in more detail by my friend and colleague, the gentleman from Ohio (Mr. BROWN), we believe that a more reasonable program for administering that tax has been fashioned in the substitute, one that will cause American industry far less disruption.

For example, 80 percent of the boilers of this country are between 100 million and 300 million BTU's per hour and yet they account for only 9 percent of all the energy used and consumed by all the boilers in this country. We think it makes sense to refashion that segment so that we do not fasten on the backs of the American industry a huge bureaucratic empire that will require additional thousands of employees and man-hours of work in simply filling out forms and engaging in contesting the feasibility of making these conversions.

In the crude oil pricing policy, as I have indicated, we would make some significant changes in present policies by instituting a crude oil equalization tax that applied to lower tiered oil, old oil. Gradually over a period of 5 years our plan would free up to the market price so-called new oil produced after April 1972, with the advantages I have mentioned, with the potential of producing by 1985 an added 2 million barrels a day.

We would also provide with respect to natural gas that price controls ought to be removed on new onshore natural gas. More on that subject later from my friend, the gentleman from Ohio (Mr. BROWN).

We would, in addition to that, put the burden of proof for conversion from oil and gas to coal on the FEA. We think it makes sense, rather than giving it the kind of broad unrestrained rulemaking authority that the majority party has provided for in this bill, to say to the FEA that "you shall come in and establish a case, and prove whether your use of oil and gas should be converted to coal."

Finally, Mr. Chairman, we have some very, very important provisions, that deal with the subject of coal conversion. We happen to think that this bill, the administration bill, is sadly deficient in that it does not provide for the development of alternative fuel technologies whereby we can use coal cheaper and even more importantly, cleanly, over the coming years to make up that gap in our energy supplies.

So we would provide that the energy trust fund set up under the bill with our crude oil equalization tax, that 65 percent of that trust fund would go to demonstrating the feasibility of low to medium Btu coal gasifiers.

In addition, we would give aid to the States for road rehabilitation and maintenance.

Finally, 20 percent of that trust fund would go for the purpose of mass transit, which certainly is germane to the whole effort to try to conserve energy in the field of transportation.

Mr. Chairman, these are the broad outlines we will discuss later; but I hope during this time of general debate that Members will listen very carefully as various amendments are discussed, because I think that even though the hour is late, if we act prudently, if we act wisely, and adopt the right amendments, it is possible to produce a sensible and coherent set of energy policies for the Nation.

Mr. ASHLEY. Mr. Chairman, I yield such time as he may consume to the very able chairman of the Subcommittee on Energy and Power of the Committee on Interstate and Foreign Commerce, my friend and colleague, the gentleman from Michigan (Mr. DINGELL).

Mr. DINGELL. Mr. Chairman, I want to begin by paying tribute to my distinguished friend, the gentleman from Ohio (Mr. ASHLEY) for an outstanding job done under enormously difficult circumstances, as chairman of the Ad Hoc Committee. The gentleman has shown remarkable patience and ability, as well as extraordinary willingness and ability to work with his colleagues to achieve a desirable end for the House on this important legislation. He has provided valuable leadership to harmonize the different viewpoints, the different approaches, the different jurisdictional concerns of the affected committees.

He merits the commendations of all of my colleagues. I salute him for his labors. He certainly merits the thanks of all of us.

I also pay tribute to our distinguished Speaker (Mr. O'NEILL) for the way that he has pushed, urged, cajoled all of us by all manner of proper means toward bringing this matter before the House before the August recess. It was not infrequent, during my consideration of this matter and during the consideration of the legislation by the subcommittee, that I felt that the time limits imposed were impossible, but we have nonetheless met them, and I believe have met them well.

My colleagues on the subcommittee on Energy and Power, without exception, on both sides, merit the thanks and congratulations of the House. The members of the ad hoc committee do likewise, because they have worked hard under enormously difficult circumstances. They have done it without partisanship, without bitterness, without anger, and in a remarkable spirit of good will under great pressure as to time and complexity of subject matter.

I want to pay particular tribute to my distinguished friend and colleague from Ohio (Mr. BROWN), who is a legislator of great power, an adversary of fearsome characteristics, and yet a wonderful, good friend, an honorable adversary and an honorable friend. I am proud of the friendship which he and I have developed during these difficult days.

The staffs of both the Committees on Energy and Power and Interstate and Foreign Commerce, and the staff of the ad hoc committee, merit the particular thanks of this body, because theirs has been the truly hard work which has been done on this matter. I do not stint on praise for either the staffs of the subcommittee or the minority staffs, who have labored long and hard under, as I have mentioned, considerable difficulty.

The labors which we have completed, I believe, are historic. They represent the first time that an ad hoc committee has rhymed the labors of the different committees and subcommittees of legislative jurisdiction. I believe the consequences are good, and the precedents established are sound. The legislative committees with the principal responsibility for energy matters have reported a single measure to the House which combines both regulatory policies and tax policies dealing with our Nation's energy problems.

Many of us can recall the difficulties which have confronted the legislative committees writing energy proposals in earlier Congresses. We have always had reason to feel that part, either regulatory or tax aspects, were missing. As a result, the Congress was hampered in achieving a truly comprehensive national energy policy because of the difficulty of combining and coordinating regulatory and tax policy treatment of the Nation's important, related problems. The legislation before the House this week, therefore, represents a significant and a major step forward in the development of a coordinated energy policy. In that, we might well rejoice.

The legislation before the House this week carries forward the regulatory initiatives established in prior legislation and establishes new regulatory initiatives, substantially revises some existing regulatory programs and, in addition, sets in place for the first time a series of energy tax initiatives coordinated with the regulatory programs.

Happily, the provisions that lie before us—and I particularly want the attention of the Chair on this point—deal not with the subject of oil pricing, a matter which has been addressed in extenso in earlier Congresses. This Congress and this committee will be much sheltered by the fact that the devisive questions which oftimes are related to oil pricing will not be before us and will not be the source of conflict and contradiction among us because of the germaneness rules which will, to some degree at least, shelter us from the kind of controversy at a time when it is little needed because of the complexity of the matter before us.

Parenthetically at this point, Mr. Chairman, I might note that the legislative history of H.R. 8444 is the same as the legislative history of H.R. 6831, which was the antecedent legislation introduced by our majority leader at the request of the White House to carry forward the administration's policy.

I note for the benefit of all that the language of the report of the different committees of jurisdiction, the comments of the minority members and the special and other comments included in the report are embodied by understanding in the legislative history of the ad hoc committee.

Mr. Chairman, the legislation before us in the public interest, it will move the Nation forward. While we must recognize that probably other further addi-

tional legislation in this area will continue to be required, as early as the next session of this Congress, it is plain to me that this is nevertheless strongly in the public interest and is a milestone toward achieving the national energy policy so necessary to the salvation of the Nation.

Mr. Chairman, today, the House embarks upon historic consideration of a major legislative proposal which represents in a true sense a comprehensive outline of a national energy policy.

Under the able leadership of our new Speaker, the legislative committees with principal responsibility for energy matters have reported a single measure to the House which combines both regulatory policies and tax policies dealing with our Nation's energy problems. Many of us can recall the difficulties which have confronted legislative consideration of prior energy proposals. Past efforts to develop a truly comprehensive national energy policy were hampered by the difficulty of combining and coordinating regulatory and tax policy treatment of the Nation's energy-related problems.

The legislation before the House this week, therefore, represents a major step forward in the development of a coordinated energy policy. Many aspects of the National Energy Act are rooted in energy legislation already enacted by the Congress. For example, the Energy Policy and Conservation Act established the legislative authority under which the President has implemented a National Strategic Petroleum Reserve Program. The Energy Policy and Conservation Act established the mandatory fuel efficiency standards applicable to all new automobiles; these standards provide the basis for the automobile fuel inefficiency taxes now reported by the House Ways and Means Committee and incorporated in title II of the legislation now before the House. Similarly, the Energy Policy and Conservation Act established the basis for continued regulation of domestic crude oil prices. The crude oil equalization tax set forth in this legislation builds upon the oil pricing policies adopted in EPCA.

However, despite its major accomplishments, EPCA could establish no more than the foundation for a comprehensive national energy policy because EPCA represented only the regulatory responses to our Nation's energy problems.

The legislation before the House this week carries forward the regulatory initiatives established in prior legislation, establishes new regulatory initiatives, substantially revises some existing regulatory programs, and, in addition, sets in place for the first time a series of energy tax initiatives coordinated with the regulatory programs.

Title I of H.R. 8444 establishes major energy conservation regulatory initiatives. These initiatives include a program to encourage the installation of energy efficiency improvements in private residences and schools, hospitals and other public buildings. Title I of H.R. 8444, the National Energy Act, establishes a revised energy conservation program dealing with the energy efficiency of consumer products other than automobiles. This program substantially improves the appliance labeling program contained in EPCA by authorizing the establishment of mandatory Federal efficiency standards.

Title I of the National Energy Act would establish for the first time Federal initiatives dealing with the regulation of electric utilities. Electric utility rate reform has long been recognized as one of the prerequisites to establishment of a true national energy policy. This legislation will facilitate nationwide electric utility regulatory reforms which are so sorely needed.

The legislation also establishes a major revision of the Nation's existing coal conversion program under the Energy Supply and Environmental Coordination Act. The legislation substitutes a broader more comprehensive program dealing with the use of both petroleum and natural gas. This regulatory program seeks to maximize the use of coal where its use is technologically feasible and would not result in violation of environmental requirements. The program is also directed at achieving significant conservation of wasteful uses of natural gas so that this premium fuel may be directed to more valuable uses. The regulatory aspects of the coal conversion program established in this legislation are coordinated with and supplemented by a major energy conservation use taxes levied on certain forms of industrial and utility consumption of petroleum and natural gas. This coordinated approach will assure maximum conversion to coal and, in addition, more efficient industrial and utility use of petroleum and natural gas where conversion to coal is not practicable.

Title I of the National Energy Act also includes a long overdue substantive revision of the Nation's natural gas pricing policies. By establishing a single uniform price for natural gas produced in the United States, the legislation removes the disparity in treatment between the interstate and intrastate markets for natural gas. The distortions created by this disparate treatment should therefore be removed. Moreover, this legislation would depart meaningfully from the historical "cost-based" pricing policy which underlies the Natural Gas Act and substitute an "incentive-based" system for the pricing of newly discovered supplies of natural gas.

This legislation joins to these major regulatory initiatives a series of energy tax programs which are designed to supplement existing and new regulatory programs through the operation of the price mechanism. These tax programs include a crude oil equalization tax, automobile fuel inefficiency taxes, the "gas guzzler tax," a gasoline tax, an excise tax on the business use of oil and natural gas, the "burner tip tax," and a series of tax credits including a residential energy credit for taxpayers who retrofit their homes with energy saving improvements, and a credit for businesses which invest in coal conversion equipment. Other tax programs include amendments which encourage the use of buses, encourage the rerefining of lubricating oil, and stimulate the development of our Nation's oil and natural gas resources through the treatment of intangible drilling costs for purposes of the minimum tax. Finally, these numerous tax programs contain mechanisms designed to minimize their overall economic impact by providing the recycling of these tax revenues to the economy.

In the Washington Post the past weekend, there was a report of a recent poll of the American people regarding their views on the energy legislation now before the House. That poll indicated that substantial disagreement existed with particular elements of this legislation. In fact, in several instances a majority of those polled responded negatively toward specific elements of the legislation. Nevertheless, a substantial majority of those polled agreed that the Congress should enact the legislation. I believe this poll indicates to the House its responsibilities and its duties. Too often in the past debate regarding energy legislation has focused on these questions of opposition to particular elements of the program. This opposition has often blurred our vision and prevented the House and Senate from considering the totality of the legislative package rather than its individual pieces. Fortunately, the rule under which this legislation will be considered is designed to focus debate on the totality of the legislative package rather than on any specific element. The rule does provide for consideration of certain amendments, but each of these amendments deals with a major aspect of this energy program. Perhaps more importantly, these amendments are not the debilitating sort which have too often in the past been politically attractive and therefore adopted without due consideration to their effect upon the totality of the legislative program.

If the House fails to adopt this legislation, we shall have no one else to blame for our failures and our inability to address the Nation's pressing energy problems than ourselves. If the House responds to the challenge presented to it and enacts this legislation, we shall be entitled to be justifiably proud of our product and this institution.

I urge my Colleagues to listen to the debate on this legislation; to vote as their conscience dictates on the amendments which will be offered; and to respond to the challenge before us. When the time comes for a vote on final passage of this landmark legislation, I urge my colleagues to provide the leadership this Nation needs by setting aside regional and even philosophical differences and standing up to support adoption of this historic legislation.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 10 minutes to the gentleman from New York (Mr. CONABLE).

Mr. CONABLE. Mr. Chairman, I rise in opposition to this bill. I opposed it in the Committee on Ways and Means, with the hope that the ad hoc committee would make appropriate changes that would allow me to vote for it. Unfortunately, they have not only not made those

changes that I felt were necessary but, worse, they have made changes which make the bill even less attractive than it was.

I cannot in conscience support what is a punitive measure, negative in approach, designed to impose burdensome costs and regulation on the American people when there are alternatives available which would help solve the energy crisis without punitive action.

In the light of what I have said, it is interesting to note that I think we all sense widespread public approval of an energy program and also a widespread public disinterest in the details. Now, there's the rub. That the public wants an energy program, after all these years of congressional balkiness, does not mean the public is prepared to pay the price required by this bill. Yet, in another sense, the public does understand some sacrifice is to be required.

"I don't mind having to pay more for my energy as long as I know everybody is being treated fairly," thoughtful people are saying in letters to me urging my support of the President's program. I hope they will also ask, "How much more?" and, even more importantly, "What will the program accomplish?" If the price is too high and the results too uncertain, should we accept sacrifice just because everybody suffers equally?

I do not think so, Mr. Chairman. Marxist regimes require equality of sacrifice to the collective, and yet I do not note many Americans lining up to move to those regimes.

I differ with the basic thrust that the President and the majority in the Congress have recommended to deal with energy. The notion of the Carter program, which is well reflected in the bill before us, is to spread the scarcity of energy in a way that will impose high taxes on our people, cost us perhaps untold numbers of jobs, raise the rate of inflation to totally unacceptable levels and put us at a disadvantage vis-a-vis the other industrialized countries of the world in our ability to produce our own energy.

For those who do not know it, in the not too distant future the United States may be the only industrialized country in the world that is not moving vigorously toward energy self-sufficiency. In 2 years Great Britain will be energy sufficient due to the North Sea oil and due to the progress that has been made in nuclear energy. The Western European countries that are heavily industrialized and almost completely devoid of energy are pushing ahead in a major way with nuclear energy as their only alternative to the enormous oil costs which they are presently incurring. Likewise with Japan, which is forging ahead significantly in the nuclear field and in developing oil and gas reserves in the waters off Southeast Asia.

The Soviet Union is virtually energy self-sufficient today.

Yet here sits the United States trying to settle its energy crisis not by insuring its own self-sufficiency in energy but only by trying to limit the extent to which it uses energy. This is the Carter program. Its misconceptions invite disaster.

Our goal should be further production, as well as conservation, and we should develop the reserves of oil and gas that we have in this country, moving ahead also to develop alternatives sources of energy, such as the liquefaction of gas and coal, shale oil, and the other so-called exotic fuels. Unfortunately, neither the Carter administration nor the bill before us seeks to do that. Instead, it says, "Let's just use less and not worry about the future," when other countries with whom we compete in world markets will be able to place us at a competitive and perhaps a strategic disadvantage because we have been shortsighted in recognizing that we must strive for energy self-sufficiency, not simply conservation.

Thus, Mr. Chairman, I cannot support a program that will confine my children and their children to a world in which they will not have the energy vital to their lives and their freedom. Let the word go forth now that it was the Carter administration and the majority party here in Congress who decided for future generations of Americans the kind of society in which they would live, the kind of place they would have in the world community. Let it also go forth that there were those of us who knew of that situation and said no and warned of the dangers and refused to be a party to such a policy.

Mr. Chairman, the ad hoc committee, it is boasted, spent 23 hours in developing a 500-page bill to outline the energy-efficient policy for America. It is clear from a reading of that bill that their actions were hasty and merely a rubberstamp of the views submitted to them by the Carter administration.

There are all kinds of economic penalties in the bill, some of them direct and some of them indirect. For instance, the Federal tax on gasoline will go up by either 4 or 5 cents, directly increasing the cost of a gallon at the pump by that much. As a result of the wellhead tax on domestic crude oil, the indirect cost of gasoline will probably be raised by an additional 7 cents.

Mr. Chairman, recent polls show that people will drive just as much despite the higher price of gasoline since in most places there is no other way to get around. Therefore, we have not done much to encourage conservation in this bill, at least as far as gasoline use is concerned. Worse still, if those nefarious oil companies do not see the value to them in building more gasoline refineries, the eventual shortage either puts us deeper into the hands of the Arabs or drives the price of gasoline still higher.

There is very little elasticity of demand in gasoline prices until one reaches such a high level that the cost would be prohibitive.

Thus, a 4-cent gasoline tax is not a conservation measure, but simply another scheme to raise taxes on Americans. It is thoroughly consistent with everything else the President has done or recommended; whether in the social security area or in the energy area or in the tax area, the administration's position is to increase taxes. The Commissioner of Internal Revenue would even increase taxes by the taxation of fringe benefits.

It is clear that this administration is committed to a program of increasing taxes on Americans. The 4-cent gasoline tax increase is just one plank in their tax platform.

Consistent with this policy, the ad hoc committee would increase the tax on general aviation fuel from 7 cents to 11 cents and put these funds into the energy trust fund in order to build highways and similar things.

General aviation is perhaps one of the most energy-efficient modes of travel. Imposing a 4-cent gasoline tax on people who ride airplanes will not cut down their discretionary flying. It would simply take money out of their pockets that can be used by the administration to fulfill one of its campaign promises.

Mr. Chairman, such a move is directly contrary to the notion of conserving energy, and this amendment should be rejected.

In title II the ad hoc committee made many of the mistakes which the Committee on Ways and Means tried to rectify in altering the proposal originally submitted to it by the Carter Administration. We limited the insulation credit in his bill to an expenditure of only 2 years, for the reason that if we were going to spend the vast amount of money such a program would require, we ought to incur those expenses now, get the insulation installed, and quickly put an end to the subsidy.

Like the administration, the ad hoc committee proposes that this program be a 4-year program, adding an additional revenue loss of $1.5 billion over the recommendation of the Committee on Ways and Means. This is silly. The insulation credit is questionable for 2 years, but certainly without merit for any longer than that.

I would urge the Members to reject the ad hoc committee amendment to extend the insulation credit for an additional 2 years.

Also consistent with the generally negative thrust of this energy policy is the amendment by the ad hoc committee to eliminate the definition by the Committee on Ways and Means of new-new oil. By doing this the Administration and the ad hoc committee, in effect, are eliminating incentive for new drilling, new drilling that is vital if we are to have increased energy supplies. However, it is obvious that the administration is not interested in new energy supplies. Therefore, this amendment also should be rejected.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. CONABLE. Mr. Chairman, I will yield to the gentleman from Texas at the conclusion of my statement.

The ad hoc committee eleminated the so-called Steiger amendment which would have rendered inoperative the users tax on business when that business was exempt from the regulatory portions of this measure imposed in title 1. It seemed only fair that if by regulation we were not to require certain conversions that we should not turn around and impose a tax when those businesses involved did not convert. Yet the ad hoc

committee decided that it wanted a double standard, that it really did not care about conversion, it simply wanted to collect the tax. Thus it voted to eliminate the provision of the gentleman from Wisconsin (Mr. STEIGER) which was adopted in the Committee on Ways and Means. Surely such a double standard is foolish and I am sure the gentleman from Wisconsin will speak to this point during the debate.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 3 additional minutes to the gentleman from New York.

Mr. CONABLE. Mr. Chairman, the things that I have mentioned are bad, but I think there are other parts of the bill which will require even more sacrifices from Americans to even less purpose.

American industry, which runs on oil, has been using a mix of foreign oil, at the world price, and domestic oil at a price controlled below the world price. Since industries in other countries pay the world price for oil, this had given us a competitive advantage and our economy has snapped back quicker than the others from the recent world recession. The wellhead tax on domestic crude oil will raise its price to the world price, now, eliminating the competitive advantage, while still making our producers develop their oil for a price to them below the world price. Then the bill assumes that industries which use oil for their energy can convert to coal if they want to, and so it puts an additional tax on their continued use of oil. Since nothing protects them from increased coal prices or the environmental problems that come with coal burning, many industries will go on using oil, paying the tax on it, and in this way having industrial energy costs above those of industries in other countries which pay only the world price for their oil. The sacrifice involved here is imbalance of trade and, eventually, jobs. Any industry dependent on oil for its products would be foolish to stay in the United States with such a prospect, when it can go and build a new shiny factory in the Persian Gulf area.

Mr. Chairman, equality of sacrifice is a good idea. But nobody sacrifices just to sacrifice. The bottom lines should be: Will it help solve the problem? I do not think this energy program does and I do not want my vote to contribute to an America of increasing scarcity, more regulation, more taxes, less competitiveness, higher prices and fewer jobs. It is not necessary and it certainly is not desirable.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. CONABLE. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, the gentleman from New York (Mr. CONABLE) has referred to the definition of new-new oil. The gentleman in the well is familiar, I am sure, with the fact that that definition could only affect the tax consequences of such definition. So it may well have had the effect of preventing any tax from being applied to any oil that should fall under this committee established definition of new-new oil. Thus had the President permitted a $13.50 price only for that oil outside the 2½-mile limit, or below 1,000 feet from an existing find, then all other oil in that definition could have been purchased by the refinery without the imposition of a tax. So this definition would have done nothing but give a windfall to the refineries and would not have done anything toward correcting the problem. The gentleman is familiar with that fact, is that not right?

Mr. CONABLE. My impression was that this was done because people will be discouraged from the kind of development that follows the initial discovery of oil.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 2 additional minutes to the gentleman from New York.

Mr. CONABLE. The particular provision in the Committee on Ways and Means bill was designed to try to take some of that oil outside the rigid definition the administration had been advocating.

Mr. ECKHARDT. But the gentleman is familiar with the fact, is he not, that the change is that definition did not apply to the pricing of oil because that was not before the Committee on Ways and Means. Therefore, pricing authority would have remained with the President, and the only effect of the definition would be to deny the opportunity to place a tax against that portion of new oil that the President did not include in his additional price.

Mr. CONABLE. I think it would give added incentives to refineries to buy domestic oil were that to be the case, and that certainly is desirable. What I am afraid of is that many of these refineries are going to want to import oil. They are going to be concerned about the price of domestic oil, actually in some cases where you have increase in severance taxes and things like that, going above the price of domestic oil.

Mr. ECKHARDT. That may be true. Of course, they would be inclined toward such domestic oil so that they could buy it at the absolutely rock bottom price. But the point is that the producer would not get a nickel more because of that provision in the Ways and Means bill.

Mr. CONABLE. The gentleman, of course, comes from a region where oil is widely understood, the details of the intricacies of this process I am not familiar with, but I will say that my impression is that the definition of new oil in the Ways and Means bill would have given considerable greater incentive to the development of domestic energy than anything that is in the ad hoc bill. However the pricing mechanism is designed, I am concerned that we have taken another step away from encouraging production.

Mr. ARCHER. Mr. Chairman, I rise to oppose enactment of the National Energy Act. I oppose this bill. I strenuously object to the manner in which it has been railroaded through this House. I object to the arrogant manner in which the administration has forced this institution to bend to an artificially imposed timetable.

I object to the fact that the Members of this House, the members of the press, and the public have been given very little knowledge of what is contained in this bill—because of the absurd time frame within which it has been considered.

If it is dilatory to want reasonable hearings on a measure of this nature, then I am dilatory. If it is dilatory to allow the public and the press ample opportunity to review and comment on proposed legislation, then I am dilatory.

If it is dilatory to implore the administration to invite the public in to comment during the preparation of a major legislative initiative, then I am dilatory again.

But I cannot believe that any thinking person would regard any of these acts as dilatory. They are but reasonable and necessary.

What is unreasonable—and what will in the long run cause more delay than a comprehensive review of this legislation in the House of Representatives—is the manner in which this proposal has been developed.

President Carter took office in January of this year. And 3½ months later, be unveiled for the first time what is now called the national energy plan. The plan was thrown together with little public participation.

Those involved in the energy production business in this country were almost entirely excluded from the process. I can only assume that President Carter did not want his preconceived notions of what ought to be done clouded by facts. That must have been the rationale for excluding those who might know somethink about finding and producing energy.

Now, 3½ months after the unveiling of the national energy plan, we are here debating on the floor of this House—under a gag rule—what will probably be the most important legislative initiative produced by this administration. It is appalling. It is a disgrace to this institution and to the country it is supposed to serve.

Lest there be any doubt of the ramrod approach which has been used in fashioning this legislation, I would like to bring one example to my colleagues' attention. The report on the bill we are now debating, prepared by the Ad Hoc Committee on Energy (Rept. No. 95–543) was not available to Members of this House—except for those who served on the committee—until after the close of business last Friday. The bill itself, 580 pages in length, has not been available much longer.

There will be precious few Members of this House on the floor in the next week who will have any real notion of what the bill contains—much less the impact of individual provisions on segments of our society and the country as a whole. Almost none of us will have any true feeling for those ramifications.

And yet the majority leadership and President Carter—in their blind, headlong rush to "do something"—have handcuffed this institution, made a

mockery of its procedural safeguards and are now thundering toward the horizon with a vigor which can only be described as foolhardy.

The people of this country will be far better served by a rational, reasonable discussion of important alternatives to the tunnel vision approach taken by the majority on this bill.

We must be concerned about economic impact of this bill—the critical relationship between energy and jobs, and what it does to our balance of payments and inflation here at home.

We cannot and need not continue to import $40 billion worth of crude oil every year. We can and must produce a much greater quantity of domestic oil and gas to reduce that dependency.

The two keys to accomplishing that are decontrol of oil and deregulation of natural gas—alternatives that the administration refused to consider, in spite of the hard economic logic calling for their inclusion in any workable program.

Chase Manhattan contends that decontrol of oil would bring domestic crude oil production up to a level of 13 million barrels a day—as compared to just 10.6 million barrels under the present proposal.

Importantly, this would not diminish our domestic known reserves. On the contrary, decontrol would increase proven reserves by some 8 billion barrels over present levels by 1985. Moreover, decontrol would not increase costs to consumers over levels in the present plan—and yet it would provide a strong stimulus for increased domestic production.

The arguments for deregulation of natural gas are just as compelling—and yet the administration, with the majority leadership's rubber stamp of approval, is actually proposing a price rollback in producing States and an extension of Federal regulation to all domestically produced natural gas.

The plan calls for a totally unrealistic timetable for massive conversion to coal and then uses that basically false assumption as its answer to pleas for consideration of the supply side of the energy equation.

No, Mr. Chairman, if this plan is adopted in its present form—without radical corrective surgery by this House which might make it workable—the administration and the Congress will have made a terrible mistake.

They will have surrendered perhaps their only chance in this decade to solve our energy dilemma—all for the sake of meeting one man's own artificially imposed campaign promise to adopt some sort of national energy policy.

Is this House going to continue with this absurd lemming mentality—or is the leadership going to muster the courage to stand up and tell the President he's wrong before his sham of a program is allowed to become the law of the land?

Mr. ULLMAN. Mr. Chairman, I yield myself 10 minutes.

Title II contains four major parts and several relatively less far-reaching sections. The fundamental purpose of these provisions is the encouragement of more efficient uses of oil and natural gas and conversion from oil and gas to other, more abundant domestic fuels. Incentives are provided to stimulate efficiency. Disincentives are provided by raising the cost of inefficient uses of fuel. Conversion to coal, solar and other forms of energy are given positive inducements.

RESIDENTIAL CREDITS

The first major part of title II seeks to encourage residential conservation and conversion. In both cases, income tax credits will be available to help homeowners meet the costs of installing the desired types of equipment.

To encourage conservation, the Ways and Means Committee action provides a credit of 20 percent on the first $2,000 of cumulative expenditures on home insulation and other energy conserving components, for a maximum credit of $400. The credit would be available for installations made from April 20, 1977, through December 31, 1982. This credit is available for forms of insulation that will reduce the heat loss or heat gains of a residence, and it covers the types of material whose fundamental use is insulation. Energy conserving components qualifying for the credit include additions to heating and cooling systems that increase their efficiency and also extend to clock thermostats, storm doors and windows, caulking and weatherstripping.

New technologies are becoming available for residential use, and the Ways and Means Committee has provided a credit to stimulate conversion to solar and wind energy equipment.

A credit up to $2,150 would be available on the first $10,000 of expenditures on solar and wind energy equipment. The credit is 30 percent of the first $1,500 spent and 20 percent of the next $8,500 spent for installations of this equipment from April 20, 1977, through December 31, 1982. Eligible equipment covers equipment that uses solar energy to heat or cool, or to provide hot water for a principal residence, and equipment that uses wind to generate electricity and other forms of energy.

TRANSPORTATION

The Ways and Means Committee's bill includes several tax changes dealing with personal and mass transportation.

GAS GUZZLER TAX

The first one is the gas guzzler tax which is designed to be a strong disincentive to the purchase of fuel inefficient automobiles.

The tax would apply to each initial sale by the manufacturer of an automobile that falls 3 to 5.5 miles per gallon below efficiency standards established for each model year. A separate tax table applies to each model year 1979 through 1985; the table for 1985 applies to later model years as well. The lowest tax increases for $339 for an auto efficiency rating of 15 miles per gallon in 1979 to $397 for an efficiency rating of 23.5 miles per gallon in 1985 and later years. The highest tax each model year applies to vehicles with efficiency ratings at or below 12.5 or 13 miles per gallon and increases from $553 in 1979 to $3,856 in 1985 and later model years.

The amount of this tax is not to be taken into account when computing depreciation, the investment tax credit, or gain or loss on resale.

The Ways and Means Committee action also establishes a public debt retirement trust fund into which the proceeds of the gas guzzler tax will be deposited and used to retire public debt obligations of the United States.

GASOLINE AND OTHER FUEL TAXES

In 1976, more than 40 percent of domestic demand for refined petroleum products was for gasoline. The Ways and Means Committee acted to maintain current tax levels on gasoline and to eliminate some special tax benefits for nonhighway use.

To realize these objectives, the current Federal excise taxes of 4 cents a gallon on gasoline and other motor fuels will be continued at that rate through September 30, 1985. These taxes are currently scheduled to be reduced to 1½ cents a gallon after September 30, 1979. No action was taken at this time on the highway trust fund, which will continue to receive these funds under present law through September 30, 1979.

The committee action also repeals the 2-cents-a-gallon refund of the excise tax on gasoline and special motor fuels used in a motorboat. The increased tax on motorboat fuel will go into the land and water conservation fund as a user tax on motorboat operators—as does the present 20-cents-a-gallon tax.

The committee also acted to repeal the personal deduction for State and local government taxes paid on the purchase of gasoline and diesel and other motor fuels for nonbusiness use after December 31, 1977. This change represents a symbol for both energy policy and tax policy. For the standpoint of tax policy it eliminates an itemized deduction that most taxpayers could estimate reasonably only after a generous application of imagination to a set of somewhat ambiguous tables.

BUSES, BUS PARTS AND ACCESSORIES

The 10-percent excise tax on all buses and the 8-percent excise tax on bus parts and accessories will be repealed under the committee action. Parts and accessories that may be interchangeable between trucks and buses will be taxed on sale unless it is certified that the parts are purchased for use on a bus. The committee also removed the excise taxes on tires, inner tubes and tread rubber, gasoline and other motor fuels, and lubricating oil sold for use with privately owned intercity, local, and schoolbuses. Removal of these excise taxes on private transit and private schoolbus operators puts them on a par—with respect to these excise taxes—with governmental and nonprofit schoolbus operators.

TAX CREDIT FOR ELECTRIC MOTOR VEHICLES

New electric cars purchased for personal use on public roads will be eligible for a tax credit of $300.

CRUDE OIL EQUALIZATION TAX AND REBATES

CRUDE OIL EQUALIZATION TAX

Under the Ways and Means Committee bill, an excise tax is imposed on the first purchase—generally by the refiner—of price controlled domestically pro-

duced crude oil. The tax increases the cost of all crude oil to the world price by 1980. The termination date of the tax is September 30, 1981, which is the date the price controls terminate under existing law.

This tax will increase gasoline prices by about 3 to 4½ cents per gallon by 1980, or 1 cent per year as the tax is phased in. If this tax went into effect all in one step, it would have a somewhat greater impact on prices. For example, gasoline prices would increase by 5 to 7 cents a gallon in 1978, if this tax were fully effective in that year. The normal decline in production of crude oil, however, will mean less crude oil will be subject to the highest tax in 1980 than in 1978.

The tax is imposed in three stages. In 1978, a tax of $3.50 per barrel is imposed on lower tier oil—old oil under current regulations. In 1979, the tax on lower tier oil will be raised so that the national average refiner acquisition cost will be identical for lower tier and upper tier oil. In 1980 and for the duration of the tax, the tax will equal the difference between the wellhead prices of uncontrolled and controlled crude oil of the same classification.

An equalization tax also is imposed on sales to end users of natural gas liquids, and it is based upon the difference—the price gap—between the controlled price of the liquid and the wholesale price for No. 2 distillate oil in the region. The tax will be equal to one-third of the price gap in 1978, two-thirds of the gap in 1979, and equal to the entire gap in 1980 and later years.

There are exemptions for natural gas liquids used in residences, on farms and in churches, schools and hospitals.

An exception is provided from the crude oil equalization tax for heating oil used in residences, churches, schools, universities and hospitals, distributors of heating oil will receive a refund of the equalization tax for each gallon sold to one of these users, so long as the dealers certify that the refund is passed through completely to the customer as lower prices.

CRUDE OIL REBATES

The net receipts from the equalization taxes will be apportioned equally and returned to each taxpayer in 1978 through a new tax credit. Single taxpayers and married persons filing separately will receive a single payment, and married persons filing joint returns and heads of households—single persons with dependents—will receive a double payment.

Special payments will be made in 1979 to adults who are recipients of monthly benefits under social security, railroad retirement or supplemental security income. These payments will be made in the fall of 1979 and will equal the credits rebated to individual taxpayers.

Special payments also will be made to adults who receive aid to families with dependent children. Other adults who do not receive a tax credit or special payment under one of the programs referred to above may file a form with the Secretary of the Treasury in order to receive their payment.

The committee amendment also authorizes payments to the governments of Puerto Rico and the possessions for distribution of amounts similar to the tax credits and special payments.

EXCISE TAX ON BUSINESS USE OF OIL AND GAS AND CREDIT

A three level tax is imposed on the use of oil or natural gas as fuel in a trade or business beginning in 1979. Tier 1 which would apply to an industrial use where conservation in fuel consumption is feasible; tier 2 which would apply to uses of oil or natural gas in which conversion to another fuel is feasible; and tier 3 would apply to electric utilities and industrial producers of electricity using boilers with a total rating of at least 100 megawatts per plant.

The first tier conservation tax on oil will start at 30 cents a barrel and level off at $1 for 1981 and later years. The tier 2 conversion tax also starts at 30 cents, but it will continue rising through 1985 when the tax will become $3 a barrel for 10 and later years. The tier 3 utility tax is a constant $1.50 a barrel that begins in 1983.

The tier 3 utility tax on natural gas also begins in 1983, but starts at 55 cents per million Btu, and rises by 10 cents in 1984 and 1985. It remains at the 1985 level of 75 cents in later years.

The tier 1 and tier 2 taxes on natural gas will vary annually between 1979 and 1985. This tax basically is intended to bring the cost to the user—that is, the price he pays plus the tax—into line with the average regional price for No. 2 grade distillate oil. The prices of oil and natural gas, including the tax, then will not encourage shifts from one to the other scarce fuel.

Both tax rates will be adjusted annually for the inflation that occurs after 1979.

An exemption from the use tax is provided for the Btu equivalent of the first 50,000 barrels of oil per year which should cover almost all small and medium-sized firms. There is also an additional exemption in case of regional competitive disadvantage.

Other exemptions from the business use tax are provided for:

One. Industrial process use when the use of fuels other than oil or natural gas would materially and adversely affect the manufacturing process or the quality of the manufactured goods, and when the use would not be economically and environmentally feasible.

Two. Nonindustrial uses of oil and natural gas in residential facilities, in transportation—including pipelines—on a farm for farming purposes, in nonmanufacturing commercial buildings, and in the exploration, development, and production of crude oil and natural gas.

Three. Oil and natural gas used in a facility that was in existence or under construction on April 20, 1977, and which was precluded from using coal by State air pollution regulations or a regulation of a local agency having jurisdiction over a facility under an approved State implementation plan.

Four. An industrial use for the duration of an exception provided under specified provisions of title I of the National Energy Act.

Special provisions allow the Secretary of the Treasury to reclassify individual firms to a category which is taxed at a lower rate or which is exempt from tax. Reclassification under the procedure would take into account the potential for conversion or conservation in the use of oil and gas and would also consider environmental, economic, as well as technological factors relevant to the individual case.

CREDIT AGAINST TAX ON BUSINESS USE OF OIL AND GAS

A taxpayer may elect a credit against the use tax of $1 for each dollar of qualified investment up to 100 percent of the taxpayer's oil and natural gas use taxes. Carryforwards are provided for use taxes not offset by investments in the first years of the tax.

Qualified energy investment which could be a credit against the use tax includes the cost of alternative energy property placed in service during the year or, if the taxpayer elects, the progress expenditures made for that property during the year. It includes—

First, a boiler, burner, or combustor whose primary fuel is an alternate substance;

Second, certain equipment used in the production of energy by nuclear, hydroelectric, or geothermal power;

Third, equipment for converting an alternate substance into synthetic gas;

Fourth, pollution control equipment required to be installed in equipment described above;

Fifth, equipment required with the use of an alternate substance, or in a facility which uses coal as a feedstock for products other than coke; and

Sixth, the costs for plans and design for equipment described above.

An alternate substance would be a fuel that is not oil, natural gas or their products.

BUSINESS ENERGY PROPERTY TAX CREDIT; INVESTMENT CREDIT AND DEPRECIATION CHANGES

BUSINESS ENERGY CREDIT

A 10-percent business energy tax credit is allowed in addition to the investment credit provided under present law for investments by business in qualified property intended to reduce the amounts of oil, natural gas or other energy consumed in heating or cooling a building or used in an industrial process.

The credit would be available for investments in qualifying property made after April 19, 1977, and before January 1, 1977, and before January 1, 1983. Credits generated by investments in alternative energy property may be applied against 100 percent of the taxpayer's income tax liability, rather than the 50-percent limitation that is now generally available.

The business energy tax credit would be available for alternative energy property as an option under which the taxpayer could elect either the dollar-for-dollar credit of the use taxes or the business energy credit for investments in alternative energy property. A taxpayer who elected the credit against the use tax would receive the regular invest-

ment credit only on the amount of the investment that was not credited against the user tax.

Qualifying property.—For the business energy tax credit, qualifying property in addition to alternative energy property includes:

First, installation or expansion of cogeneration property in an existing facility;

Second, advanced technology property which would use solar, geothermal, or wind energy to provide heat, cooling or electricity;

Third, specified items of heat exchange equipment which would recover waste heat and gases or otherwise reduce energy consumption, and also equipment to modify existing facilities to allow the use of oil or natural gas and at least 25 percent of some other substance in a combustor or to produce an industrial feedstock; and

Fourth, equipment to recycle solid waste and to sort and prepare solid wastes for recycling.

BUSINESS INSULATION

For purposes of the regular investment credit, insulation installed in connection with an existing building or industrial facility would be qualifying property through 1982. Insulaton includes storm doors and windows, thermal glass and double glazing.

DENIAL OF REGULAR INVESTMENT TAX CREDIT AND ACCELERATED DEPRECIATION

The regular investment credit would be denied for air conditioners and space heaters.

The regular investment credit also would be denied for new oil and gas boilers. In addition, straight-line depreciation would be required for these boilers, and the 20-percent variance from the guideline lives for depreciable property under ADR would not be available for these boilers. These limitations, however, would not apply where the use of coal as an alternative fuel is precluded by Federal or State regulations or if oil or natural gas qualifies as an exempt process use.

DEPRECIATION ADJUSTMENT FOR PLANNED RETIREMENT OF BOILERS

If a taxpayer certifies that he plans to replace or retire a boiler or other combustor which uses oil or natural gas as a fuel before a specified date, the undepreciated value of the equipment would be deductible using the straight line method over the time remaining before the date specified for retirement.

MISCELLANEOUS PROVISION

TAX TREATMENT OF GEOTHERMAL EXPENSES

A current deduction would be allowed for intangible drilling costs related to the exploration and development of geothermal resources. To the extent that these intangible drilling costs exceed the taxpayer's income from the production of geothermal resources, these costs would be subject to the minimum tax on preference items.

In addition, percentage depletion will be allowed at a 10-percent rate for all geothermal resources, subject to the limitation that the total amount of depletion allowed with respect to any property is not to exceed the taxpayer's adjusted cost basis in that property.

MINIMUM TAX ON INTANGIBLE DRILLING COSTS FOR OIL AND GAS WELLS

The committee extended beyond 1977 the provision in present law relating to the minimum tax on intangible drilling costs. As a result, the minimum tax on preference items applicable to intangible drilling costs for oil and gas wells would be modified to treat these intangible costs as preference items only to the extent they exceed the taxpayer's oil and gas production income.

REREFINED LUBRICATING OIL

New lubricating oil would be exempt from the 6-cents-per-gallon excise tax, if it is combined with rerefined oil and the new oil makes up 55 percent or less of the mixture. If the new oil in the mixture exceeds 55 percent of the contents, the exemption would apply only to the new oil that would make up 55 percent of the mixture. In any case, the mixture must contain at least 25 percent waste or rerefined lubricating oil in order to qualify for the exemption.

ANNUAL REPORT ON ENERGY SAVINGS AND REVENUE EFFECTS

Beginning in August 1978, the President will report each year to the Congress on the savings in energy use accomplished, the revenue received, and the revenue disbursed under each specific program contained in title II of H.R. 6831, the Energy Tax Act of 1977.

This summarizes the provisions in title II of the National Energy Act as reported by the Committee on Ways and Means. The committee worked long and hard in developing this package and in my view it represents a sound energy tax program.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield briefly?

Mr. ULLMAN. I yield to the gentleman from Texas.

Mr. ECKHARDT. I thank the gentleman for yielding.

I think my distinguished chairman of the Committee on Ways and Means will confirm the proposition that I was attempting to clarify with the gentleman from New York (Mr. CONABLE), and that is that in no way would the definition of new-new oil in the Ways and Means bill give one penny additional money to the producer. It would simply give a windfall to the refiner with respect to that oil which the President had not defined and had not altered the price of as frontier oil.

Mr. ULLMAN. Let me say to the gentleman that yes, it is my understanding that would be the impact. The ad hoc provision makes the definition of new-new oil under the tax conform to whatever definition is used for price controls.

Mr. ECKHARDT. They will permit the President's program and the tax program to interface in a proper way in order to encourage the production of frontier oil, as I understand it. That is the reason I offered the amendment.

Mr. ULLMAN. Yes, I agree with the gentleman.

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from Wisconsin.

Mr. STEIGER. I do not want to prolong this, and I thank the gentleman from Oregon very much for yielding.

I think it is important to set the record straight. We will get into the debate when we get to the Eckhardt amendment. The point is that under the Committee on Ways and Means bill we had a definition of new-new oil and the tax that could be applied. That definition meant that the President would then have to face that issue. Without it, the President is allowed to write his own definition. It seems to me the Congress has lost its opportunity—the opportunity it would have if that Jones definition stayed in the bill. It is that point that has to be made. We have lost that chance if the Eckhardt amendment is adopted.

Mr. ECKHARDT. If the gentleman will yield very briefly, I do not want to entrench on his time.

Mr. ULLMAN. I yield to the gentleman from Texas.

Mr. ECKHARDT. I do want to answer that point. I thank the gentleman for yielding. Had the definition remained in the Ways and Means bill it would have in nowise constrained the President to follow it with respect to pricing. It simply would have constrained the Government from taxing a portion of the oil which the Ways and Means Committee defined as new-new oil.

Mr. ULLMAN. Mr. Chairman, first let me commend the Ad Hoc Committee and all of the committees of jurisdiction. I commend the Rules Committee for issuing a responsible rule.

The chairman, the gentleman from Ohio (Mr. ASHLEY), did a splendid job of pioneering a new procedure in the House of Representatives that enables us now to bring an energy package to the floor that is comprehensible, that is responsible, and that is responsive to the recommendations of the administration. I think this will enable this Congress and this Nation to make the very fundamental decisions needed to turn the corner on energy policy and energy use in a way that will allow us to avert the kind of major crisis that would be imminent without this kind of change in direction.

So I am pleased to be a part of it. We have been able to do this without sacrificing in any way the major jurisdictional responsibilities in the House. We bring here a recommendation from the Ways and Means Committee as we reported it from that committee, a fine, responsible package. The coordinating committee under the gentleman from Ohio (Mr. ASHLEY) is going to bring a series of recommendations that the ad hoc committee has suggested are important and necessary in order to make this a good, solid working package.

This, I think, is a very important day in the history of the Congress because I think it is going to give us the kind of procedures that we are going to need more and more in order to solve the very complex problems of this Nation.

Let me go briefly, then, through the provisions of the bill in title II which are under the jurisdiction of the Committee on Ways and Means.

Mr. ALLEN. Mr. Chairman, will the gentleman yield for a question?

Mr. ULLMAN. I will be happy to yield.

Mr. ALLEN. I thank the gentleman for yielding.

My reason for rising to ask questions is because I did not receive a copy of the bill or of the committee reports until about one-half hour before I had to leave here on Friday, and with a 500-page bill and all of these reports, quite frankly, I have not had an opportunity to read them, let alone digest them. But, with respect to the tax fund, the gentleman spoke of the tax on crude oil gradually going up. Does it ever cease? That is the tax on crude oil?

Mr. ULLMAN. Well, let me say to the gentleman that in the first two stages we bring the price of old oil up to the price of second tier or new oil; then, in the third stage, we bring all price-controlled oil up to world levels.

Mr. ALLEN. When we get to the third stage, will the Government be getting that money, or will the bill then be permitting oil drillers and the petroleum companies to be charging the same as the world price on crude oil?

Mr. ULLMAN. The Government gets those revenues, and then they are returned to the people through a tax credit, special payments, and through a heating oil rebate.

Mr. ALLEN. But it will not go back to the oil companies, in any event?

Mr. ULLMAN. No. No. They will continue to get the same price that they do now. Crude oil price controls will remain in effect.

The CHAIRMAN. The time of the gentleman from Oregon (Mr. ULLMAN) has expired.

Mr. ULLMAN. Mr. Chairman, I yield myself 1 additional minute.

Mr. ALLEN. If the gentleman will yield further, the gentleman said someting about the tax on what they call gas guzzlers, the Lincolns and Continentals and big Oldsmobiles. When would those taxes go into effect, and how much would they be?

Mr. ULLMAN. They do not go into effect until model year 1979, and then on a graduated scale.

Mr. ALLEN. Starts at what and goes to what?

Mr. ULLMAN. The tax phases in between 1979 and 1985, and the lower a car's mileage below the mandated standards, the higher the tax. For a given level of gas mileage, the tax rate increases year by year, so that out there in 1985 one could be paying a tax of almost $4,000 if he bought a very inefficient automobile, assuming it is on the market then.

Mr. ALLEN. A $4,000 tax on the automobile?

Mr. ULLMAN. If it were really inefficient and out there in 1985, that is correct.

The CHAIRMAN. The time of the gentleman from Oregon (Mr. ULLMAN) has again expired.

Mr. ULLMAN. Mr. Chairman, I yield myself 2 additional minutes.

Mr. FOUNTAIN. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from North Carolina.

Mr. FOUNTAIN. I thank the gentleman for yielding.

Mr. Chairman, I think public opinion in most areas of the country—certainly in my area—supports the idea, the recommendations of the administration, that industry convert, insofar as possible, back to the use of coal from fuel oil and natural gas.

I have a number of industries in my congressional district which some time ago, because of the Environmental Protection Act and the recommendation to clean up the environment, moved from coal to natural gas and to fuel oil and such other oils as it may use.

What protection is there in this legislation, exemptions, exceptions, or whatever form it may be, to those industries which now attempt to go back to the use of coal rather than to natural gas and other oils in the environmental protection area?

Mr. ULLMAN. As I have indicated, we have attempted to apply this tax in a practical and realistic way. We have said if there are economic, technical or environmental reasons why they cannot convert to alternative energy sources, then we have exempted them from the tax, except in certain instances where we say that if they cannot convert but can conserve, we have a second tier, a modest tax, which in some instances would apply.

Mr. FOUNTAIN. I thank the gentleman.

Mrs. FENWICK. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Chairman, I have a question I would like to ask the Chairman, if I may, on this question of the tax on the crude oil. As I understand it, under this bill some portion of it will go back in rebates, $22 rebates to the public, and the remainder into the general revenue; right?

Mr. ULLMAN. First, there is a heating oil rebate. That is applied through the dealers in a reduction in the bills for those families, schools, churches, and hospitals which burn heating oil, and, in addition to that heating oil rebate, there is that per capita rebate to the American people; that is correct. The heating oil rebate applies for the life of a tax; the per-person rebate applies to 1978.

Mrs. FENWICK. And the remainder goes back into the general revenue?

Mr. ULLMAN. That is right. After 1978 the bill does not have a per-person rebate. The committee plans to provide such a tax reduction in the tax reform bill we will consider next year, and it wanted to integrate the return of crude oil equalization taxes to consumer with the comprehensive tax reform program.

The CHAIRMAN. The time of the gentleman from Oregon (Mr. ULLMAN) has again expired.

Mr. ULLMAN. Mr. Chairman, I yield myself 1 additional minute.

Mrs. FENWICK. If the gentleman will yield further, as I understand it, the total take, so to speak, on the subject of this tax, will be many tens of billions of dollars; is that correct?

Mr. ULLMAN. Over the period of the tax it amounts to close to $28 billion, yes.

Mrs. FENWICK. Close to $30 billion

What proportion of that will be going into the general treasury and what proportion of that will be going into these rebates?

Mr. ULLMAN. In 1978, the vast majority will go into per person rebate. The rest goes to the heating oil rebate.

Mrs. FENWICK. I understand.

Mr. ULLMAN. So most of the revenues over the period of time, if the law is not changed, would go into the general treasury. The anticipation is that we probably will in the tax reform bill continue to rebate just as much as possible to the American people.

The CHAIRMAN pro tempore (Mr. EVANS of Colorado). The time of the gentleman from Oregon (Mr. ULLMAN) has expired.

Mr. ULLMAN. Mr. Chairman, I yield myself 2 additional minutes.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I appreciate having the chairman of the committee yield to me.

In one of the tables here in the committee report, I notice that there is a figure for "total of all parts" under a table called "Summary of Estimated Budgetary Effects of Title II of H.R. 8444, Fiscal Years, 1978 to 1985," and it shows: $93 billion.

What does that mean?

Mr. ULLMAN. That is the revenue impact. We have the gas tax, the industrial use tax, and the crude oil tax. That is a composite of the full general revenue impact.

Mr. ROUSSELOT. Does the gentleman mean taxes on people overall, and that that would be a cumulative figure for potential revenues from taxation?

Mr. ULLMAN. This is the total net revenue gain from the ad hoc committee's bill.

Mr. ROUSSELOT. Does the gentleman mean the rebates are subtracted from that?

Mr. ULLMAN. Yes, that is right. This is the gross tax revenues for this whole period of years, from 1978 through 1985. This is the total of all parts of the bill insofar as revenue is concerned.

Mr. ROUSSELOT. Is this after the rebates have been given back or what? Is this a net figure?

Mr. ULLMAN. Yes.

Mr. ROUSSELOT. Before rebates?

Mr. ULLMAN. This is the net revenue.

Mr. ROUSSELOT. How much will the rebates be?

Mr. ULLMAN. Well, I believe that figure has been indicated. In 1978 the per person rebate will be $3.4 billion.

Mr. ROUSSELOT. What I am trying to get at is this: Is this going to cost the taxpayers $93 billion? That is a tidy little figure.

Mr. ULLMAN. The reason the figure is so high in that the bill limits the per-

person rebate of the crude oil tax to 1978. There will be a further extension of those rebates, or equivalent tax cuts, in the tax reform bill, or other legislation.

Mr. ROUSSELOT. Mr. Chairman, I thank the gentleman.

Mr. MILLER of Ohio. Mr. Chairman, will the gentleman yield?

The CHAIRMAN pro tempore. The time of the gentleman from Oregon (Mr. ULLMAN) has expired.

Mr. STEIGER. Mr. Chairman, I yield myself such time as I may consume.

Mr. MILLER of Ohio. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. MILLER of Ohio. Mr. Chairman, I attempted to gain the attention of the chairman of the Committee on Ways and Means when he was speaking a minute ago. I would like to pursue my point, if I may.

One point did come up, and that is that we will have the additional tax on old oil, that we will bring the price up to the world price, and that we will have a rebate. So my question is this:

Could the gentleman from Oregon (Mr. ULLMAN) tell the House how we will be able to produce more oil if we do not plow part of that money back in for exploration, drilling, and production?

Mr. ULLMAN. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the chairman of the committee to try to answer the question.

Mr. ULLMAN. Mr. Chairman, what we are saying is that new oil, under the new liberal definition of "new new oil," is given the world price. The reason people go out and discover oil is to get that price. That is where the incentive is.

People go out and make a new discovery, and the oil that results from that new discovery will get the world price for oil. I do not know of a more dynamic incentive than that.

Mr. MILLER of Ohio. In other words, if the gentleman from Wisconsin will yield further, are you saying that the tax on old oil will be a revenue maker for the Federal Government and it will tend to discourage consumption; because the price is higher, is that the idea?

Mr. ULLMAN. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the chairman of the committee.

Mr. ULLMAN. No. that is not what we are saying. What we are saying is that unless we can get a mechanism to get the price of domestic oil and petroleum products to competitive world levels, we are not ever going to stimulate our industry and our people to convert and move toward other energy sources.

We have to solve the pricing problem. There is a very equitable way of doing it. Through the tax mechanism, we are bringing it up to world level. We are giving the incentives to explore for new oil. For all the new oil discovered we are giving the world price, and we are establishing the kind of price mechanism that is absolutely essential to get people to convert to coal and other energy sources.

Mr. MILLER of Ohio. I thank the gentleman.

Mr. STEIGER. Mr. Chairman, may I say to my friend, the gentleman from Ohio (Mr. MILLER), that his questions are very good. The answers given are not satisfactory from my standpoint, and that is one of the deficiencies in the bill before us. We are simply raising money. From my standpoint, we get absolutely nothing except higher taxes.

Mr. MILLER of Ohio. Mr. Chairman, if the gentleman will yield further, I thank the gentleman for his comment.

Perhaps during the other half of this legislative day we will be able to unravel this bill and find out exactly what is in it.

Mr. PICKLE. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. Given the limited time available, of course, I will yield to the gentleman from Texas.

Mr. PICKLE. Mr. Chairman, I think the record ought to show again that this question was asked of the chairman of the Committee on Ways and Means just a few minutes earlier; and he pointed out to the gentleman from Tennessee that the tax would stay the same and that although it would start at $3.50 and would change a little bit, the price would remain the same.

Obviously there is no increased tax in the bill. There is no extra incentive for exploration and development.

The chairman may be correct that the world price, whatever it is, may give sufficient incentive. If that is his point, it may be well taken; but there is not any increase and there is no incentive in this bill.

That ought to be understood by the Members.

Mr. STEIGER. It should be, and I thank the gentleman from Texas (Mr. PICKLE) for that clarification.

We will face that issue, as my colleagues know, a little bit when we get to the Jones amendment on the plowback.

Mr. ALLEN. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Tennessee.

Mr. ALLEN. Mr. Chairman, what we are, in effect, then doing, if I understand it correctly—and I hope the gentleman will correct me if I am wrong—is that after about 3 years, we are going to permit the OPEC oil companies or the countries of this world to set the price of oil that the American people will pay, whether it is foreign oil or domestic oil; is that correct In other words, we are going to permit the OPEC nations to set the price of all oil that is sold in the United States?

Mr. STEIGER. As a practical matter, that is exactly what happens today to a very real extent in terms of new oil.

My concern over the way that the ad hoc committee has operated and with respect to the total bill as we have it before us is that my instincts tell me—I am not sure that anybody can ever prove this, and we will not be able to prove it until 2 or 3 years down the road—my instincts tell me that the national energy policy that this House is about to adopt at some point this week would result in reliance upon more imported petroleum at higher prices because we provide no significant incentive for us to increase domestic production as a way to get at the OPEC price structure.

Mr. ALLEN. Certainly that is one point, but what I want to get clear in my own mind is the answer to this question: Let us suppose that OPEC prices, the prices for OPEC oil, go to $20 a barrel. Then what will the domestic oil be selling for? What will the tax on that be, enough to bring it up to $20 a barrel, too?

Mr. STEIGER. The answer is yes, enough to bring it up to that price.

Mr. ASHLEY. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio, hesitatingly, of course.

Mr. ASHLEY. Mr. Chairman, may I say to the gentleman that that is not necessarily so at all. The tax is not pegged to the OPEC price or the world price. That tax can be suspended on authority, as the gentleman knows, so the answer to the question is not yes, but that it is not necessarily so at all.

Mr. STEIGER. There is a song from Porgy and Bess with a similar title.

Mr. ASHLEY. It is not necessarily so.

Mr. STEIGER. That is right. I remember that song well.

Mr. ALLEN. If the gentleman will yield further, of course, we can change the law at any time.

Mr. STEIGER. I cannot yield to the gentleman from Tennessee (Mr. ALLEN) at the moment, but "It ain't necessarily so," that is right.

Mr. Chairman, the gentleman from Ohio (Mr. ASHLEY), our distinguished chairman, who, I must say, has done a superb job under very difficult circumstances, is a gentleman to whom I give great credit in spite of the fact that he runs a helluva lot better railroad than anybody I see around here does. I give him great credit for how he handles himself under these circumstances.

Mr. FRENZEL. Mr. Chairman, if the gentleman will yield, let me say that I agree with the chairman, the gentleman from Ohio (Mr. ASHLEY) that it is not neccesarily so, but that is the basis for this whole act, and the supposition is that if the OPEC price goes to $20 a barrel, the chances are it will take our price up to $20 a barrel. It does not have to happen, but that is the basis of the act.

Mr. ASHLEY. But it is not the basis of the legislation.

Mr. STEIGER. But the tax is, in fact, designed to bring domestic oil up to the world price.

Mr. ASHLEY. The present world price.

Mr. STEIGER. The present world price, that is correct.

Mr. ASHLEY. And that was made clear in the gentleman's committee and in the ad hoc committee: If there is a sudden escalation in the price of oil, the tax would not necessarily follow the rapidly escalating price of world oil.

Mr. STEIGER. No, it does not necessarily follow.

Mr. ASHLEY. It may not be in the best interests of our economy to allow it to do so, in which case the President would not allow it.

Mr. Chairman, I fail to see the mystery in this.

Mr. STEIGER. I do not believe there is any mystery in this.

Does that help to clarify it?

Mr. ALLEN. Mr. Chairman, if the gentleman will yield, let me say that it helps to confuse me all the more.

I want to know if the present bill is based on having at some future time down the road a situation where if the price of OPEC oil goes to $20 a barrel, if, under the bill, we are not saying that the tax goes up sufficiently to bring the domestically produced crude oil up to the OPEC or world price.

Mr. STEIGER. The answer to the question is that the tax, under this bill, and I would appreciate the gentleman from Oregon (Mr. ULLMAN) correcting me if I am wrong—is that the tax under the bill geos up automatically unless the President suspends it. If I understand the way it is supposed to operate, it would require a suspension by the President of that tax above the world oil price.

Mr. ULLMAN. Mr. Chairman, if the gentleman will yield, in the instance related by my friend, the gentleman from Tennessee (Mr. ALLEN), my judgment is that the President would not allow the price of oil to follow the world price in that kind of an escalation. The President simply is not going to allow the OPEC prices to dictate to our economy an undue increase in the price of petroleum.

Mr. ALLEN. But, Mr. Chairman, that is up to the President to instigate such action. If he did not suspend it, it would do so, would it not?

Mr. ULLMAN. That is correct. The whole purpose here of the legislation is that if it does do so, if there is an undue increase, the President will suspend it. That is the whole impact of the legislation.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Chairman, I have been listening to this debate with interest, and I thank my colleague, the gentleman from Wisconsin (Mr. STEIGER) for pointing out these particular portions in the bill. It is my understanding, however, that the President has requested this authority and now we are hearing that should anything take place he would set aside the tax. It is also my memory that the President of the United States was seeking a much greater tax than what the gentleman handling this bill ended up putting into this legislation. I believe he was talking up to 50 cents, was he not?

Mr. STEIGER. That is correct, but the effect of it would have been higher revenue raised because it is higher than that which comes to us from the Committee on Ways and Means.

Mr. ASHBROOK. As I understand it, as one of the members of the Committee on Ways and Means pointed out, the President is asking for a tax but may not urge its implementation. Is that not what the gentleman is saying?

Mr. STEIGER. Let me say that I have a lot of problem with the President's proposal, and I have a great deal of problem with the things that are in this bill, but I do not wish to be unfair to the President of the United States. I think he made it quite clear, and I think it is clear in the Committee on Ways and Means version of the bill that, yes, it is true, the tax is designed to take domestic oil presently controlled up to the world market price by a taxing mechanism, and that if the OPEC nations raise their prices sharply above the present level, the President of the United States would intend to suspend further taxes above the level contained in the bill. If he does not do that, then the tax automatically would go up to that new world price.

But I think President Carter made it eminently clear that he intended to use the tax mechanism as a vehicle to say to OPEC, "If you are going beyond this price level in a dramatic fashion, I intend not to let domestic prices follow you automatically." I do not think I misstate that.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Texas.

Mr. HALL. I thank the gentleman for yielding.

With reference to what the gentleman has just said, would the President only have the right to suspend that until 1981? After 1981 he would not have the right to suspend?

Mr. STEIGER. The gentleman is talking about two different things. One is the so-called controlled price of oil that is controlled by law until May 1979—that the President may administratively extend until October 1, 1981. That is under the Energy Policy and Conservation Act of 1975. The second is the tax which expires on October 1, 1981.

Mr. HALL. If the gentleman will yield further, with reference to what the gentleman from Tennessee (Mr. ALLEN) had referred to a moment ago, would not the President have the right to keep that price from going up to, say, $20 a barrel of the OPEC nations only until 1981, and if that situation occurred after 1981, he would have no right to suspend that tax?

Mr. ASHLEY. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. ASHLEY. I thank the gentleman for yielding.

The authority for the tax expires in 1981, so if no action is taken, there will not be any wellhead tax. There will be no equalization tax thereafter. So clearly both the tax and the authority of the President to suspend the tax expire coterminously in 1981.

Mr. HALL. So after 1981 if the OPEC nation price went to this theoretical $20 a barrel and the domestic price went up to that price also, the President would have no authority to keep that domestic price from raising to $20 a barrel?

Mr. STEIGER. I think the answer is yes if both expired. I yield to the gentleman from Ohio (Mr. ASHLEY).

Mr. ASHLEY. If both expired, there would be no wellhead tax after 1981.

Mr. STEIGER. No tax and no controlled price because both expire.

Mr. ASHLEY. Precisely so.

Mr. HALL. No control after 1981?

Mr. ASHLEY. That is correct. That is correct. The authority that currently controls the price of crude oil of the United States expires in 1981. This is under the legislation that was enacted in 1975.

Mr. HALL. I thank the gentlemen.

Mr. STEIGER. Mr. Chairman, I am embarrassed. I have not even given the Members a chance to hear what I started out to say. I will try very hard not to impose upon the committee's time more than I have already.

Mr. Chairman, I am opposed to this legislation. There is very little time left. What this institution is about to do is, in my view, irrational, but I hope that in the end we will not fail in our responsibilities to the American people.

I sat through the Committee on Ways and Means' deliberations. I served on the ad hoc committee. I attended as faithfully as I possibly could all of the briefing sessions. Unfortunately, some of the ad hoc sessions were going on at the same time the Committee on Ways and Means was meeting. I attended the ad hoc committee's markup sessions which lasted only 3 days. To say that I am disappointed would be an understatement of incredible proportion.

Mr. Chairman, if we look back on recent history, the President of the United States on the 20th of April in proposing this bill said we are going to embark on what is the moral equivalent of war. As that week went on, it was a little bit less, and a little bit less, and a little bit less. I said after listening to the President that what we are embarking upon is the moral equivalent of peace. What we were embarking upon in the ad hoc committee deliberations and what we are embarking upon in the Committee of the Whole House to consider the bill is neither war nor peace but an effort to prevent the House of Representatives from adequately considering the most profoundly important and far-reaching policy decision that this country will be embarking upon.

As I said during debate on the rule, it makes absolutely no sense to me that we will be voting upon the Davis-Bacon Act and upon bicycles but will not be voting upon such things as crude-oil pricing, or insulation tax credits, or any number of areas that are legitimate public-policy issues, to prevent us from dealing with it because of the rule we are operating under.

I have never in my legislative career, either in the Senate of Wisconsin where I had lots of frustrations or in the House of Representatives, had a more frustrating time in attempting to deal with an issue of this magnitude under these circumstances. The administration at the time it proposed the bill could not even answer the most basic questions as to who was going to pay the tax and what its distribution was going to be and who was going to feel the bite, and neither could we find out, and here we are just before the August "district work period" begins and we are going to be debating this bill under the most incredible time constraints I have yet seen despite the amount of time given here this afternoon for general debate.

Let me talk now about some of the issues I see us talking about in this bill.

In the crude oil equalization tax as proposed by the Ways and Means Committee, the tax would produce $26.6 billion in net tax revenues between now and 1982. That is a staggering sum of money. But as staggering as it may be it is a net figure. The gross revenues produced from this tax—and I am only talking about one tax now, the crude oil equalization tax—would be $38.9 billion between now and 1982. In 1980 alone it will be $11.3 billion. It will be $14.5 billion in 1981.

But that is, as I said, only the crude oil equalization tax. Let us stop and look for a moment at the total tax picture presented by the National Energy Act as reported by the Ad Hoc Committee on Energy. Between now and 1985 it will produce $93.259 billion in net revenue increases. The gross number is far higher.

My principal objection to the crude oil equalization tax as proposed by the Ways and Means Committee is its failure to deal with the issue of production incentive. In this connection, in the ad hoc committee I proposed an amendment which was ruled out of order.

We cannot touch production incentives for new crude oil.

Let me just briefly describe what my amendment would have done. The crude oil excise tax would apply to only lower tier—old oil. It would be identical with that proposed by the Ways and Means Committee. New oil—or upper tier oil—would be decontrolled over a 5-year period. The tax on old oil would be imposed on the first sale of that oil beginning January 1, 1978; it would be imposed in three stages: $3.50 per barrel in calendar 1978, $7 per barrel in calendar 1979, and, effective January 1, 1980, and for each year thereafter, the tax would equal the difference between the average U.S. lower tier controlled price in that year and that year's average imported cost of foreign oil. The per barrel tax would be identical for all lower tier crude oils, irrespective of quality or location differences, thereby preserving absolute differences among crudes.

Producers would be eligible for credits against the tax by initiating eligible expenditures for oil and gas exploration and development. Tax credits could not exceed 50 percent of the total excise tax revenues generated. Eligible expenditures would include any bona fide cash outlays for purposes of finding and developing domestic crude oil and natural gas reserves except that payments for purposes of acquiring or holding leases shall be excluded. Eligible expenditures would be applied against Federal crude oil excise tax liability on a 50 to 1 basis above a base spending or threshold requirement. The threshold level would be the average of a producer's otherwise qualified investments over the proceeding 3-year period.

Plowback credits would be carried forward or back 3 years from the year in which the expenditures was made and used to offset Federal crude oil excise tax liabilities.

This proposal could have increased domestic oil production by as much as 2 million barrels of oil a day in 1985. It is the kind of proposal we ought to be here today debating. But we cannot under the rule touch the oil pricing policy except through the substitute, and thus let me touch on a couple of other points I think we ought to look at.

The transportation provisions of title II relate to a number of things but perhaps the most important for our purpose today is the proposed gasoline tax. The ad hoc committee has proposed a gasoline tax of 4 cents per gallon. The gentleman from New Jersey (Mr. HOWARD) has proposed an amendment which would and will be permitted to impose a gasoline tax of 5 cents a gallon. I must say I am absolutely dumbfounded that this House is going to even consider such proposals. They certainly will produce no incentive to conserve energy and in fact a lesson from our recent history ought to make that painfully clear to everyone.

In January 1973 the average selling price of regular gasoline at a full service retail outlet in the United States was 37.3 cents a gallon. In December 1976 that price had increased to 59.9 cents, a rate of increase of 60.6 percent.

Yet gasoline consumption during that period of time increased by over 15 percent.

Now we are faced with a situation where we are going to actually consider the imposition of a 4 or 5 cents a gallon gasoline tax. The crude oil equalization tax when fully effective and passed through will push costs up at least 5 cents, and I think with accompanying markup this will translate to almost 7 cents at the pump. The proposed gasoline tax will add another 4 or 5 cents depending upon which version we consider. That is these two taxes will result in a 17.5 to 19 percent increase in gasoline costs over average December 1976 prices by mid-1980.

We might say that 17.5 or 19 percent is not very substantial, but I would like to point out that the 60.6 percent increase which occurred between January 1973 and December 1976 when adjusted for inflation translates to a 17.8 percent increase.

So we are looking at proposals which will have the same effect on gas prices as an oil embargo.

The ad hoc committee amendments would also impose a tax on general aviation fuel. The tax would be 2 cents a gallon in 1978 and 4 cents a gallon in 1979 and thereafter. The revenues from the tax would not be put into the airport and airway trust fund. They would be put into a trust fund which would be used to develop mass transportation, highways and energy research and development. This latter category could almost be justified. But to put a tax on aviation fuel to be used to develop mass transit and highway facilities is probably an embarrassment even to those who propose and support it.

The excise tax on business use of oil and gas was substantially improved by the Ways and Means Committee. It was significantly better when reported by that committee than when proposed by the President. That is because the Ways and Means Committee recognized that certain kinds of process uses simply could not be converted to coal. Additionally, the Ways and Means Committee took into account the fact that certain petrochemical feedstocks simply could not be replaced by coal. It was a major battle to get the administration to recognize these things. And even now their recognition is grudgingly.

The ad hoc committee, with no hearings on the matter and only several minutes of discussion, reversed the Ways and Means Committee position on a critical issue associated with the oil and gas use tax. It would delete the exemption from taxes on business use of oil and gas for facilities which would be exempt from the regulatory program under title I of the bill. The Ways and Means Committee bill recognized that in title I there were mandatory prohibitions against the use of oil and gas in new "major fuel burning installations" and new electric generating facilities. These prohibitions however were subject to exemption upon fairly narrow showing that the use of coal was simply impossible or totally impractical economically. As proposed by the administration, the bill would have continued to tax facilities which were able to obtain exemptions under the regulatory program.

This can only be described as the kind of disparity of treatment which so infuriates the American citizens in their dealings with Washington. You apply for an exemption under one program. You obtain that exemption at great cost and after large legal expense and hassle, only to find out in the end that you are still not exempt.

The Ways and Means Committee was wise enough to recognize that once the regulatory exemption process had been fully exhausted and a particular facility had become exempt, that it should not be subject to the tax. The ad hoc committee has taken a twisted view and has concluded that even though a facility is exempt under title I from the prohibition against using oil or gas that facility's use of oil and gas ought to continue to be taxed.

The stated reason for the ad hoc committee's action is that the tax will encourage conservation. It strikes me as bizarre that people who are able to obtain exemptions under a regulatory program so they may use oil and gas will have to pay prices higher than those which prevail throughout the world. That is what will result from the ad hoc committee action. Under the crude oil equalization tax, by 1980 crude oil will be available to consumers only at market levels. That means that an industrial facility which uses oil which has obtained an exemption under title I will have to pay world market prices for oil. That is fine. I have no quarrel with that. But in addition, that facility will have to pay a use tax. That will not produce conservation. It will only produce tax revenues. Perhaps the greatest affront of all is the proposition put forward by the majority that this disparity of treatment will result in an energy savings of between 250,000 and 400,000 barrels of oil per day by 1985. If it does result in any decrease in oil use at all it will be because

most of the people who would have otherwise been employed at the facilities in question will be unemployed. All of the factories that would otherwise have been producing will be idle and nearly all of those still engaged in the enterprise in question will be spending three-quarters of their time completing forms and submitting them to the Departments of Energy and Treasury. They will be spending the remaining quarter of their time trying to make sure that the employees of those two Departments talk to each other directly on occasion.

Mr. GRADISON. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. GRADISON. Mr. Chairman, I know the gentleman during the meetings of the Committee on Ways and Means showed a great deal of interest in the so-called residential energy credit. Section 2011 of the bill provides for residential energy credit, sometimes called the insulation credit. In an analysis issued in June by the Congressional Budget Office which goes into the insulation credit indicated that the number of homes being insulated was rising rapidly following the oil embargo of several years ago, the rising price of fuel, and the very bitter winter of last year.

The Congressional Budget Office also made an estimate that between now and 1985 24 million homeowners and renters are likely to insulate their dwellings and that only about one-third of those will be attributable to the proposed insulation credit. That is, two-thirds of those who would insulate between now and 1985 are going to do so.

The Congressional Budget Office went on to say:

> Some experts suggest that the windfall portion of the credits to buyers who planned to insulate anyway will only compensate those buyers for the cost increase resulting from announcement of the credit.

Mr. Chairman, I want to call attention of the House and the gentleman from Wisconsin that at least in the area I represent this theoretical possibility has already come to pass. It appears that there is a current waiting list for insulation, that the shortage has actually happened, that the supply is short. Sales are going up and the price is going up as well.

I want to call this to the attention of the gentleman from Wisconsin and ask for the gentleman's comments about this.

My personal concern is that while we may have on our hands a very popular proposal, one which does provide a credit for insulation, we may actually be taking money away out of one pocket as we put it in the other; that is to say that by making this credit available at the time insulation sales are going up anyway, we may really have increased the price of insulation for those who would benefit from the credit.

Mr. STEIGER. Mr. Chairman, the gentleman from Ohio is absolutely correct. If we look further at the Congressional Budget Office study, it indicates for each barrel of oil concerned by the credit, there will be a revenue reduction of $2.42.

The CBO report goes on to say:

> These costs are high because a large portion of the credits are paid to people who would have made energy-saving improvements anyway. This represents a payment from taxpayers in general to those who buy insulation.

I am concerned, because one of the features of the rule under which we are operating today is that the gentleman from California (Mr. STARK), the gentlewoman from Kansas (Mrs. KEYS), the gentleman from Indiana (Mr. JACOBS), all came to the Committee on Rules, as did I, asking for a motion to strike the insulation credit. We are going to be giving $500 million a year to 1984, which is a very substantial sum of money, to a relatively small group of people, most of whom would have made that improvement, anyway, as energy prices are going to go up.

I think the House has been deprived of a chance to operate more effectively if that issue could have been debated. For all practical purposes, the issue will not even be touched upon during debate on amendments because there will be no amendment.

Mr. GRADISON. I thank the gentleman.

Mr. STEIGER. I thank the gentleman for raising the issue.

Mr. FRENZEL. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Minnesota.

Mr. FRENZEL. Will the gentleman explain to me, if there is a windfall profit on energy, that is somehow outrageous, but, if there is a windfall profit to an insulation manufacturer or installer, that is very good. Does the gentleman understand the rationale behind those two circumstances?

Mr. STEIGER. I really do not understand the rationale behind the point, and I am waiting to see if the Committee on Banking, Finance and Urban Affairs and International Monetary Affairs can come out with a reasonable proposal for wage-price controls that will be directed at insulation. I said, during debate on the bill in the Ways and Means Committee that this was an open invitation to every soft-shoe artist in the country because they are all going into the insulation business, and you better believe that under the proposal we are presenting that costs will go up. They have already started, and we are opening the door for the worst kind of chicanery under the guise of energy conservation.

Mr. ASHLEY. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. Of course, I yield to the distinguished chairman of the Housing and Community Development Subcommittee, who wrote an excellent letter, may I say, to the chairman of the Ways and Means Committee on just that point.

Mr. ASHLEY. If the gentleman will yield to me in my other capacity, I would like to ask if my understanding is correct, that the Republican substitute that will be offered does not contain an extension of the tax credit through 1984. Is my understanding of that correct?

Mr. STEIGER. The chairman of the ad hoc committee has dealt me a low blow. The answer to the question—over my strenuous objection, I must say—is yes. But, please understand that we extended the credit to 1985 in order to soften that inflationary effect. I intend, as contrasted to my distinguished and able minority leader on the Ways and Means Committee, the gentleman from New York (Mr. CONABLE) to support the Fisher motion to extend that another 2 years, because if we took it off in 1982, we are just going to force everybody to move much more quickly than they ought to do. But, I am sorry that the chairman of the ad hoc committee would be so perceptive as to find that one slight discrepancy in the substitute.

Mr. ECKHARDT. Mr. Chariman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Texas.

Mr. ECKHARDT. I know that some of the factual bases of the objection of the gentleman in the well have evaporated, but he still retains objections to the bill.

Mr. STEIGER. Yes. If the gentleman from Texas were able to make the kind of compromise that Mr. WILSON, Mr. WRIGHT, and others did on the natural gas price, he will understand that there are times when one compromises one's deeply-held beliefs in an effort to reach agreement.

Mr. ECKHARDT. The gentleman who is questioning at this time had suggested that very thing before the time Mr. WILSON came over to that particular proposition, but I have not heard the gentleman from Wisconsin, nor did I hear the gentleman from Illinois, recognize, when they both stated how much the crude oil equalization tax would bring in, anything about the equalization tax credit, which, as I understand, during 1978 would be designed totally to pay back to taxpayers and to nontaxpayers and certain others the whole amount collected by that tax. That is on page 491 of the bill.

Now, it is true that this is for 1978 in the bill, except in the case of home heating oil, but we retain authority, of course, to do the same thing in subsequent years. We have the statement of the President that his plan is not to use this as a revenue-raising measure, but rather to get rid of some of the problems that existed with respect to the disparate prices of oil.

I think the major purpose, as I see it, is to get rid of the entitlements provisions, which are about 75 percent of the bureaucratic burden of FEA at the present time. It strikes me that that is very laudable and very desirable.

Mr. STEIGER. The gentleman from Texas is correct that that is the purpose of what the President proposed. Please understand that I started out, essentially, as being very sympathetic to the concept of trying to get out of the entitlements program, trying to get out of the controlled program, going to allowing that price to go up. So that it is comparable to the world price. That is the direct way of doing it. I have a difference, in terms of how I would get there, but, yes, that is where I would like to go. The credit, obviously, is throwing $22 bills out of airplanes, which I do not believe is a very good way to do it and I think is discredited, as compared to the thoughtful approach of the gentleman from New York (Mr. CONABLE) which is a tax cut, a plain tax cut. But we both attempted, in

different ways, to get to the point where we soften the blow.

Mr. ECKHARDT. If the gentleman will yield further, I do not have a great deal of disagreement with the approach of the gentleman from New York (Mr. CONABLE), except for the fact that he only returns the tax, which is paid on the higher cost of all things, including gasoline, to those who pay a tax. He does not take into account those persons who do not pay enough tax to give a sufficient offset for the increased cost of gasoline and food hauled by diesel fuel. He does not manage to take care of that situation.

Mr. STEIGER. Yes, he does. Under the present law, for example, AFDC, SSI or social security have increases built in to reflect higher costs and inflation. Therefore, the gentleman from New York, I think, wisely separates those programs, be they social security or welfare, that have automatic built-in cost-of-living increases, to take care of just that point, as compared to those who are in the tax program.

Mr. ECKHARDT. But the thing is that that is a built-in cost-of-living increase, that relates to the ordinary increase in cost of living. These extra payments might be paid, for instance, to offset the cost of gasoline. In many sections of the country these are very heavy additional costs and they may be in excess of the overall increases in the cost of living.

Mr. STEIGER. That is possible, I will say, and I think the gentleman will join with me in opposition to the 4-cents or 5-cents gas tax.

Mr. ECKHARDT. I have never been enthusiastic about that portion of the President's program.

Mr. STEIGER. I had great respect for the gentleman's courage in the ad hoc committee for opposing that proposal.

Mr. ECKHARDT. And I did vote against it.

Mr. STEIGER. Yes, sir.

Mr. FRENZEL. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Minnesota.

Mr. FRENZEL asked and was given permission to revise and extend his remarks following the remarks of the gentleman from Wisconsin (Mr. STEIGER.))

Mr. FRENZEL. Mr. Chairman, the gentleman from Texas indicated that three-quarters of the bureaucracy comes from the entitlements program, and the gentleman from Wisconsin responded that when you get the price of domestic energy up to the world price, that only then can you get rid of the entitlements program. Did I understand that correctly?

Mr. STEIGER. That is correct.

Mr. FRENZEL. Then we get back to the problem of the gentleman from Tennessee, that if the OPEC price goes to $20 we cannot get rid of the bureaucracy unless we let that price go up to $20.

Mr. STEIGER. Yes. I suspect that the honest answer is that we cannot.

Mr. FRENZEL. The tax refund, credit, and heaven knows what, are all tied together in this package. Once we pull one fishhook out of the bait box, the whole bait box comes with it. This program is exactly like that. Each part sticks to all the other parts. The plain fact is that this program is unnecessarily overcomplicated, based on an unnecessary system of tax rebates which will condemn this country to bureaucratic redtape so long as the program continues.

Mr. STEIGER. Mr. Chairman, I thank the gentleman from Minnesota (Mr. FRENZEL) for his remarks. I did get a little perplexed when that part about the "bait box" got in there. Other than that, I think the gentleman did an excellent job.

Mr. FRENZEL. Mr. Chairman, the minority views in which I shared pointed out that Carter proposed was one-half of a bill. Focused as it is almost entirely on conservation, it ignores the need to increase domestic energy supplies. Conservation is an essential part of any energy, but it is not a whole energy policy.

Conservation implies sacrifice, and the American people is willing to make sacrifices. It will be less willing to do so if it feels the sacrifice is unequal or is made without reasonable hope of improvement. Since the Carter/Congress program with which we are dealing today does not offer any real hope of increasing supplies, the public is likely to feel that the sacrifice is for no good purpose.

If the added tax burden of H.R. 8444 does not improve domestic supplies, all of our sacrifice will add up to an even greater reliance on foreign oil. Conservation without more supply can only create a need for more conservation. Sacrifice will lead not to less dependency, but to more sacrifice. If we are successful in meeting all of the President's conservation goals, and that I assure you, is an assumption of heroic proportions, we will be repaid by the need to save more, to cut demand further. The only place this can lead our country is to unemployment, no-growth, and higher and higher taxes on energy for all our consumers.

The primary defect of H.R. 8444 is that it ignored the need to increase domestic supply. Because of that defect, the bill had to contain its second important defect—that is, its conservation mechanism is a highly complicated, burdensome tax scheme, which is partially relieved, but further complicated by a wide range of tax credits, rebates, and refunds. The Republican substitute has the nature of a vastly simplified tax system and a simple, easily understood tax cut.

These additional taxes, rebates, refunds, and credits will condemn our society to additional burdens of regulation, redtape, and bureaucracy. I find it ironic that a President who calls our tax system "a disgrace to the human race," and who has repeatedly called for tax simplification, has suggested an energy plan which creates 10 new taxes, refunds, rebates, and credits. It could, I suppose, be more complicated, but one has difficulty in comprehending such a thing.

Since the early warning of the embargo of 1973, this country has desperately needed a comprehensive energy policy. Unfortunately, H.R. 8444 is not a comprehensive energy policy. Because of the flaws noted here, I will vote against it.

I shall oppose both of the amendments to raise the gas tax. They are not high enough to discourage demand, and they are too high to impose just for show, or to serve other purposes which could be done with State taxes, or by the regular appropriations process.

Finally, I regret that, after its 4-year nap, Congress has awakened to give the country half an energy policy—and one that is badly flawed at that.

Mr ASHLEY. Mr. Chairman, I am pleased at this time to yield 5 minutes to the distinguished chairman of the Committee on Banking, Finance and Urban Affairs, the gentleman from Wisconsin (Mr. REUSS).

Mr. MILLER of Ohio. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield briefly to the gentleman from Ohio.

Mr. MILLER of Ohio. Mr. Chairman, I thank the gentleman for yielding.

Just a few minutes ago we had colloquy concerning the tax on crude oil. We seemed to have the gentleman from Wisconsin (Mr. STEIGER) stating his point of view and the chairman of the ad hoc committee stating his, concerning whether the President has the authority to suspend the increase in tax.

Because we have a bill containing more than 580 pages, it took a little time to find it, but on page 477 it is spread out for the RECORD very clearly.

It says that the President may, if he determines "that, by reason of a significant increase in the world price of oil, there has been or will be an increase in any tax imposed by section 4986"—and then it goes on to say "that such increase in tax will have a significant adverse effect on the economy of the United States"—"submit to the Congress a suspension plan providing for the suspension of part or all of such increase in tax for the period specified in such plan."

That clears it up. That is what we were looking for in our attempt to have someone on the committee clear it up.

Then on the next page the bill also says as follows: "before the close of the 15th day (as defined in section 2081(c)(5) of such Act) after the day on which such plan is delivered to the Congress, neither the House of Representatives nor the Senate disapproves such plan * * * " and in that event it will go into effect.

Mr. Chairman, I think that even though we went into this matter in colloquy, it was not made clear, and so I think that is important for the RECORD.

Mr. Chairman, I thank the gentleman for yielding.

Mr. REUSS. Mr. Chairman, I rise in support of H.R. 8444, the National Energy Act, particularly with reference to subparts A, B, C, and D of part I of title I, which were approved by the House Committee on Banking, Finance and Urban Affairs and referred to the Ad Hoc Committee on Energy on July 11, 1977.

The House Committee on Banking, Finance and Urban Affairs was the first of the legislative committees to which parts of the National Energy Act were referred to complete its work and report its version of the Energy Act proposals to the Ad Hoc Energy Committee. These proposals were embodied in H.R. 7893, the National Weatherization Act, and was approved by a vote of 38 to 1 by the committee.

UTILITY PROGRAM—SUBPART A

Mr. Chairman, the provisions that are contained in H.R. 8444 pertaining to the utility program are the provisions that were ordered reported by the Committee on Interstate and Foreign Commerce, along with some minor changes that the ad hoc committee approved along the lines recommended by the Banking Committee.

The distinguished chairman of the Interstate and Foreign Commerce Committee has outlined the program that is proposed in subpart A. The Banking Committee's proposals regarding the use of utility companies in the energy conservation effort was a more voluntary approach than the Commerce Committee's. The Banking Committee's proposals would have prohibited utility companies from engaging in financing and in the installation of weatherization materials, while the approach adopted by the Commerce Committee and the ad hoc committee would not bar utility companies from engaging in the financing, nor would they mandate them to do so.

WEATHERIZATION GRANT ASSISTANCE—SUBPART B

In order to achieve the national residential energy conservation goal, 90 percent of the Nation's housing stock must be weatherized by 1985. Among those families that occupy this housing, about 14 million have incomes less than 125 percent of the poverty level. These families require special assistance to enable them to afford to weatherize their homes to conserve energy and to lessen the burden of increasing fuel costs.

There are currently three Federal agencies with weatherization programs directed to meeting the needs of these low-income families: The Communities Services Administration, the Federal Energy Administration, and the Farmers Home Administration. These existing weatherization grant assistance programs have different income eligibility, grant amounts, eligible activities, and energy conservation standards. The bill eliminates these differences and makes uniform the weatherization grant assistance provided through these programs for low-income families.

The bill establishes a new income eligibility level at 125 percent of the poverty line established by the Office of Management and Budget. It extends and makes uniform the definition of weatherization materials that may be purchased and installed for the purposes of weatherizing structures among the various regions of the Nation. Accordingly it increases the maximum amount of weatherization materials that are eligible under the grant from $400 to $800 per dwelling unit. Volunteer or CETA labor will be used for installing weatherization materials in the homes of families assisted through these programs. To assure the supply of this, labor provisions are included to have the Secretary of Labor take all appropriate steps to have local CETA sponsors allocate the appropriate number of workers to these programs. Under the FmHA program, however, the allowance grant may be increased to $1,500 to cover both the cost of materials and labor in the event that volunteer or CETA labor is not available in rural areas. All three programs are required to use consistent national weatherization standards that are established in the bill to assure that the investment in weatherization materials and applications will be economically optimal for each dwelling unit. This is to insure that the weatherization measures applied to dwellings in the various regions of the Nation will reflect the differences in climate and in the cost of fuel and that savings generated by the installation of such measures will be in proportion to the cost of the investment in such measures.

The bill increases the authorizations for the FEA low-income weatherization grant program from $65 million to $130 million for fiscal year 1978, from $80 million to $200 million for fiscal year 1979, and an additional $200 million for fiscal year 1980. The bill also designates that $25 million of the funds already authorized for the FmHA section 504 program be appropriated for the new FmHA weatherization grant program.

FINANCING OF WEATHERIZATION IMPROVEMENTS—SUBPART C

The Banking Committee has proposed three steps to assure that sufficient credit is available to finance these improvements and to meet the special credit needs of various income groups.

First, to assist low- and moderate-income homeowners who are traditionally excluded from credit markets, a low-cost loan program has been created. This program, utilizing the facilities of the Government National Mortgage Association, would require the Government to purchase up to $2 billion—outstanding at any one time—worth of weatherization loans from lenders made to homeowners with incomes of less than 90 percent of median area income. These loans would be coinsured under the FHA title I insurance program, not to exceed $2,200 per loan and have terms of not less than 5 years nor greater than 15 years—though prepayment without penalty would be permitted. The interest rate on the loans could be lowered by the Secretary of HUD from the applicable rate for FHA title I insured loans—currently 12 percent, to as low as the Treasury borrowing rate, currently 6.75 percent, if she finds it necessary.

Second, since many multifamily property owners find it difficult to get financing, in addition to their principal mortgage, an insured loan program to assist these owners has been developed. The Federal Housing Administration would be permitted to coinsure loans made to any multifamily property owner for the purpose of weatherizing their property or the conversion from master meters to single meters. The terms of the loans would have to meet the requirements of the Secretary of HUD. Provisions are also included to assure that the benefits of improvements financed by an insured loan would primarily accrue to the tenants of the property.

Third, to assure a general availability of credit for financing weatherization improvements, a standby secondary market in FHA title I insured weatherization loans has been developed. The Secretary of HUD, after finding that insufficient credit exists for weatherization loans, would require the Government National Mortgage Association to purchase such loans from traditional lenders. The GNMA could purchase up to $3 billion of such loans—outstanding at any one time—as approved in appropriation acts.

The definition of "energy conserving improvements" in the FHA title I insurance program is conformed by the bill to the list of "weatherization materials" as contained in the FEA weatherization grant program.

MISCELLANEOUS—SUBPART D

The Banking Committee also addressed several other specific areas relating to energy conservation. The committee provided $10 million of annual contributions contract authority to finance energy conserving improvements in existing conventional low-rent public housing. This authority, subject to appropriations, is sufficient to finance approximately $110 million worth of energy conservation improvements.

The committee also directed the Secretaries of HUD and Agriculture to upgrade the energy efficiency standard contained in minimum property standards used in the construction of homes insured by FHA and financed by FmHA.

The Banking Committee proposal would also assist in the financing of solar energy systems for both new and existing residential structures under provisions of the National Housing Act.

And finally, Mr. Chairman, the Banking Committee recommendations would direct the Secretary of HUD, in consultation with other Federal agencies, to determine the need for and feasibility of requiring, by mandatory Federal action, that all residential dwelling units meet applicable energy efficiency standards. This study would be submitted to the Congress 1 year after the date of enactment.

Mr. Chairman, the gentleman from Wisconsin (Mr. STEIGER) mentioned the inflationary danger of a huge outpouring of demand making contact with, at the present time at least, a rather limited supply. I shared that feeling, and I hope it will not come to pass if and when, as we probably shall, we pass the weatherization tax credit.

However, I would point out that in the financing features there is a sensible measure of anti-inflationary control because the Secretary of HUD, of course, can turn the needle valve on these GNMA controls and thus speed up or slow down the past weatherization program. After all, we have 7 years in which to do it, and we should not try to build a weatherized Rome in a day.

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Mr. Chairman, what the gentleman from Wisconsin (Mr. REUSS) has just said is important, and I wish to say that my friend, the gentleman from Wisconsin (Mr. REUSS) had what I do not think was a still, small voice; it was quite a good voice in support of striking the insulation tax credit.

I am perplexed, if I may say so, about the amendment we will debate tomorrow or whenever we get to it of the gentleman from Michigan (Mr. FORD).

What effect would that amendment have, in the gentleman's view, since it directly goes to provisions that were in the bill of the Committee on Banking, Finance and Urban Affairs, if we apply Davis-Bacon to all of these weatherization projects for poorer people?

Mr. REUSS. It will have about the same effect that Davis-Bacon has over the entire spectrum. At the margin it may up costs a bit. I do not think it will be very serious.

This is similar to the old question of the minimum wage; and that is if we did not have a minimum wage, goods would be much cheaper. Yet, I know that the gentleman supports a minimum wage and agrees that some heightening of the costs of goods is not too much of a price to pay for fair labor standards.

I believe the same argument applies to Davis-Bacon so I think the economic effect would be only marginal.

Mr. STEIGER. I thank my colleague.

Mr. Chairman, I understand that there are a number of speakers on the majority side. As you can tell when I came forward so early, we are a little short of hitters, and I therefore would like to have the majority side use some of its talent so that we may have something to rebut.

Mr. BOLLING. Mr. Chairman, I yield 5 minutes to the gentleman from Tennessee (Mr. ALLEN).

Mr. ALLEN. Mr. Chairman, I thank the distinguished gentleman from Missouri (Mr. BOLLING) for yielding me this time.

Mr. Chairman, the President on April 20 most forcefully alerted all of us to the serious worldwide decline in oil reserves, and has asked us, as a nation, to respond as we would in time of war.

I agree we do face very grim prospects, as he has pointed out, if we did not begin immediately to conserve and slow down on our ever-escalating consumption and waste of energy.

I may say that many of the bills that came out of the various committees of original jurisdiction, after lengthy hearings, contain many meritorious and worthwhile suggestions. But I will have to say in all honesty that, in my judgment, the bill that came out of the ad hoc Committee on Energy, without proper public hearings, does not fulfill the test of meeting the President's objectives.

All we know for sure about the proposed tax on domestic crude oil to bring it up to the price of imported crude oil, is that it would increase the price of gasoline at the service stations by 7-to-9 cents a gallon. Further, such a heavy tax on domestic crude oil would skyrocket the price of fuel oil for both heating and manufacturing. Even though it is said that that which was used for home heating would be refunded, there is nothing said about refunding to the manufacturer and this would eventually increase the prices on manufactured articles at both the wholesale and retail levels. This would bear hardest on families and individuals with both low and modest incomes and would place an especially heavy burden upon the elderly with small and fixed incomes.

Likewise the proposed 4-cent-per-gallon tax on gasoline at the service station, proposed by the ad hoc Committee on Energy, on top of all of the Federal, State and local taxes which are already added into the price of gasoline, would hit hardest those who work for a living and must use their automobiles and trucks, sometimes many miles a day, to go to and from work, and would leave them much less of their net wages and salaries to support themselves and their families. Such an increase in taxes on gasoline and crude oil would further fan the flames of inflation, which is already one of the biggest drags on our economy and on our efforts to provide full employment.

We can conserve the use of energy, and we must, as the President has said, but still avoid the huge bureaucratic monstrosity that I am afraid would be required to administer these increased taxes and then figure out the amount of rebates which each of millions of citizens in varying circumstances would be entitled to under any law that can be devised that would be fair and equitable to all. If we have limited oil resources, I say we should allocate fairly what we do have and in order to prevent the utter ridiculousness of this Nation's exporting crude oil, gasoline, and fuel oil at the same time we are paying extortionate prices to import crude oil and petroleum from foreign countries, we certainly should prohibit any such expor's during any year when we are importing from abroad.

With respect to this crude oil tax, the answer to the question has since been given about whether or not if the price of OPEC crude oil goes up to $20 or $25, the President will make an adjustment in the amount of taxes. The law says, as has been correctly pointed out, that he may do it but then his power and the whole control program expires in 1981. All controls over the price of crude oil expire on that day. So if this goes on as anticipated and contemplated in this bill, the U.S. crude oil for 1981, which is the year after the next Presidential and congressional election of 1980, could go sky high, as dictated, not by the President, or the Congress, but by the OPEC nations.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 10 minutes to the gentleman from Ohio (Mr. BROWN).

Mr. BROWN of Ohio. Mr. Chairman, the consideration of the National Energy Act has probably set many records for the speed in which legislation as far reaching, as complex, and as extensive in its impact on the American public has been considered in the House of Representatives. In the interest of completing consideration of the extremely controversial issue of energy as soon as possible in our new President's first year in office, the usual safeguards which provide for careful legislative deliberation were either severely compromised or eliminated. There was little or no time for Members to absorb the vast amount of information generated by hearings which proceeded morning, noon and night before the Subcommittee on Energy and Power, there was no attempt by the ad hoc committee to consider the views of outside parties on how the various pieces of the legislative package reported by the standing committees should be fit together. And matters such as the requirements of the Budget Act were waived by the rule under which we are considering this legislation in spite of the multibillion tax impact of this bill.

The result of this rush to judgment on energy was sadly predictable. What has emerged is a series of legislative provisions which, under the banner of conservation, do nothing but disguise many of our basic energy problems and attempt to create the illusion that we are moving toward solutions to the crisis.

H.R. 8444 can be characterized as billions of dollars in taxes but very little for energy supply and energy conservation. The American people are being asked to pay and pay and pay for this program. The sum effect of the tax proposals in H.R. 8444 will be to load on each American family $1,000 in the new taxes in the next 4 years and uncounted thousands of dollars in costly new Government regulation and interference in our lives.

What are they getting in return? Very little.

First, as to conservation, the program can be termed "the great illusion." In presenting his program—which remains substantially unchanged in its impacts from the results of hasty conclusions taken by standing committees and the ad hoc committee, President Carter stated:

> The Cornerstone of our policy is to reduce demand through conservation.

Unfortunately, the conservation aspect of this program is pretty much of an illusion. As the GAO in its very critical study of the program stated,

> (It is) more of a fuel-switching program than a conservation program.

The administration's own numbers confirm the illusion of conservation. On page 95 of the National Energy Plan submitted to Congress by the Executive Office of the President, it states that demand in 1985 without the plan will be 48.3 million barrels of oil equivalent but with the plan will equal 46.4 million barrels per day. Thus, the American people are being deceived into thinking that they are being forced to accept significant changes in their lifestyle mandated by this plan—and to pay $93 billions in new taxes by 1985—in exchange for achieving national conservation effects which in fact are virtually negligible.

Second, as to supply of energy, the bill literally guarantees that OPEC will be our major supplier of energy for years to come. The bill fails to provide any adequate incentives for production of both conventional and nonconventional fuel sources—first, as manifested by the President's CIA report, the program gives up on conventional sources of our cleaner fuels such as natural gas in favor of the far more environmentally dangerous coal. Second, the bill fails to deal with questions of nuclear, synthetic, solar, and

other nonconventional sources in any meaningful way.

The major specific problems with the Commerce Committee's part of the bill are as follows:

NATURAL GAS

The natural gas pricing policy of H.R. 8444 is a seriously flawed provision which will not protect consumers from either higher gas prices or the devastating economic effects of continuing winter gas shortages. As the Commerce Committee bill is now drafted, Federal price and allocation controls are extended into the presently unregulated intrastate market. A ceiling price for new natural gas—both interstate and intrastate—is set equal to the Btu equivalent price of refinery-acquired domestically produced crude oil. Energy Czar James Schlesinger said this would amount to $1.75 by the time the bill would be passed. Today, this price is approximately $1.60 per Mcf—a figure substantially less than the near $2 price at which unregulated intrastate gas is now selling and 14 cents higher than current Federal price controls on very sparse interstate sales.

The administration recommended/Commerce Committee bill is merely an extension of the present deficient natural gas price control policy which has resulted in the shrinkage of our gas supplies.

In a July 14, 1977 study, the Brookings Institution concluded:

> If the Carter proposal is enacted, producers would probably explore for and produce less gas than they do now . . . In short, these proposals will not eliminate the gas shortage; they will partially disguise it and extend it to the markets that are now uncontrolled.

The supposed "compromise" position proposed by Mr. ECKHARDT and apparently blessed by the majority leader and passed by the ad hoc committee changes the administration-proposed/Commerce Committee-passed bill in only two respects: First, the new gas definition has been modified so as to allow only slightly more gas to qualify for new gas treatment than the administration bill. Second, the ad hoc committee amendment would permit "new" natural gas to be sold at the higher of $1.75 per million Btu's or the current Btu-related price immediately, rather than creating, as the Commerce Committee bill did, an initial ceiling of $1.60/mcf and which would allegedly move to $1.75 by early next year. But although initial prices will be slightly higher under the ad hoc committee amendment than they would be under the Commerce Committee bill, the $1.75 price is still significantly less than the near $2 intrastate new gas price. For producers currently selling in the intrastate market, this price represents a rollback from current market prices, and together with the restrictive definition is a disincentive which will cause many independents—who are the greatest source of new gas finds—to withdraw their capital from gas exploration.

Although this amendment addresses one flaw present in the Carter/Commerce Committee proposal—the new gas definition—it falls far short of making any significant improvement in the bill.

The committee apparently intends to offer as a solution to our increasing natural gas shortage, legislation which would extend counterproductive Federal price controls in the intrastate market. If this legislation is enacted, undersupplied American consumers will be forced to spend $48 billion more for energy than they would pay if Federal price controls on new gas were not in effect during the next 13 years. In my part of the country it has already cost millions to have gas. As a result of the negative impact on U.S. production of gas resulting from controls in the bill, U.S. consumers will spend an extra $26 to $40 billion on imported crude oil alone between now and 1990.

Because it fails to address the really significant problems in the Commerce Committee/administration proposal, that is, continuation of counterproductive price controls on new natural gas in the interstate market and extension of such controls into the intrastate market, the ad hoc committee amendment is cosmetic, not "compromise."

UTILITY REGULATORY REFORM

This part of the commerce bill establishes national minimum standards for retail electric rates, and thus, provides a Federal role for the first time in a matter traditionally left to the States. The minimum standards require utilities to implement peak-load, time-of-service rates and mandate that rates be based on the cost of providing the electric service to the customer. While I do not quarrel with the possibility that benefits can accrue from cost-based rates or peak-load pricing, I am concerned about the extent of the Federal Government's role in the implementation of enforcement of the minimum standards. The States, and not the Federal Government, should implement and enforce the minimum standards. Instead, the bill gives the FPC the authority to promulgate the rules with respect to the gathering of information which will be used by the State regulatory authority to determine cost-of-service rates. This is an undesirably intrusive influence on the State regulatory authorities which are charged with the responsibility for selecting methods of cost determination and devising cost-of-service and time-of-use rates. Because format and type of information specifications can dictate methodology and eventual rate determinations, State discretion and flexibility are thus undercut. In addition, there are vast differences among the States and the utility systems serving each State. State regulatory authorities are better able to adopt techniques of information gathering to particular circumstances and to integrate the information requirements of this legislation with the extensive information gathering in which they already engage so as to make such information gathering less burdensome and less expensive for the State regulated but customer-financed utilities.

Furthermore, the compliance determination and judicial review provisions create a contradiction between the expressed intention of the committee to continue State regulation of retail rate structures and the role being given by the committee to the Federal Government.

The FPC is given the power to review patterns of compliance within a State regulatory authority's jurisdiction and the FPC can seek judicial review in Federal court of every rate determination pursuant to H.R. 8444 made by a State regulatory authority. The power to obtain review of all cases means that the flexibility of the State regulatory authorities would be effectively eliminated and that, in actuality, the Federal Government could be setting retail utility rates through Federal courts.

PART VI—COAL CONVERSION

The fundamental problem with the President's coal conversion program is twofold. First, it presents, with its prohibition on gas and oil use in new and existing facilities, perhaps the most far-reaching extension of Government involvement in the private sector decision-making ever conceived in the energy area. Second, the program has failed to receive from the administration a coherent explanation of the projected results and the economic and environmental impacts of the coal conversion program. The fact is that the economic cost of the program could be well over $50 billion in electric powerplant conversion alone. And the environmental costs of mandating the burning of our least-clean fuel may be staggering. The objective seems to be more to proscribe the use of natural gas than to restrict the use of oil—which use benefits OPEC and hurts the U.S. economy—or to enhance the use of coal—which is otherwise severely restricted by Clean Air Act legislation, et cetera.

The vast majority of testimony presented before the Subcommittee on Energy and Power indicated that electric utilities and industry in general are already, where possible, converting to coal from oil and natural gas, and showed that the proposed administration coal conversion program in fact will not substantially increase the amount of coal that would otherwise be used in 1985 without the program. Furthermore, the hearings made it eminently clear that the proposed program was conceived prior to developing the supportive data and analysis of the impact of such a policy. The environmental and physical constraints of coal use; the availability of an adequate coal supply, coal boiler equipment and transportation facilities for coal; labor, health, and safety limitations; and technological and economic impact problems of the coal conversion policy are not adequately addressed and reconciled by the President's program. Unfortunately, therefore, switching from oil and natural gas to coal or anything else is not as simple as the administration has stated.

The Energy and Power Subcommittee and full Commerce Committee did make some improvements in the President's bill, but it remains confusing and unacceptable, particularly with respect to existing powerplants and major fuel-burning installations—MFBI's.

Under section 613, the Administrator could require all installations of a certain category to convert, even though individual facilities could not do so. The burden is clearly on the wrong party. Before someone is required to convert, the FEA

should have to first determine that the use of coal or other fuels is possible and that the facility is capable of conversion. The Republicans offered an amendment which would have required the FEA to make certain specific findings prior to the issuance of a general conversion order. This amendment was not adopted, unfortunately.

The conversion requirements also apply to facilities as small as 100 million Btu's per hour. The problem with ordering conversion of smaller facilities is that, while they are fairly numerous, they consume very little energy in comparison with the larger facilities. For example, industrial facilities of a size which consume in excess of 300 million Btu's per hour, consume 91 percent of the boiler fuel energy consumed by all industry. But 80 percent of the boilers in the United States fall within the 100 to 300 million Btu's per hour range. By permitting conversion orders for the 100 to 300 million Btu's per hour range, the President's program would subject 80 percent of these facilities—assuming they could all convert—to the economic cost and agonies of Federal regulation to save only 9 percent of the energy consumed. The result will be needless and very expensive bureaucratic chaos at FEA which probably will paralyze the implementation of the more important part of the program which deals with the facilities above the 300 million Btu's per hour threshold.

OIL POLICY

The failure to reform our disastrous oil pricing policy represents another serious defect of H.R. 8444.

The need for correcting flaws in our oil pricing policy is readily apparent. The present provisions simply have not worked. The United States is today more dependent than ever on Arab oil and this Nation's consumers are paying more for foreign oil than they would be for domestic oil. In addition, EPCA has exacerbated the decline in our domestic production. In 1973, when Federal price controls were first enacted, our average domestic production was 9.2 million barrels per day. By March of this year, this had declined to only 7.8 million barrels per day.

In 1972, just prior to the imposition of price controls on crude oil, the United States imported 2.2 million barrels of oil per day at an annual cost of $3 billion. In 1974, 1 year after the Arab embargo and the imposition of price controls, our imports averaged 3.5 million barrels per day at an annual cost of $24 billion. At the end of this past year, 1976, U.S. imports were 5.3 million barrels per day at an annual cost of over $40 billion. Last week's headlines indicated that our balance of payments deficit for the first 6 months this year exceed the total deficit of last year—largely as a result of oil imports.

The significant failure of our crude oil pricing policy begs for a solution. It is a problem basic to our whole energy crisis, but the administration and the Democrats in Congress have turned their backs on this problem. Significant adjustment is necessary in the oil price control mechanism to meet the original goals that the architects of EPAA and EPCA desired—protecting the consumer from excessive energy price increases while at the same time providing appropriate incentives and certainty for the producers. H.R. 8444 fails completely to deal with these basic questions. It does not even try to address it.

Those of us opposed to various parts of the bill have attempted, to the extent that the very restrictive legislative process has permitted to make improvements through the amending process. Unfortunately, the 25-page-per-hour speed with which we have proceeded has made it very difficult to enable our colleagues to evaluate the various alternatives that we have presented. Furthermore, the rule under which we are operating will make it difficult for us to present many of these alternatives to our colleagues who have not had the opportunity to deal with this bill either through the standing committees or the ad hoc committee. There will, however, be an amendment offered to modify the natural gas provision so as to provide better incentives for domestic supply while at the same time protecting the consumer. I urge my colleagues to support this amendment which I intend to offer when we get to the natural gas part of the bill.

A whole substitute which modifies the many objectionable provisions of the bill will be offered by Mr. ANDERSON of Illinois and I urge support of this substitute.

Finally, a motion to recommit may provide opportunities for further change in this disastrous legislative proposal.

The CHAIRMAN. The time of the gentleman has expired.

Mr. STEIGER. Mr. Chairman, I yield the gentleman from Ohio an additional 5 minutes.

The CHAIRMAN. The gentleman from Ohio is recognized for 5 additional minutes.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, I understand it is the gentleman's intention to offer an amendment during the reading of the bill under the 5-minute rule for total deregulation of natural gas. Is my understanding correct?

Mr. BROWN of Ohio. There is a proposal which will be found in the CONGRESSIONAL RECORD of July 27, 1977, on page 25321, that provides for deregulation of the price of a very narrowly defined category of new natural gas. That proposal for the termination of Federal price control will be explained, in addition to the remarks that I have made here verbally.

Mr. YATES. Is there a difference between that proposal and the one in the committee bill, under the terms of which, as I understand it, there will be a total deregulation of natural gas by 1981, through increases in the world price over the years?

Mr. BROWN of Ohio. Mr. Chairman, I might say to my friend, the gentleman from Illinois (Mr. YATES), that the committee bill does not deregulate the price of natural gas any time within the foreseeable future.

Mr. YATES. I was under the impression, at least from the explanations that I have had, that the price of crude oil, to which natural gas would be tied in the committee bill, would be increased progressively by taxes until in 1981 the price of crude oil would match that of the world price.

Mr. BROWN of Ohio. I might say to the gentleman that I do not think that is a correct interpretation of what the bill does. What the bill does, as it came from the ad hoc committee, is to tie the price of natural gas to the Btu equivalency of refiners' cost of domestic oil.

Domestic oil, as I am sure the gentleman knows, is price controlled now at about $8.19, which is a little over half the price of market-priced oil, and there is no prospect that this oil will be decontrolled, because unfortunately your President, and mine, has said that he would like to continue the price control on domestic oil indefinitely into the future. Price controls were due to terminate, as I recall, by 1981, but the President has already said that he is going to ask for an extension of that price control.

So, in effect, what that means is that oil will be price controlled. That pertains not to foreign oil, not to the Arab oil, but just the oil produced in the United States. We will go ahead and pay whatever the OPEC nations ask in order to receive an increasing amount of our oil supply, but to our domestic producers we can only pay what the Federal Government tells us we can pay. And thus it will be with natural gas.

Mr. YATES. Mr. Chairman, will the gentleman yield for another question?

Mr. BROWN of Ohio. Of course, I yield to the gentleman from Illinois.

Mr. YATES. Is it the gentleman's understanding of the ad hoc committee bill, then, that the control over the price of new natural gas will continue beyond 1981?

Mr. BROWN of Ohio. It will continue as long as the price controls on oil continue, and since the President said he intends to continue those beyond 1981, the answer to the gentleman's question is: Yes, the price control will continue beyond 1981.

The CHAIRMAN pro tempore (Mr. BENNETT). The time of the gentleman from Ohio (Mr. BROWN) has expired.

Mr. STEIGER. Mr. Chairman, I yield 5 additional minutes to the gentleman from Ohio (Mr. BROWN).

Mr. YATES. Mr. Chairman, will the gentleman yield further?

Mr. BROWN of Ohio. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, may I ask the gentleman this question?

Again in the event the price controls are not extended beyond 1981, even through the President were to request it, then all regulation on crude oil and on natural gas would cease; is that not correct?

Mr. BROWN of Ohio. That is not true with respect to natural gas. The prospect of our terminating price controls on oil, however, may be more difficult now than it was when we passed EPCA in 1975, because in fact the price spread now—and this is one of the wonderful things about Federal regulation—between the price of domestic oil and foreign oil is greater than it was then. It was supposed to have

narrowed over the years, but somehow somebody in the bureaucracy made a slight miscalculation, and the result has been that the price of new oil that is domestically produced has gone down in the United States since EPCA was passed.

The result has been that our supply has gone down and our dependence upon foreign oil has gone up. So I suppose that establishes once again the validity of the desirability of the Federal Government's trying to set prices in any area.

Mr. YATES. Mr. Chairman, I thank the gentleman for his replies.

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Mr. Chairman, if I may direct the attention of the gentleman from Illinois (Mr. YATES) to this, there is some confusion in all of this, but let me see if I can correctly state it, and if I do not, the gentleman from Ohio (Mr. BROWN) and the gentleman from Ohio (Mr. ASHLEY) may correct it.

My understanding of the way the ad hoc committee bill is drafted is that it ties the price of new natural gas—and that is a relatively small slice of it—to the price of average domestic oil, and that is the $7 price, or whatever it is.

Mr. BROWN of Ohio. That is not the real price of oil in the United States.

Mr. STEIGER. Correct, but that is what it is tied to. The authority of the President to control the price of oil expires October 1, 1981. Therefore, it would be possible, if controls on oil were not continued, to have the price of new natural gas increased; but it does not under the Eckhardt amendment or the ad hoc committee bill, deal with the issue of old natural gas, which would continue to be controlled.

Mr. BROWN of Ohio. Old natural gas would continue to be controlled, in any event; and the amendment which the gentleman from Ohio, the gentleman in the well, will offer also continues controls over old natural gas.

Mr. YATES. Mr. Chairman, will the gentleman yield for another question?

Mr. BROWN of Ohio. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, is there any estimate as to how many trillion cubic feet are in the so-called new gas reserves? Do we know that at all?

Mr. BROWN of Ohio. I cannot answer the question of the gentleman specifically but I can say that some 20 studies of potentially available additional natural gas of a conventional nature have been made.

We are not talking about the MOPPS study which said that we might have as many as 1,000 years of geopressurized gas in the geothermal area.

With respect to conventional natural gas the estimates are, except for the CIA estimate on which the President leans so heavily, that we will have from 30 to 40 years' supply of natural gas. If we take all the different studies done by educational institutions, by private industry, and by select groups of educational institutions, all of these studies indicate an adequate natural gas supply.

The question is, at what price does that supply come in? The MOPPS study by ERDA suggested that that volume would begin to come in as the price goes up.

Mr. YATES. The MOPPS study consisted of three conclusions, as I remember; is that correct?

Mr. BROWN of Ohio. That is right. The most optimistic indicated that we have vast quantities of conventional supplies. That was sent back. Somebody in the administration said that the study was much too optimistic, I imagine.

They went back and restudied it; and they came back with a somewhat less optimistic study, but still it was fairly optimistic. They came up with a third study, and in that study their figures were not quite so optimistic, but they were nevertheless fairly optimistic that we would get somewhere in that price range above $2 a rather significant supply response. I might say that at $2.50, natural gas in our part of the country, the Midwest, which the gentleman and I represent, would still be a much cheaper fuel to use than oil, which many of our constituents must use because they cannot tap into natural gas lines. Certainly it is much cheaper than electricity, and when it is blended with our presently contracted low-priced gas, it is still cheaper than the price paid by our friends in Texas where the gas is produced and where they have been getting an adequate supply over the last few years.

Mr. YATES. I thank the gentleman.

Mr. BROWN of Ohio. Mr. Chairman, let me say to the gentleman that I will offer an amendment to the National Energy Act (H.R. 8444) seeking to end Federal price controls on new natural gas. It is the same proposal—with two slight modifications—as the Krueger-Brown-Wirth amendment which was narrowly defeated in the full Commerce Committee. It was introduced as separate legislation as the Natural Gas Supply and Conservation Act of 1977 (H.R. 8585) by Congressmen JOHN ANDERSON of Illinois, BROWN of Ohio, KRUEGER of Texas, and WIRTH of Colorado on Thursday, July 27, 1977, and will be found printed in the RECORD as an amendment by Mr. BROWN on page 25321 and as part D of H.R. 8555.

This amendment removes Federal price controls from a very narrowly defined quantity of new natural gas. "New" gas is defined as: first, gas sold or delivered in interstate commerce for the first time on or after April 20, 1977, provided that such gas could not have been sold or delivered prior to April 20, 1977; second, gas produced from a new well which is 2.5 miles or more from any old well or gas from a new reservoir; or third, gas from a well drilled 1,000 feet deeper than an existing well less than 2.5 miles away or in a reservoir discovered after April 20, 1977, as established by applicable State or Federal authorities.

Offshore natural gas—which must be sold to the interstate market—remains subject to Federal price controls through April 20, 1982, based on a new national ceiling reflecting prospective costs and Federal price controls are thereafter removed.

Old natural gas if sold in the interstate market remains subject to present FPC cost-based price controls and present contracts—ranging from about 18 cents per MCF to $1.46 per MCF—remain in effect until they expire by their own terms. Most of these contracts are for the life of the well. This maintenance of gas supplies at existing old price-controlled contracts is the first protection for interstate gas consumers.

Natural gas now being sold in the intrastate market is not subject to any price control. Prices are designated in contracts, but such contracts are usually for shorter periods and at higher prices. Under this amendment, when these intrastate contracts expire, that gas can be bid for by buyers for interstate markets thus bringing added supplies to interstate gas consumers.

The Emergency Natural Gas Act of 1977—requested last winter by President Carter—is extended through April 20, 1980, to give the President power to cancel contracts for new "market-price" gas purchases if he thinks the prices excessive—thus providing a second protection to consumers from natural gas price increases that are too sharp. Under this provision, the President also has the authority to allocate natural gas from one part of the country to another to meet any emergency shortages.

The third protection against prices jumping too rapidly is afforded the residential consumer by assuring that all the new gas purchased to fill shortages in a pipeline will be charged to boiler fuel users of natural gas and industrial users to the extent that they use gas in excess of their base period consumption until such costs reach 120 percent of the costs of imported crude oil on a Btu basis. This means that all higher cost new gas will be charged first to large industrial boiler users and then to medium and large users using over their base allowance, thus holding residential users harmless. Not until old low cost contracts expire and are gradually replaced by contracts for more recently developed higher cost wells will the residential user be affected by higher prices for natural gas.

As a matter of fact, as pipelines become 100 percent utilized and fixed pipeline costs are spread over more units of gas in the line, transportation costs for consumers which now represent about 70 percent of the consumers' bill, may actually go down. And as excessively costly synthetic fuels are no longer needed to supplement shortages of lower cost natural gas, the costs to present natural gas users may in some cases be reduced. Finally, the necessity to curtail natural gas tap-ins for new homes—in effect in many parts of the Nation since the early seventies—may actually be ended so that new home buyers can once again use environmentally clean, economical natural gas rather than electricity which is generally four times more expensive and environmentally more damaging to produce.

The amendment provides for the Federal price controls on new natural gas to be lifted after April 30, 1978, in order to give the Congress time to enact, if it wishes, a tax on windfall profits of gas producers which may occur. Chairman

ULLMAN of the Ways and Means Committee has indicated he would call his committee together for this purpose and that the time allowed would be adequate for such deliberation and action.

A careful study of our natural gas amendment versus the natural gas provisions which emerged from the House Commerce Committee indicate that our amendment will provide for 25 trillion cubic feet more gas to be produced between now and 1990—about 3 trillion cubic feet per year more than the Commerce Committee plan. In the same period of time, maintaining Federal price controls as the Carter-Dingell bill proposes would cost American consumers $48 billion more than terminating Federal price controls, or about $7 billion per year more than removal of Federal controls. Slight changes made by the ad hoc committee would have no appreciable affect on this cost and production analysis.

I urge you to study the facts carefully and vote to avoid the future of shutdown factories and closed schools which last winter's shortage predicted for our Nation if past Government policies are continued in the future by supporting my amendment.

Mr. ASHLEY. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. JOHN L. BURTON).

Mr. JOHN L. BURTON. Mr. Chairman, section 701 of this bill is really the cornerstone of the President's energy policy.

We have spent a lot of time today in talking about some of the less important, esoteric aspects; but this measure would provide authority for a van-pooling program for Federal employees.

Van-pooling is a concept that has worked very well in the private sector as well as in the State of California where it is funded through the State CalTran Agency.

In the State of California we have found that for every 50,000 people who are involved in the van pooling program, we can save some 30 million gallons of gasoline.

Testimony before the subcommittee showed strong support for this aspect of the energy program from people in the private sector who were involved in this program. They feel if the Federal Government would get involved in a minimal program for its employees that that would show tremendous encouragement to the private sector and would help the program grow.

Basically, Mr. Chairman, we authorize up to 1500 vans a year through either purchase or lease by the Federal Government, asking also that the major emphasis be placed upon private vans owned by private employees or employees of the government.

These vans carry between 9 and 12 individuals to and from work. It has been shown in the private sector to be not only a savings in energy and a savings in commuter dollars by the employees but actually had shown to provide for better morale at work, more timely showing up at work and better production by those individuals who are in the program.

I have heard that there would be an amendment to gut the Nation's energy policy by striking this from the bill. I would hope that the Members do not support such an amendment. I believe our Nation's energy policy is much too important to have it shot down in such a careless way.

Lastly, I would like to say that all costs of the programs are recoverable except for some administrative costs that would be difficult to compute such as maybe an employee spending 30 minutes a day making telephone calls, or things of this sort. Also the cost of making these vans accessible to the elderly or the handicapped would not be recoverable, otherwise the program is a fully recoverable one. It will be self-supporting.

As I said, Mr. Chairman, it had strong support from those segments of the private sector who are involved in this program. They feel that this definitely can lead to a tremendous conservation savings on the part of not only the Federal Government but on the part of the private sector as this program will grow.

Mrs. FENWICK. Mr. Chairman, will the gentleman yield?

Mr. JOHN L. BURTON. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Chairman, I wish to state to the gentleman that I believe this sounds like a very good program and a very desirable one and a self-sustaining one, paying for most of the riding. I know that many private companies are doing this. They say that in most cases it pays for itself because the people pay less than they would if they were riding in their own cars.

So I believe this sounds very sensible.

Mr. JOHN L. BURTON. I thank the gentlewoman from New Jersey.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan (Mr. BROWN).

Mr. BROWN of Michigan. Mr. Chairman, as a Member of the House, as a minority member generally, as a member of the ad hoc committee and as a member of the Banking Committee, I have grave reservations concerning the substance of H.R. 8444 and the procedures under which it is being considered.

I will not belabor the procedural points which I detailed last Friday during consideration of the rule. However, there is something totally unsatisfactory about considering this legislative package under a virtually closed rule when it is obvious that the various parts would never have qualified for such a rule.

What is it about the fact that they are all titles in one bill that makes them sacrosanct?

But, beyond the procedural problems, we still must deal with substance. Unfortunately, the substance is either lacking or misdirected in H.R. 8444.

Throughout this debate you will hear much about energy conservation and energy supply. You will also hear a good deal about energy prices.

Regrettably, Mr. Chairman, the era of cheap energy is over, but that fact does not diminish by sticking our heads in the sand and hoping it will go away. We must conserve. We must adjust the pricing mechanism which is detrimentally artificial, and we must encourage new exploration to add to our energy supplies. The latter should also be thought of in the context of new technologies and types of energy.

While many of us may disagree on how to do these things, I regret that H.R. 8444 does not address the supply question adequately. Any schoolchild knows that when something is in short supply, you must either reduce its use or supplement the supply, or both. Our domestic production of oil and natural gas has declined from 9.2 million barrels per day to 7.8 million barrels per day, and from 22 trillion cubic feet to 19.8 trillion cubic feet annually for oil and gas respectively, since the 1973 oil embargo.

The other side of this equation is that imports since that time have risen dramatically. Since 1972 the cost of this imported oil has risen from $4.6 billion to nearly $40 billion. Unless this Congress faces the issue squarely and does not hide behind the parliamentary ruse of closed rules and similar devices, there will never be a solution to our energy problems.

It is beyond me how the U.S. House of Representatives can hold its head high with respect to the energy problem while admitting it is afraid to let its Members offer amendments and consider proposals which the leadership might disagree with.

Let me point out just a couple of things—anomalies if I may call them such—about this rule as applied to the public utility program. I asked the Committee on Rules to permit me to offer amendments so that the provisions reported from the Committee on Banking, Finance, and Urban Affairs that are in H.R. 8444 could be considered by the whole House. The rule was not granted. Rather, the only thing that we will have before us is the ad hoc committee amendment dealing with public utility programs. Since there is the possibility, of course, that the ad hoc committee amendment will be defeated, I then urged the Committee on Rules to provide that an amendment would be in order to strike the Commerce Committee portions of the bill if the ad hoc committee amendment fails. I did this because it is totally irresponsible, it seems to me, to leave that possibility open.

In short, what I am saying is that if the ad hoc committee amendment is defeated, we will have in the bill that goes to the Senate, H.R. 8444, two diametrically opposed programs, one from the Commerce Committee and one from the Committee on Banking, Finance and Urban Affairs, and they are irreconcilable. Yet the Committee on Rules did not see fit to avoid this irresponsible result and permit an amendment to strike either one or the other of the provisions. Of course, I preferred the Banking Committee provisions, so I wanted a rule that would permit the striking of the Commerce provisions. But as it stands, it is not permitted and, as a result, it is entirely possible that these totally irreconcilable programs incorporated in the same bill will be sent to the Senate. I guess at this point in time all we can say is thank God there is another body.

Another interesting aspect of the provisions of H.R. 8444 is that it delegates

to the energy czar—the Secretary of Energy, if that comes to be by the time this legislation is implemented—or other Federal officials almost unfettered discretion in more than 100 instances to make vital energy-related determinations without any congressionally enacted guidelines, standards, or anything else.

Let me just point out one of these because an example occurred in the ad hoc committee.

Mr. ECKHARDT offered an amendment which attempted to make some sense out of the limitation about what shall be considered to be new gas. In that amendment he provided that if the well is more than 2½ miles from an existing well, or if it is drilled more than 1,000 feet deep, then that can be considered new gas. But he knew that was too restrictive a limitation, so he added the words "or a new reservoir." Then he went on to say very properly, I think, and I quote:

> On the request of any State agency having regulatory authority over the drilling of natural gas wells or the production of such wells, the Commission shall delegate to such State agency the authority to determine whether the requirements of section 402(5)(B)(iii) (relating to the definition of new natural gas) have been satisfied for purposes of applying section 404.

Then he goes on to say in the amendment:

> Any such delegation shall be upon terms and conditions prescribed by the Commission.

I thought that was a little bit too broad a grant of authority since there were no controls or standards proposed, so I offered an amendment to the amendment in the committee that basically such terms and conditions could not be inconsistent with the generally accepted standards of the industry and regulatory bodies for wells in the area in which this well was located.

Then with respect to the recinding of this authority, since the Eckhardt amendment provided for rescinding authority to the State agency, instead of just saying "The Commission may rescind any such delegation at any time by notifying the State agency of such rescission," I suggested that we add the language "upon good cause shown" immediately after "The Commission."

All I was attempting to do is to have the House of Representatives and the Congress apply just a little bit of qualification on this unfettered discretion, and of course the amendment was defeated by an overwhelming majority of Democratic votes.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Michigan. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, in the committee report on this matter, it says:

> With respect to its application to the definition of newly discovered reservoir, a special rule may be required. Satisfaction of the requirements of this definition will always involve circumstantial evidence. What evidence should be considered sufficient by a State agency? The Committee anticipates that the Federal Power Commission could require a natural gas producer to certify, under oath, to the State agency that the producer (1) had not previously discovered the natural gas by the drilling of any well, (2) has no knowledge that any other person previously discovered the natural gas, and (3) has no information in his possession, including well logs, indicating the fact of a prior discovery of the natural gas by the drilling of a well.

I construe that as giving some guide as to whether or not a producible reservoir was previously discovered and if gas in any appreciable quantity was discovered the Commission would simply not treat it as new gas.

The gentleman in the well would like to give that authority to the State agency. Is that correct?

Mr. BROWN of Michigan. The gentleman in his amendment gives that authority to the State agency. It says: "the Commission shall delegate."

And then it says: "under such terms and conditions."

Mr. ECKHARDT. That is correct.

Mr. BROWN of Michigan. The point I am making is the gentleman does not give any indication as to what the terms and conditions shall be. The gentleman makes the best argument for me, which is that we have to explain in the report that which we do not say in the statutory language. I do not think it is proper for the House of Representatives and the Congress of the United States to legislate by report.

Mr. ECKHARDT. I think the gentleman and I have a legitimate difference. I felt that it was necessary for the Federal agency to have control over standards and definitions. The gentleman in the well would feel that there should have been a mandatory delegation to the State agency to deal with that subject matter. Is that correct?

Mr. BROWN of Michigan. No. The gentleman heard my discussion in the ad hoc committee. He just heard my remarks here. I am just saying in the delegating of authority the FEA Administrator may not impose terms and conditions that are not generally accepted as standards of the industry.

Mr. ECKHARDT. That is not what the language in the bill says.

Mr. BROWN of Michigan. Of course, because we did not accept my amendment. The important thing here is not the substance or the merits of the language. The important thing here is that in over 100 instances we have granted almost life and death authority over our energy usage and our economic existence, to an Administrator with practically no or no guidelines and standards, and I think this is improper legislation.

Mr. ECKHARDT. I think the gentleman and I simply disagree on what should be done.

Mr. BROWN of Michigan. Mr. Chairman, I decline to yield further.

Mr. Chairman, there is no question that we disagree, and I disagree with the constantly burgeoning Government we have and in this bill we have quadrupled the problem.

Maybe, the leadership's answer to this problem is to pass the buck. Unfortunately, I do not see that now famous sign "The Buck Stops Here" anywhere in the Congress or in H.R. 8444.

Mr. ASHLEY. Mr. Chairman, I yield such time as he may consume to the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Chairman, I rise in support of H.R. 8444 and the President's national energy program. For the first time we have proposed a truly comprehensive national energy program. Through companion legislation almost completed, the administration will be given authority to create a Department of Energy with which to administer the program. I am proud to have played a part in the creation of this program through my service on both the Energy and Power Subcommittee of the House Committee on Interstate and Foreign Commerce and the energy subcommittees of the House Committee on Science and Technology.

The accent of the President's program is properly on conservation, for it is only by elimination of our enormous waste of energy that we can quickly overcome the staggering burdens of our current dependence on oil imports. Conservation is the only quick, clean, safe path to reducing that dependence. The President's program addresses all the major areas of potential conservation: in transportation, in buildings and in industry and commerce.

On the supply side of the equation, the President's program gives ample incentives for the discovery and production of new gas, while avoiding gigantic windfall profits to the gas-producing companies.

While I am seriously concerned with the economic consequences of the wellhead tax on oil, those affects will be cushioned both by the phase-in of the tax and by rebating the revenues to the taxpayers. While this will still result in very serious price increases for virtually every category of goods and services in our economy, it is the best available compromise for backing-up conservation strictures in the marketplace without unconscionable enrichment of the giant energy companies. While I would have relied on controls rather than price as the Government's principal conservation mechanism, certainly the critical nature of our oil import situation requires immediate action. Faced with this provision or nothing, and having viewed the great difficulties of adopting more stringent conservation measures in the Energy and Power Subcommittee, I have to conclude that this provision is far preferable to inaction, despite its risks.

Indeed, my chief concern with the President's program is that it does not go far enough. All the available evidence indicates that it will not roll back existing oil import levels at all. Indeed, the three independent studies done of the program by the General Accounting Office, the Congressional Budget Office, and the Office of Technology Assessment indicate that even after adoption of the program, oil imports will rise to a level of 10 to 12 million barrels a day by 1985. This means we must witness a continued drain of our dollars to the OPEC countries of more than the present $43 billion a year, on top of an accumulated $150 billion, imposing an intolerable risk to our national security and to our economy and that of the entire free world.

Indeed, in recent days we have seen oil import-generated record deficits in our trade and international payments balances. The international banking system and our own banks are staggering under the burden of financing payments for oil by the less developed countries. The Department of the Treasury has estimated that the OPEC embargo and resulting oil price increases will "probably cost the U.S. economy a cumulative loss in real output of about $500 billion over the period 1974 to 1980." These are trends that cannot be allowed to persist.

The President's program that we are considering today, therefore, must be viewed only as a good first step. Much more drastic measures must be taken quickly to protect our security and end this deadly drain on our economy and that of our allies.

In the next few days, therefore, I will be proposing to the administration and to Congress with several of my colleagues very drastic follow-on measures to assure that we will meet the President's originally announced goal of reducing oil imports to a level of 6 million barrels a day by 1985. To achieve this, we will be proposing oil import quotas and both mandatory conservation measures and a crash program to utilize existing renewable energy supply technologies including solar energy and use of agricultural and human wastes for fuel production.

I view the energy crisis as the greatest danger which faces us today. It poses the greatest immediate threat to our security and international relations. It faces us with virtual control by the OPEC countries and the major international energy producing companies. It involves a drain of capital to the OPEC countries that is in itself intolerable and is threatening to topple the international banking system and our own economic viability. The President's program is to be applauded for recognizing these problems and for proposing sound first steps for addressing them.

I hope my colleagues will join in support of the program, even though it may not be viewed as the ideal solution by many of us in particular provisions, and in resisting the many weakening amendments which will be offered.

Mr. ASHLEY. Mr. Chairman, I yield 8 minutes to the gentleman from California (Mr. MINETA).

Mr. MINETA. Mr. Chairman, I am pleased to report on the sections of H.R. 8444 handled by the House Public Works and Transportation Committee. Sections 721 through 789 reported by the committee are intended to insure that Federal agencies further intensify their efforts to conserve energy and utilize solar energy.

There are approximately 400,000 federally owned buildings totaling about 2.5 billion square feet of floor space. Fiscal year 1976 energy use was equivalent to 353,000 barrels of oil per day, or roughly 1 percent of total U.S. energy demand. Implementation of cost-effective conservation measures and the life-cycle costing procedures could save 20 percent of the energy used in existing Federal buildings.

The sections of H.R. 8444 reported by the House Public Works and Transportation Committee encompasses four subparts of part (G), of title I, section 721, (subpart 2) amends section 381 of the Energy Policy and Conservation Act which directed the President to develop and implement a 10-year plan for energy conservation with respect to buildings owned or leased by the Federal Government. This section specifies that all executive agencies and the U.S. Postal Service shall be included in the development of the plan, and authorizes to be appropriated $25 million for fiscal year 1978 and $50 million for fiscal year 1979 in addition to funds authorized under other statutes.

Although it is difficult to estimate precisely the costs of implementing conservation measures in Federal buildings where such investments are cost justified administration officials testified the total required investment is likely to be about $2.67 billion, but the resulting energy savings are likely to save more than $4 billion in the utility costs by 1990.

Clearly, the selection of the actual measures to be undertaken should and will, involve life-cycle cost analyses to determine the cost savings that will result over the building's economic life. The most effective measures should be implemented first, and the measures that are not cost effective will not be implemented.

The President's bill as transmitted to the committee recommended open ended funding for an 8-year period. However, the committee amended the bill to read for fiscal years 1978 and 1979 in order for the Congress to have a control on the program.

Sections 741 through 746 (subpart 3) authorizes appropriations of up to $100 million over the next three years to add solar hot water and space heating to suitable Federal buildings to reduce consumption of conventional fuels and demonstrate the feasibility of widespread solar energy use. Installations of solar space cooling are also authorized and the committee is particularly interested in their potential for reducing the summer peak demands on electric utilities. The program to be implemented by the administration of the FEA could involve approximately 3,000 buildings. The committee believes that a program funded at this level can make two vital contributions.

First, it would have the Federal Government lead the way in making use of solar energy in its own buildings. In addition, the Federal Government would then be in a position to gain experience with the maintenance and operation of solar equipment and to use this experience in assisting other solar energy users. The committee views this particular aspect, together with the overall Federal leadership role, as an important contribution to increasing consumer confidence in such technologies.

Second, substantial purchases by the Federal Government over the next few years can help lower the cost of production and installation as experience is gained and economies of scale are attained.

The committee amended the bill to include sections 761 through 772 (subpart 4). These sections set up a program for the use of energy conservation measures and solar energy systems in Federal buildings. These sections establish comprehensive and uniform energy conservation performance targets which are considered essential to the effectilve implementation of the energy conservation activities in Federal buildings to be undertaken pursuant to section 721. It is also the purpose of these sections to aim for a reduction of energy use in existing Federal buildings by 20 percent by 1985.

The Administrator of the Federal Energy Administration is charged with the responsibility of implementing the program and he is directed to establish life cycle cost methodologies, develop forms to be used, and procedures to be followed in conducting the preliminary energy audits required by the bill which will identify, for example, the type, size, energy use, and major energy systems of Federal buildings.

These audits will identify those buildings which are the best candidates for further examination for energy conservation improvements. It is not the intent of the committee that these audits should require onsite inspections by trained professionals. It is envisioned that the information required will be able to be provided by the building manager with available resources. The Administrator is further directed to insure that all new Federal buildings are life cycle cost effective. He is directed to establish energy performance targets for existing buildings, structures, and facilities. Upon enactment, each Federal agency shall conduct a preliminary energy audit and reports will be submitted to the Congress on the findings. Upon completion of the reports Federal agencies are directed to retrofit buildings under their control and all existing buildings will have been the subject of retrofit measures by January 1, 1990. Also, Federal agencies are directed to line item in their budget request those funds being requested for retrofit measures which will enable the Congress the opportunity to have a complete handle on this program. Last, there is authorized to be appropriated to the Administrator $2 million to allow him to perform the functions vested in him under this subpart.

The committee also amended the bill to include sections 781 through 789—subpart 5—cited as the "Federal Photovoltaic Utilization Act."

Solar photovoltaic conversion systems are composed of photovoltaic or solar cells which convert sunlight directly into electricity. These systems offer the potential for highly reliable power in a variety of applications ranging from small, low power in remote instruments, to dispersed systems, to large central power stations, for intermediate and peak load operations.

Photovoltaic conversion systems operate on principles which are widely understood as a result of experience gained from their use in the national space program. Therefore, the major thrust of this program is to reduce the costs of the cells themselves.

These sections establish a photovoltaic energy commercialization program for the accelerated procurement and instal-

lation of photovoltaic systems for the electric production in new and existing Federal facilities.

The Administrator of FEA is directed to administer the program which shall provide for the acquisition of photovoltaic solar electric systems and associated storage capability, primarily for use by the Department of Defense. There is authorized to be appropriated $39 million for a 3-year period to carry out this program.

It is the committee's intent that this program be fully coordinated with the ongoing research and development activities of the Energy Research and Development Administration.

The energy crisis is here now and it is vital we act now. I, therefore, recommend favorable action on H.R. 8444 as proposed with the House working its will on amendments.

Mr. PICKLE. Mr. Chairman, will the gentleman yield?

Mr. MINETA. I yield to the gentleman from Texas.

Mr. PICKLE. Mr. Chairman, I want to express some rather strong reservations that I have about this bill, although I do favor the intent of the legislation; and support the bill merely to advance the general idea of establishing a national energy bill. However, let us face it—this bill is a bill of tax and rebate, control and more Government control, and more tax and rebate.

Punish and penalize is not the right emphasis for a national energy bill.

This is not to say that I am against a conservation energy bill. Since 1973 I have felt there would be little voluntary conservation in this country. I think it is logical to have a Government program taxing and requiring steps that result in conservation. It may be the only way we can "conserve" energy. The people will conserve only when they are forced to conserve.

On the other hand, this bill is not a full national energy plan. The bill before us should be called the national energy conservation program. This bill is only one part of the solution to our energy problems. This bill is not the answer to our energy problems. This bill is only a partial answer.

At some point, we, the national Congress, must realize that we need to have a national energy production bill. Even with the President's limited energy demand forecasts, his administration bill requires a 9 percent increase in the production of oil and gas by 1985.

This is an incredible figure when our domestic oil and gas production is going down, and has been for the past few years. And even though the bill before us foresees an increase in production, little or nothing in the bill will help increase production. It is for sure that nothing in the bill encourages production to the tune of a whopping 9 percent increase of domestic oil and gas.

I recognize that many people, many people in this Congress and in the administration, feel that price controls and more price controls are the best answer.

With all due respect, less controls and more production would be more helpful to the American people, and would be a more logical energy program.

I would say that the story that we all read in the Washington Post yesterday will probably prove true. Everyone is for the so-called national energy bill, but when the money starts flowing from the consumers' pockets to implement all the requirements and taxes, the support will be shallow.

This means that this is not the last time there will be a bill on the floor of the Congress dealing with the same issues we see in H.R. 8444.

The energy issue is not solved by H.R. 8444, but it is a measure that can be helpful in awakening all Americans to our energy plight.

Mr. Chairman, I also want to make some specific remarks about parts IV and V of title II of the bill, and then some general remarks about the whole coal conversion program and its future.

Part IV of title II set up a program where utilities that burn oil or gas are taxed extra on the oil or gas burned. Part V of title II says that credits are allowed against the tax for money spent converting to nonoil or gas generators.

An examination of this tax shows that it will impact mainly on Texas, Oklahoma, and Louisiana. As introduced the bill would have also impacted heavily on southern California, but the administration, for rather obvious and predictable reasons, agreed to exempt most gas boiler use in southern California.

Now the reason why the tax hits mainly three States is historical. When oil was discovered in the early 20th and mid-20th century, natural gas was burned off, or totally wasted.

The people in producing States decided to put an end to this waste; they decided to use the natural gas in boilers to make electricity.

I do not believe anyone can quarrel with what was done. Natural gas was being wasted, it was plentiful, and thus it was put to use making cheap electricity. As a result, utilities, at least in Texas, made electricity using gas in all their boilers—in other words, 100 percent gas electric utility systems.

Times change, of course, and in the late 60's and early 70's, the price for natural gas for electrical generation began to skyrocket. Also, during this time, gas supply problems began to develop. In turn, these new economic realities started massive planning for coal-fired, lignite-fired, and nuclear electrical generating plants in this area.

The building of electrical plants is not easy, however, and it takes a long time. Coal and lignite plants take 5 to 8 years from planning to actual production. Nuclear plants sometimes take as long as 10 to 15 years to build.

To summarize at this point, the utility user tax will impact mainly on three States, the conversion program underway in those States mean a 100 percent rebuilding of the electrical production system, and the billions of dollars spent to convert 100 percent will be paid by the consumers in these States.

The administration originally proposed a very general but, in theory, fair concept that for each dollar spent on conversion, there would be a dollar credit against the tax.

Since the States using natural gas are converting, it appeared in this initial stage of the energy bill that the consumers in my area would have little to worry about the user tax. In other words, it appeared the consumers conversion credits would equal, and even exceed the tax.

As the details of the utility tax emerged, however, a haunting feeling grew that the consumers paying the most to convert—billions of dollars—would end up paying the most in user taxes—again, billions of dollars.

In fact, an irony became clear that these consumers would have to slow down, or even stop conversion efforts, in order to pay a tax that is supposed to make them convert. This would be a true Catch-22—the conversion tax prevents conversion.

In the Ways and Means Committee, I was able to amend the administration's bill to help prevent such a situation from developing. In all these efforts I and other members had the support of Treasury and FEA officials, and the unanimous backing of the committee members. These amendments were:

First. An amendment on the natural gas tax on utilities reduced the tax rate by 31 percent;

Second. There will be a cap on the tax so that utilities will not have to pay more for natural gas than they would for the BTU equivalent of residual oil.

Third. Tax credits for construction of coal fired plants will now apply to nonprofit utilities.

Fourth. The administration's proposal could not be used for more than 1,500 hours per year in order to be considered and officially phased out in order to get a credit. My amendment offers more flexibility so that these plants could operate up to approximately 2,000 hours per year and still be considered as "out of operation" or "phased down".

Fifth. The natural gas tax will not have to be paid until 6 months after the end of the year instead of each month as the President proposed. This will allow utilities time to compute their construction credits from the previous year and use them to offset the tax: and

Sixth. One of the most important amendments was one setting up a certification program that allows a utility in the process of building a replacement coal plant to apply its construction credits to the tax during the period of construction. The President proposed collecting the tax during construction and then rebating it after the new replacement plant is completed.

Even with these amendments, however, there is some concern that the consumers paying most for conversion will pay an unfairly high amount of the tax. This feeling stems from the fact that the area where this user tax will impact are growth areas. The consumers in Texas, for example, are having to spend millions and millions to build new facilities just to keep up with new electricity demands.

The bill before us does not give any direct relief in this situation. I would hope that the section of bill giving the agencies authority to exempt utilities from the tax would be used fairly where the consumer just cannot pay any more conversion costs, growth costs, and tax costs.

The final word I have on the utility user tax is one of personal pique that a tax is proposed here impacting mainly on consumers living in the producing States, and no sympathy is given to them on this side of the Potomac. Where other regional taxes are proposed, you can be sure crocodile tears will be shed for the people in that region.

Turning from the specific concern of the conversion tax to the general trend this Government wants in the use of coal, I must express an alarm, a concern, and deep frustration at what I see developing.

With this bill, we are announcing a tremendous commitment to using coal. We are saying that we have coal, and that we are going to use that coal. Also we are saying that those who don't use coal will have to pay a very high tax. The bill before us punishes noncoal users.

Specifically, the President's national energy plan calls for an increase in coal production by 1985 of 84 percent over 1976 domestic production. Coal must move from 26 percent of our current domestic production of energy to 36 percent by 1985. In doing so, the rate of increase over the next 9 years must be seven times that of the last 9 years, a period of time in which record coal production occurred nationally.

These goals for coal are fine. We have the coal, no one disputes that.

If the coal story ended here, then I could be quiet; and in fact, I would go home and tell everyone to be calm: coal is the answer. But there is no end here, and there is no peace of mind. For the Congress and administration have done some things that severely restrict our ability to get coal out of the ground, and our ability to burn coal.

Given the Clean Air Act which prevents coal burning in some areas, given recent amendments that require expensive scrubbers on new coal plants no matter what kind of coal is burned, and given the rather complex Federal coal leasing laws, the Congress has thrown strong roadblocks against using coal. And do not let rhetoric deceive, these are very real roadblocks.

Given executive branch action taking 2 or 3 years to see if the FEA orders to convert to coal are environmentally sound, and given recent action by the Secretary of Interior that he will not sell Federal coal for at least 3 years to be used in a conversion effort, it is easy to see the President's people are creating coal roadblocks also.

Mr. Chairman, I make some predictions.

One, I predict that we will be mining one-half the coal we will need based on projected coal needs of 1983.

Two, I predict since we will not be mining or burning the coal we need for conversion, there will be strong pressure to repeal oil and gas users tax.

The final prediction is that Congress experience with coal conversion perhaps will be just like our experiences with automobile emission standards. I predict that Congress, in the early 1980's will be voting to delay or ease mandatory conversion orders, and to delay or ease the user taxes. I predict these delays will be reasonable because Federal policy will be preventing the mining and burning of coal.

Again, the Federal Government must be chastised for no foresight.

By passing laws calling for the use of coal, but preventing mining and burning of coal, the Congress, and the President, are putting the American people on a dead end street.

We all, or our successors, will see the day the dead end street becomes obvious to the people.

We must change our attitudes, and our laws to mine and burn more coal.

We cannot kid ourselves, and the administration is encouraging us to do just that.

So, in sum, I generally protest the very regional impact of the gas user tax, and the stated reliance on coal that may not be usable because of Federal statutes and regulations.

The CHAIRMAN. The time of the gentleman from California (Mr. MINETA) has expired.

Mr. ASHLEY. Mr. Chairman, I yield 1 additional minute to the gentleman from California.

Mr. BROWN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. MINETA. I yield to the gentleman from Michigan.

Mr. BROWN of Michigan. Mr. Chairman, the gentleman in the course of his remarks—which were very eloquent, I will point out—mentioned that in several places, I think there were about 8 or 9, as I recall, in respect to the public utility program, the Federal Energy Administrator is given the authority to make certain determinations. What are the congressional guidelines, standards, et cetera, that are set forth in the bill for the making of those determinations?

Mr. MINETA. The bill itself calls for utilization of solar energy life cycle costing methods as a way of determining as to construction of new Federal buildings, as to the type of installation which might be required. Life cycle costing is a kind of generic term which is already the state of the art language, so that we know what they are, and that is incorporated in the bill.

Mr. BROWN of Michigan. If the gentleman will yield further. I am well aware of the general argument in support of this provision, but the gentleman mentioned other areas where the Federal Energy Administrator makes certain determinations, I think if the gentleman will go back and read the bill, he will find that in the public utility program, which relates to the solar energy program also, and other areas, by and large the administrator is given the authority to make any determinations, without any guidelines or standards set forth in the bill for making of those determinations.

Mr. MINETA. I do not recall that we got into the public utility aspect of it, other than the cost of installation of the various kinds of equipment versus the operational and maintenance cost as related to that equipment.

Mr. BROWN of Michigan. I thank the gentleman.

The CHAIRMAN. The time of the gentleman from California (Mr. MINETA) has expired.

Mr. ASHLEY. Mr. Chairman, I yield 2 additional minutes to the gentleman from California.

Mr. MILLER of Ohio. Mr. Chairman, will the gentleman yield?

Mr. MINETA. I yield to the gentleman from Ohio.

Mr. MILLER of Ohio. Mr. Chairman, I understand that much of what the gentleman has said involves solar energy and solar cells. I understand, too, that there would be a possibility of utilizing this energy through a power station. I have read about feedback from one area where the Sun is out and blooming and another area where cloud formations would be between the Earth and the Sun and, therefore, excess energy would be diverted from one region to another. But energy from solar cells is d.c., and we have on our transmission lines 60 cycle a.c. How do we convert this so that we will be able to move it across the transmission lines?

Mr. MINETA. The program, as it is envisioned in this bill, is a limited program, only as it relates to mostly Department of Defense installations. This program is really not for the generation of electric power for transmission purposes.

As the gentleman has indicated, it would require conversion from d.c. to a.c. But in this instance we are thinking only in those areas where we can utilize solar or photovoltaic cells for onsite generation and use, rather than for transmission of long distances.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 7 minutes to the gentleman from North Carolina (Mr. MARTIN).

Mr. MARTIN. Mr. Chairman, these are not times for easy answers about this extremely complex bill, H.R. 8444. Let me clarify, for anyone who is wondering if that is the number of pages, it is only 580 pages long. For the benefit of the Members who have not had a chance to go over the bill to familiarize themselves with it, let me say that there are copies available at each of the party desks on either side of the aisle.

If a quick glance through these 580 pages of the legislation does not clarify all the questions that might come to our minds, let me say that there are an additional 924 pages of the report from the ad hoc committee that can be examined when one has the opportunity. Because of this, I hope that all of us will stay as close to the debate on this bill as we would to our wallets during a blackout.

Mr. Chairman, what we do here this week is going to have a tremendous significance for this Nation's future, no matter whether we approve or reject the bill before us. Every district in the country will be affected by this legislation, and affected differently from every other. So you had better watch closely lest the latterday fallout fall on your district. This is not the time for moving in herds, following the thumb signals flashed by ones' favorite guide standing just outside or inside the door of the House Chamber.

America is the national power it is, and we have the wealth we have, thanks in part to cheap, plentiful energy in our past. Relative to the rest of the indus-

trialized world, our energy is still cheap and plentiful. We will almost certainly retain that enviable relative position for many years. I mention this because some would have us dash pellmell into untested energy use patterns on the theory that otherwise the lights go out tomorrow. We should not; and they would not.

The bill before us is a monster, neither all-benevolent nor all-evil. In the Committee on Ways and Means, I voted for reporting out the titles dealing wth tax incentives and that put me in a distinct minority—of one—on my side of the committee's somewhat rigid aisle. But, even that segment of the bill, the one out of Ways and Means, could stand a bit of improvement. Just a touch, here and there, ought to help.

Going back for a minute, if our Nation grew on cheap, plentiful energy, we have to recognize that what we do here to change all that very likely will change radically the shape of American industry, the American economy, and Americans' way of life. Some of that may well be necessary and desirable; but there are great risks.

We have a bill proposing to add 4 cents to the gasoline tax and further increase the cost of gasoline through the wellhead tax on oil, the so-called equalization tax. I previously opposed those provisions in Committee and still do. They are OK, if the goal is to bloat the Federal treasury. But, they will not conserve gasoline. We found out with the OPEC price increases that a near-doubling of the price of motor fuel does not cause a drop in consumption; people buy the stuff instead of buying clothing or small appliances. There is a consumer effect, but not the intended effect. There will be a political effect, though, with voters blaming Congress for the 4 cents tax and the oil companies for the effect of the wellhead tax. So, to set the record straight: If both taxes become law, 4 cents more at the pump is Congress's fault; another 7 cents or so is also Congress's fault, even though it is designed to look like it goes to the oil companies. That is about 11 cents on the gallon, altogether, and it will not cause much conservation.

There is the much-noted "gas guzzler" tax. Here, we seek to change the composition of our car population to smaller, more efficient vehicles. I support the general objective and am delighted the industry is responding rapidly, even with station wagons meeting the standards. And, I am pleased with the changes made by the Ways and Means Committee in the original proposal. By cutting the revenue windfall to the Treasury by 90 percent, we lose only 10 percent of the fuel savings. That is a break for the consumer.

For a while, I was the extent of my party's support for the home insulation credit, and I am still looking for more company. Since 25 percent of our total residential fuel consumption is wasted due to poor insulation, this will save energy, but at a cost. There are other provisions of the bill which may well interact with the credit to produce a generation of more energy-efficient housing. But, let us be aware of what we are saying here to homebuilders and buyers. We say that more of the total price of a home or office should be devoted to its energy efficiency. Since the average renter or buyer looks for the most he can afford, and since what he can afford is relatively constant, we say your budget should devote more resources to insulation rather than to, say, an extra lavatory or spare room.

There are provisions of this bill placing great emphasis on mass transit and other public transportation. It is much needed. But, let us recognize that with transportation and residential provisions of the bill what we are saying is that we want more densely-settled areas which can support public transportation, and we want to get away from sprawling subdivisions toward garden townhouse clusters and high rises.

In the bill we tax the use of gas and oil and place greater emphasis on coal and electricity. Let us recognize what this means in trade offs. It means environmental problems we will have to face, and facing them will be costly. As we increase the use of coal we increase the need for deep-mining labor. Proximity to coal reserves and rail lines will be an increasingly important factor, with demographic significance. By that, I mean that someone's constituents will move to someone else's district.

But, let us recognize that what we do here will have effects far removed from gas consumption. As people adjust, disposing of their large cars, replacing them with others that will handle most of the same tasks, but with smaller chassis, there will be gradual changes in the design of garages, parking lots, and roads. Shopping patterns may well change.

On top of the fact that energy has ceased to be an insignificant item in the American citizen's budget, this legislation—adopted or not—will have a sweeping impact on how, where, and how well we live. Too much discussion has been on the bill's relative trivia. Before we vote it up or down, we should hope that every Member will seriously assess its social, economic, political, and demographic impacts, for his Nation as well as his district. It is not a simple choice about gas taxes and gas guzzlers and storm windows. The choice is as to how far and how fast we can shove the people in the direction of a new pattern of residential living, commerce, and transportation. We need to move in the direction the bill points. As for me, I am going to see—before voting—whether the pace prescribed here is one that can be met and tolerated.

The major deficiency, the glaring flaw, in this legislation, is its disregard for the energy production side of the equation. If we reduce our rate of growth for consumption from 4 to 5 percent down to 2½ percent, but without increasing domestic energy supplies by the same 2½ percent a year, the net imbalance will leave us increasingly dependent on foreign oil producing nations. That will leave our foreign policy increasingly dependent on their attitudes and policy objectives.

Because it avoids any serious effort to encourage or generate domestic energy supplies, President Carter's so-called comprehensive energy program is really only half a comprehensive program. What is more, throughout its legislative journey, all efforts to stimulate supply and discovery have been blocked, either by small margins secured by the proxies held by each committee chairman, or by procedural rulings to the effect that we could not amend earlier energy laws unless the President first asked us to. Even though President Carter earlier assured Louisiana, Oklahoma, and Texas that he favored deregulation of oil and gas, thereby assuring his own victory in those States, he has fully neglected those commitments in this proposal and his party intends to keep it that way.

We must take the few opportunities allowed us by the rules to remedy this omission. Otherwise, this bill, for all its weight, will do little more than create a greater shortage and direct the public how to manage it, and at widely varying personal sacrifices depending on where one lives and how one makes a living.

Mr. ECKHARDT. Mr. Chairman, I yield 5 minutes to the gentleman from Kansas (Mr. GLICKMAN).

Mr. GLICKMAN. Mr. Chairman, first of all, I want to applaud the efforts of the committee, all of the committees, the ad hoc committee, they Ways and Means Committee, and the Commerce Committee for dealing with these issues.

I would say, however, that what I am going to talk about today is perhaps, in the views of some people, not quite so significant as the issues of pricing and regulation. Perhaps the whole problem with respect to this energy bill is that it has gotten too hung up with these issues and perhaps it has not dealt effectively with some of these alternative energy sources available to us today.

Mr. Chairman, I recall that not too long ago the chairman of the ad hoc committee, the gentleman from Ohio (Mr. ASHLEY), was on television. He said that we need to reduce our consumption of gasoline by 10 percent.

Mr. Chairman, while I do not have the answer to all of our energy problems, I do have a method by which we can reduce our consumption by 10 percent. And it can be done soon.

I went to the Committee on Rules on this issue, and while it is not possible for me to offer an amendment to this bill, I thought I would talk to the House about it. That is the issue of alcohol.

Mr. Chairman, alcohol is a fuel additive to gasoline. Alcohol is derived from renewable resources and in the appropriate mixture, can be put into our automobiles today, right now, with no modification whatsoever to our cars, and it will run. It is not a novel idea. Henry Ford thought about it a long time ago. Congress considered the idea in 1940 just prior to World War II as a result of President Roosevelt's urging that we needed to consider alternative fuel resources.

Mr. Chairman, in Brazil automobiles run partially on gasohol which is an alcohol-gasoline mixture. They make theirs from sugar beets or sugar cane.

The State of Nebraska has run 1½ million miles of road testing using an alcohol-gasoline mixture called gasohol.

They found, No. 1, that the car has fuel emissions which meet the most stringent

1978–79 clean air standards because the alcohol component reduces hydrocarbon and nitrous oxide emissions.

No. 2, they found that because of octane problems with nonleaded gasoline, alcohol provides that needed octane requirement.

No. 3, they found some increased fuel efficiency.

Mr. Chairman, the question is, Why do we not have gasohol, the mix of alcohol and gasoline, being sold in our service stations? I think the historic reason is that it has been more expensive to produce, even when mixed with petroleum, although as we are seeing and talking to people today, that is probably going to change. Although it would probably cost, under existing technology, 3 or 4 or 5 cents a gallon more to produce, the problem is that the oil companies have no incentive by which they can market it because they have no control over raw materials, the growing crops, the coal, the timber, and anything else that constitutes renewable resources. All they seem to know about, and care about, is the marketing of depleting resources.

For that reason, Mr. Chairman, I, along with 16 of my colleagues, signed a letter to the gentleman from Ohio (Mr. ASHLEY) asking that if we adopt an excise tax or additional Federal taxes on gasoline, we consider exempting from these taxes alcohol-based fuels such as gasohol.

This was something that President Roosevelt suggested over 35 years ago.

The response I got—and I asked people in the various committees to which I went—was, "That is a great idea, but we "have not considered it."

Mr. Chairman, what I am saying to the Members of the House here today is if we are dealing with a comprehensive energy policy and we have a technology that is feasible, that is renewable in character, which grows in our backyards and which can be used now in our cars with no modification whatsoever of our engines, why is it not in a part of our energy package?

It is really too late to do anything about it right now. It is not in here, and it is absolutely necessary. It could provide some reduction, as much as 10 percent, if we could only provide incentives for marketing it.

The only reason I came down into the well today is to tell the people, the American public and the Members that we do have this technology, that it is feasible, it is possible, and we could now start using alcohol far differently from the way it has been used before, now we can find a clean way to use alcohol, people can now put it in their automobiles and for other uses and it would provide an immediate reduction in petroleum consumption. It has beautiful regional appeal, also particularly in areas of the country which have a surplus of growing crops that could be converted into alcohol.

I have written President Carter and I have written Mr. Schlesinger about this subject and, while it will not make us completely energy independent, on the other hand, it would be a ludicrous lack of commonsense indeed for us not to explore alcohol as a fuel.

So, Mr. Chairman, I shall introduce legislation that would provide an exemption from Federal gasoline taxes for alcohol-based fuels. The idea has merit. I think it should be explored. It should have been explored as a part of this energy package.

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. GLICKMAN. I yield to the gentleman from Iowa.

Mr. GRASSLEY. Mr. Chairman, may I say to the gentleman from Kansas (Mr. GLICKMAN) that his concept has been one of interest to the people of rural America because it would obviously have something to do with the price of corn.

There have been many experiments on the part of the university in the gentleman's area that has been referred to.

I might mention that earlier this spring the Subcommittee on Family Farms, Rural Development, and Special Studies of the Committee on Agriculture, held hearings on this, and one of the agencies we had in was ERDA. And, as a result of the hearing, I was quite astounded to find these figures come out, and I had it followed up with a letter, and I will be glad to show it to the gentleman from Kansas if he has further interest in it. The letter shows that if we were to go on the assumption that in 1985 we would have about the same number of cars per person that we have today, and if they would go an average of 25 miles on a gallon of gasoline and travel the usual 10,000 miles as the average car today does, and if we were to use a 10 percent mixture of alcohol and gasoline that it would take 4 billion bushels, or about two-thirds of the corn crop, to even provide that much of a mixture.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ASHLEY. Mr. Chairman, I yield 2 additional minutes to the gentleman from Kansas (Mr. GLICKMAN).

Mr. GRASSLEY. Mr. Chairman, if the gentleman will yield further, all I am saying to the gentleman from Kansas is that if this were to be implemented, it would, in effect, demand a rapid increase in the production of corn.

Mr. GLICKMAN. I believe that is a good point but I would point out to the gentleman from Iowa (Mr. GRASSLEY) that alcohol need not be produced from only one renewable resource such as corn, but it can be made from sugar beets, wheat garbage, timber, and practically everything is renewable in character. Also, I am not proposing that we go into this immediately, overnight. All I am saying is that there are renewable resources that can be utilized in this process.

The point the gentleman has made is well taken. All I am saying is that the technology is with us now, and we could start with it right now.

I have talked with people from ERDA about this before. The thing seems to be sort of a mystery to them. I have talked to several people over there who really are not too serious about the concept, but I cannot see how such a large possibility could be overlooked by the Government. Could it be that there are some people in this Government who have blinders on as far as this proposal is concerned?

Mr. GRASSLEY. I would simply point out that since I received the message that they gave me regarding the large volume of corn that would be involved in this technology that could it possibly be that maybe they are trying to put us off?

Mr. GLICKMAN. You bet.

Mr. GRASSLEY. Are not those people saying that there is no alternative? The people in this country are interested in this, and they believe that it should be explored because it is one alternative that we could get in production in a hurry, we could do it a lot quicker, and it would not be a program using scarce resources in order to meet our needs. Is that what the gentleman is saying?

Mr. GLICKMAN. Yes, I think the gentleman has made a good point.

Mr. Chairman, I would like to ask the chairman of the ad hoc committee, the gentleman from Ohio (Mr. ASHLEY) a question on the subject of alcohol. The gentleman has been kind enough to talk to me in some depth about this proposal. As I say, I realize it is too late to deal with this issue now, but I would ask if there is any way that this particular issue can be explored in further depth, is there any way that it can be given some serious attention, because the technology is here and now.

Mr. ASHLEY. Mr. Chairman, in reply to the inquiry of the gentleman from Kansas (Mr. GLICKMAN), I will say that as a result of our discussions I did ask representatives of ERDA to reply to the persistent interest that has been shown by the gentleman from Kansas in this approach, and I have a reply in which ERDA acknowledges that the use of alcohol as a fuel does have a certain potential to stretch our petroleum supplies.

The major obstacles to alcohol fuel use are lack of supply and the presently unfavorable economics.

They go on to say:

Alcohols of the type which would predominate in fuel, ethanol and methanol, are presently almost totally derived from natural gas and petroleum derivatives. Ethanol for beverage use is derived from grain. Alcohols for fuel would be made from coal, agricultural or forest products and, perhaps eventually, municipal solid waste. The technology for production is well known," says ERDA, "and, with the exception of municipal solid waste, application is straightforward. Limited biomass resource and economics of conversion"—the memo goes on to say—"are such that alcohols from biomass would be applicable primarily on a local or regional basis. Substantial new production facilities would be required as present U.S. alcohol capacity for industrial purposes would provide only one-tenth that needed for a 10 percent alcohol blend in gasoline.

The memo concludes by saying:

The consequences of using alcohol fuels are sufficiently significant that they warrant serious review and consideration. Most aspects are of the nature that they are the province of industry, and if economics were favorable they would be made by any prudent party prior to commercial activities. However, they have not been adequately addressed or assessed by the Government to assure that a policy decision to use alcohol fuels would permit success without added supportive action not yet identified. Thus

it appears prudent that this matter be looked at on an overall basis with all reasonable options and needs fully understood. In this way, a supportive decision can be made if warranted in such a manner as to assure that petroleum conservation goals are achieved.

I take it from this that ERDA supports the interest of the gentleman and feels, as he does, that there is a very real potential as far as the use of alcohol fuel is concerned. I would suppose that with the efforts such as the gentleman has shown, we could get some specific commitments from ERDA as far as this is concerned.

Mr. GLICKMAN. I appreciate the remarks of the gentleman. I also appreciate his thoroughness and agreeability in dealing with this issue. I just hope that when this energy legislation passes, which I think it will, we in the Congress can continue to move on some of these types of subjects that do need addressing by special legislation.

Mr. ASHLEY. If the gentleman will yield further, I do want very particularly to commend the gentleman, because he has in discussions with me and others evidenced a real understanding and solid understanding of the subject matter at hand. There is no question in my mind that this will be available, that this will be a feasible economic development in the immediate out years. I am glad that the record as of this date will record the contribution of the gentleman in this regard.

Mr. GLICKMAN. I thank the gentleman for his comments.

Mr. Chairman, I yield back the remainder of my time.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield such time as he may consume to the gentleman fom New York (Mr. CONABLE).

Mr. CONABLE. Mr. Chairman, during the amending process I will offer an amendment which the Rules Committee has made in order which would substitute a 1-year tax cut and an increase in the earned income credit in lieu of the ill-begotten and discredited rebates and payment scheme that was recommended by the Committee on Ways and Means and the Ad Hoc Committee on Energy.

The administration recommended rebates and payments to certain individuals including those on SSI, AFDC, Veterans and others, modeled after the so-called $50 rebate that President Carter himself junked earlier this year when it was clear that the Senate Finance Committee might not order it reported. It is perfectly obvious to those of us who have been through this charade on energy that the only reason the administration recommended the so-called "rebate scheme" was that they had no other alternative readily at hand. The energy bill submitted to the Committee on Ways and Means was substantively weak. It was, as is often said, " a mile wide and an inch deep." It was conceptually poor and technically inaccurate. The rebate scheme was obviously the only concept drafted at the time and it was therefore put in the bill.

I have found it incredible that an administration which claims that the tax system is a disgrace, that cries for simplicity in the tax system, that calls for reform, would for a second time propose a scheme that is not only complex, but administratively difficult and conceptually unwise. As I said when the administration sent their stimulus proposal to the Committee on Ways and Means earlier in the year, the $50 rebate is like shoveling dollars out of an airplane; "You do not know where they are going to go, or who is going to get them." And yet, this administration and the majority in the House have failed to recognize that there are other ways of dealing with the problem of alleviating the enormous burdens of taxation that the energy bill we are about to vote on will impose.

If anyone has missed the point, this bill is really a tax bill. For those who do not know it, between 1978 and 1985 the bill reported by the Ad Hoc Energy Committee will increase taxes on the American people by $93.3 billion. That is equivalent to a 50 percent average increase in the taxes people in America now pay. It is also equivalent to removing $93.3 billion from a shaky economy and has the overall probability of thrusting this country into a major economic crisis.

It is clear that if we are to have an energy policy—albeit only half one—which tries to spread a scarcity by increasing taxes with the goal of conserving energy that we must also protect our economy, its consumers, its taxpayers. This must be accomplished by returning to them at least a portion of these tax increases in order that they may continue to provide for their families, pay their mortgages, drive their cars to work and generally have the cash flow that is necessary to sustain life in this country. The $22 rebate scheme recommended by the ad hoc committee on energy is a joke. It is half of a dinner for one person at an expensive restaurant in Washington. It is not even one dinner for a family of four in a modest priced restaurant in an average city in America. It will buy a tank and half of gasoline for the average sized car at today's gasoline prices. In short, it is a drop in the bucket and an insult to those that will have to absorb huge costs resulting from this program. The only way that we can really effectively return funds vitally needed by our citizens to them is through a general tax cut, a tax cut that recognizes that the heaviest burden will fall on those in the lower income categories and thus, rewards them proportionately more than those who can absorb the burden that this hastily drafted bill will impose.

The tax cut that I propose provides a reduction ranging up to $80 for 63.2 million tax returns; 6.3 million returns receive up to an additional $150 as a result in an increase in the earned income credit that this measure contains 33.8 percent of the revenue loss or, to put it, another way, the tax benefit from this proposal, goes to those with adjusted gross incomes below $10,000 and 76.3 percent of it goes to those with adjusted gross incomes below $20,000. 194,000 returns are made nontaxable. Thus this proposal is not a Robin Hood scheme but rather one that recognizes that the ultimate tax reform is tax-reduction and gives that tax reduction to those who need it most.

Its cost is $3.3 billion in 1978 and that is $1.5 billion more than the crude oil equalization tax would raise in that year. It should be made clear, however, that in the future this bill raises enormous amounts of revenue and this one-time, $1.5 billion revenue loss can more than be absorbed by other parts of the bill in future years. The proposal I am submitting would reduce taxes for most Americans, in fact, it would reduce taxes for all who now pay taxes. It would not however, provide a special payment of $22, to those who are on welfare, those who receive social security, payments, those who receive social security payments, those who get SSI payments. The latter two categories already have indexed benefits which simply means that the amounts they received are increased whenever the cost of consumer goods increases. Thus, when this energy bill hikes prices of gasoline and other goods—as it inevitably will—their payments will be increased accordingly. It seems to me unfair for them to receive a double-dip, for them to get a special payment in addition to the indexed benefit they will receive as a result of the increases in cost of living that will be occasioned by this measure.

I urge my colleagues to think seriously about the way we return some of these tax revenues to our people. The administration's rebate scheme is loaded with administrative difficulties; it was estimated that it would take several months for the $50 scheme to be administratively handled due to the difficulties that would occur in attempting to prevent double and triple dipping. My proposal avoids that and will assure a neat, simple and understandable mechanism to provide overall tax relief to taxpayers.

In addition, it saves for future use the revenues raised by these energy taxes and provides an assured source of revenue for tax simplification and reform that the President has said he will propose in the fall. It allows flexibility in future years for providing more tax relief if that is indicated. If we find that as a result of this energy measure, that the economy is sluggish and that stimulus is required, we can simply reduce taxes after the fashion recommended in my proposal and these will be immediately reflected in the withholding schedules. If, at this time next year, it should be obvious that we need additional stimulus and we have a rebate program in effect, then we will have to take the time to either accelerate that program or redo it. Such administrative difficulty is unnecessary. Finally, I would like to point out to my colleagues some very interesting results from the Roper Poll that was released last week. This poll which was commissioned by the H. R. Block firm asked over 2,000 Americans several pertinent questions about the tax system. The results are interesting.

It shows that while Americans favor tax reform by a 2 to 1 ratio, to them, in each instance, tax reform means lower taxes. The poll also indicates that while Americans favor the new tax deductions and exemptions by a wide margin, they said that a lower tax rate was more important to them than additional tax allowances. In each case where the Roper organization asked about a lower tax

rate Americans favored it, not because they are ignorant of the tax system, as some people in the administration have suggested, but because, in my view, they well understand that a lower tax rate is the best way to assure that they have the needed funds to live their lives as they see fit and to make the economic choices they desire.

The tax cut I am proposing here is sound, it deals with the problem directly, it is something that all Americans will understand and it is a foundation for tax reform. I urge you to support it.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 5 minutes to the gentleman from Oklahoma (Mr. EDWARDS).

Mr. EDWARDS of Oklahoma. Mr. Chairman, just a little over 3 months ago this House gathered to hear the President of the United States announce that he had discovered an energy crisis in the country which, he said, would require our immediate and urgent attention.

We have been giving it that kind of attention. Urgent and immediate. In fact there is some little temptation to call it hasty, but whether we went too fast or too slow, considered too long or too little, one important point remains. After 3 months of Rube Goldberg deliberations we have come up with exactly nothing.

That is not to say that this bill, if it is passed, will not be noticed. It imposes taxes. It increases costs. It bans. It prohibits. It orders.

It does almost everything we as a Congress can economically do to the people. The only thing it does not do is increase their supply of energy. Which is what this whole exercise was supposed to be about.

Well, I would like to share a couple of observations with you.

First, I think the House must come to the shocking realization that this Government that says it is going to solve the energy crisis is now, as a matter of policy, deliberately withholding huge supplies of energy from the American public.

We have bills in the House to lock up more than 100 million acres of land, removing their natural resources from the use of the American people. The administration has cut offshore lease sales and 96 percent of all the oil and gas leaseholds have not yet been sold.

Mr. Chairman, whether it is coal mining, wood cutting, water damming, oil drilling, or whatever, the Congress has been proceeding not to increase energy, but to decrease it. And what we sow, our poor constituents reap—in the form of higher utility prices, more dependence on foreign energy sources, tax increases.

And that is precisely what is wrong with this bill: it continues all of the problems and offers none of the solutions.

Mr. Chairman, my own State of Oklahoma has had the great good fortune of enjoying plentiful supplies of energy at reasonable cost. Why? Not because we are sitting on oil and gas, but because we are not sitting on it. Because we are developing it. And because we are doing it under the wonderful protection of intrastate commerce which until now has meant simply that the Government has had to keep its hands off and let the people do their work.

The result has been interesting. While regulated parts of the energy picture have been in a state of chaos—rather expensive chaos, I might add—in Oklahoma, during the years 1972 through 1976, under the free market, the number of active drilling rigs has increased from 103 to 192; additions to our natural gas reserves have increased from 393 billion cubic feet in 1972 to 878 billion cubic feet in 1976—and our increase in net reserves totaled more than 454 percent.

Energy crisis? Where? In the parts of the energy sector that are controlled by the Government. And the only solution, Mr. Chairman, is to get the Government out.

But this bill does the exact opposite. It gets the Government more into the energy field. Under the tent. In the door. Through the cracks in the walls and around the windows. Government is coming in. And it is bringing with it high taxes; high electric utility bills; power blackouts; high prices for consumer products and more and more bureaucrats to feed.

The American people are going to sacrifice all right. If we pass this bill there will be economic and energy sacrifices the likes of which the American people have not seen in years. It is good for us. Builds character. I hope so, Mr. Chairman—because it will not do anything else.

This is a bad bill, Mr. Chairman.

Even worse; it is a silly bill. A bill that sets no goals for increased energy production, but provides for studies and demonstration projects for conversion from automobiles to bicycles.

A silly bill. But if we pass it, nobody will be laughing.

The old people on fixed incomes will not be laughing. The people who have to travel long distances to work will not be laughing. Young married couples socked with higher utility bills will not be laughing. The poor will not be laughing.

And, after the next election the Members of this Congress will not be laughing either.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Oklahoma. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, I have before me the average price for new contracts for gas in Oklahoma for the first months of this year, January, February, and March. I find it to be $1.6362. Would the gentleman object to the price that we establish in the bill at $1.75 and moving upward with the escalator?

Mr. EDWARDS of Oklahoma. Mr. Chairman, I would say to the gentleman from Texas, the factor that increases production is a free market. We cannot set one price that is going to be the price, regardless of what the other factors are.

Mr. ECKHARDT. But the price goes up.

There is one other question I would like to ask the gentleman. When I was sitting in a committee hearing on this subject your Governor urged us to enlarge the definition of new gas, saying that if we left the original definition at 2½ miles and 1,000 feet, it would embrace a relatively small amount of gas in Oklahoma that would realize the advantage of the higher price.

The gentleman will concede that the Eckhardt-Wilson amendment did, to a very great extent, meet the objection of the Governor of the State of Oklahoma?

Mr. EDWARDS of Oklahoma. The Eckhardt amendment was better than what we had in the bill we were confronted with.

Mr. ASHLEY. Mr. Chairman, I yield such time as he may consume to the gentleman from Oklahoma (Mr. JONES).

Mr. JONES of Oklahoma. Mr. Chairman, I appreciate this time. I will only take a limited amount of time. I will not attempt to persuade my colleagues at this point to vote for an amendment to plow back the crude oil tax to qualified producers to increase production of oil and gas in this country.

Mr. Chairman, I will take only a limited amount of time, first of all, because I am sure the few who are here have heard just about enough of energy.

Second, as I look at the schedule for this week, I am reminded of the story of Winston Churchill, who was once attending a Women's Christian Temperance Union meeting. During the question and answer session he was berated by one of the women, who said, "Mr. Churchill, if all the brandy and liquor you consumed in your lifetime were poured into this great hall, it would fill the hall from the floor halfway to the ceiling."

To which Mr. Churchill replied, first of all, looking at the floor, then looking halfway up the wall and then looking up to the ceiling, "My little lady, so much to do and so little time in which to do it."

That is sort of what we are faced with this week with the energy bill. What I ask today is that you read the CONGRESSIONAL RECORD, in which I will insert the technical explanation of the plowback amendment, which the gentlewoman from Colorado (Mrs. SCHROEDER) and I have introduced.

Mr. Chairman, a great deal of misinformation has been spread around the floor about the cost and the thrust of this particular amendment. Particularly, if you feel as I do that we should have some slight increase in the domestic production of oil and gas and at least some slight decrease in our dependence on foreign oil, then I know you will support our plowback amendment. I hope you will read the technical explanation of the amendment and you will find there are no hidden surprises in our proposal. It is merely an attempt to provide a very modest incentive to increase domestic production of oil and gas.

I include at this point in the RECORD, the full explanation of the plowback amendment:

ANALYSIS OF SCHROEDER-JONES PLOWBACK AMENDMENT

The Schroeder-Jones Plowback Amendment proposes to amend the Crude Oil Equalization Tax by allowing producers of crude oil who have paid the equalization tax to earn a credit against a portion of their equalization tax liability, provided they qualify for the credit by previously investing a substantial portion of their production in-

come in crude oil or natural gas exploration or development.

Section 4987(a)(1). Liability for Tax.—The amendment to Section 4987(a)(1) places the liability for the crude oil equalization tax imposed by Section 4986(a) on the economic interest owner of the crude oil subject to the equalization tax. Section 611 of the Internal Revenue Code, which established the rights of various persons to the depletion deduction, is referenced to assign the liability for the crude oil equalization tax in the same manner. Each interest owner will be liable for the equalization tax on crude oil to the extent of his economic interest. For example, if a property were leased with a 12.5% royalty, the royalty owner would be liable for 12.5% of the equalization tax and the working interest owner (or owners) would be liable for 87.5% of the tax. The liability for the tax on the 87.5% working interest would in turn be subdivided among the various working interest owners, if necessary, in accordance with each interest owner's share of the working interest.

Section 4987(a)(2)(B). Alternative Method of Collecting Tax.—The amendment to Section 4987(a)(2)(B) provides a general rule allowing the Secretary of the Treasury the flexibility to issue regulations so that the first purchaser or subsequent purchasers can collect the tax and disburse it to the government. It is not the intent of the amendment to Section 4987(a)(1) to create an inordinate administrative burden but rather to place the wellhead tax liability on the owner of the crude at the wellhead. The purchaser can serve as the collecting agent in much the same manner as employers collect withholding tax from their employees and disburse it to the government. As an alternative, this provision also allows the Secretary the flexibility to collect the tax from the operators of producing properties, who normally handle severance tax, royalty, and working interest accounting and disbursing for each of the parties to a lease.

New Section 4989. Plowback Credit Against Tax.—A new Section 4989 is added to Subpart A to provide for the plowback credit. The credit would be provided only for calendar year 1978 to conform with the Ways and Means Committee provisions rebating the equalization tax for calendar year 1978 only.

Section 4989(a). Allowance of Credit.—This subsection allows a credit against the equalization tax to each person liable for the tax of an amount equal to 90 percent of his plowback investment, subject to the limitations of Section 4989(b). Plowback investment is defined in Section 4989(c). A 90 percent credit is provided so that anyone who claims the credit must risk his own funds in any venture. Producers will, therefore, not be permitted to obtain a credit against the equalization tax without financial risk to themselves.

Section 4989(b). Limitation based on Amount of Tax.—This subsection limits the amount of the credit available to each interest owner to an increasing portion of the crude oil equalization tax for which he is liable. The portion of the equalization tax available for the credit would be ½ percent of the person's total equalization tax liability in January 1978, the month the equalization tax first becomes effective, and would increase at ½ percent per month during each month thereafter. The applicable percentage in April 1978 (4th month) would be 2 percent, and in December 1978 (12th month) 6 percent.

Each person's total monthly equalization tax liability would be determined by summing his monthly equalization tax liability for each of the properties in which he has an economic interest. To determine the amount of available credit his total monthly liability would then be multiplied by the percentage applicable to the month in question. This aggregate amount of available credit for each month in 1978 would then be summed to establish the total amount of the credit which would be available to the taxpayer for that calendar year.

Inordinate administrative and compliance burdens are not intended. The amount of production from each property for each month is to be based upon actual sales for such month. The Secretary should consider that a sale occurred in the month in question provided such sales occur at normal time intervals and do not appear to be adjusted in order to maximize available credit.

Section 4989(c) Plowback Investment.—This subsection defines plowback investment as the difference between a person's qualified investment (defined in Section 4989(e)) and his plowback threshold (defined in Section 4989(d)). The credit to the equalization tax for each person would then be determined by multiplying the plowback investment by 90 percent. The amount could be no greater than the limitation of section 4989(b).

Section 4989(d). Plowback Threshold.—This subsection defines plowback threshold for each person as 25 percent of his gross income during calendar year 1978 from crude oil and natural gas production, subject to a net income limitation, determined on a property-by-property basis. The 25 percent figure is based upon the average historical spending level of domestic producers in the qualified investment categories which are defined in Section 4989(c). The percentage is directly tied to the specific qualified investment categories and there are a number of additional categories of expenditures typically made by domestic producers such as offshore lease acquisition costs, severance and ad valorem taxes, overhead, operating and lifting costs which are not included in the qualified categories. Because independent producers typically spend more of their gross income in domestic exploration and production than do major oil companies, active independent producers should be able to attain the threshold more readily than the majors. If a major oil company qualifies for the credit, a significant effort to increase domestic crude oil and natural gas supplies will have been made.

Calculation of the plowback threshold for calendar year 1978 will be made by summing 25 percent of the person's gross oil and gas production income from each property in which he has an interest. The amount from each property to be included in the plowback threshold will be limited to 75 percent of taxable income. The calculation of gross production and taxable income from a property will be determined as Section 613 of the Internal Revenue Code, under which percentage depletion would be calculated. Basically, gross production income is the person's fractional interest multiplied by price multiplied by volume of production for the oil and gas produced and sold from the property. Taxable income is gross income minus all operating costs and deductions for cost depletion and depreciation of prior years' investments but not cost depletion or depreciation of amounts treated as qualified investments under Section 4989(e) in such period or deductions for any other amount treated as qualified investments in such period. This taxable income represents the producer's true economic income from the property. Percentage depletion would not be included in the calculation of taxable income.

The net income limitation is included in the determination of plowback threshold so that producers would not be required to invest more than their profits from marginally economic properties. For example, if a producer had a very high cost per barrel stripper property, profit per barrel would be low, but gross income would be quite high. It would defeat the purpose of this plowback credit to assign a plowback threshold based upon gross income which far exceeds true economic income.

Section 4989(e). Qualified Investment.—This subsection defines qualified investment as the amount paid or incurred by the interest owner during 1978 for intangible drilling and development costs; geological and geophysical expenses; drilling nonproductive wells; construction, reconstruction, erection, or acquisition of depreciable assets used in the exploration, development, or production of crude oil or natural gas, or pipelines used for gathering crude oil or natural gas and transporting it to the point of first sale; secondary or tertiary recovery of crude oil or natural gas; and onshore lease acquisition costs.

Only pipelines used in the gathering of crude oil or natural gas and for transporting to the first sale point are to be included. It is not intended that pipelines which levy a tariff and produce revenue for the owners be included as qualified investments. Secondary and tertiary recovery of crude oil and natural gas includes not only investments in physical assets such as pumping and fluid handling and disposal equipment, but also the direct costs of operating such projects and of injected fluids and fluid additives.

All of these categories of expenditures are for the purpose of increasing oil and natural gas production and reserves. Routine operating expenses and overhead are specifically excluded because they are generally associated with maintaining existing production and not with increasing or finding new production.

Section 4989(f). Denial of Double Benefit for Qualified Investment—This subsection denies double tax benefits to the extent of any plowback credit which is claimed. The purpose of this provision is to prevent the producer from obtaining the plowback credit as a result of qualified investment and then obtaining a normal income tax deduction for the amount claimed as a credit.

There are other more simple methods to accomplish the objectives of this subsection than provided herein. This method was chosen because of the parliamentary situation in the House.

The total credit will be prorated to each of the person's qualified investments based upon the ratio of the individual qualified investment involved and the person's total qualified investment. The tax deduction (if the qualified investment is expensible for tax purposes) or the increase in basis of either depreciable or depletable property associated with the individual qualified investment will be reduced by this prorated amount. The person will then calculate normal income tax in the usual way.

A special rule is provided for a qualified investment which would increase depletable basis.

Section 4989(g). Geological and Geophysical Costs—This subsection defines geological and geophysical costs. It is intended that geological and geophysical costs be defined and interpreted in a manner similar to existing law.

Section 2032(c). Effect of Crude Oil Equalization Taxes on Crude Oil Pricing—This new subsection states that the crude oil equalization tax imposed by Section 4989(a) shall not be considered an element of price for crude oil pricing purposes pursuant to the Emergency Petroleum Allocation Act (EPAA) of 1973, as amended. The purpose of this section is to make clear that the crude oil equalization tax is a tax, is not price, and does not constitute gross income for purposes of Section 61 of the Internal Revenue Code of 1954, if collected by the producer. The tax, however, is to be included in the cost to the first purchaser. It is not intended that the producer's severance or other state or local tax liability would be increased as a result of the equalization tax, or credits against the equaliza-

tion tax, nor should the tax be considered in calculating the actual weighted average first sale price pursuant to the EPAA.

Amendments to Subpart B, Section 2033 (b)(1)(A)(ii) and Section 2043(a) (new section "44E(c) (1) (B)") provide that the amount of the plowback credit during 1978 will not be transferred to the Trust Fund and will be excluded in determining the amount of the per taxpayer crude oil payment.

Mr. ASHLEY. Mr. Chairman, I yield 10 minutes to the gentleman from Texas (Mr. KRUEGER).

Mr. KRUEGER. Mr. Chairman, I appreciate the opportunity to address this body at this time. I have, as I am sure many of us do, a certain sense of déjà vu about coming back over here again to consider this question, another time.

As we look back at the history of natural gas legislation, we find that William Fulbright in one of his very early addresses to the Congress brought to the floor the question of deregulation of natural gas. It has always been a closely fought question in the past and was the most closely fought question last year. It was decided by a margin of less than one-half of 1 percent of the House.

Now, the major problem, I think, with regard to the question of appropriate natural gas legislation is that this is an instance in which legislation has its major benefit some years away, but offers political difficulty in the short run.

It is always easier for people in the short run to say. "I am going to vote for price ceilings. That is going to save us." That is the instant way. "Take the instant way," we are told, "and honor will pursue immediately behind." The problem is that if we take the instant way, it may help us before the next election, but it is not going to help the country several years down the road when we need the energy to fuel our industrial enterprise.

Natural gas is the largest single source of energy for industry in our Nation. It constitutes some 30 percent of all of the energy which we use. It constitutes 40 percent of the domestically produced energy. Over half of the industry in this country depends upon natural gas. Yet, unfortunately, the administration has given us a program that will not in any way add to natural gas supplies, and it has given us a program in which the price is established by statute at a price well below the general intrastate price today. Since most gas goes into the intrastate market, that effectively means that what we have is a price that is set below the current market clearing price, the major intrastate market being Texas.

Now, this is an issue that I think is best discussed with cool reason and with an interest in intelligent, long-term policy. I am sorry that on occasion today I think we have heard more partisanship in this debate than we should have. I am quite prepared to work with the administration for future energy policy, regardless of the President's politics, and I think it is important that we try to approach this in as nonpartisan a manner as possible. The people in this country want a good energy policy, and they really do not care that much whether it wears the label of a donkey or of an elephant. They would just like to get better energy policy.

If we look back in particular to natural gas and what has happened with regard to natural gas in this country, we see that the roots of our current problem were laid in 1954 when the Supreme Court—in my judgment—misinterpreted the Natural Gas Act and concluded that the Congress intended to regulate the wellhead price of natural gas when it passed legislation to regulate transmission costs. With that 1954 decision came the responsibility of the Federal Power Commission to set price controls for wellhead sales of natural gas in interstate commerce.

The Federal Power Commission then found, that if it attempted to determine on each different reservoir what should be the appropriate cost-base price, that they would create a backlog of cases that would last until the year 2049. They could not decide on a cost-base basis as to what price gas from the various reservoirs should receive. Since this did not work, they decided to go to an area pricing concept, and divided the United States into seven different areas, each with its own price. When that did not work, they decided to go to one national rate.

Yet, this policy, too, was doomed to fail because prices were based on historical, rather than prospective costs. Therefore, producers were only allowed to receive last year's prices for this year's gas. Accordingly, exploration and production declined.

The crossing point in our country's supply and demand curves came in 1968, when, for the first time, demand for natural gas exceeded supply or, rather, exceeded the extent of new reserves added. At that time, for the first time the pipelines themselves changed from favoring Federal regulation to favoring deregulation of the wellhead price because they could look ahead and realize that all of that vast pipeline system would not be worth very much if they did not have gas to put in at the end of it. Since that time we have consumed natural gas at twice the pace in this country than we have been replacing it. That very policy of putting Federal controls on the wellhead, whenever natural gas crossed the State line, meant shortages occurred. And, of course, natural gas gravitated towards the intrastate markets. Now a lot of people take delight in coming up with monstrous scare figures about the cost of deregulating. I understand that that might be good politics, but I do not think it is good policy. Let us be realistic about what the costs are with natural gas deregulation. As so many New Yorkers know, in 1975 of the $3 the New York consumer paid for natural gas, $2.30 went for the amortization cost of the pipeline system delivering gas inside New York City. Forty cents went to transport that natural gas from Texas or Louisiana or Oklahoma up to New York, and only 30 cents, or 10 percent, actually went to the producer. When we talk about deregulation, we are not talking about pipeline costs, which will continue to be regulated. We are talking about simply removing Federal price controls on the producer's segment. Last year there was an average increase of 6 cents in the wellhead cost for interstate natural gas. There was a corresponding increase of 30 cents to the consumer because of the increased pipeline costs. Those pipeline costs went up more because there was less gas transmitted through the pipeline. As a matter of fact, it might be instructive, I think, to look at the cost of regulation versus the cost of the product that we are talking about. Last year producers of natural gas, for all gas sold in interstate commerce, received $5 billion. That $5 billion provided the American people with 15 percent of all of the energy used in this country. Natural gas producers got $5 billion. This year, Mr. Schlesinger has come to us and asked for $10 billion for a Department of Energy budget. So the Department of Energy is asking over twice as much money to regulate an industry than producers received for all natural gas sold last year in interstate commerce. We know, I think, what happens to Federal budgets, and we have no doubt that the budget for the Department of Energy will continue to rise. The world is out of joint—

O cursed spite,
That ever I was born to set it right!

To find that the Department of Energy should receive twice as much to regulate an industry as a producer receives for actually providing the energy itself.

One of the assumptions, unfortunately, of the administration policy is that we seem to largely have run out of natural gas.

The problem with that is that it lacks historical perspective. If we look at the past decade, we find that within the last 10 years the largest single reserve ever found and proven on the North and South American continents were discovered at Prudhoe Bay, Alaska, which is larger than the Maracaibo Bay field in Venezuela or the East Texas field, which started the oil boom in my own State in the 1920's.

The CHAIRMAN. The time of the gentleman from Texas (Mr. KRUEGER) has expired.

Mr. ASHLEY. Mr. Chairman, I yield 3 additional minutes to the gentleman from Texas (Mr. KRUEGER).

Mr. KRUEGER. In the last 10 years, then, Mr. Chairman, we found Prudhoe Bay. In the last 5 years England discovered its North Sea reserves, which already constitute a total amount corresponding to two-thirds of our known American energy reserves, and in the last year in Vera Cruz, Mexico, new discoveries have been made which, if they are proven, will probably be larger than those of either Prudhoe Bay, Alaska, or any known reserves on either the North or the South American continent.

Ten years ago we often heard it said that we were running out of petroleum reserves. Suppose someone at that time had imposed price controls and said, "Let's not bother looking for any more." That is a shortsighted approach. It is an approach that will work to the detriment of the American people, because any natural gas that we do not find in this country is replaced at much higher cost by imported crude oil from other countries, or it is replaced at vastly higher prices by synthetic natural gas. Natural gas at deregulated prices is far and away the lowest cost energy our American consumers can get.

Mr. Chairman, I will conclude with one final observation about the administration proposal. The administration proposal has as its keystone the assumption that we should convert massively to coal. Currently this Nation gets about 16 or 17 percent of its energy from coal, and I have no doubt that we will increase that use. However, we need to recognize what it means to our environment if we do not maximize natural gas production but, instead, rely overwhelmingly on coal.

Let us just consider this one small statistic. If we use coal to substitute for 4 trillion cubic feet of natural gas, which is 20 percent of the gas we now use, and if that coal is 4 percent sulfur coal and we burn it in circumstances under which we remove 90 percent of the sulfur from that coal by using the best available control technology, we will still put into the atmosphere 10 pounds of sulfur for every man, woman, and child in America. That is 10 pounds in just 1 year as we substitute for only 20 percent of the gas. So at the same rate, the Congress of the United States could take credit for having put 50 pounds of sulfur per year into the atmosphere for every man, woman, and child in America, if we substitute coal for natural gas 100 percent.

For that reason we ought to maximize domestic natural gas reserves and production, because that energy is going to be needed for our own economic survival, and it will be needed if we are not to become increasingly dependent upon the Middle Eastern nations. If we do not go ahead and make this important decision this time around, if we continue to take the short run view and say, "I am simply going to vote for price controls, because that makes it more comfortable for me in the next election," the natural gas shortages this winter, which the Federal Power Commission has already said will be 4 percent worse than last year, are going to cause us to come back and reconsider our actions. There is going to be turmoil again, and we will see the same loss of jobs again this winter that we experienced last winter when we saw massive economic losses.

Mr. Chairman, we will return here, not because of the actions of those of us who believe in market pricing rather than the pricing of five wise men or of the Congress of the United States, in Washington. We will return to this issue not because anyone asks us to return, but we will have to revisit this issue because we have not had the guts to make the right decision now.

I hope the other Members here present will join me in making the best choice for our Nation's energy future now when it will do us the most good. We simply must deregulate the price of new natural gas sold at the wellhead. Federal price controls will not furnish us with the energy we will need in the next decade, but a market pricing system will automatically act to bring future supplies into balance with our needs.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois (Mr. STOCKMAN).

Mr. STOCKMAN. Mr. Chairman, I want to take this opportunity to commend the gentleman from Texas (Mr. KRUEGER) for the very learned and dispassionate remarks he just made on the question of natural gas.

Before I go into my own prepared remarks, I want to elaborate on one very important point the gentleman from Texas (Mr. KRUEGER) called to the attention of the House. I am referring to a date the gentleman alluded to in his remarks, a date that is terribly significant and that I believe we really ignore.

The gentleman from Texas (Mr. KRUEGER) pointed out that in 1968 for the first time we consumed more natural gas in this country than we put into new reserves. I think that really needs to be broadened out. It answers very effectively, I believe, the charge that we have heard time after time from the administration that if we allow higher prices, if we decontrol the price of natural gas, we will not get any additional production because we are running out of gas. The fact is that in 1967 we were adding about 20 trillion cubic feet of reserves a year to our inventory of natural gas that could be produced in later years. By 1973, 6 years later, we were only adding 6 trillion cubic feet a year, or, in other words, the rate of drilling and exploration and the adding of new reserves to our producible inventory had declined something like 70 percent.

That radical decline in the amount of new reserves is fundamentally responsible for the decline in production from 1974 to 1976. It is a clear indication that that is the cause of this production decline which we have had in natural gas and that we are not going to turn it around. We are not going to meet the natural gas needs of this country until we can get that rate of reserve additions back up to the level of the 20 trillion cubic feet a year or more than we had in the 1960's. I can guarantee this House that we will not do that at $1.75.

Mr. Chairman, I want to take this opportunity to express my strong opposition to the basic thrust of the energy plan we have before us. I do so not unmindful of the diligent labors and good intentions that have gone into the formation of this bill in the various standing committees as well as the ad hoc committee. I served on one of those standing committees. We spent from 8 to 10 good weeks in the process of hearing and marking up this legislation. I certainly do not believe that a more conscientious effort could possibly have been made in the time available.

Nevertheless, Mr. Chairman, I have to come to the very harsh judgment that despite all of the modifications and the amendments and the attempts at improvement that we adopted during the course of those various committee hearings, our efforts are largely in vain because the original plan is fundamentally flawed in its design and rests on a total misperception of the basic energy problem that we have before us.

Mr. Chairman, I think that that misperception, that fundamental flaw in the basic approach to the administration's energy plan was fully apparent in the President's recent intemperate and erroneous outburst this past weekend. He berated the American consumer for—and I use his words—"increasing their waste of energy." He pointed the accusatory finger of blame at the household, at business, at auto dealers, and at others in the consuming sector of our economy. He pointed the accusatory finger of blame at them for the substantial increase in OPEC imports and import dependency that we have experienced in the last 3 years.

Mr. Chairman, I would suggest that the only thing that the President had right in those remarks which he made this past weekend was the objective fact that imports have risen. In fact, they have risen by about 2.7 million barrels a day since 1974, but I think he is absolutely mistaken in laying the blame on the American consumer for that rise in imports and dependency on OPEC as he accuses the consumer of gluttony and waste of energy, focusing exclusively on the demand side of the equation.

I think it is pretty obvious that in the last 2 years there has been an increase in oil consumption. Oil consumption is up, but that is primarily because of the strong economic recovery that we have had in this country since the bottom of the recession in 1975. In fact, in the last 24 months real GNP has risen by 14 percent, and in the first two quarters of this year we have had positively a boom recovery in this economy because, as the Members know, GNP has been rising at the rate of 6 or 7 percent.

Mr. Chairman, the real question we have to ask, the question before this House, is not about energy consumption in some absolute aggregate sense, but the real question is, is energy consumption rising relative to the level of economic activity? Is it still rising faster than GNP, as it did during the 1960's and early 1970's, or are the higher prices and costs of all types of energy that we have experienced since 1973 encouraging an adjustment of our consumption habits?

Mr. Chairman, I think if we look at the objective facts, the indicators that are available, it is unmistakably clear that the unsustainable rate of energy growth that we had in this country prior to 1973 has not been reignited. The rate of energy consumption relative to economic activity is cooling down. There is already underway a very substantial adjustment on the demand side of the equation. For example, in 1976, at the end of the year, real GNP, the level of economic activity, was higher than it was in 1974. It had fully recovered from the recession, and yet total energy consumption, of oil, gas, coal, or the other elements that go into the total energy consumption in 1976 was actually lower than it was in 1974 despite the fact that the rate of economic activity had recovered and actually risen above its 1974 level.

In fact, energy consumption was 70 million barrels a day of oil equivalent lower than it was in 1974 at substantially the same level of economic activity. So this suggests to me that the objective facts in our economy today do not sustain at all the charge that was made by the President over this weekend that consumers are engaging in an enormous

increase—and I underscore "increase"—in the waste of fuel in this economy.

If we look at gasoline consumption, we find another example. We find the same trend in the 2 or 3 years after the 1970 recovery. Gasoline consumption increased at the rate of 6.2 percent a year as the economy recovered and consumers had more money to spend.

Look at the figures for last year, 1976. Despite a very strong recovery, an 11-percent increase in personal consumption expenditures, gasoline consumption only rose by 4.5 percent, below its historic average during periods of strong economic recovery. This is again an indicator that we are getting some adjustment on the demand side of the equation.

There are many other measures where we can find the same result. I would just point out to the House that in the 30 years from 1940 to 1973 when real electricity prices were declining very rapidly, the household sector tripled its kilowatt-hour consumption of electricity per dollar of real disposable income. Since 1973, when real electricity prices have been rising, electrical consumption relative to the income or the demand in the household sector has been entirely flat, again an indication that a consumption adjustment is taking place.

The same is true in industry regarding electrical consumption. The point here is that, contrary to the baseless accusations that were made by the President over the weekend, and contrary to the basic assumptions which are embodied in this energy plan before us, the demand at the consumption side of the energy equation is responding to the energy crisis that we have before this country. It will continue to respond in the years ahead simply because it takes time for habits of individual consumers and businesses, and for the capital stock, to adjust to higher energy prices and costs. But the point is it is happening very substantially already. So if we want to find a real explanation for the rise in imports since 1974, I think we have to look in another direction. I would suggest to the House that specifically we look on the production side of the equation, because from 1973 until the present when imports rose by about 3 million barrels a day, as I have indicated in the last 3 years, just consider what has happened on the production side of the energy equation. Today oil production is 1.2 million barrels a day below its 1973 level. Natural gas liquids are .3 million barrels a day below their 1973 level. Natural gas production is 1.3 million barrels a day in oil equivalent below its 1973 level. When we add those up, we get 3 million barrels a day of reduced hydrocarbon production in the last 3 years in this country.

That 3 million barrels a day of reduced production is exactly equal to the amount of increase that we have experienced on the import side in terms of this rise of imports from OPEC, and since the problem is on the production side, very clearly it seems to me that if we want to find culprits, then we ought to look at the pricing policies for natural gas and for oil that we have in this country. We could start with EPCA which was passed in December of 1975. I think most of the Members will recall that at that time EPCA was voted in as a way of reversing the decline in oil production by gradually phasing out over a 39-month period the price controls on upper-tier or new oil.

But, as a matter of fact, just the opposite consequence occurred, In current 1977 dollars, the price for new oil in January 1977 was $12.75 a barrel. Today it is $11 a barrel. That is a 15 percent reduction in the price for new oil over the last 24 months.

I cannot believe that anyone would advocate or argue that a 15 percent reduction in the incentive price in the new oil price is likely to turn around that decline in oil production that we are facing.

The same thing can be said of natural gas. The $1.75 cap proposed by the administration would amount to a 15 percent reduction in the price that actually prevails in the unregulated intrastate market today.

It seems to me that the basic flaw in this plan is that it attempts to adjust the entire problem of the equilibrium of energy supplies, and to reduce the cost, but the indicators show that adjustments are being made in the rate of economic activity and our real income, in which energy consumption is going down, and we are not going to pass an energy plan that will effectively meet the needs of this country for the next 10 or 15 years until we turn our attention to the production side and specifically to the pricing policies for natural gas and oil, both of which are entirely omitted by the plan before us.

For that reason I urge that it be defeated.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Chairman, I wish to take this opportunity to commend the gentleman who just preceded me in the well for the outstanding presentation and learned discussion of the energy problem that he has laid out before us. He obviously has devoted considerable time and thought to this complicated problem.

As a freshman Member from the State of Michigan, the gentleman has made a great contribution to the ad hoc committee. We are very proud of the kind of representation that he continues to give his constituents and to the grave national problems now facing us.

Early in his service in this body the gentleman from Michigan proved his worth. As chairman of the Republican task force on fiscal policy he has recently released a report recommending a new fiscal policy framework upon which the Congress could well base its tax and spending decisions. This is a drastic departure from the policy that has resulted in some of our present day fiscal difficulties and this new approach has been long overdue. I am confident that his constituents are as proud of his work as we are.

Mr. Chairman, I would very briefly go on to observe that when President Carter first presented his energy proposals, he emphasized the aspect of sacrifice entailed in its provisions. We would be engaged in the "moral equivalent of war" said the President. It was clear that he wanted all Americans to accept the kinds of sacrifices any nation must be prepared to make during a war.

But now we see that we are being asked to sacrifice not for the sake of national security or increased sources of energy or even reasonable conservation measures. We are being asked to sacrifice for nothing. We are being asked to sacrifice so that President Carter will have additional tax revenues to help him balance the budget, something he promised to do and, of course, could not do by ordinary means, given the economic policies of his party.

This bill, in my opinion, is a fraud. It will, by some estimates, cost each taxpayer $1,000 over a 4-year period. It makes no provision for giving producers incentives to find new oil. Its proposal on natural gas, which is to raise the current price to $1.75 per thousand cubic feet was, according to the Wall Street Journal, "plucked out of mid-air." It will not help producers to search for new gas.

This is a revenue-raising bill, pure and simple. It is disguised as an energy bill, but even a cursory glance at its provisions will show that it will not do the one thing that must be done: It will not help America find new sources of energy.

When this was first introduced, in April of this year, I said that the President was asking us to fight one of our greatest challenges with one hand tied behind our back. We were being asked to conserve, and that is fine. But there was nothing in the proposal to help us produce, to find new sources of energy.

And that is where we are today. This bill, if passed in its present form, will come back to haunt the American people like no other bill in recent memory. It is a bad bill because it is rooted in the kind of fiscal and economic irresponsibility and ignorance that have led us to the energy crisis in the first place.

During reading of the bill, there will be attempts made to amend this bad bill. I might add here that similar attempts to amend the bill in committee were defeated by the majority party's manipulation of the rules. It is unfortunate that the rule under which we are considering this bill excludes the opportunity for legitimate efforts to improve the bill. Only certain amendments are made in order and the general membership of this House has been prevented any meaningful chance to work its will.

I do know one thing: This should be called the "Carter administration bailout bill," for it seeks to deviously provide tax revenues he needs to keep his promise to balance the budget and provide Federal goodies for just about everyone except the taxpayers. If this is what President Carter and the majority mean by sacrifice, we know what they really mean: The worker and the taxpayer sacrifices, the majority collects. And the country still suffers an energy crisis, only this time at higher and higher prices on top of a heavier tax burden.

Mr. ECKHARDT. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, I will speak briefly on the question of gas pricing.

I believe the question of gas pricing must be looked at in historic context. It was, I believe, in 1970 that the uncontrolled price of intrastate gas crossed the line so as to move above the price of controlled interstate gas. At that time both were selling at approximately 20 cents per Mcf.

This gives you a little picture of how the price of gas has gone up from that time, so shortly ago, to the present time.

By about 1975 the average price of new gas in Texas, which was not in any way controlled but bore the market price, was about $1.50. This was up from approximately 20 cents in 1970, as I said. Just last year, the uncontrolled price on intrastate gas in Texas had moved from $1.50 to $1.75. At the present time the price is nearly $2. If we were to completely decontrol, it would be quite easy for new gas in Texas to sell for $4 in competition with the price paid by a pipe line in the case of a mixture that is perhaps 95 percent 50 cent gas and perhaps 5 percent new gas which is uncontrolled.

Now if that will only raise the gas cost price at the other end of the pipeline from 50 cents to 67½ cents, it means that new gas is bid up to astronomically high figures at the place where it is produced. Initially the persons who suffer the most are the persons in the State where the gas is produced because many of them will be buying 100 percent $4 gas—not only 5 percent $4 gas as is being delivered at the other end of the pipeline.

My distinguished colleague, the gentleman from Texas (Mr. KRUEGER) recognized this problem in his first amendment to our bill before the Interstate and Foreign Commerce Committee and provided that gas selling out of intrastate stocks into interstate commerce would, if I recollect the figure—and if I am wrong the gentleman might correct me—be limited to $1.45. That was in order to prohibit this inordinately great increase in the price of gas when decontrol was complete.

What has happened about added reserves per foot of well drilled as price has gone up? Actually, ever since 1947 added reserves have decreased per foot of well drilled. A peak was reached in 1955 and 1956, and again when we began to talk about increased prices and the Federal Trade Commission began to permit increased prices. It is true drilling activity increased, and we are at the absolute drilling peak in 1977, but I venture to say we will still experience a decrease in added reserves per foot drilled in the future.

This is simply for the reason that we discover the biggest finds first and we are now getting finds of smaller quantity. That does not mean that we should not encourage those finds, and that is the reason why the gentleman from Texas (Mr. WILSON) and myself offered an amendment to the President's program permitting drilling anywhere within the onshore areas for new gas which would bring the $1.75 maximum limit, rather than limiting that to outreach of 2½ miles beyond present wells to a depth of more than 1,000 feet below existing finds.

The reason for that was to broaden the base in which gas could be discovered and receive the $1.75 price. There are diminishing reserves. Why not give an incentive over the entire reach for all possible gas production which had not yet been discovered?

That is the reason that we broadened the area in which gas could be sought and could thereafter receive the bonus of $1.75.

We would not have brought on much more gas at a higher price because gas has moved in price at such a rate that there is presently sufficient incentive to produce it. But I want to point out to the Members that $1.75 is not the end of the road in price. It has been estimated that over the 15-year existence of a field and under the formula that has been devised, so that gas receives the average price of domestic oil in Btu equivalent value, the average price over that 15 years would be about $2.40.

Would any more money produce any appreciable amount more gas? I think the answer to that is manifestly "no." As has been seen, we are moving sharply upward in this bill in the price of gas but, at the same time, cautiously upward with respect to the amount of expensive gas we are mixing in the total stream to the American consumer.

I suggest that this is a prudent course. It is a course that will permit exploration at a profitable level in a wider area, a course that will not disproportionately increase the price. I suggest to all of the Members and particularly to my Texas colleagues that it would be most disastrous if there were no limit in price.

The threat of forcing the price of gas sharply upward is far greater than that which existed when we were talking about the Emergency Gas Act. I know many agreed with me that to permit that price to go up to whatever the market would bear would suck gas out of use in Texas, unless the intrastate market could meet something like a $3 or $4 price. That is the danger we would run into in Texas now, but it is a danger over the long run that we would run into in the Nation, because the price in the producing States is the ultimate price for the entire country.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BOLLING. Mr. Chairman, I yield 2 additional minutes to the gentleman from Texas.

Mr. KRUEGER. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Texas.

Mr. KRUEGER. Mr. Chairman, I observed the gentleman indicates he feels that the amendment offered by the gentlemen in the ad hoc committee and now to be offered by the ad hoc committee would offer substantial incentives in the acquisition of new gas; but it is my understanding from one of the members of the ad hoc committee that the administration suggests that the additional amount of gas so recovered would be 130 trillion cubic feet, which would be 5 percent of 1 year's usage. I suggest that is not a very substantial amount of gas, if that is all the additional recovery would bring on. I would think it really does not amount, frankly, to very much.

Secondly, I would observe under the proposal of the gentleman here that the gentleman advises his Texas colleagues to go along with suggests, under the suggestion the gentleman in the well makes, there are substantial allocation authorities of gas from our State to other States which do not now exist and which would not exist if the Brown amendment is passed.

Mr. ECKHARDT. Mr. Chairman, if the Brown amendment is passed?

Mr. KRUEGER. If the Brown amendment is passed, there are not those allocations extended, because there are allocations in intrastate pipelines, such as are part of this administration.

Mr. ECKHARDT. I would say that if, indeed, this is not advantageous in encouraging production of gas by oil and gas companies, I would hardly have thought I would have been urged so strongly that it was important to go to seek gas within the discovered territories, but from new reservoirs. I have been told by those who know most about the business—and I suppose those are the persons who seek it—that it was crucial to them to have a more realistic definition permitting them to take gas from a newly discovered reservoir where gas has not yet been detected and that this was of crucial importance to them, that the 2½ mile, 1,000-foot limit, would not, in fact, have satisfied the incentive requirement for further discovery in the United States.

Mr. BOLLING. Mr. Chairman, I yield 5 minutes to the gentleman from New Jersey (Mr. HOWARD).

Mr. HOWARD. Mr. Chairman, during the discussion and debate and amendment process on this energy bill, the House will be voting on the future of surface transportation in this Nation. It was not intended to have this issue come up in this bill, but it is absolutely unavoidable. The amendment will be an amendment to increase the price of gasoline in this Nation by 5 cents per gallon. Under the amendment one-half of this, 2½ cents would go for the establishment and operation of a mass transportation trust fund.

Mr. Chairman, the Subcommittee on Surface Transportation of the Committee on Public Works and Transportation has been involved in this total problem for over 2½ years. We held hearings during the entire 94th Congress and have held hearings for months during this Congress in looking at the future in transportation in this country.

We found some definite needs. One need crying out is the need to repair and replace the unsafe bridges in this country. There are today over 105,000 unsafe bridges in the United States, both on and off the Federal aid system. With these structurally deficient or functionally obsolete bridges, we have found that on the average there is a bridge collapse in this Nation once every 2 days. We had 176 last year.

The cost, on and off the Federal aid system, to repair and replace the bridges needed today is $23 billion; $12.4 billion on the system, and $12.6 billion off the system. In our current legislation, we are putting only $180 million per year federally to meet this problem. At that rate, it will take us over 100 years to replace and repair the bridges that need it today.

Again, with the great emphasis we have had on the interstate system in past years, we have seen a deterioration of the primary and secondary road system in this country. A recent Department of Transportation study has shown that the primary and secondary road system in this Nation is deteriorating 50-percent faster than we can maintain and upgrade these important roads for all the people in the United States.

We also have a great deal that we need to do in the area of safety. We have done our demonstration programs and our pilot programs, and we find that we can effectively save lives by putting money into programs, increasing the amount to eliminate railway crossings on the system and off the system; for the removal of roadside obstacles in high-hazard locations, and in the very important area of energy conservation and traffic signalization programs.

We also found that we need a stable funding source for mass transit systems in our large cities, but in a program that will sift down to every small city, every town, every county, every area that can effectively use some means of public transit. These could be funded under a 5-cent gasoline tax. We are going to be faced with the vote up or down Wednesday on this issue. If it goes down, we will not have, in this Congress or any future Congress that I can see for the next decade, a sufficient amount of money because we will not have the opportunity again—as far as I am concerned, away—to be coming back for gasoline taxes for these modes. We have to vote on the tax at this time.

What about fuel conservation? This is supposed to be an energy bill. People say, "Is a 5-cent increase going to cut down on the use of gasoline?" Directly, probably not, but indirectly, it will because with the amount of money available we will not only improve our roads and have people move more smoothly, but we will have better roads. We have some old primary roads, two-lane roads, which were all right when they were built, but we need four-lane roads in the same areas. Traffic signalization will save fuel and, most importantly, the availability of alternatives to the automobile, decent public transit systems, will be there. If we do not have an alternative, a mass transit system, available in this country, we can be paying three dollars a gallon for gasoline and still have people buying it because they have no other way to go.

So, this is the opportunity to do that. We will save gasoline and also save the gas guzzler. That was brought out, and probably will be voted upon. None of these companies are going to pay the gas-guzzler tax because we know that when the deadline comes they are going to be meeting the criteria of miles per gallon.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. ASHLEY. Mr. Chairman, I yield 2 additional minutes to the gentleman from New Jersey.

Mr. HOWARD. The increase in the criteria for the mileage we must have in the next few years in our automobiles is proportionately more than is the proportion with the 5-cent gasoline increase, so even with this increase, with the gas-guzzler tax, by the time it is paid the people will be able to go farther per cent on gasoline than they are today without the tax. So, there is a gas saving that is going to be in the gas-guzzler tax. I did not even talk about the bill, but I would like to talk about the urgency of this bill because it means that the need for the urgency of mass transit will be an absolute disaster if we do not pass this substitute amendment when it comes up during debate on this bill.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. I yield to the gentleman from New York.

Mr. OTTINGER. I thank the gentleman for yielding.

Mr. Chairman, I want to congratulate the gentleman on the amendment. I would just like to take one thing down for certain, and that is that in the allocation of funds, the receipts of this tax, that there will be no additional roads built. All of that fund that goes to the highway portion will be used for the rehabilitation, for the building of new bridges, but not for new roads, in any case. Am I correct?

Mr. HOWARD. I will tell the gentleman that last Friday, along with 24 cosponsors, I introduced a surface transportation bill, which will be worked on and which will come out of our committee early next year. We had several cosponsors on both sides of the aisle for this bill. The gentleman is correct. As to the 2½ cents which goes to highway programs, not 1 cent will go to build 1 foot of new additional highway in this country. The only purposes will be approximately $2 billion a year for bridge replacement and repair, the upgrading and maintenance of primary and secondary systems and various safety programs, and not for new highways. That is stipulated in the percentages as they were laid out in the bill which was introduced last Friday.

Mr. OTTINGER. Is that stipulation in the amendment that we will have before us?

Mr. HOWARD. Unfortunately, the only amendment which we have before us is the 5 cents increase in the gasoline tax, one-half of which is to go into the highway trust fund and one-half to go into the mass transit trust fund. However, I would say that in all of the hearings, in the discussions we have had, both in the committee and out of the committee, there has been no justified need proposed for any money for expansion of highway systems in this country beyond what we have now. So I can say that this bill will be the result of the passing of this amendment.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield such time as he may consume to the gentleman from Tennessee (Mr. DUNCAN).

Mr. DUNCAN of Tennessee. Mr. Chairman, I rise in opposition to this bill because I believe it will not only fail to solve our energy problems but also will impose unnecessary burdens on our people and our economic system. As the first line in the minority views accompanying the Ways and Means report on title II of this bill states, "the fundamental flaw in this bill is its perspective: it looks backward rather than forward." The perspective of H.R. 8444 is to tax Americans who for the most part must use energy in their daily lives and businesses which depend on energy for their continuation with the hope that somehow we will reduce our dependence on foreign oil. Unfortunately this is the wrong way to go. It is clear that in the past we have attacked problems facing our country in a positive way. For example, when we found it in our national interest to compete with the Soviet Union in outerspace we did so by going forward, by initiating a program to get us to the moon within a certain number of years and we were successful.

This positive approach has been the hallmark of our greatness and yet the negative approach contained in this bill could very well be the hallmark of our decline. I will not be a party to such an approach.

I am concerned with several features in this measure, particularly, the huge new taxes that it will impose on an already overtaxed populace. This bill will raise $93.3 billion between now and 1985. Some of it will be rebated to Americans but a good portion of it is clearly designed to help the Carter administration fulfill its many outrageous campaign promises. Such a scheme is not in the national interest and will doubtless impose burdens which none of us can foresee. Among them will be an increase in the rate of inflation, joblessness, and perhaps even an alteration in our way of life. The most disturbing thing about this scheme is that it is not necessary. We could very well expand our ability to produce the energy we need thereby putting people to work and increasing our overall productivity as a Nation. This is a positive approach and the Carter administration has rejected it.

I am unalterably opposed to the imposition of a 4 or 5 cent gasoline tax as recommended by the ad hoc committee on top of the 7 cents gasoline tax that will result from the crude oil equalization tax contained in H.R. 8444. This is simply a tax on work; 47 percent of the personal gas consumption used is for commuting for individuals to and from their jobs. It is clear from recent polls that this kind of a gas tax—in the neighborhood of 11 cents—will do little if anything to reduce the consumption of gasoline. The polls indicate that Americans would have to have a gas tax in the neighborhood of 90 cents to $1.30 for them to reduce their consumption for pleasure and business purposes. This 11 cents increase in gas taxes is not a conservation measure but rather another punitive feature of the Carter administration's overall scheme to raise taxes on working Americans. It should be rejected.

I am also disturbed that we have imposed a tax on businesses which do not convert from oil and gas to coal. The assumption of this tax is that it is easy to convert and, in some instances that is probably the case. However, there is nothing in this measure that will insure the availability of the amount of coal that will be necessary for this conversion to take place. There is no guarantee that

we can get the coal out of the ground at the levels that will be required nor is there any incentive or provision for the transportation of this coal to its ultimate users. Testimony before the Ways and Means Committee indicated that there is a shortage of railroad cars for the transportation of coal today and there is a general need for the updating of track and roadbeds so that the coal, if it can be extracted from the ground, can be properly moved. In the absence of such provisions the idea of a users tax on businesses which do not convert is punitive. There is little concern on the part of those who advocate this conversion for the practical physical difficulties of storing coal or of the environmental concerns which will be raised by its burning. These are serious issues and have failed to be addressed in this legislation.

Also, I question the wisdom of a crude oil tax which, when combined with the users tax, will raise the price of domestic oil above the world price. It seems to me that this is an invitation for the OPEC countries to simply raise their prices—a move clearly not in our national interest Also it is difficult to understand why the administration is so concerned about any attempt to include production incentives in this measure. If we are to have the energy we need in the future we must recognize that spreading of the scarcity will not provide it. Rather we must take positive steps to insure that our vast reserves of oil and gas and coal are properly developed. In addition we should do everything possible consistent with safety and environmental concerns to develop our nuclear capacity as the Western European countries and Japan are doing so that we will not continue to be dependent on the importation of foreign oil.

Unfortunately this bill is a rejection of the idea that we can produce our way out of this crisis. I could not disagree with it more. In looking backward it is a direct affront to the American spirit to get ahead and to the extent to which it is only half an energy policy it will prove to be one of the unfortunate pieces of legislation ever considered by any Congress.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield such time as he may consume to the gentleman from Iowa (Mr. GRASSLEY).

Mr. GRASSLEY. Mr. Chairman, the legislation now before the House (H.R. 8444) is officially cited as the "National Energy Act" by its proponents. But I would submit that this bill as currently drafted should, and could, be more aptly referred to as the "Omnibus Tax Increase and Redistribution of Earnings Act of 1977."

In support of this statement I would commend to my colleagues the Congressional Budget Office's estimate that passage of the so-called National Energy Act would result in an increased tax burden of $73.6 billion by 1985 causing the average American family to pay an additional $1,050 in taxes over the next 8 years.

Economic studies have projected that implementation of the administration's energy plan will directly and indirectly cost the American people $380 billion by 1985. It does not matter whether we tax petroleum products at the wellhead or at the service station pump. The American people will, as usual, end up footing the bill which will be in excess of $5,000 for each American family.

It seems that those responsible for bringing this legislation before the House at this time, want an energy bill passed now—regardless of its merits. So next week we will be able to go back home and be able to tell people that we in the House have passed an energy bill and everything is taken care of. It will be a splendid example of the form-above-substance type of legislating which has been the rule, rather than the exception, this year in Congress.

Consider if you will, Mr. Chairman, the always controversial, but unpopular Federal gasoline tax. Initially, the President sought a 5 cents per gallon increase in this tax together with language which would have provided for more or less automatic yearly increases. The Ways and Means Committee of the House wisely rejected this, and it should have been a dead issue.

As you may know, the Federal gasoline tax was scheduled to decrease from the current 4 cents per gallon to 1½ cents per gallon in 1979. The bill before us would have frozen the tax at 4 cents per gallon. Then along came the Ad Hoc Committee on Energy and decided to levy an additional 4 cents per gallon tax. The crude oil equalization tax which will be imposed at the wellhead, will add another 5 cents to 7 cents per gallon to the cost of gasoline.

Columnist Patrick J. Buchanan has noted that a Federal gasoline tax is probably one of the most regressive forms of taxation. Increasing the direct Federal gasoline tax from 4 to 8 cents would simply mean that an additional $5 billion would flow into the Federal Treasury at the expense of American consumers. This tax increase will most adversely affect those who are least able to pay it. Particularly hard hit will be residents of the midwest and the rural regions who are not able to take advantage of mass transit systems.

Quoting from Mr. Buchanan's column,

> The tax is regressive in that it drains off billions annually from the productive private sector into the generally nonproductive bureaucratic sector. Carter apparently intends to balance his budget by 1980 by sticking his taxpayers with a higher bill.

That is what I mean when I say that this legislation is redistributive in nature.

All Americans should, by now, be aware of the harsh reality that in the future we are going to pay more for energy. Two years ago there was a proposal before Congress which would have allowed the increased costs of securing energy to be passed on by the operation of the marketplace. The free market system, which most of us supposedly subscribe to, would have been allowed to operate. At that time there was a tremendous hue and cry from the other side of the aisle. Now we are told that the only way to decrease consumption and conserve energy is to do so legislatively. The same people who were opposed to free market increases in energy costs 2 years ago are the very ones who now want to increase energy costs by taxation and legislation.

An amendment will be offered which would provide for the gradual deregulation of natural gas prices. I support the concept and will vote in favor of the amendment, particularly if it is married to an excess profits tax. This may mean short term increases in the price of natural gas; but it will insure that there is natural gas available to heat homes and supply both commerce and industry in the long run. It boils down to a question of doing something now or not doing anything. The latter course of action would be disastrous for the American people and the United States.

This is a bad bill. It emphasizes conservation through taxation, and gives only lip service to increased production. Certain amendments will be offered which, if adopted, would enable us to cut the losses of the American people. I hope that my colleagues on both sides of the aisle will listen to and carefully consider the arguments, facts, and figures. A matter such as this of overriding national import should be decided not on rhetoric which, unlike energy, is cheap; rather, let us do what is best for the American people.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 10 minutes to the gentleman from Texas (Mr. COLLINS).

Mr. COLLINS of Texas. Mr. Chairman, President Carter's bill, H.R. 8444, as before us today, will intensify our energy crisis. I rise in opposition because of its staggering taxation load and the bureaucracy it establishes to overpower our normal energy development.

President Jimmy Carter has put the full powers of the Presidency behind the passage of this energy bill. The Democrats showed the party strength behind the bill when they voted it out of the Ad Hoc Committee on Energy 26 to 14.

I realize that as Republicans we are outnumbered 2 to 1 in this House by Democrats. I realize that the full weight of the Democrat Party is pushing this bill through Congress. But for my colleagues who are independent and will weigh H.R. 8444 with an open mind, I ask them to weigh these factors.

This H.R. 8444 is a heavy, 580-page book. Few Members of Congress understand what is in it. In fact, I will dare say that out of 435 Members, I doubt if 43 of them actually have a full comprehension of what is in the bill. It should have been brought to the House in 10 different specialized bills instead of this overloaded, complex, and confused document.

This bill represents nine dogs and one wildcat, but it comes before the House as one bill, and we have a tiger by the tail with this H.R. 8444.

This bill, this 580-page book, covers everything from a bicycle study to corporate directorates, newspaper advertising, labels for automobiles, how to price electricity, and tiers for oil and gas.

The bill does not face the major economic fact of our energy crisis, and that is the imports of oil. That is our major fact on energy. This year America will pay $45 billion for imported oil. This has risen from less than $5 billion for im-

ported oil in 1972. Just realize that—$5 billion to $45 billion in just 5 years.

If we will take the 8 years that President Carter stipulates for the energy program, this means that the oil imports will cost America more than $360 billion by 1985, and it means the loss of 7 million American jobs.

The bill does not provide a plowback tax credit, and a plowback tax credit is the device we could use to enable American producers to produce here at home the oil and gas that is needed within America.

Let us consider the lack of balance that Congress has in financial planning. Congress has appropriated $10.6 billion for a new Department of Energy. Now, for $10.3 billion the oil producers in America each year drill all the new oil wells and they drill all the new gas wells. They lose $2.3 billion in drilling dry holes, they rework over 500,000 old oil and old gas wells, they pay $1.6 billion to lease acreage, and they pay out $1.5 billion in leasing equipment. Everything they do in the entire oil industry in drilling for oil and gas comes to $10.3 billion.

This bill, through tax credits, could have increased our annual $10.3 billion drilling effort so that we could reduce this $45 billion we send each year to the Arab OPEC group.

H.R. 8444 is a heavy tax bill. The Carter bill plans to get 5 cents a gallon more from every automobile owner. They also have a tax on larger cars.

But the heavy tax is on old American crude oil. This American oil which was discovered prior to the 1970's and is now under price control at $5.16 a barrel will be taxed to raise the price up to the $14.50 a barrel, which is the price that Americans pay the Arab OPEC. The tax is on Americans. This assesses no tax on Arab OPEC oil. The income will be distributed on some share-the-wealth plan, however it works out.

Gas will also be a most serious problem as a result of this bill. Price controls have caused the gas shortage, and yet this bill legislates and regiments price control. Oil and gas is the only commodity in this country under price control, and never in peacetime history has price control worked.

Gas sells for one-half of what it costs for coal. Let us take crude oil. It will usually sell for six times the price of gas. With world oil selling at $14.50 a barrel, gas should be $2.41 an Mcf.

This bill pushes strongly in the direction of socialistic legislation. One of its worst features is the overriding of intrastate supervision of gas within a State. This law will make a dictatorial Federal Government even more dominant with centralized control.

The planners who advocate absolute Federal controls have written the provisions governing electric utilities. This law would mandate full control to Washington for allocation by interconnection of all the electricity in this country. It would provide Washington with the final say in all ratemaking.

This bill does not seem cognizant of the burdens Congress has already placed on industry and on the utilities. Scrubbers for powerplants, just to mention one item, will cost over $50 billion. Water pollution controls that are already being implemented will cost $300 billion, and the question of their need still goes unanswered. EPA and OSHA can mandate another $400 billion with the regulations Congress has provided for them. We have a clean air bill that is in conference right now, and it will probably require another $100 billion.

Taxation and inflation have severely limited capital funds for industry. From 1950 to 1970 the American economy enjoyed a real growth rate of 4 percent, but in the 1970's that growth rate has dropped to 2.3 percent.

Congress should realize that all these environmental and bureaucratic control requirements are nonproductive and are using up all of industry's capital funds while increasing the costs of manufacturing the product.

One of America's greatest Speakers of the House, one of the greatest statesman of all times, Sam Rayburn, said, "When in doubt, don't."

You should have plenty of doubts on this bill, so do not vote for it.

Mr. ASHLEY. Mr. Chairman, I yield 5 minutes to the gentleman from Missouri (Mr. ICHORD).

Mr. ICHORD. Mr. Chairman, it was my understanding, if I can obtain the attention of the gentleman from Ohio (Mr. ASHLEY), that the gentleman from New Jersey (Mr. HOWARD) stated that we would have an opportunity to vote on the so-called gas-guzzler tax. Perhaps I misunderstood the gentleman from New Jersey, but it is my understanding that under the rule, there will be no opportunity to vote on the gas-guzzler tax; is that correct?

Mr. ASHLEY. If the gentleman will yield, Mr. Chairman, the gentleman is right.

Mr. ICHORD. Mr. Chairman, that reason and that reason alone would be enough for me to cast my vote in opposition to H.R. 8444.

Rather than use the term "tax on gas guzzlers," I would prefer to use the term "tax on the family car," because what is a more efficient carrier of passengers? Is it a family car or a gas guzzler—if we want to use the term—that will get 15 miles to the gallon and carry six passengers, or is it a car which is more efficient and gets 30 miles to the gallon but only carries two passengers?

Mr. Chairman, this reason alone, as I stated previously, is sufficient cause for me to cast my vote against H.R. 8444, particularly when we do not have the opportunity to vote on the issue.

Mr. ASHLEY. Mr. Chairman, if the gentleman will yield further, I would like to point out to the gentleman that the proposal that was received from the administration and referred to the Committee on Ways and Means provided for a tax on inefficient cars that was much more stringent than the one which was reported by the Committee on Ways and Means.

It was that committee which after considerable testimony found, as the gentleman has, that the proposal contained in the national energy plan would, indeed, impose a burdensome tax on the family car.

It was for that very reason that the Committee on Ways and Means, I believe with the support of the minority as well as the majority, structured the tax in a way that imposed no tax on model cars achieving less than the fleet average. Therefore, for example, in 1979, when the tax takes effect, the tax will kick in some 4 miles per gallon below the fleet average.

Mr. Chairman, let me just say to the gentleman because I am anxious to at least have him keep an open mind that as far as support of H.R. 8444 is concerned, this was done and this provision was ratified by the ad hoc committee having in mind the very concerns which the gentleman has expressed.

I simply wanted to make sure that the gentleman understood the rather considerable changes that were made by the Committee on Ways and Means with respect to the provisions contained in the administration's proposal.

Mr. ICHORD. I appreciate very much the efforts of the gentleman from Ohio (Mr. ASHLEY) to ameliorate the burden upon the family car owner.

I must also state I very much appreciate the tremendous problem which the gentleman and his committee, and all of the standing committees who contributed to this legislation faced in considering the issues surrounding our so-called energy crisis because the myriad of issues surrounding the so-called energy crisis are, indeed, complex. This is a complex piece of legislation and the rule is even complex. But I am deeply concerned that the committee did not see fit to move in a more positive direction toward the reestablishment of the principle of the free enterprise system and the law of supply and demand and the price in the marketplace, to eventually solve our energy problem. Because I believe that is the only way that we will eventually ever solve the so-called energy crisis.

I consider the bill too long on conservation and entirely too short on incentive toward bringing new energy sources into being.

I will state quite frankly that I fully believe there is no energy shortage in the United States of America. It is a contrived crisis. True, there is only so much oil under the ground in the United States and only so much offshore and I am quite sure that some of the big oil companies have held back on the production of oil.

I am also positive that we have ourselves to blame for this so-called energy crisis because we are using up oil at a fantastic rate.

The last time I looked at the figures we were gulping oil at the rate of 17.1 million barrels a days. I also believe very strongly that the greatest entity at fault is probably the Federal Government because there is no shortage of energy. Energy is all around us. Quite a bit of energy has been expended today. I am expending some right now. I do not know how much of a contribution I am making and I do not know how much contribution has been made by the speakers before me, but there is an abundance of energy everywhere, in the farmer's barnyard, in your sewage, geothermal, solar, wind, shale, coal, nuclear and so

forth. We should be building all of the nuclear plants we possibly can. I greatly deplore the decision to stop the breeder reactor. Then there is hydroelectric power, and I have already mentioned oil and gas. But I am adamantly and irrevocably opposed to that portion of this legislation which proposes taxation as a means of conservation. I believe that the proposal of using taxation as a means of conservation parallels the great mistakes of the 1930's when we tried to bring ourselves out of the depression by destroying hogs and cattle even though millions of Americans were on the verge of starvation.

The energy shortage of the United States should be solved by the use of the free enterprise system, the law of supply and demand, and prices fixed by the marketplace. One of the greatest criticisms that I hear of the free enterprise system is that it frequently overproduces. Why, then, do we not move toward—and I know we cannot move toward it immediately—a more positive direction to use the free enteprise system to solve our energy shortage?

Mr. ALLEN. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the gentlemen from Tennessee.

Mr. ALLEN. I thank the gentleman for yielding.

The gentleman was not here when I was asking the chairman of the Committee on Ways and Means, the gentleman from Oregon (Mr. ULLMAN), about this gas-guzzling tax, when it will start, what it would be at the beginning, and how it would go. Had he been here, he would have heard him say that by 1985 on a car that uses much more gas than those who are in power think it should use, the tax could go as high as $4,000 per car, which we call a family car—$4,000.

Mr. ICHORD. Let me state that I think this strikes at the very heart of what America is all about. If the gentleman from Tennessee wants to eat cornbread and beans—and I think cornbread is still pretty cheap and I think beans are still pretty cheap—and drive a Mark IV Lincoln Continental, if the gentleman from Tennessee wants to eat caviar, drink champagne, eat high-priced beef and drive a Honda, that is his privilege. I do not think that we are going to solve the energy crisis by such things as a so-called gas-guzzler's tax or a family-car tax, whatever one wants to call it. I agree with the gentleman.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. MOORHEAD).

Mr. MOORHEAD of California. Mr. Chairman, the last three Presidents of the United States have given the Congress a tremendous challenge, that is, to adopt a workable national energy plan. We have been striving for the past 3 or 4 months to adopt such a plan. The American people are ready to make sacrifices in order that they might be sure that they have an energy supply that will take care of their industries and their homes and family needs. The product that we have come up with, however, has totally failed the American people in a solution of their problems. When they find out a few years down the line that they have spent $350 billion by 1985 as a result of this legislation and still we have taken no positive steps forward in solving our American energy problem, they are going to be totally disillusioned, and it is going to be difficult to get a plan at that time that makes any sense.

We have a great opportunity over the next few days of changing this plan around so that it will produce energy. At the present time it produces taxes, it produces bureaucracy and redtape, but it produces very little energy. If we start from the beginning, we go into the work that we are asking the American people to do on their homes. Surely that will conserve some energy if they do the work that we are asking of them, but it is not going to solve the problem of supplying the energy for our plants and factories to keep our free-enterprise system going in this country.

If we bring about a tax on gasoline and on the production of oil under this legislation, but that money does not go into the production of new energy and goes into a redistribution plan, it will do nothing toward solving America's problem. We have seen since 1973 that as the price of gasoline has gone up, the use of gasoline has also gone up.

Because there is no alternate fuel taking the place of gasoline or oil derivatives for the operation of our motor vehicles, the rise of prices has not cut down on the use of the product.

I think our legislation that we passed last year or the year before in which we told the major motor car companies that they had to reach certain standards as far as fuel efficency goes much further than any gas guzzler tax that we are putting on the use of larger cars in this Nation. The companies will reach those goals, required under present law, but any kind of tax we place on the larger cars will do very little good because there are many people in this country who have the money to pay additional taxes and they will not cut down their use because they can afford the extra costs. Under the tax scheme it is only the poor who would be adversely affected. Under the present plan we give the people of the country no alternatives, no new way to look into new kinds of automobiles that will use less gas and less oil.

In the field of natural gas we can cut down use by higher prices because gas is in competition with coal, oil, and other energy sources. If we allow gas to go to the free market price, we have been told by Mr. Johnson, the Assistant Administrator of ERDA, that we can have all the natural gas that America needs over the next 50 or 60 years. This we are told by the Carter administration, and yet the program we follow is one that is restrictive, that takes taxes off of the use of gas, but it gives nothing to the producer and does not encourage the producer to produce more natural gas for our Nation's needs.

Many people say if we raise the price to $1.75, artificially fix a ceiling, it will solve the problem. It will not. The money may be there. That may be a higher price than we would pay if we had a free market, but with the Government stepping in and setting a ceiling the companies will not go out and spend the billions of dollars necessary to bring in the deep gas that is available for America's use. They will not take a gamble when there are Government ceilings that are sitting there.

If we really want energy at a reasonable price in this country, we have to get off of the artificial Government ceilings that have been established over the past few years. They have been a total failure. If America is willing to pay a reasonable price over the next year or two until there is some kind of stabilization and we start developing synthetic fuels, and we bring in LNG if it is necessary, and we start developing the coal fields, we can get the products we need at a reasonable price.

But with artificial goals set, our major companies will still go to natural gas if they feel it is the cheaper fuel, and they will slow down on going to coal and other forms of energy, and America will still be in the same difficult position that it is in at the present time.

Under this legislation we encourage the American people, we say to go to coal, but at the same time we impose upon the American people tremendous redtape that is not necessary for this program. For instance, we tell the people of California and other areas that cannot use coal in their factories and plants, that there is going to be an extra tax on other forms of fuel if they do not convert. There is no way they can convert so they are going to pay a tax and there is going to be no possible benefit to them or to the country in raising that tax.

We also tell the people of the country that if ERDA uses its power to declare large areas of people—and they can be divided in many ways—that they must convert, it is up to each company to show that they have an exemption that they can use.

Thousands of them have exemptions that they are given under the law, but they are going to have to go to the Federal Government and prove those exemptions or else they and their companies are going to be restricted in what they do and in their uses.

Now, it is true that under the bill we have ways that they can have these restrictions withheld until they have had a hearing on their exemptions; but they are going to be artificially restricted from any expansions, from any hirings, from any changes in their processes, until these determinations have been made and it will result in the lost employment of perhaps hundreds of thousands of American people.

Mr. Chairman, let us get a workable energy plan. Let us develop more energy for our country. Let us make our Nation free of the OPEC nations and the controls that they have on us.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 1 additional minute to the gentleman from California (Mr. MOORHEAD).

Mr. MOORHEAD of California. Mr. Chairman, let us take those steps that are necessary then. Let us give Americans a plan that will work, that they will not

be disillusioned 2 or 3 years down the line or 5 years down the line.

Let us be proud of the product that we put out and let us serve the American people.

Let us make the changes that are necessary in this legislation in the time that is left, so that we can go back to our people and say, "Yes, we have solved the energy problem of this country."

Mr. ASHLEY. Mr. Chairman, I yield 3 minutes to the gentleman from Massachusetts (Mr. MARKEY).

Mr. MARKEY. Mr. Chairman, I rise in support of H.R. 8444, the National Energy Act. I do not do so in the belief that this legislation is perfect, for it is not. Rather, I do so in the conviction that this bill does represent a major step forward in developing a national energy policy—a task of the utmost national urgency.

This legislation reaches the floor of the House after lengthy and detailed consideration by five standing committees and the Ad Hoc Committee on Energy. I have had the opportunity to participate in this process as a result of my membership on the Subcommittee on Energy and Power of the Committee on Interstate and Foreign Commerce.

Mr. Chairman, as we look at this monumental 580-page document before us, I believe it is essential that we look back to the principles articulated by President Carter in his presentation of the original legislation to the Congress. In the booklet entitled, "The National Energy Plan," in accompaniment of H.R. 6831, he stated:

> Above all, the United States must solve its energy problems in a manner that is fair to all regions, sectors and income groups.

I repeat: Above all, it must be fair.

It must be noted that the legislation before us does contain inequities; as for example, section 2071, which provides a permanent exemption from even a minimum tax on intangible drilling costs. This represents a sizable windfall for a tiny sector of one income group. I regret that we will not have the opportunity to strike this unfortunate provision.

Nonetheless, in its fundamental elements, this is a fair bill. As we look to the major issues we will resolve on the floor in the coming days, one must note that we will be presented with a series of opportunities to strike that fundamental fairness from our national energy policy.

We will be presented with two opportunities to enact a regressive gasoline tax for which no conservation claims are made. I oppose both amendments.

We will be presented with the opportunity to deregulate natural gas, both by specific amendment and as a part of the Republican substitute. We will also be presented with the opportunity to rebate some of the crude oil equalization tax—not to consumers confronting higher prices, but rather to the producers themselves.

In urging rejection of these income redistribution schemes—redistribution, that is, from the pockets of American consumers to the pockets of the major oil and gas companies—I call to the attention of my colleagues the excellent and concise analysis contained in the report of the Committee on Interstate and Foreign Commerce on this National Energy Act:

> Because consumption of these fuels is central to the health of the Nation's economy, allowing price increases which do *not* produce additional supplies would *not* be sound policy. Such price increases would be inflationary, while simultaneously imposing recessionary pressures by reducing the level of consumer dollars available to purchase other goods and services, other than essential energy supplies.
>
> . . . the legislative program recommended by President Carter seeks to implement such an energy policy.

Mr. Chairman, the alternatives we will consider seek to implement the antithesis of such an energy policy.

Mr. Chairman, this bill will not be the first piece of energy legislation to be passed, nor will it be the last. But it does represent the first effort to establish a comprehensive energy policy. The President described the cornerstone of his policy as the development of our Nation's cheapest and most readily available energy resource—conservation. I for one wish that call for conservation were stronger and believe that we will have to return in the future to add that strength. For now, what is essential is that we take that first step, pass H.R. 8444, and in passing it be sure that we say no to those who seek an energy policy that is not "fair to all regions, sectors, and income groups."

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 12 minutes to the gentleman from California (Mr. GOLDWATER).

Mr. GOLDWATER. Mr. Chairman, time is growing exceedingly short for the House of Representatives to show the American citizen that we deserve their respect and confidence. We begin today the consideration of the so-called National Energy Act of 1977. At this moment, with the exception that this bill will have very substantial national impact, it is not and cannot legitimately claim to be national energy legislation.

Even though you and I will be considering the bill under a "gag" rule that effectively disenfranchizes the Members of the House and, thereby, our constituents, we do have a limited opportunity to correct several serious and potentially fatal flaws in it. We have the opportunity to adopt several important amendments. We do have the opportunity, if each Member of the House gets up the courage to vote his conscience, to defeat the bill if corrective amendments are not adopted. The choice is up to you.

Frankly, the bill reported by the Ad Hoc Energy Committee amounts to outright consumer fraud. If a merchant had advertised a product in the glowing terms that this energy bill has been advertised and then offered to the consuming public a product as shoddily put together and incomplete as this bill is, he would be guilty of blatant "bait and switch" tactics. This bill bears little resemblance to the general claims of praise about it that have been presented to the press and the public at large.

With a few exceptions that I will note in a moment, the provisions of this bill insure we will not meet our national energy goals, insure increased financial and procedural burdens for the public—producer and consumer alike—and, insure a substantial erosion of our liberties and freedoms.

I do not believe nor intend to imply that Members of the House deliberately set out to accomplish such a result. I personally believe that all of the individuals associated with the preparation of this legislation have acted with the best of intentions.

The problem is, this bill bears as much resemblance to those intentions as Dr. Frankenstein's monster did to the original objectives of his experiments. And, make no mistake about it, this bill is a real monster.

There are many general problems with it, but I want to direct your attention to just a few blatant ones. In the so-called utilities section, the operating presumption of the bill is based on the Napoleonic Code theory that a utility is presumed guilty until it can prove its innocence. Title I gives the Federal Energy Administrator the authority to presume guilt, in this case for "failure" to implement a federally ordered residential energy conservation program and it requires the Administrator to fine the offending utility regardless of whether or not there has been any finding of fact. This provision doesn't even maintain the quaint fiction of other statutes than a utility is dealing with a rebutable presumption.

While such an approach is fully consistent with the authoritarian, nationalized tone of the bill as a whole, not one shred of evidence was produced to show that it is necessary or justified to do away with the Anglo-Saxon legal concept that innocence is presumed and that the burden of proof lies with the accusor.

The Congress should be fully aware that in passing this bill with such provisions in it we are taking a legal and policy stance that is contrary to our Constitution and national experience.

To my deep regret, this energy bill not only continues most of the Federal regulations and controls developed over the last 30 years but it also greatly increases them. The proponents of the bill blithly assume that current regulation and control do not have anything to do with the energy crisis. What is more, they presume that any workable, fair solution cannot be achieved without increased regulation and control.

I find this to be an amazing presumption. Most of the original committees of jurisdiction over this legislation received massive amounts of testimony and expert analytical studies by OTA, the Congressional Research Service, the GAO, and others, which clearly indicate that arbitrary and inflexible regulatory controls significantly contributed to the current situation. History as well teaches that price, supply, and demand are directly related. Basic economics teaches, unless it is based on Marx, State capitalism or authoritarianism, that the arbitrary setting of price will directly affect the degree of consumption and supply. Experience over the last decade clearly reveals that as resources become more scarce, more difficult to locate and produce, and as required technologies become more expensive, arbitrarily lowered and con-

trolled prices encourage overconsumption. They also discourage increased exploration, development, and adoption of expensive technologies. As a matter of fact, it is artificially controlled low pricing of energy that is in the main preventing the adoption of synthetic energy technologies and the production of more inaccessible fossil energy resources.

This bill not only continues price controls, although it does permit an arbitrarily determined increase, but it proposes to extend these controls into the intrastate area as well.

In addition, general Federal regulation and control is extended. For example, governmental entities are put in the business of establishing lists of businesses that consumers can use, if they want to have their insulation improvments qualify for tax credits. Not only does this bill fail to deal with the problem of business discrimination that is inherent in this approach but also there is no remedy for any injury that could occur from being left off. If any of my colleagues are under the delusion that an errata sheet can be effective and compensate for loss of revenues or competitive position, I urge them to talk to the victims of such errors that have been perpetrated by OSHA, EPA, and others.

Several companies have gone out of business, filed for bankruptcy or been irreparably harmed as the result of Federal "lists." And, every Member should understand that in the main the businesses involved will be small with little ability to absorb loss of income or reputation.

Make no mistake about it, underneath the velvet glove of energy conservation is a mailed fist of arbitrary, capricious, callous Federal regulation and control.

Finally, as an individual Member of the House, I must protest the manner in which this legislation was ramrodded through the ad hoc energy committee and brought to the floor of the House.

All, I repeat all, of the members of the committee were promised by the Speaker and the leadership that the legislation would be openly and fairly considered. The committee was assured that all points of view and concern would be considered. Such was not the case. Almost all amendments were developed in Democrat caucus. They were presented to the Republican members of the committee either immediately before the committee took them up or as they were being offered. No serious consideration was given to other amendments. The votes for the most part followed strict party lines. It was a roughshod approach to legislation.

The vitality of our political system and of the parliamentary rules that govern the House depend in large measure on insuring that majority tyranny does not control events. Legislation developed under such circumstances has not been open to meaningful criticism and it cannot legitimately lay claim to being truly national legislation.

The rule under which we are now operating permits the full House to consider only those amendments adopted by the ad hoc committee and those few specified in the text of the rule.

Individuals who did not serve on the ad hoc committee or who are not named in the rule are prohibited from offering any amendments.

Such a circumstance makes a lie of the label many Members of the House would like to have apply to this Congress: The sunshine Congress. We are disenfranchised from full participation and, as a result, so are our constituents.

Fortunately, in a strictly partisan sense, I am glad this is the case, because the Republican Members of Congress will not have to bear the certain burden of defending before the Nation the effects this bill will have. The blame for higher prices and taxes Americans will have to bear will not be ours. The blame for increased Federal control of our institutions and our lives will not be ours. The blame for lost opportunity and misguided effort will not be ours.

I am, however, deeply saddened by the fact that it is all the American people who will have to pay the staggering price the bill will demand of them.

Mr. Chairman, there are several specific provisions of this bill that I find particular disturbing.

First, the ad hoc committee voted a 4 cents a gallon additional tax to be paid by all consumers at the gas pump. In the debate on the amendment, its proponents admitted the increase would have negligible conservation impact. They did admit it would raise substantial revenue, possibly as much as $40 billion by 1985. They admitted the real motive behind the tax was to raise revenue, no more no less. I have consistently opposed such a tax as being unnecessary at this time and as being patently unfair because it will hit hardest those citizens who can least afford to pay. Unfortunately, the House will not have the opportunity to do anything about the provision.

Second, the committee chose to add an additional 4 cents a gallon tax to general aviation fuel. This segment of our society uses planes for business-related purposes 75 percent of the time and accounts for less than 1 percent of the fuel consumed in the Nation. Such a tax on an industry that has one of the best energy efficiency records in the Nation is clearly not intended to encourage conservation. Once again, its motive is to raise revenue. And, once again, the American public will pay the price for such increases in the goods and services they buy.

The provision on Federal van pooling is a farce. In the first place, it puts the Federal Government in the business of providing "free" personal transportation for Federal employees. No evidence was produced to show that private enterprise jitney services could not do the job. No evidence was produced to show that federally sponsored van pooling is the most cost-effective, energy efficient way to go. The proposal would permit private, personal use on weekends with accounting methods, responsibility for repair, insurance, and other questions unresolved. It frankly makes little sense to force the executive branch to give up its limousines, which cannot number more than 300, and then deliberately opt for 6,000 vans that are subject to notorious fuel efficiency problems.

The decision to repeal the deduction for State and local gasoline taxes is equally ill advised. State and local governments depend on such taxes to finance roads, schools, and other basic programs. If a loss in revenue continues, and it is obviously the intention that this provision will encourage a reduction in gasoline purchases, then local units of government will be even harder hit than they are now. And, once again, taxpayers will be hit regardless of ability to pay.

There are many other provisions that should not be adopted by the House but I have no illusions about the probability of such an event.

The bill should contain natural gas deregulation provisions. It should contain provisions which deliberately aim to stimulate all forms of energy production. The bill should deal with the coal transportation and supply problems that will accompany the coal conversion program. The conflict between the coal conversion provisions and the clean air standards should be resolved. And, the bill should generally give the free market the opportunity to show what it can do.

Instead, we have a bill that as far as I am concerned is anti-consumer. We have a bill that is in large measure a tax raiser, a revenue raiser for the Federal Government, with no guarantee that the revenues will not be used to fund new, additional Federal programs having nothing to do with our energy situation.

I hope the House will see fit to amend this bill to the maximum extent the rule allows. I also urge my fellow colleagues to defeat this bill.

The Nation deserves better. The House is capable of producing better legislation. This energy crisis will not be solved by half-measures that rely on increased Federal regulation and control and taxes. Failure is in store if that is the route we insist on taking.

Mr. ASHLEY. Mr. Chairman, I yield 5 minutes to the gentleman from Texas (Mr. GONZALEZ).

Mr. GONZALEZ. Mr. Chairman, the National Energy Act has much to commend it, and the citizens of our country want to do something about the elusive phantom, the energy problem. But what is it we are trying to do? What will we accomplish if we enact this hefty bill?

The President and his advisers tell us that we will be saving a great deal of energy through this program. But the General Accounting Office and the Congressional Budget Office tell us that the projected savings are overstated.

We are told that portions of the bill will give new incentives to the producers of domestic oil and gas. But producers say otherwise.

We are told that this is the moral equivalent of war—but against whom?

We have had only a very short time to study this bill, and to study the recommendations of the Ad Hoc Energy Committee, and those few amendments that have won the blessing of the Rules Committee. In the time that I have had, however, my general conclusion is that the bill suffers from a fatal confusion of objectives. It goes in too many opposite directions at the same time, and so leaves us in danger of going nowhere.

Is the objective to bring about some reasonable degree of American energy

independence, so that we are not so overwhelmingly dependent on imported oil? If that were so, conservation measures would have to be far more stringent than anything in the bill, and there would be far more incentives in the bill to spur domestic production of oil and gas. My reading of the bill shows some commitment to conservation, but no real incentives to add to domestic levels of production.

Is the objective to decrease the power of the oil cartel, perhaps even to break up its ability to demand any price that comes to mind, and enforce that demand? If that were the case, we would hear much more about the need to conserve, and much, much more about the importance of the proposed strategic petroleum reserve.

We hear that the bill will accelerate conversion to coal, thereby saving oil and gas. But there is no evidence that industry would move any faster, under this bill, than it is today, to convert to coal. I cannot think of a single major energy user that has not taken, or committed to take, every possible action to convert to coal at the earliest feasible time.

The bill would raise fuel costs to consumers, but then rebate many of these increased costs. One version of the Energy Act continues the gasoline tax at present levels, the ad hoc committee recommends a 4-cent increase, which I thought was the administration bill, but now the Department of Transportation is lobbying for a 5-cent tax addition. What is it that the plan calls for? An 8-cent tax or a 13-cent tax? We are faced with a Dutch auction here, in which nobody knows what the bids are, but everybody is supposed to get a piece of the action, if his guess is at an acceptable minimum, to be determined sometime later.

In any case, we all know that the proposed gasoline taxes would not really conserve any significant amounts of fuel, gasoline is one of those commodities for which there is an almost inelastic demand. The result of the gasoline tax provision will be to raise revenues, but not to conserve energy; and the tax on motor fuels like diesel will be to raise the general level of inflation, which the administration wants to see go down. On the whole, the fuel tax provisions make sense only as revenue raising devices of the most regressive possible kind—the kind of taxes that I have always opposed.

If we are to have anything like a trade balance or trade surplus at any time in the foreseeable future, we have the choice of reducing oil imports or reducing the price of oil. The choice the bill makes is to more or less stabilize oil consumption. But the oil cartel, OPEC, can unhinge the whole savings or economic stabilization effect that this would have, simply by kicking prices up once again, as they have the power to do at any time .

The only way the bill addresses this problem is to set up a strategic petroleum reserve, which would hopefully give us some defense against an embargo by OPEC. In itself, the reserve is a good idea, badly needed. The very existence of the reserve might help break up the cartel itself.

For so long as the cartel has the economic initiative, nothing that we can do by way of stabilizing import demand will enable us to realize any economic benefits from such a program.

Not only our own economic well being is at stake: the whole world, rich and poor alike, finds itself being strangled by the cost of oil. The oil-producing countries are taking in vast surplus revenues that they cannot possibly dispose of. As their money piles up, no way exists for others to earn the money back—for what they cannot spend, no one can earn. Inflation thus builds up, for currencies in deficit depreciate inevitably; and the consequence of that is that the cartel wants to raise prices again, which only exacerbates the whole problem.

If we could buy oil in only those countries that can dispose of their oil revenues, we might be in a better economic situation. Is that an option that is available, or even potentially available? If a policy of that kind might help destroy the power of OPEC, should we not pursue it? But the plan is silent on this critical economic point.

There is no way that I, or any other Member, could fully weigh the energy plan envisioned in this bill, in one short statement. I cannot even cover all my major concerns. But it is essential to say this: if we are to enact what the President is pleased to call the moral equivalent of war, we must be certain of the enemy.

In this bill, we are largely fighting against ourselves—consumers against producers, spenders against savers, Americans against Americans. But we are not the real enemy.

It may be that we need to change our pattern and extent of energy use. I think that most of us realize that, and I believe that the country is far along in that process. To the extent that we can encourage and help people to make changes and adjustments, this is a good and worthy bill. No one can quarrel with provisions that assist homeowners in saving energy, or require higher efficiency in various kinds of products, or penalize energy uses that are patently wasteful.

But the bill fails to have any underlying purpose, with respect to the larger economic problems—the very problems that are central to the whole issue. And those economic problems—domestic pricing, the trade balance, the dependence of the country on foreign sources of energy—are bound up in one question—what to do about the power of the oil cartel.

The bill is nearly silent on that, except for the implicit strategy of the petroleum reserve. But in dealing with the power of OPEC, no implicit weapon is enough. There has to be some kind of explicit commitment. We have the choice, in dealing with OPEC, of submitting to its power, or becoming independent of it, or of attempting to diminish that power. This bill does not address any one of those choices. In that sense, it is no answer at all.

It would be one thing to tell Americans that there is an energy crisis, in the sense that we must become independent and make sacrifices to do that. It is another thing to tell our people that there is a crisis that we are not really dealing with, but that sacrifices have to be made anyway. I think that our citizens will only become disillusioned if there is no clear purpose for the sacrifices called for in this bill. Let the goal be clear. Let the means be adequate. But do not fail to set goals that people find reasonable and necessary. A free people will find enough sense of purpose and strength to reach such goals. This bill does not meet that crucial test. It does not have a clear goal and does not have within it any real unity of purpose. I am disappointed by it, and find enthusiasm for it only among those whose job is to sell it, and whose interests will benefit from it. That is too narrow a base to conduct a great national policy from.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 3 minutes to the gentleman from North Carolina (Mr. MARTIN).

Mr. MARTIN. Mr. Chairman, I want to take a moment to explain to the House the process fuel exemption from the excise tax levied on business use of oil or natural gas. Although it is not now subject to an amendment, it is important for Members to understand how it will work and what it seeks to do.

The House Ways and Means Committee approved legislation which would impose a tax on the business use of oil and gas. The legislation would, however, exempt various uses. Among these would be "process use," defined to mean:

. . . The use of oil or natural gas in any manufacturing process where there is no substitute fuel—

(A) which may be used without materially and adversely affecting the manufacturing process or the quality of the manufactured goods, and

(B) the use of which is economically and environmentally feasible.

A substitute fuel such as coal would have to meet both tests in (A) and (B) or else the tax would not be levied. It is important to note that the exemption for "process use" does not include use in a boiler or in a turbine or other internal combustion engine, so that the exemption from tax would not apply to those uses.

This exemption is consistent with the President's proposal to tax those uses of oil or natural gas which can readily be converted to coal or some other substitute fuel. The tax seeks to promote such conversion to coal. It recognizes, however, first, that there are some uses of oil or natural gas where the characteristics of the fuel are essential to the process and substitution is not feasible, second, that these involve relatively minor amounts of oil and natural gas, and third, that it would be useless and counterproductive to tax those uses of these fuels for which there is no adequate substitute.

The uses of oil and natural gas where substitution of coal is not possible fall into a number of categories. These include instances where the substitution of coal would materially and adversely affect the manufacturing process because precise, consistent, or evenly distributed temperature control or rate of heating is vital; instances where the substitution of

coal would materially and adversely affect the quality of the manufactured goods because clean burning characteristics or other physical properties of oil or natural gas are essential to change the chemical composition of the product or to prevent product contamination; instances where the substitution of coal would materially or adversely affect the overall energy efficiency of existing energy conservation equipment such as furnace regenerators; instances where the use of oil or natural gas is required because of the nature or character of the process equipment such as, for example, where alternate fuels would corrode or damage the process equipment; and instances where oil and natural gas is required for plant protection purposes, such as to protect process equipment from damage during shutdowns, process upsets, et cetera.

To impose a tax on types of uses where oil or natural gas must continue to be used would not serve the purpose of causing a shift from the use of these fuels to the use of coal, but would simply raise costs which would be reflected in the prices of goods sold and hence would be both burdensome and inflationary for the consumer. In the case of some industries such as, for example, textiles and steel, which even at present are beset with competition from foreign imports, there may be serious competitive disadvantage. This, of course, is not the purpose and should not be the effect of enactment of the national energy plan. My amendment to exempt process uses was approved by an overwhelming majority of the Ways and Means Committee and I am pleased to note that it is retained intact in H.R. 8444.

Mr. ASHLEY. Mr. Chairman, I yield such time as he may consume to the gentleman from Georgia (Mr. JENKINS).

Mr. JENKINS. Mr. Chairman, it is only human nature for each of us to favor those parts of this comprehensive bill that help our individual districts; and, to oppose vigorously those parts of the bill that hurt us most. Whatever is said here in general debate will probably have little influence upon these individualized choices.

Some time ago, I polled the people of my congressional district as to their feelings on this energy package and the results of that poll could probably be duplicated in any other congressional district in the Nation. Basically, the overwhelming majority of people strongly support the President's call for some form of a national energy policy. By the same poll, they are strongly opposed to various specific parts of that proposal. This leads me to one conclusion that overrides all other questions in this debate, and that is simply this: the people clearly recognize that the President is correct in responding to the absolute necessity of developing a national energy policy; and, that they are depending upon this Congress to supply the details of a workable plan. Without question, there will be many parts of this bill with which I disagree. Many of the proposed amendments, I cannot support. But, basically, I feel that the various provisions of the legislation that have been approved and passed by the standing committees of this House are supportable. It is a step in a long journey that must be taken. It is incumbent upon this Congress to take that step at this time, even though some parts of the bill will be distasteful to each of us.

Mr. Speaker, we are fast approaching the time when we will have substantially depleted the traditional energy sources of this great Nation. The real question before us is not which plan or proposal will intensify this depletion, however comfortable this might appear for the short run, but which plan will best serve the future generations of this great Nation. In my opinion, it would not be in the best interest of our people to encourage an immediate withdrawal and consumption of the remaining traditional energy resources, without any regard for conservation and the needs of future generations. For these reasons, it appears that the President is right in asking that sacrifices be made now in order to avoid the total disintegration of our way of life in the future. This decision must be faced now. I trust that this Congress will measure up to this grave responsibility, and produce a workable piece of legislation which will serve all of us.

Mr. ASHLEY. Mr. Chairman, I yield such time as he may consume to the gentleman from Oklahoma (Mr. WATKINS).

Mr. WATKINS. Mr. Chairman, I rise in opposition to H.R. 8444. I do not oppose the concept of a national energy policy, for one is definitely needed if the United States is to protect its national security and its energy security. Nor do I oppose the energy conservation concepts embraced by this bill.

I speak in opposition to H.R. 8444, however, because it fails to consider both sides of the energy equation. While it gives dutiful emphasis on energy demand, it fails to adequately assess our Nation's energy supply capabilities. Several congressional analyses, including those by the Office of Technology Assessment and the General Accounting Office, conclude that this legislation will fall short of the energy goals established by the administration. And the basic reason this plan fails to achieve its goals is that it fails to provide adequate incentives for increased production of domestic energy, primarily oil and natural gas.

Simply stated, this legislation provides too much "stick" and not enough "carrot." Rather than increasing incentives for production of domestic petroleum, it levies a crude oil equalizing tax, which the General Accounting Office concludes will result in a $13 billion shortfall in capital formation for the producers. Rather than deregulating the price of natural gas, this legislation actually extends that regulation to the intrastate market, the only domestic energy market which has balanced supply with demand, simply because of free market forces.

Consequently, this legislation is inherently counterproductive and self-defeating. While the conservation provisions may trim the energy demand between now and 1985, domestic oil and natural gas production will decline at an increasing rate during this time period.

The consequences of failing to properly address the supply side of the energy equation can only be increased reliance on foreign energy sources. These shortfalls will have to be made up, and the only way to balance this delicate equation is with imported energy. That means the net effect of this legislation is that it will have little effect in dealing with the problems it outlines—in 1985 we will be just as dependent on outline energy sources as we are now, if not more so.

Therefore, I have no choice but to oppose this legislation as it has been presented to us. However, over the next few days I will be supporting and voting for two amendments that will deal with the critical problems I have outlined. So I urge my colleagues to keep an open mind about this bill, and to give careful consideration to the consequences of their actions on the House floor this week. At stake is our national security, as well as our economic and energy security.

Mr. ASHLEY. Mr. Chairman, I yield 5 minutes to the gentleman from Texas (Mr. HIGHTOWER).

Mr. HIGHTOWER. Mr. Chairman, as we begin consideration of the energy bill, and take this vital step in planning how we will meet our Nation's future energy needs, we all realize there are vital industries and segments of our economy that will merit special consideration. The foremost of these is agriculture.

The special problems of having needed fuel available for tractors, combines, trucks, and irrigation wells when it is needed often means the difference between a crop being harvested or not harvested. The timing of plowing, planting, watering, and harvesting is crucial to producing food and fiber for the consumer. The day of the horse and mule is gone, but depending on what we do here, may soon return.

Not being able to plan when the moisture is available to sprout the seeds can mean no crop that year. Being late watering a crop only a few days during the hot summer months can mean stunted growth or even loss of the entire crop. Bringing in the crops before hail, a driving windstorm, or a falling price can mean the difference between profit and disaster during harvest time.

As many of you have heard during the recent debate on the farm bill, the cost of fuel has played a major role in placing farmers in the loss side of the profit and loss column over the past 3 or 4 years. The price of their products have dropped dramatically while the costs of their fuels have climbed at an equally drastic rate. The cost of fertilizer made from fossil fuels has moved upward right along with the other costs. During some of the shortage periods, chemical fertilizers became almost impossible for farmers to find for any price.

The energy crisis to which this bill is addressed can be best understood as a problem of basic economics. President Carter is correct in telling the Nation that we must find an efficient means of allocating a scarce resource to meet the

requirements of an energy-thirsty and complicated economy.

The unique American economic system provides an excellent mechanism for performing such an allocation. This mechanism is neither new nor revolutionary, it is the "free market" system, where the supply and demand for a resource is regulated by the market price charged. Clearly, the imposition of a crude oil equalization tax proposed in this bill will prevent this traditional and proven system from operating properly.

One of the reasons for the present crisis is that Government policies have made petroleum products artificially cheap. All of us find it difficult to conserve a product which we have always viewed as cheap and plentiful. When the economic realities of our petroleum pricing policies causes the old controls to break down, shortages develop and rationing and supply restrictions—more artificial mechanisms—are seriously discussed.

This legislation includes a crude oil equalization tax which is just one more artificial economic mechanism to equate the price of domestic crude with the price charged on the world market. Why must we continue relying on artificial controls when the price movements in the free market can and would accomplish the same effect as well as provide an extremely important additional benefit.

If we allowed producers to charge the free market price for crude oil or gas, the additional revenues from such pricing would become an invaluable incentive for them to explore and develop additional supplies of petroleum reserves. In my home State of Texas there are no artificial controls on the price of natural gas sold within the State, and the developmental activity is intense. The evidence that a fair market price for petroleum stimulates development is overwhelming in the 13th District which I represent. I see no reason to believe that such activity would not increase on the national level if we had a national policy that would rely on the incentives of the free market to stimulate such activity.

Many have charged that such action would result in what is sometimes termed "obscene profits" for oil companies. Many claim that we have no guarantee that such profits would be plowed back into increased production. Jim Langdon of the Texas Railroad Commission answers this contention most expressively. He said that if the oil and gas producers make windfall profits, tax them. If they make them dishonestly or improperly, "put them in jail, but don't just assume these people are a bunch of bandits." He summarized it very well.

Conservation of petroleum resources is the announced cornerstone of the administration's energy policy. The rigidity of this reliance on conservation above all other considerations is disturbing to me. Geologists and geophysicists insist that there are reserves which we must develop, yet this legislation downplays development. Most of us agree that we will continue to rely on petroleum products for many years to come. Since this is the case we must work to develop all the resources which are within our borders. Pure economic incentives are the best means of encouraging this kind of development. The proposed equalization tax prevents such an incentive from having this effect.

The Government must act as a catalyst in helping the American people solve our energy dilemma. Too often the Government becomes only an administrator, an inefficient one at that, who shoves us to a goal rather than helping get there on our own initiative. Artificial controls on petroleum prices have not worked in the past. This equalization tax is nothing more than an income distribution program. We have no evidence that such a program will even help us to conserve petroleum resources. But worse, we are sure that it will never provide the producer with the economic ability to increase production.

The farmer is one producer who is not in a position to add the cost of production on to the price of his products. The nature of our free marketing system of supply and demand precludes this type of price adjustment. As we continue these debates, keep in mind, the availability of food and fiber at a reasonable price depends on the cost and availability of energy for the farm.

The poor, the disabled, the aged who are often victims of economic policies that they have no means to influence or control, would not be helped by an energy policy that is centered on conservation alone, they are already conserving all they can, they will only be truly helped by a policy that will continue to provide the energy necessary for their sustenance.

Why not let a free market for petroleum products limit the demand for petroleum while providing producers the ability and incentive to develop new resources within our borders? The free market system helped make this country great. We should turn again to proven methods to solve one of the most difficult problems.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 3 minutes to the gentleman from Ohio (Mr. MILLER).

Mr. MILLER of Ohio. Mr. Chairman, I thank the gentleman for yielding.

I take this time to ask the chairman of the ad hoc committee about the gas-guzzler tax.

The purpose of inquiring about the tax is that I find in the charts on page 416 of the bill if you receive at least 17 miles per gallon in the year 1980, there is no tax.

If you receive at least 16, but less than 17, there is a $249 tax.

Now, as we go into the next year's model of 1981, it is necessary to receive 18½ miles per gallon in order to not pay a tax.

As you go into the next model year of 1982, you must receive 20 miles per gallon in order not to pay a tax; so we are jumping up 1½ miles per gallon each year until we hit the year 1983. Then we only need to receive from our automobiles 20.5 miles per gallon in order not to pay a tax. As we continue to go to the model year 1984 and above into 1985, we jump back again to 1½ miles per gallon increase; so for the year of 1983 we only have to have ½-mile-per-gallon increase.

The purpose of taking this time is to have it clear in the record as to why every year we would increase 1½ miles per gallon, but in that 1 year, of 1983, we only have to receive ½-mile-per-gallon increase.

Mr. ASHLEY. Mr. Chairman, if the gentleman will yield, the gentleman is asking a question that was addressed, as the gentleman knows, by the Committee on Ways and Means. I am advised that as that committee considered the proposal of the administration and in doing so determined that the so-called family car should be accorded more consideration.

Mr. MILLER of Ohio. That really does not answer my question.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. ANDERSON of Illinois. Mr. Chairman, I yield 2 additional minutes to the gentleman from Ohio.

Mr. ASHLEY. As the fleet efficiency became greater over the years, the schedule of taxes would be reflected as suggested by the committee.

Mr. MILLER of Ohio. Let me put it this way, if I may. If in the year 1982 one would have an automobile that would give one 19.9 miles per gallon, he would have to pay $266 tax.

Mr. ASHLEY. That is right.

Mr. MILLER of Ohio. In 1982, if one has an automobile that then only received 20.5—.6 mile increase—one would have to pay no tax, but would be home free.

Mr. ASHLEY. What is the gentleman's problem? The idea is, under the EPCA standards, the efficiency of the fleets produced by the various automobile makers must improve year by year.

Mr. MILLER of Ohio. And the schedule says they will improve year by year, but we get 1 year where the change is made and we only have to have ½-mile-per-gallon increase, whereas in all the other years we must have an increase of 1.5 miles per gallon.

Mr. ASHLEY. It certainly is a fact that if the efficiency of a fleet increases from one year to the next, that the tax will apply to automobiles from one year to the next that did not apply before. There is nothing mysterious about that.

Mr. MILLER of Ohio. It applies on all of the years prior in the tax table and all of the years after, but that one year is different from all the rest. That is the purpose of my question.

The CHAIRMAN. The time of the gentleman from Ohio has again expired.

Mr. ASHLEY. Mr. Chairman, I yield 1 additional minute to the gentleman from Ohio.

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Ohio. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Let me say, if I can help clarify it, that we have an anomaly that exists in terms of the 1-year bulge. I think there were two factors that entered into the decisions of the Commit-

tee on Ways and Means deliberations on this issue. One is that we were trying to track EPCA standards. But, the gentleman knows the EPCA standards ended in 1980 in terms of what we knew at the time.

Between 1981 and 1984, they were to be set administratively by the Department of Transportation. When we did our work, we did not know what those standards were going to be because the Secretary had not announced them. So, we were, in effect, guesstimating as to what we thought the standards would be, and that is one of the reasons why this happened.

Second, I think it is important also to keep in mind this factor with the issue of the gas guzzler tax: We do not want to have one company, General Motors, have an inordinate advantage over the other three automobile manufacturers. Thus, as we modified the administration's proposals, we lopped off, if my memory is correct—and the staff on both sides can correct me—we were lopping off about 3 miles per gallon from the EPCA standard to the tax in order to minimize the advantage that otherwise General Motors would receive, because they have more capital and more cash. So, the gentleman from Ohio has read this better than most Members in reading it, and he finds us in a position where we have this small bulge, but I think it is those two factors that gives us that result.

Mr. ASHLEY. Mr. Chairman, let me say to the gentleman from Wisconsin (Mr. STEIGER) that the gentleman from Ohio is very grateful for his explanation.

Mr. MILLER of Ohio. If the gentleman will yield, if I might say so, it appears that 1983 will be a good year for automobile sales.

Mr. ASHLEY. Mr. Chairman, I yield 3 minutes to the gentleman from California (Mr. KREBS).

Mr. KREBS. Mr. Chairman, it is hardly possible to discuss a bill of this magnitude in 3 minutes. Therefore, I have to limit myself to generalities. However, let me say that I, for one, have been pleasantly surprised that 100 days after the President's message we find ourselves in a position this week to vote on an energy package which, while not perfect, certainly represents a substantial step forward.

It would, of course, be a mistake to assume that, with the adoption of this energy bill, which I assume will be adopted, our task is anywhere close to having been fulfilled. It is merely a step in which I perceive to be a continuing effort to meet the energy crisis which, indeed, is with us. There is no way that this House, or any other legislative body, in the final analysis, can meet the responsibility without the cooperation of the American people. As long as we find Members in this well trying to convince the membership, as well as the people that they represent, that we still do not have an energy crisis in this country, this task will be more difficult than ever.

Mr. Chairman, I think this bill, like many legislative efforts—I should say most legislative efforts—does represent a compromise. It represents a compromise in the field of natural gas. Obviously, there are some people who would like to see a total deregulation of natural gas. I for one do not believe that this would be in the best interest of the American consumer.

There are some people who would like to see us impose a much higher tax—and maybe we should—on gasoline. I for one happen to feel that the 5-cent tax which is being contemplated in this legislation is not only regressive, but it is also highly discriminatory to rural dwellers, for reasons which I believe are too obvious to mention here.

However, I will support the legislation. I think the legislation, as I said before, does represent a substantial step forward. I wish we could have come up with a bill that is stronger, that meets the energy crisis more forcefully, but, after all, we should remember that this type of an effort very seldom represents a perfect job. I happen to feel that, with the continuation of the crisis, this body will address itself on a continuing basis to the issues before us, and I happen to have enough confidence in the integrity of this body, in the imagination of this body, in the good will of this body and in the good will of the American people that we will meet this crisis in the years to come.

Mr. KEMP. Mr. Chairman, in his energy address to Congress on April 20, President Carter warned that unless action is taken, we will freeze in the dark. After reading, analyzing, and reflecting on that message and the subsequent energy bill, now before us, I am convinced his warning is true. We will end up freezing in the dark if we adopt the administration's program. It is a disaster to the consumer, the taxpayer and the worker.

Lewis Lapham, the editor of Harpers magazine, has described the Carter energy plan for what it really is. He recently wrote:

> The plan must have been written by people who didn't know what they were talking about.
>
> The plan was conceived either as a transcendent moral vision or as a scheme to raise about $40 billion a year in additional tax revenue.
>
> Although I hold no brief for the merchant class and its habit of blind rapacity, I cannot see how a policy of "zero growth" can do anything but lead to even more savage result.

Mr. Chairman, the administration's energy plan can be summarized thusly. It will:

Put an increasing burden of the energy crisis on the back of the consumers by denying new supplies of energy to the market;

Drive up taxes, at the expense of the already overburdened taxpayer, to the point of around $40 billion in the next 8 years unadjusted for dollar depreciation.

Assure continued dependence on foreign oil and foreign natural gas, mostly from Arab sources;

Further suppress domestic U.S. production of oil and gas and penalize any increase in its use;

Punish the electric utility industry and practically guarantee power shortages in the 1980's;

Slow the pace of economic growth we need so badly to reduce unacceptably high levels of unemployment; and

Assure higher prices and increased regulations with bureaucrats controlling the production and distribution of energy in the United States, the same road traveled by Great Britain.

In no aspect of energy could this be more the case than in natural gas. The administration's energy policy is pursuing a course which will withhold vast quantities of natural gas from the American people, from their businesses and from their homes.

The consequence of this policy is inescapable: The taking of dollars and jobs from the American workers to subsidize the economic growth of other nations. This happens every time we buy a barrel of oil or a cubic foot of natural gas from foreign sources, when we could be producing them here at home from domestic sources.

ADMINISTRATION IS SUPPRESSING INFORMATION CONTRARY TO ITS POLITICAL OBJECTIVES

This administration is guilty of covering up conclusions reached by its own experts—a coverup which will cost the consumers billions—a coverup stemming from the requirement that supposedly objective statistics fit the obviously subjective, highly politicized goals of the administration. It has been a deliberate suppressing of information in order to achieve the subsequent suppression of domestic production.

What is it that the administration has suppressed? It is information showing supplies of oil and natural gas are much more extensive than those revealed in the President's method. It is information showing the way in which deregulation would bring more oil and gas into the market. It is information showing deregulation would save consumers as much as $48 billion by 1990.

The administration has insisted on the maintenance of price controls, with a cap of $1.75 per Mcf. That price assures such a low return on investment as to deter exploration and production. Since supply would then be inadequate in terms of transmission pipeline capacity, the unit cost to the consumer will be driven up without any increased production in return. A price of $2 would bring much more natural gas onto line, and a price of $2.50 would result in decades of supply.

The President refuses to decontrol because of his fear of that $2 or $2.50 price. That is understandable at first blush; no one wants prices to go up. But the question is not one of either $1.75 per Mcf or $2 to $2.50 per Mcf. It is, rather, between $2 to $2.50 per Mcf or $4 to $6 per Mcf. Why? Because unless more domestic production occurs—and it will not occur at $1.75—natural gas suppliers will have to turn to whatever other sources of natural gas are available to meet demands. Those two sources will be imported liquefied natural gas—LNG—most all of which comes from Arab countries, and synthetic natural gas—SNG. The cheapest we can import LNG is $4 per Mcf, and it will rise far beyond that;

and the cheapest we can produce SNG is $6 per Mcf.

When an internal study group in the administration—the acronym for which is MOPPS—showed both these cost comparisons and the supply which would come on line by deregulating domestic production and prices, it was disbanded and the information suppressed. I need not remind my colleagues and the consumers that all of this happened in an administration elected only months earlier on the pledge of returning sunshine, truth, openness, and objectivity to the operations of the Federal Government. It is easier to understand, when you hear this kind of report and find out that it is true, why so many are already saying, "It's just like all the rest."

SUPPRESSING PRODUCTION TOO

The administration policy is moving simultaneously to suppress domestic production.

Let me be more specific.

First, up to half of all the potential oil, and the natural gas byproduct of its production, has now been blocked from further exploration and development.

Second, there are proposals presently pending, exclusive of Alaskan D–2 lands, which would remove another 79 million acres from production.

Third, the administration has cut offshore lease sales from nine to three.

Fourth, 96 percent of all oil and gas lease holds onshore, offshore, and on the Continental Shelf have yet to be sold.

The net effect of these and other actions has been to suppress production. That, in turn, will lead to greater dependence on foreign and exotic sources which cost the consumers more.

ADMINISTRATION PLANS MEAN HIGHER COSTS OR INADEQUATE SUPPLY IN NEW YORK STATE

This point about higher prices or less supply is critical.

I recently examined the relative cost comparisons among the various types of natural gas sources used by two major suppliers in New York State—National Fuel Gas, which services western and upstate New York as well as western Pennsylvania, and Brooklyn Union Gas Co., which services that downstate area.

National Fuel Gas has shown the substantially higher cost to the consumer of the greater reliance on SNG necessitated by inadequate pipeline transmission from the Southwestern States.

In contrast to the $0.964 per Mcf for flowing gas and rates from $1.174 to $1.733 per Mcf—with a 10 cents per Mcf add-on if five or more wells are tied into one meter—for gas acquired from independent producers, National Fuel Gas is having to pay from $3.50 to $4.130 per Mcf for SNG. The independent producer prices range from $1.174 to $1.333 per Mcf in the summer to $1.574 to $1.7333 in the winter.

Why, even under the generally higher intrastate—produced and used inside of New York State—prices, National Fuel Gas is paying $1.22 per Mcf for gas produced from May 1 through October 31, and $1.62 per Mcf for gas produced from November 1 through April 30.

Any of this—all of this—is substantially less under deregulation.

Information from Brooklyn Union Gas Co., our downstate supplier, reflects similarly higher prices for liquefied natural gas and synthetic natural gas.

Because of inadequate domestic production of natural gas, Brooklyn Union has had to rely increasingly on LNG and SNG. It has obtained additional sources of gas supply in the form of an SNG plant using naphtha feedstock and imported LNG to supplement its declining sources of supply from domestic pipelines. The cost of these supplemental supplies exceeds the currently regulated price for new natural gas and the range of prices which could be reasonably anticipated, assuming the deregulation of prices for new natural gas production.

Brooklyn Union has provided me with estimated unit costs of supplemental supplies and deregulated gas both with respect to 1978 and 1980.

This information is as follows:

Estimated unit costs of supplemental supplies versus deregulated gas, $/MCF

	Deregulated gas	Liquefied natural gas	Synthetic natural gas
1978	$2.00	$3.25	$5.75
1980	2.00+	3.75	6.50

Brooklyn Union has also made some important calculations on estimated dollar savings by replacing the supplemental supplies they are now having to rely upon with deregulated natural gas in 1978 and 1980. It proves our point: That deregulated natural gas is less costly than relying on the President's program.

The range of potential dollar savings shows that even if deregulated gas was obtained at prices higher than $2 per Mcf, there would still be substantial savings.

As a matter of fact, it could rise by 50 percent, up to $3 per Mcf, and there would still be substantial savings to the consumers.

The information is charted out, as follows:

Estimated dollars saved by replacing supplemental supply with deregulated natural gas, 1978 and 1980

[In millions]

	Savings to the consumer	
	1978	1980
$2.00/MCF	$38	$61
$2.50/MCF	31	50
$3.00/MCF	24	39

Brooklyn Union has translated these figures into estimated dollars saved by a typical residential heating customer using deregulated gas—in contrast to using gas being supplemented by LNG and SNG. This information shows that the typical residential heating customer would save $97 a year in 1978 and $145 a year in 1980. That is a substantial saving to the users in New York.

WE ARE NOT RUNNING OUT OF NATURAL GAS

The President and his administration spokesmen have spoken repeatedly of their conclusion that we are about to run out of natural gas. Some of their remarks are reminiscent of the doomsday soothsayers who have predicted for nearly a century that we are about to run out of fuel. These observations are an insult to the intelligence of our people.

Our people know that every threat of a depletion of a fuel has brought forth the discoveries which gave us subsequent fuels. When the great forests of Europe could no longer provide the fuels for the ovens of that continent in the closing days of the medieval period, the continent turned to coal. We are not in the midst of the fossil fuel age, and we are far from its end. But at some point, we will run out; it is inevitable. But science and technology will have harnessed new sources. They are already working on some energy sources that will require only sunlight and water, and we seem to have abundant quantities of that.

I want to examine this point more thoroughly though, because it was made a centerpiece of the administration's energy plan—that we are running out. In his April 20 message, the President said we had only about 20 years of natural gas left.

The debate over the supply of natural gas revolves around the effect of price upon production and supply.

On the one hand—that represented by President Carter, Energy Secretary Schelsinger, and a majority within the Democratic Party in Congress—you have the following line of reasoning: Keep the price of natural gas below what the true market price would be. Do not let it rise above $1.75 per thousand cubic feet, even if that artificially low price depresses exploration for new sources. It is better to force conservation because of inadequate supply and to run the risk of further shortages, if those are the consequences of $1.75 per Mcf, than to let the price rise.

On the other hand, you have this approach. Let the price of natural gas rise to the level which will assure adequate supply. It is better to have enough gas at a slightly higher price than not enough. These slight price rises, such as to $2.50 per Mcf, would bring on line another 45 years supply. Because this is the minority opinion here in Washington, it is easy to see how the majority opinion has created the present energy shortage in general and the present natural gas shortage in particular.

Who is right? Which ought to be our policy for the future?

The most convincing way to do this is to examine the alternatives to slightly higher prices.

THE EFFECT OF PRICE UPON SUPPLY

Let us assume the price of domestically produced natural gas rises to $2.50. That's 75 cents per Mcf higher than President Carter's $1.75 per Mcf. That $1.75 will not bring enough new domestic gas onto line. It will, rather, increase our dependence on liquefied natural gas from Arab countries and synthetic natural gas. LNG, by contrast with the $2.50 price, is running as high as $4.00 per Mcf. SNG is expected to run about $5 per Mcf. Thus, the consumer

will have to pay $1.50 per Mcf more for LNG and $2.50 per Mcf more for SNG under the Carter proposal that he would have had to pay for the $2.50 domestic natural gas. Thus, the alternative to the $2.50 per Mcf is $4 and $5 per Mcf.

Comparison of cumulative resource quantity/cost data—Total U.S. conventional gas

[Lower 48 and Alaska, onshore and offshore]

Producer cost	MOPPS I [1]	MOPPS II [2]	MOPPS III [3]
$1.00/MCF	550	330	120
2.00/MCF	800	490	275
3.00/MCF	990	590	465
5.00/MCF	1100	750	622
7.00/MCF	1140	810	700

[1] Estimate 1, April 7, 1977.
[2] Estimate 2, April 7, 1977.
[3] Estimate 3, May 24–26, 1977.

Note: Quantities are in quads representing moderate case estimates corresponding to indicated costs.

Quantities include proved, inferred and undiscovered.

The supply factor here is crucial, since that is what the consumers want. Under President Carter's price formula, we would only have about 280 trillion cubic feet brought on line. Yet, if we went to $2.25, that price could bring on 230 trillion additional cubic feet in what are called inferred reserves, 285 trillion cubic feet from the Devonian shale in the Appalachian region—of tremendous importance to the Northeast and Midwest, another 600 trillion cubic feet from the western tight sands, and from 200 to 300 trillion cubic feet in coal seam methane. If the price rose to $3.00 per Mcf, it could make feasible the recovery of between 20,000 and 30,000 trillion Mcf of natural gas dissolved in onshore and offshore waters at depths of 15,000 feet. Yet, by staying with the President's insisted-upon price of $1.75, we will have enough for only about 20 more years.

You can see, in light of this information, why I am so critical of all the prophets of doom and no growth advocates—those who say the world is running out of fuel and we will all perish. It may give high drama to political speeches, but it both flies in the face of fact and is of no help to the people who have to cooperate to resolve the real problems.

Our colleague, HENSON MOORE of Louisiana, recently analyzed the predictions of impending fuel shortages made during this century. He has chronicled, example by example, how badly these predictions have missed the mark.

His information is worth repeating in the course of today's debate on natural gas. Here are his findings:

1908

Statement: "Maximum future supply of 22.5 billion barrels." (Officials at U.S. Geological Survey)

Fact: 110 billion barrels produced since 1908 with proved and undiscovered resources now estimated at 135 to 223 billion barrels.

1914

Statement: "Total future production only 5.7 billion barrels." (Official at U.S. Bureau of Mines)

Fact: More than 108 billion barrels produced in the U.S. since 1914.

1920

Statement: "U.S. needs foreign oil and synthetics; peak domestic production almost reached." (Director of U.S. Geological Survey)

Fact: Production in 1976 almost 7 times 1920 production.

1931

Statement: "Must import as much foreign oil as possible to save domestic supply." (Secretary of Interior)

Fact: During next 8 years imports were discouraged and 14 billion barrels were found in the U.S.

1939

Statement: "U.S. oil supplies will last only 13 years." (Radio broadcasts by Interior Department)

Fact: New oil found since 1939 exceeds the 13 years supply known at that time. More than 90 billion barrels of crude oil produced in U.S. since 1939.

1947

Statement: "Sufficient oil cannot be found in the U.S." (Chief of Petroleum Division, Department of State)

Fact: 4.3 billion barrels found in 1948, largest volume in history and twice our consumption. 86 billion barrels of new crude oil reserve found in U.S. since 1947.

1949

Statement: "End of U.S. oil supply almost in sight." (Secretary of Interior)

Fact: More than 73 billion barrels of crude oil produced since 1949 with proved and undiscovered resources now estimated at 135 to 223 billion barrels.

NATURAL GAS MEANS JOBS IN NEW YORK STATE

The reason I am so concerned about this issue is that I represent an area of the country—western New York—which is heavily dependent on uninterrupted supplies of natural gas to heat our homes and schools and keep our factories and business running.

The natural gas issue in New York State is the jobs issue—pure and simple.

And I intend to see that the workers and homeowners in New York State do not lose their jobs or their fuel supplies because Government policies prevent them from getting adequate amounts of energy at reasonable prices.

I frankly am sick and tired of my constituents in western New York being told they must bear the burden—and shoulder the shortages—when it is Government that has made all the mistakes. Government makes the mistakes and gets off the hook by telling the people it was their overconsumption that created the problem. That is a lie, and it has to be labeled as such particularly when Government has been artifically holding down prices for years and causing shortages.

It is time to reverse the policy of the past 20 years, a policy which the new administration would lock even more into place, a policy of Government control instead of consumer soverignty. Our time to reverse this policy is now, during this week of debate on this natural gas bill. I intend to support amendments to it, and substitute measures to it. It is time this Congress put economic reality ahead of ideological and partisan politics.

Mr. RHODES. Mr. Chairman, the bill before us today is not a good bill. It is a faltering, tentative step when the challenge demands a bold stride. It is a partial answer to a problem that requires a broad scope solution.

This bill might well have been contrived by Rube Goldberg, who was famous for his laborious, labyrinthian contraptions that had a lot of machinery, but would not work.

This measure does take a positive move toward conservation of energy. That is a worthy goal. The methods being used, however, are self-defeating. Since our Nation runs on oil and gas, they should be our chief immediate concern. This bill does nothing to increase the supply of petroleum or natural gas; in fact, it raises roadblocks to expansion of supplies.

The bill is not a national energy policy. It should be recognized for what it really is, a proposal by a Democrat President to raise revenues by hitting the consumers. I recall the solemn pledge made during the campaign by Mr. Carter that he would never raise taxes on the middle-income American. Yet, this bill will cost American families thousands of dollars. In fact, its costs are estimated at $3 billion the first year, escalating to $56 billion a year by 1985. By passing this bill, Congress will help Mr. Carter shatter his campaign pledge to hold the line on taxes.

The bill seems overly-concerned with making certain that energy companies do not over-profit. The remedy is to create a tax windfall for government. Somehow, this is considered beneficial. The obvious alternative should be to mandate that extra profits be plowed back into research and exploration for more energy.

Although it is apparent that Republican suggestions were ignored by the carefully-stacked special energy committee, we Republicans do have a sound, pragmatic, workable program that would carry forward the twin goals of saving energy and increasing energy. It is a better idea, and would produce more favorable results for our economy than this bill, which will lay the groundwork for an energy recession down the road.

This energy bill we take up today creates a hodge-podge of tax complications, rebates, penalties and disincentives to produce. Our Republican version is more direct, emphasizes the supply side, and avoids the tortuous twists and turns incorporated in the administration measure. Again, Mr. Carter promised to simplify taxes, yet this bill is essentially a tax bill, and will further complicate preparation of tax returns for the American family.

I believe the people should realize that this bill is in reality legislated inflation. Its coal conversion requirements, coupled with stringent EPA mandates, will cost the electric power industry $100 billion. There is but one way to recoup those costs, and that is through power bills paid by the consumers. Gasoline will cost more, gas will cost more, power will cost more, automobiles will cost more, the price of appliances and products that require energy in their manufacture and use energy to operate, all will cost more. Taxing our way out of the energy crisis will not work. It is the wrong way to go.

The gas-guzzler tax feature is a populist approach. Yet, it carefully exempts the biggest gas-guzzlers of all, the huge, expensive motor homes that get single-digit mileage. At the same time, generally the public must buy vehicles that get mileage up into the twenties.

Mr. Carter has labeled our energy challenge the moral equivalent of war. Yet he chooses to go to battle with a pop-gun in areas with huge potential, such as solar, nuclear, and geothermal energy. The measure before us slights development and overemphasizes conservation through taxation. We cannot win the energy war in a skirmish at the gasoline pump.

I want to set the record straight about the genesis of this legislation. The majority has frozen out input by the minority. This is a Democrat administration proposal shaped into legislation to be rammed through by a Democrat majority in Congress. This bill transfers control and responsibility for energy from the private sector to Uncle Sam. It is not a real national energy policy, it is a Federal energy revenue bill.

It is pessimistic, no-growth legislation, that underestimates the capabilities of our technological and productive economy. It fails to encourage our energy industry to progress toward utilization of massive supplies of untapped energy, far larger than known reserves of fossil fuels.

When the lights go out and water turns cold, the American people should reflect on the fact that shortages, economic disruptions, and unemployment are the result of a faulty program proposed by a Democrat President and passed into law by a Democrat Congress.

Mr. BOLAND. Mr. Chairman, I want to take this opportunity to express my support for H.R. 8444—the National Energy Act. I do not contend this is a perfect piece of legislation, nor do I consider this bill the answer to all our energy problems. But I support completely what this bill does represent. The House is now considering a comprehensive national energy program. It is a task that has been a long time coming—and one that we can put off no longer.

There can be no question that this country is facing a crisis. This Nation will someday find itself in a precarious energy situation. The debate, of course, centers on when that crisis will occur—when the ax will fall. By acting today, Mr. Chairman, we are delaying that time. We may well be able to forestall indefinitely the falling of the ax. Indeed, we consider today the energy future of this Nation. By looking ahead, and I mean into the next century as well as into next year, we are preparing this country for a time when oil and gas can no longer be our primary energy supplies, when energy conservation is a way of life, when energy sources not yet developed are responsible for much of the U.S. energy production. We guarantee ourselves that future by making provisions for it today. H.R. 8444 is a prerequisite for that future.

The National Energy Act is a far-reaching piece of legislation. Its provisions range from natural gas pricing and crude oil equalization taxes to recycled materials and appliance efficiency standards. The bill covers a full range of both tax and nontax provisions. The House rarely faces a bill of this complexity. It is a difficult bill, make no mistake about that. But it is a difficult bill because we are dealing with a very difficult problem. H.R. 8444 will demand a great deal of our time and attention. It can be handled no other way. Piecemeal efforts will just not suffice any longer.

Some have attacked this bill—in whole or in part—by saying that it does not do certain things—that it does not answer all the questions. Mr. Chairman, I urge my fellow Members to reread section 3 of the bill. The national energy goals listed there are not meant to be the final answer to the energy questions of the future. A 10-percent reduction in gasoline consumption, a reduction of the compounded average rate of energy growth in this country, an increase in annual coal production, as increase in the use of solar energy—these are not unrealistic goals. These are preliminary steps we must take if we are to meet and master the energy challenges of tomorrow.

This body has considered a great deal of energy legislation since the 1973–74 Arab oil embargo. Mr. Chairman, we must consider a great deal more in the future. This bill, however, is unique. It marks the first real step in a national commitment to meeting the energy demands of a complex and uncertain future. I urge the House to give this step careful review and consideration. More importantly, I urge it to take that absolutely necessary step.

Mr. ARMSTRONG. Mr. Chairman, is Government harassment the only effective means to spark energy conservation among Americans? One college group does not think so, and they are out to prove it.

More than 300 students at Western State College in Gunnison, Colo., set two goals in forming the National Energy Conservation Challenge. First, NECC encourages energy conservation on campus through new and creative voluntary initiatives. Second, NECC challenges any college, business or Government unit to match its energy conservation record between October 1, 1977 and April 30, 1978.

While it remains to be seen whether NECC achieves its goals, the group has already triggered significant accomplishments. Western State this summer has saved about 20 percent over previous summer's electricity consumption. And three colleges, several high schools and retail stores have accepted the college's energy conservation challenge.

I applaud the group's initiative and creativity, and its faith in individual action to meet and solve national problems. NECC's enthusiasm is a great step toward securing our energy independence. This approach is certainly preferable to increasing mandatory Government conservation programs, taxes, subsidies and regulations that never seem to work.

I wish the National Energy Conservation Challenge every success in achieving its goals.

Mr. VANIK. Mr. Chairman, this week we have an opportunity to take our first major step toward a natural energy policy. The road to this work has been a long one. The debate over natural gas pricing for example, has been raging since the Supreme Court extended the Federal Power Commission's authority to regulate wellhead prices in its 1954 Phillips decision. It is important to understand the history behind the many complex provisions in this bill to realize that the bill now before us is not hastily conceived; it is the product of years of debate and consideration.

Let me review some of the major provisions of this legislation.

NATURAL GAS PRICING

The debate on deregulation of natural gas has been smoldering for over 20 years. Soon after the Phillips decision, legislation was introduced to exempt so-called independent producers from price regulation. This bill, sponsored by Representative Oren Harris from Arkansas, passed the House by a vote of 209–203 on July 28, 1955. The legislation passed the Senate but was vetoed by President Eisenhower when it was learned that oil producers had attempted to influence unethically the vote of at least one Senator.

Since that time, the controversy over natural gas pricing has remained essentially unchanged. Economic arguments can be thrown from each side, but the essence of the controversy is a regional political conflict. In testifying before the House Interstate and Foreign Commerce Committee in 1955, I put the matter this way:

> It seems to me that despite all the talk about escalator costs, fair field prices, and favored nations clauses, the issue before us simply boils down to a political decision. Are the people of the Sovereign States of Texas and Oklahoma and the other gas-producing states of the Southwest which produce natural gas, privileged to charge whatever price they see fit on which they find themselves? . . . Are the Northern consumers of natural gas who have no choice about whose gas comes into their homes going to suffer the lack of any effective public regulation on this important natural resource on which they are so dependent?

Mr. Chairman, I support the natural gas pricing proposal of the ad hoc committee because it represents a compromise position. The proposal embodies the view that neither side—in its arguments—is completely right. The proper position lies somewhere in between. As I stated in 1955—

> The struggle which we witness . . . is a struggle between the have and the have-not areas of the country with respect to natural gas. We call ourselves the United States of America: we are united in the Federal form of our Government in the national welfare, but this process of picking away at the very thing that makes America strong will destroy us. We are an economic unit and the interdependence of our section of America upon another will strengthen the land.

I am hopeful that the long, divisive debate over natural gas pricing will be over with this bill. It is time we make compromises and move ahead.

ENERGY TRUST FUND AND GAS TAX

The ad hoc committee proposal includes a gasoline tax of 4 cents per gallon and the establishment of a trust fund for energy research, mass transit, and reimbursement to States. The Rules Committee made in order an amendment to increase the tax to 5 cents per gallon with one-half of the revenues to go to mass transit and the other half to highway repair.

In my judgment, the original ad hoc provision is preferable. In June 1975, the House manifested support of a trust fund for energy research and development. If alternatives to import oil are to be developed, research and development must be provided with vigorous stimulation. The highway repairs contemplated by the substitute should be carried on by the several States which have the capacity to impose additional gasoline taxes on their own. A program of Federal taxes with distribution for State spending does not make for accountability.

In any event, a user charge on gasoline will serve to reduce consumption. The imposition of gasoline taxes for essential conservation purposes is preferable to higher untaxed income for the oil industry which has successfully eluded reasonable taxation—almost from the beginning.

AUTO EXCISE TAX

Only a brief glance at energy statistics leads to the inescapable conclusion that if our Nation is at all serious about conserving energy, we must start with the automobile; 39 percent of our annual petroleum consumption is gasoline, of which 96 percent is for the automobile. Gasoline consumption is a function of two variables: the miles driven, and the efficiency of the automobile. By improving the efficiency of our automotive fleet, we can conserve enormous amounts of energy.

An auto efficiency tax is designed to function at the time a consumer decides which automobile to purchase. By in effect reminding the consumer of the importance of gasoline consumption, the tax will serve to alter consumption patterns away from heavy, fuel-inefficient cars to more fuel efficient models. This approach has long been recommended by economists who have investigated the problem of automobile efficiency.

I proposed the first auto efficiency excise tax in May 1973. Since that time, endorsements of the proposal have multiplied, for example:

A Treasury Department staff study of August 1973 concluded:

This study recommends a fuel economy tax to be levied on automobiles beginning in 1975 . . . [T]hrough inducing manufacturers to produce more efficient cars and reducing automobile purchases of large cars, it would save increasing amounts of gasoline. By 1980, the savings should reach 1 million barrels per day of gasoline. [See remarks of Rep. Vanik, CR, October 24, 1973, E6735]

On December 15, 1973, Business Week magazine stated in an editorial:

The best way to promote fuel economy is simply to set the mileage standards and tax those auto models that fall short . . . Anyone who wanted to buy a muscle car or a big limousine would be at liberty to pay as much as $1,000 annually for the privilege of operating a vehicle that gets 8 miles per gallon. The high cost presumably would deter such waste, and the tax money could fund further energy research.

In January 1974, Fortune magazine, referring to auto efficiency legislation introduced by Representative VANIK in the 93d Congress, stated:

If Congress feels it must do something [to improve fuel economy] no proposal so far makes more sense than that of Charles A. Vanik of Ohio. The Vanik bill would impose progressively steep excise taxes on the basis of gas mileage.

The Committee of Economic Development, an independent research and educational organization of 200 businessmen and educators, in its December 1974 report, "Achieving Energy Independence," stated:

[The CED recommends] that a consistent national policy be developed to apply a higher tax to higher-fuel-consumption motor vehicles.

In commenting on the President's national energy plan the General Accounting Office noted—

In the past we have supported the concept of excise taxes on inefficient cars . . . In March 1975 we developed, in response to a Congressional request, a package of alternative energy proposals which included these measures.

In short, this proposed excise tax represents a needed complement to the fuel efficiency standards developed under the Energy Policy and Conservation Act.

SOLAR INCENTIVES

The issue of financial incentives for solar energy development is another facet of H.R. 8444 which has received a great deal of attention and research. According to the legislative compilation of the Congressional Research Service, the first bill to provide a tax incentive for solar heating and cooling equipment was H.R. 11543, introduced on November 15, 1973. This legislation, which I introduced, was accompanied by a companion by H.R. 11542 which required the use of solar heating and cooling equipment in Federal buildings to the maximum extent such equipment was economical and efficient. Both of these recommendations are contained in the National Energy Act as reported by the ad hoc committee. In addressing this issue on the House floor during consideration of the appropriations for the General Services Administration, I stated on August 1, 1973:

A substantial federal commitment to solar energy in office building construction will do more than test the winds of the marketplace. Important data will also be generated. Significant information on component and systems design and testing will prove invaluable to the future of solar energy in meeting the thermal requirements of buildings. This data will become an indispensable resource on solar energy for architects, design engineers, and builders.

The importance of Federal involvement in this area cannot be overstressed. A broadened commitment by the G.S.A. to implement energy conserving technologies and solar energy to all old and new buildings can serve as a catalyst to a revolution in building design and construction.

Mr. Chairman, although the time is late, we have not missed the opportunity to see a significant contribution from solar energy by the year 2000. This legislation finally begins to recognize the important scope of this new energy resource.

RECYCLING OF WASTE OIL

Finally, Mr. Chairman, I would like to bring the attention of my colleagues to a relatively smaller but important excise tax change proposed in this legislation. Specifically, section 2074 of H.R. 8444 alters the excise tax treatment of rerefined lubricating oil. The effect of the current excise tax treatment of rerefined oil is to impose an additional cost on rerefiners which virgin lube oil manufacturers do not pay. As the result, present law discourages recycling of waste oil.

In 1971, I introduced the National Oil Recycling Act. A portion of this legislation was enacted in the Energy Policy and Conservation Act. The tax aspects of the National Oil Recycling Act are embodied in the National Energy Act now before us. I am gratified that we continue to take steps to improve our Nation's capability to recycle lubricating oil. Each year over a billion gallons of waste oil is generated. Less than 8 percent is recycled. The rest creates a significant pollution problem. Millions of gallons of contaminated oil are burned, dumped down sewers, and poured into waterways. The excise tax change proposed here is a small one, but it removes an important obstacle to more extensive recycling efforts.

Mr. HILLIS. Mr. Chairman, the National Energy Act is intended to help ease the threatened critical energy shortage in this country.

An evaluation of the bill, however, reveals a devastating adverse impact on the development and transmission of electric power.

At a time when electricity should be counted on to replace energy from gas and oil, its ability to do so is severely hampered by this legislation.

Hopefully, an opportunity will be presented during debate on H.R. 8444 to amend those sections which are especially counterproductive to the announced objectives of the act.

Examples of needed amendments are:

Section 511 mandates the time of day and seasonal rates to all classes of customers. This section causes business and industry to subsidize energy for the homeowner. By providing cheap power for the individual, we encourage waste and inefficiency.

Section 512 prohibits utilities from recovering in their rate base any costs for promotional or institutional advertising at a time when the public needs to know why expensive scrubbers are used, why conservation is necessary, and so forth.

Sections 521, 522, and 523 require extensive bookkeeping procedures which were not asked for in the administration bill and which will require an army of Federal bureaucrats to study, interpret, and enforce.

Section 541 requires the interconnection, pooling, wheeling, and central dispatch of electrical power. It gives the FPC, or its successor agency, authority to order the operation of a centrally dispatched power pool and to order a utility to increase its transmission capacity. In other words, a utility may be man-

dated to ignore the needs of its investors and subscribers to fulfill the needs of some other utility that has not managed its affairs in an efficient manner.

One of the most crippling sections of the bill is section 548 which restricts the construction of any bulk power facility until unnecessary antitrust proceedings have taken place. There are cases in Michigan and Alabama, for example, where customers are deprived of much needed power for 7 to 9 years while the potential anticompetitive aspects of a proposed plant are being discussed. One certain way to insure the anticipated power shortages of the mid-1980's is to provide time-consuming and costly delays in the construction of new plants.

Section 546 requires an electric utility to sell energy to, and purchase energy from, any qualifying cogenerator. While the concept is good and while this is being done on a voluntary basis wherever it is economically feasible, it could create a prohibitively expensive mess of meters, records, and bookkeeping procedures where the generation of electricity is too expensive, too infrequent, or too minimal.

In general, H.R. 8444 does not address the most important aspect of the energy problem. It does not stimulate the necessary increase in energy sources to feed our expanding job requirements. H.R. 8444 will significantly increase the cost of available energy, inhibit the efforts of the private sector to solve the problem, delay the installation of much needed energy sources, increase the roll of Federal bureaucrats in the decisionmaking and operation of energy sources, and create stumbling blocks of redtape for those who need help, not hinderance, in doing their job.

Mr. Chairman, I have been asked if I would like the post office to deliver my electricity. My answer—no thanks.

Mr. ASHLEY. Mr. Chairman, I have no additional requests for time.

Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. BOLAND, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 8444) to establish a comprehensive national energy policy, had come to no resolution thereon.

GENERAL LEAVE

Mr. ASHLEY. Mr. Chairman, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on H.R. 8444, the National Energy Act.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed a bill and a joint resolution of the following titles, in which the concurrence of the House is requested:

S. 1935. An act to amend Public Law 95–18, providing for emergency drought relief measures; and

S.J. Res. 79. Joint resolution to amend the Federal Home Loan Bank Act.

REPORT ON RESOLUTION WAIVING CERTAIN POINTS OF ORDER AGAINST CONFERENCE REPORT ON S. 826, DEPARTMENT OF ENERGY ORGANIZATION ACT

Mr. BOLLING, from the Committee on Rules, submitted a privileged report (Rept. No. 95–558) on the resolution (H. Res. 731) waiving certain points of order against the conference report on the Senate bill (S. 826) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes, which was referred to the House Calendar and ordered to be printed.

AMENDING THE FEDERAL HOME LOAN BANK ACT

Mr. ST GERMAIN. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate joint resolution (S.J. Res. 79) to amend the Federal Home Loan Bank Act.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Rhode Island?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, will the gentleman from Rhode Island (Mr. ST GERMAIN) explain why we have to keep the term of office of this gentleman from expiring again?

Mr. ST GERMAIN. Mr. Speaker, I would be very happy to do so, if the gentleman will yield.

Mr. ROUSSELOT. I yield to the gentleman from Rhode Island.

Mr. ST GERMAIN. Mr. Speaker, Senate Joint Resolution 79 would extend the term of the expired Board member of the Home Loan Bank Board for an additional 15 days.

The administration has requested passage of this legislation in order that Mr. McKinney, who has just been approved as Chairman of the Home Loan Bank Board by the Senate, can get his private affairs in order, including the establishment of a blind trust for his personal holdings.

Further, without this resolution, there would be just one member of the Home Loan Bank Board until Mr. McKinney took the oath of office. Under this situation, the Home Loan Bank Board would not be in a position to process any applications for new charters or branches, or conduct any other business, since it requires at least two members to be present and voting on any issue which comes before the Board. With only one member on the Board, obviously, any matter which comes before the Board cannot be acted upon.

Finally, this resolution calls for a repealer of this extension on August 15, 1977, by which time Mr. McKinney will be sworn in as Chairman of the Home Loan Bank Board.

Mr. ROUSSELOT. Mr. Speaker, further reserving the right to object, does this gentleman have any good bank stock that he has to sell?

Mr. ST GERMAIN. Mr. Speaker, I have not been made privy to his portfolio, I might say to my good friend and colleague, the gentleman from California. If I receive any advice, I will be glad to inform the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I am very tempted to object just to see if the Government could operate with only one person on the Board. It might be a good idea.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

The Clerk read the Senate joint resolution, as follows:

S.J. RES. 79

Joint resolution to amend the Federal Home Loan Bank Act

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 17(a) of the Federal Home Loan Bank Act, 12 U.S.C. 1437, as amended, is amended by adding the following immediately at the end thereof: "Upon the expiration of the term of office of a member of the Federal Home Loan Bank Board, such member shall continue to serve until a successor is appointed and has qualified, but not to exceed forty-five days.".

SEC. 2. The last sentence of section 17(a) of the Federal Home Loan Bank Act is repealed, effective August 15, 1977.

SEC. 3. This resolution shall take effect on July 1, 1977.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, an a motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON ARMED SERVICES TO SIT ON TOMORROW DURING 5-MINUTE RULE

Mr. PRICE. Mr. Speaker, I ask unanimous consent that the Committee on Armed Services may be permitted to sit on tomorrow, Tuesday, August 2, 1977, during the 5-minute rule.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, will the gentleman explain to us why this request is necessary?

Mr. PRICE. Mr. Speaker, if the gentleman will yield, this request is made as a matter of urgency.

On tomorrow at 10 o'clock a.m., the Committee on Armed Services is scheduled to hear Defense Secretary Brown, whose testimony is vital to our consideration of the fiscal 1977 authorization bill on the cruise missile. We are making every effort to move rapidly on that meas-

ure in order that we may report to the House in early September.

Mr. ROUSSELOT. Mr. Speaker, further reserving the right to object, can the gentleman assure us that this request is being made for hearing purposes only?

Mr. PRICE. That is correct.

Mr. ROUSSELOT. The committee is not marking up any bill?

Mr. PRICE. Mr. Speaker, I can give the gentleman that assurance.

Mr. ROUSSELOT. Mr. Speaker, I appreciate the gentleman's reply, and I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

HOUR OF MEETING ON TOMORROW

Mr. DANIELSON. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 10 o'clock a.m. on tomorrow, August 2, 1977.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

HOUR OF MEETING ON WEDNESDAY, AUGUST 3, 1977

Mr. DANIELSON. Mr. Speaker, I ask unanimous consent that when the House adjourns on tomorrow, Tuesday, August 2, 1977, it adjourn to meet at 10 o'clock a.m. on Wednesday, August 3, 1977.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

REQUEST FOR PERMISSION TO DISPENSE WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. DANIELSON. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday of this week.

The SPEAKER. Is there objection to the request of the gentleman from California?

Mr. ROUSSELOT. Mr. Speaker, I object.

The SPEAKER. Objection is heard.

RESIGNATION AS MEMBER AND APPOINTMENT AS MEMBER OF SELECT COMMITTEE ON AGING

The SPEAKER laid before the House the following resignation as a member of the Select Committee on Aging:

WASHINGTON, D.C., *August 1, 1977.*

Hon. THOMAS P. O'NEILL,
Speaker of the House,
House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: I hereby respectfully submit my resignation from the House Select Committee on Aging.

With best wishes.

Sincerely,

BOB WILSON,
Member of Congress.

The SPEAKER. Without objection, the resignation is accepted.

There was no objection.

The SPEAKER. The Chair appoints as a member of the Select Committee on Aging the gentleman from Ohio (Mr. REGULA) to fill the existing vacancy.

DISHONORING THE DEAD

(Mr. GONZALEZ asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GONZALEZ. Mr. Speaker, a story in the Associated Press on Saturday, repeated and elaborated on a lie and canard that Lyndon Johnson lived with throughout his career in the Senate, throughout his service as President, and that followed him like a shadow. Now that he is dead, he is dishonored by a story that repeats the lie, the claim that Lyndon Johnson "stole" an election from Coke Stevenson in 1948.

Now comes a character who swears that as election judge he certified phony votes for Lyndon Johnson. What kind of credibility does this man have? Well, you might say, it is a kind of deathbed confession—the old man wants to clear his conscience. But this man was one of the minions of the most corrupt political machines in Texas, and perhaps anywhere else, the machine of the Parr family. He was what we used to call a pistolero—a man who would not hesitate to do anything for his leader, his boss, his patron. You could not help but observe that this character was a pistol-toter, and is pictured that way in the newspapers. Does he have more to clear his conscience of than perjury? How about theft from the public purse—the specialty of the Parr machine. How about murder?

This AP story claims that Lyndon Johnson called Archer Parr to say that he needed 200 votes to win the election against Coke Stevenson. How did he know? Did Lyndon Johnson know what every ballot box in Texas contained?

The AP story quotes a man named Kellis Dibrell, identifies him as an ex-FBI agent, and says that this man Dibrell looked at the ballot box returns in question. What the story does not say is that Dibrell was not an FBI agent in 1948. He was, in fact, the Bexar County campaign manager for Lyndon Johnson's opponent, and later in life, and today, is a dyed-in-the-wool Republican. The only thing a guy like Dibrell wants in this life is to excuse the loss of the election that he, in part, was responsible for losing. Dibrell and all the other purveyors of the box 13 lie never talk about the fact that Coke Stevenson went into the famous election with a better than 70,000 vote lead over Lyndon Johnson. Did Johnson steal all those votes? No; no one says that he did.

Why should we take the word of an ex-pistolero, and a self-admitted perjurer at that, to substantiate anybody's claim on anything? Why should anyone accept the word of Johnson's opponent? Nobody should be so innocent as to believe, as AP would have us believe, that even a man of Johnson's formidable talent and skill would know, out of thousands, the hundreds of thousands, of votes cast, that 200 would make the critical difference?

But worst of all is the inference in this story that Kellis Dibrell investigated box 13 as an FBI agent, or as some disinterested party, when he was in fact one of the principal managers, maybe the principal manager for Stevenson.

Lyndon Johnson is dead, and the AP story does nothing to establish truth; it only repeats an old, old lie, and it dishonors the memory of a man who surely deserves better. We might expect this kind of story in the sensational weekly tabloids, to exploit and degrade every well-known name in the land—but surely, surely we deserve more from one of the foremost news organizations in the land.

Lyndon Johnson, if he were alive today, would be hurt by this repetition of the lie that dogged his life and blighted his career—but he would laugh and say that in recent years, he only saw the press from the open end of the gun barrel. Sadly for him, the press still is holding the gun on Lyndon Johnson, held this time by an old member of an old and notorious gang, a witness no more credible than any other small time hood, down on his luck, and without a patron now that the old organization is gone.

I do not believe that Lyndon Johnson stole any election, in 1948 or any other time, and I doubt that anyone will ever show that he did. It is long past time to let that lie rest, and let Lyndon Johnson be judged on what we know he did—not on what old opponents and old pistoleros think or allege, but do not know and cannot prove.

SOLID WASTE DISPOSAL ACT NEEDS AMENDMENT

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. FINDLEY) is recognized for 5 minutes.

Mr. FINDLEY. Mr Speaker, I am introducing today an amendment to the Solid Waste Disposal Act to remedy deficiencies in the existing legislation regarding hazardous waste management. The Congress addressed itself to the hazardous waste problem most recently in the Resource Conservation and Recovery Act of 1976—Public Law 94-580. In that act the Congress provided authority to the Administrator of the U.S. Environmental Protection Agency to develop plans to regulate the management of hazardous wastes in the United States.

Prior to this most recent legislation, the Congress, in the Resource Recovery Act of 1970—Solid Waste Disposal Act, section 212, Public Law 89-272—required that the U.S. Environmental Protection Agency undertake a comprehensive nationwide investigation of the storage and disposal of hazardous wastes, and directed EPA to develop a "plan for the creation of a system of national disposal sites for the storage and disposal of hazardous wastes." Although directed to establish a system of national disposal sites—NDS's—EPA determined that there were several other alternative means to solving the disposal problem of hazardous waste. Although EPA found

that the magnitude of the hazardous waste problem was larger than originally anticipated and that current disposal practices were inadequate, and although citizen opinion favored national regional processing facilities for hazardous wastes, the Environmental Protection Agency ultimately recommended to Congress in 1974—Report to Congress, disposal of hazardous wastes, U S. Environmental Agency, 1974—that "a regulatory approach is best for the achievement of hazardous waste management objectives."

In other words, EPA found that a small private hazardous waste management industry had emerged in the United States, that EPA believed that "the private sector will respond to a regulatory program, and that no governmental actions to limit the uncertainties in private sector response" were appropriate at that time.

Therefore, the approach contained in the 1976 Resource Conservation and Recovery Act established national authority only to regulate hazardous waste disposal and to formulate standards including but not limited to the following areas: Records maintenance, reporting, waste treatment, storage, disposal, design and location is waste facilities, damage contingency plans, and operation maintenance. The Administrator was directed to promulgate guidelines to allow States to develop their own hazardous waste programs pinned primarily upon private enterprise ownership and management of waste disposal facilities.

Although the Administrator will not publish standards until October, 1978, already deficiencies have appeared in the existing legislation. My investigation into this matter stemmed from the events surrounding the location of a private enterprise hazardous waste facility in the 20th Congressional District of Illinois which I represent.

A private company, The Earthline Corp., division of SCA, Inc., developed a waste disposal facility employing the latest state of the art technologies for hazardous waste treatment, storage, and disposal. In some respects, the site approaches the ideal solution for hazardous waste management in the 20th century. Yet, unaccountably, Earthline chose to locate this dangerous hazardous materials disposal site partially within the city limits of Wilsonville, Ill., and on top of an abandoned coal mine. Naturally, the local citizens have objected strenuously. In the controversy which developed over the location of the site, the following deficiencies in the Federal legislation were discovered:

First, there is no assurance that treatment, storage, and disposal of hazardous wastes will comply with the Safe Drinking Water Act.

Second, there is no requirement that the location of hazardous waste disposal sites be safely distant from inhabited areas, especially residential neighborhoods.

Third, there is no specific instruction that the Administrator should require that sites be located on land which is suitable with respect to geologic and soil conditions.

Fourth, there is no specific requirement that proper maintenance and storage of hazardous waste after termination of disposal activities would be assured over an extended period of time.

Fifth, there appears to be no satisfactory requirement insuring that sites used previously for the disposal of hazardous wastes will not be subjected to incompatible land uses.

Sixth, there is no specific requirement that the public be given an opportunity to make their views known to appropriate officials before a decision is made on the location of a hazardous waste management site.

Seventh. There is no specific requirement that, in case a facility is found to be improperly located and in itself hazardous to area residents, its operation be terminated and the contents stored there moved to another location.

Eighth. Last and most important, there is no adequate assurance that sufficient hazardous waste disposal sites will be developed in the areas of the country where they are most needed to handle the ever increasing amounts of hazardous wastes that are now being dumped illicitly.

Again, although the Congress specifically directed that the U.S. Environmental Protection Agency plan for a system of national disposal sites, EPA opted for a regulatory program feeling that adequate private response would occur to provide well managed and sufficient hazardous waste disposal sites.

In the course of my investigation of the problems stemming from the Earthline site at Wilsonville, Ill., I came to the conclusion that the regulatory approach will not work. In fact, in its 1974 report, EPA acknowledged that its option for a regulatory approach could be affected adversely by the lack of private capital flow and problems involving facility location, user charges, and long-term care of the storage site. These problems have now become the major focus of the hazardous waste disposal program nationally, and EPA's regulatory approach has proven to be wholly incapable of solving them.

It is for these reasons that I have drafted legislation to grant to the Administrator of the U.S. Environmental Protection Agency the needed authority:

To select future locations for hazardous material disposal facilities on public lands meeting all appropriate standards—public lands would include those already in existence, lands purchased for the purpose, or those donated to the Government by private operators;

To establish at least one such location in each State; and

To allow the private sector to continue to operate existing appropriately located sites meeting all relevant regulations under appropriate bond, and after the facilities are no longer in use, require that they be donated to the public forever to insure that they will be adequately maintained and that incompatible land uses will not be allowed.

Last, my amendment provides that the free movement of hazardous wastes from State to State will not be impaired. I have included this provision to insure that if disposal problems exist in one State and a suitable disposal facility is in a nearby State, proper transport and disposal can occur unhampered.

This legislation offers practical, effective means to achieve the goal of proper recovery and disposal of hazardous wastes in conformity to the intent of Congress in enacting the 1976 Resource Conservation and Recovery Act. I recommend it to my colleagues for their consideration and support.

ONE HUNDRED FIFTY-FOUR REPRESENTATIVES COSPONSOR THE CONGRESSIONAL PAY RAISE DEFERRAL ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 10 minutes.

Mr. WHALEN. Mr. Speaker, on the first day of this Congress, January 4, the Congressional Pay Raise Deferral Act, H.R. 1365, was introduced. Joining me as original cosponsors were NED PATTISON, DON PEASE, and NEWT STEERS. In the time since then, our legislation has attracted considerable attention in the House and in the news media.

Today we are pleased to reintroduce the Congressional Pay Raise Deferral Act with 58 new cosponsors. This brings to 154 the total number of cosponsors in the House—more than 1 out of every 3 Members.

The legislation simply provides that any increase in congressional salary shall be deferred until the Congress following the one in which it is approved. This means that a general election would fall in the time between approval and receipt of the pay raise.

This simple change in procedure is needed in order to eliminate the conflict of interest that is now present. For it is unquestionably an inherent conflict when we are called upon to make a salary decision that is to our immediate and personal benefit or detriment. Yet, this is the way Congress operates today.

This uncomfortable situation was first noticed in 1789 by James Madison. He described the matter in this way:

> There is seeming impropriety in leaving any set of men without control to put their hand into the public coffers, to take out money to put in their pockets; there is seeming indecorum in such power, which leads me to propose a change . . . that no law, varying the compensation shall operate until there is a change in the Legislature; in which case it cannot be for the particular benefit of those concerned in determining the value of the service.

Madison proposed an amendment to the Constitution, providing for deferral of congressional pay until the next session. It was adopted by both Houses of Congress. Although seven States approved the amendment, the ratification process was never completed because of the new Nation's rush to adopt the Bill of Rights.

Today, 37 States have provisions in their constitutions preventing State legislators from raising their salaries during their term of office. One of those States is Georgia. And the former Gov-

ernor of Georgia, Jimmy Carter, is an advocate of the pay-raise deferral concept.

In an article carried by United Press International on February 18, President Carter was quoted as saying that he had only one reservation about the recent salary increases recommended by the Quadrennial Commission. He noted:

In the future we should not ever let any salary increases go into effect until after the next general election.

Several days later, the Boston Globe quoted the President:

In the future any increases should benefit the members of following Congresses.

David Cohen, president of Common Cause, has taken a similar position. While supporting the recent pay raise, he has called for various reforms of the process by which congressional salary is adjusted. He places congressional pay-raise deferral at the head of the list of needed changes.

The Congressional Pay Raise Deferral Act was first introduced in 1975 by then-Congressman Charles Mosher. In 1976 it was passed by the Senate, in the form of an amendment to the Hatch Act reform bill, which ultimately died at the end of the last Congress. No action has yet been taken on congressional pay-raise deferral by the House.

Last February, the House Post Office and Civil Service Subcommittee on Presidential Pay Recommendations held hearings on the broad issue of top-level Federal pay, including that of Congress. According to the subcommittee's report, about 30 Representatives came to the panel and advocated action on the pay raise deferral concept.

The subcommittee, then chaired by BILL FORD, issued its unanimous report the following month. It included this recommendation:

The subcommittee agrees that pay adjustments for Members should be deferred until the Congress next following that in which they are considered. Such a practice would lessen the inherent and inescapable conflict of interest charges which Congress faces with respect to establishing its own rate of pay.

I am pleased to note that the House leadership also appears to have taken an increased interest in this idea.

Admittedly, somewhat at my instigation, there was considerable discussion of the Congressional Pay Raise Deferral Act in late June, during the debate over the legislative appropriation bill. During that debate the majority leader, JIM WRIGHT, said:

It is my understanding that the Committee is prepared to report out (the congressional pay raise deferral) proposal. If I am correct, and if the Committee does report out that proposal, it would be the purpose of the leadership to schedule it. As a matter of fact, the Speaker in his press conference (on June 29) indicated that it was expected that the proposition would come before the House at a later date this session.

Then, in his stirring remarks at the close of the debate, the Speaker, TIP O'NEILL, said:

With regard to the Whalen amendment, I have talked with Chairman Solarz and members of the subcommittee, and we will have that issue on the floor before this session is over.

Now, together with NED PATTISON, DON PEASE, and NEWT STEERS, I again am contacting STEVE SOLARZ, whose subcommittee has jurisdiction over the Congressional Pay Raise Deferral Act. We are hopeful that some action will be taken soon after the August recess, to fulfill the pledge made by the Speaker.

For the benefit of my colleagues, I am listing the cosponsors of the Congressional Pay Raise Deferral Act. Not all of these Members are 100-percent satisfied with the legislation in its present form, but all support the concept of congressional pay raise deferral.

The following are the 154 cosponsors of our bill. They are listed by State. An asterisk appears next to the name of each State which has a provision in its constitution barring State legislators from benefiting from a salary increase during the session in which it is proposed.

MEAT INSPECTION AND TRUTH IN LABELING ACT OF 1977

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. KRUEGER) is recognized for 5 minutes.

Mr. KRUEGER, Mr. Speaker, today I introduce legislation which I hope will ultimately equalize imbalances in the meat industry and improve the general health of the population. This legislation, the Meat Inspection and Truth in Labeling Act of 1977, will be of great benefit to both consumer and meat producers, and relies upon free market trade mechanisms for competitive regulation.

This bill will provide that all imported beef sold at the retail level be labeled as such. Furthermore, it requires that inspection standards for imported beef more closely approximate the standard uses for domestic beef, and that costs incurred in administration of the bill be borne by foreign producers rather than the American taxpayer.

The American consumer has a right to know whether or not the meat he purchases is imported. It is the responsibility of a democratic government to supply the people with the information necessary to make a reasonable decision to purchase imported meat. My bill requires that every piece of imported meat sold to an ultimate consumer be labeled as such. The choice, then, is where it should be—with the consumer.

Currently a great deal of imported meat reaches the U.S. consumer without having undergone the same meticulous scrutiny as domestically produced meat, whether in the form of fresh, frozen or processed meat or as live cattle. In the last one-third of 1976 alone, over one-fourth of a million head of Mexican cattle were brought into the United States subject to only minimal inspections.

As the elected Representative of many cattle producers, and as a cattle rancher myself, I find this outrageous. Texas has by far the worst brucellosis problem of any State in the Union, yet there are inadequate safeguards to prevent the further spread of this damaging disease from imported cattle. My bill would require that all live cattle being imported into the United States be tested specifically for brucellosis. The Secretary of Agriculture would be required to conduct a study and report to Congress on the impact the importation of live cattle has on the domestic brucellosis problem.

Besides requiring that foreign meat be subjected to the same inspection standards as domestic meat, this legislation increases to two the mandatory yearly inspections of foreign slaughterhouses. Furthermore, the foreign government is required to certify that the meat has in no way been adulterated, and that the foreign inspectors meet the same criteria as our domestic inspectors. The bill further provides that a minimum of one-fourth of all incoming meat be reinspected upon entry into the United States. This spot checking is designed to both verify the integrity of the importer and to provide a last safety measure for the protection of the American consumer.

Finally, this legislation requires that all costs of inspecting and labeling meats be borne by the foreign producers; no meat products can be released from customs until the fee apportioned by the Secretary of Agriculture has been paid.

The Meat Inspection and Truth in Labeling Act of 1977 will benefit both the domestic consumer and the cattle producer. The consumer is provided with the proper information to choose his product. All costs to the taxpayer for meat inspection are removed while the quality of inspection is improved. For the benefit of all Americans this well-balanced legislation certainly merits expedient consideration by this Congress.

H.R. 8684

A bill to require that meat and meat food products made in whole or in part of imported meat be subjected to certain tests and that such meat or products be identified as having been imported; to require that the cost of conducting the inspection and labeling of imported meat and meat food products be borne by the importers of such articles; and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 20(a) of the Federal Meat Inspection Act (21 U.S.C. 620(a)) is amended by inserting "(1)" after "(a)" and by adding at the end thereof the following:

"(2)(A) Any carcass, part of a carcass, meat, or meat food product (or package or container thereof) described in paragraph (1) and imported into the United States and any meat food product (or package or container thereof) made in whole or in part of imported meat shall be labeled 'imported' or 'imported in part,' as the case may be. This paragraph shall not apply if the meat or meat food product, or its package or container, is marked and labeled to show the country of origin as required under regulations referred to in paragraph (1).

"(B) If any person other than the ultimate consumer cuts any carcass, part of a carcass, meat, or a meat food product into pieces (or breaks a package or container thereof), and such carcass, part of a carcass, meat, meat food product, package, or container is marked or labeled as required by paragraph (1) or subparagraph (A) of this paragraph, such person shall affix a label to each piece of such carcass, part of carcass, meat, or meat food product (or to each package or container thereof) to provide the information required by subparagraph (A). In applying this paragraph for purposes of this Act, the term 'label' includes 'labeling' as defined in section 1(p).

"(3) No carcass, part of carcass, or meat or meat food product (or package or container thereof) described in paragraph (1) may be imported into the United States unless—

"(A) the animal from which such carcass, part, or meat or meat food product was obtained has been examined and inspected, at the establishment in which such animal was slaughtered, in the same manner as animals are examined and inspected in the United States under this Act;

"(B) the establishment described in subparagraph (A) and the government of the country in which such establishment is located allow the Secretary or inspectors appointed by the Secretary to inspect, at such times as the Secretary may determine but not less than twice per year, the facilities of such establishment in the same manner as establishments in which animals are slaughtered in the United States are inspected under this Act; and

"(C) the government of the country from which such product is being imported has certified to the Secretary that such product has been examined and inspected in accordance with the provisions of this Act and regulations issued by the Secretary under this Act and that such product is not adulterated.

Examinations and inspections required by subparagraph (A) shall be conducted by inspectors appointed for that purpose by the government of the country in which the concerned establishment is located under the same criteria as inspectors are appointed by the Secretary to carry out such purpose in the United States.

"(4) For the purpose of assuring that all carcasses, parts of carcasses, meat, or meat food products described in paragraph (1) are not adulterated, the Secretary shall provide that every fourth such carcass, part of carcass, meat, or meat food product shall be inspected upon entry into the United States by inspectors appointed by the Secretary for that purpose.

"(5) The Secretary, through persons appointed by the Secretary, shall, by all known and effective methods, test for brucellosis all imported cattle which are live at the time of their importation into the United States. Such tests shall be conducted at such places and at such times as the Secretary may designate.

"(6) Within one year after this paragraph becomes effective, the Secretary shall conduct a study of the importation of live cattle into the United States and of the effects of such importation upon the number of cases of brucellosis occurring in the United States and shall prepare and submit a report to the President and both Houses of the Congress on the results of such study. Such report shall include the Secretary's findings and conclusions concerning the relationship, if any, between such importation and brucellosis in the United States and his recommendations, if any, concerning the manner in which the regulation of such importation can be improved in order to provide additional protection for the health of individuals and cattle in the United States.

"(7)(A) No carcass, part of a carcass, meat, or meat food product (or package or container thereof) described in paragraph (1) and imported into the United States shall be released from customs custody unless the importer of record pays to the customs officer concerned an assessment in an amount or at a rate which the Secretary determines is necessary to cover the costs to the Secretary of examining, inspecting, and labeling such carcass, part of a carcass, meat, or food product under this subsection.

"(B) In establishing the level or rate of assessments to be imposed under this paragraph, the Secretary shall take into consideration the volume of imports into the United States, the value thereof, and such other factors as he or she deems appropriate in order to achieve a fair and equitable allocation of such assessments among importers."

AMERICANS MUST SUPPORT CZECHOSLOVAKIAN ASPIRATIONS FOR FREEDOM

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, August 21 marks the ninth anniversary of the unprovoked invasion of Czechoslovakia in 1968. This outrageous act, led by Soviet totalitarian oppressors for the sole purpose of suppressing all of Czechslovakia's moves toward freedom and liberty, repudiated and negated almost every article in the United Nations Declaration of Human Rights.

This act serves as a bitter reminder to the world that there is no place for freedom and human dignity in the distorted ideology of the merciless and bar-

baric Kremlin leadership. Today, Soviet tyranny and brutality still rule in the captive nation of Czechoslovakia and we as Americans must continue to do all we can to support the Czech people in their sincere desire for self-determination and freedom from outside domination. August 21 is a reminder to the freedom-loving people of the world that we must maintain our vigilence and condemn such unconscionable acts on the part of a government which does not even respect its own constitutional guarantees of human freedom.

Mr. Speaker, at this point in the RECORD, I wish to include an appeal by the Czechoslovak National Council of America in commemoration of this tragic day in the history of freedom-loving peoples everywhere:

[From Czechoslovak National Council of America]

FREEDOM IS INDIVISIBLE

On this sad occasion of the ninth anniversary of the brutal Soviet-led invasion and occupation of peaceful and freedom-loving Czechoslovakia, we American citizens of Czech, Slovak and Subcarpatho-Ruthenian descent, again remind the entire world of this Soviet violation of key principles of international law incorporated into the Charter of the United Nations:

The brutal Soviet aggression and occupation:

(1) violated the sovereignty of a member state of the United Nations (Article 2, Section 1);

(2) was carried out in violation of Article 2, Section 4, which prohibits the use of military force in the relations between individual members of the United Nations;

(3) violated the principle of self-determination of peoples (Article 1, Section 2);

(4) was in conflict with Article 2, Section 7, which prohibits outside intervention in matters essentially within the domestic jurisdiction of any state;

(5) was in conflict with a number of resolutions of the General Assembly of the United Nations, particularly with Resolution 2131 (XXI) adopted at the meeting of December 21, 1965, upon the Soviet Union's own motion, prohibiting any intervention in the domestic affairs of any state and guaranteeing its independence and sovereignty.

The continued Soviet occupation of Czechoslovakia is another crime against the right of a small country to determine its own destiny and aspirations. The invasion was an intervention by the forces of reactionary communism to prevent the Czechs and Slovaks from establishing their own social order that did not endanger anyone and sought to contribute to the building of bridges across the discords of a divided world and to lend aid to a better understanding and cooperation among all nations on the basis of true progress and humanity.

The people of Czechoslovakia have not resigned themselves to these aggressive plans of Moscow. The day of August 21, is being commemorated in Czechoslovakia as a Day of Soviet Shame in a mighty and disciplined resistance against Soviet pressure. We are joining our friends in Czechoslovakia in asking the entire civilized world to support the people of Czechoslovakia in their effort to achieve "the withdrawal of Soviet troops from Czechoslovakia."

H.R. 8410—LABOR REFORM ACT OF 1977

The SPEAKER. Under a previous order of the House, the gentleman from Michigan (Mr. FORD) is recognized for 5 minutes.

Mr. FORD of Michigan. Mr. Speaker, on July 18 President Carter transmitted to the Congress his proposal to make our laws which govern labor-management relations work more efficiently, quickly and equitably. These proposals were embodied in H.R. 8410, the Thompson-Williams labor reform bill, which was introduced the very next day.

As a member of the Thompson Labor-Management Relations Subcommittee which is presently conducting hearings on H.R. 8410, and as one who has advocated this type of legislation for several years, I am happy that it has received the President's support, and I commend both the President and my distinguished chairman (Mr. THOMPSON) for efforts on behalf of this badly needed legislation.

Mr. Speaker, one of the major problems addressed by H.R. 8410 is election delays. President Carter, in his message to the Congress said:

Unnecessary delays are the most serious problem. In even the simpler cases, the NLRB typically takes almost two months to hold an election to determine whether workers want union representation. The enforcement of Board decisions is also subject to unnecessary delay: lengthy proceedings before the Board and extended litigation can sometimes delay final action for years.

Mr. Speaker, the large majority of representation elections handled by the National Labor Relations Board every year are dealt with in an enlightened and civilized manner by all parties involved. These "consent" elections run smoothly and are almost without fail held within 45 days of the date of petition for election.

However, many of the elections held in 1976 required a preliminary hearing. In these instances, the time between petition and election increased dramatically. The median time lapse increased to 75 days—a full month more than needed for the most complicated "consent" election. In the cases where a decision from the Labor Board was deemed necessary, the delay increased, even more alarmingly, to a median of over 9 months.

In some of these delay elections there were legitimate issues which required clarification. It was not necessary, however, for the parties involved to be forced to wait from 2½ months to over a year for that clarification. This period of delay is a breeding ground for dissension and bad feeling. Neither labor nor management can be reasonably expected to function normally while an issue as vital as a representation election is held in limbo by unnecessary bureaucratic delay. This delay often functions to foster tension and anxiety, while further separating both management and labor. The detrimental effect this situation can have on productivity, efficiency and labor-management relations is obvious.

Even more anathematic, however, is the all too frequent case of an employer deliberately instigating delay through the bureaucratic processes of the Board for the sole purpose of interfering with his employees' right to organize. These unscrupulous employers have quickly learned the rules of the game. The longer they talk, the longer they waffle, the more time they have to wear down their workers, to divide their ranks and effectively destroy the union's majority status.

The Labor Board, by its actions, has shown itself to be the perfect tool for these employers' tactics. Testimony of the United Mine Workers before the Subcommittee on Labor-Management Relations illustrates how the processes of the NLRB can be used to delay an election:

Delay is most frequently accomplished by requesting a formal hearing once the union has petitioned the NLRB for an election. A formal hearing is scheduled at either party's request, whether substantive issues exist or not. In fact, some employers insist on a hearing and then stipulate to all the facts of the case. Others are more imaginative and dream up issues of no relevance, merely to bog down a record. After a hearing, there is time for the filing of briefs, and, of course, extensions of time freely granted for the filing of briefs. Then the regional director must issue a decision based on the record of the hearing. But even a decision issued a week after briefs are received, which rarely happens, can only result in an election 25 to 30 days after that.

After this process there remains the ability of a time consuming appeal to the Board.

The consequence of these delays is often that the union loses the election. It is during this period of delay when most unfair labor practices occur. This is the period of discriminatory and illegal discharges, illegal selective increases in wages and benefits and other forms of coercive activities engaged in by employers.

The NLRA has, unfortunately, become a tool of unscrupulous employers in their attempts to stop working people from exercising their rights. There is no reason the NLRB should not be able to resolve disputed election issues within 45 or at most 75 days. After more than 40 years experience in this field, there cannot be too many new, novel or unprecedented election issues. Even if such issues do arise, there is no excuse for postponing the rights of both employees and employers to an election for 4, 8, or even 12 months while a decision is made. This situation is unacceptable to anyone with a sense of justice.

Changes to expedite the election process must be made. We must deny the opportunity for conscienceless employers to distort and pervert the National Labor Relations Act into a tool to deny working men and women their rights. The enactment of the Thompson-Williams labor reform bill would bring about the long overdue changes in the labor laws to insure quick and democratic process when workers seek representational elections.

ACTS ADOPTED BY COUNCIL OF DISTRICT OF COLUMBIA

The SPEAKER. Under a previous order of the House, the gentleman from Michigan (Mr. DIGGS) is recognized for 10 minutes.

Mr. DIGGS. Mr. Speaker, the Council of the District of Columbia has adopted a number of acts since last I reported to the House on June 13, 1977.

The House Committee on the District of Columbia has in its files Council Committee reports and copies of the Council's acts, if Members desire further information.

The material follows:

ACTS ADOPTED BY THE COUNCIL OF THE DISTRICT OF COLUMBIA AND TRANSMITTED TO THE SPEAKER JUNE 8, 1977–JULY 31, 1977

Act 2–30—Electrical Code—To update the 1972 Electrical Code and (1) provide practical safeguards for buildings, structures, and the general public from electrical hazards arising from the use of electricity, and (2) establish regulations for installation, maintenance and repairing of electrical wiring and equipment in all but U.S. public buildings and embassies and chanceries. Adopted by the Council May 3, 1977. Signed by the Mayor May 24, 1977. Transmitted to the Speaker July 11, 1977.

Act 2–40—Building Code, Second Amendment—To update the 1972 Building Code and (1) establish regulations governing the construction, alteration and repairing of all buildings, signs, and premises; (2) clarify penalties for violations; (3) ensure continued protection and safety of all buildings and structures; and amend regulations re requirements for smoke detection devices in residential buildings. Adopted by the Council May 3, 1977. Signed by the Mayor May 25, 1977. Transmitted to the Speaker July 11, 1977.

Act 2–44—Charter Amendments Procedures Act of 1977, Initiative, Referendum and Recall—To direct the Board of Elections and Ethics to provide procedures for the conduct of an election in November, 1977, to consider amendments to the Charter of the District of Columbia. Adopted by the Council May 17, 1977. Signed by the Mayor June 8, 1977. Transmited to the Speaker June 30, 1977.

Act 2–48—Tax Amendments—To (1) amend the Income and Franchise Tax Act of 1947 (61 Stat. 331; D.C. Code, Tit. 47, Sec. 1550) to disallow deductions from gross income of deed recordation taxes and motor vehicle registration fees; and (2) amend Section 6 of Title II of the Act of August 17, 1937 (D.C. Code, Tit. 47, Sec. 1806) to require that the 2 percent tax on insurance companies be paid in installments. Adopted by the Council on May 31, 1977. Signed by the Mayor June 21, 1977. Transmitted to the Speaker July 13, 1977.

Act 2–49—Advisory Neighborhood Commissions, Vacancies On—To amend the Advisory Neighborhood Council Act of 1975 (effective Oct. 10, 1975; D.C. Law 1–2) in order to allow for appointment of individuals by the Advisory Neighborhood Commissions (rather than by special elections) to fill vacancies on the Commissions. Adopted by the Council May 31, 1977. Returned by Mayor without approval. Transmitted to the Speaker June 30, 1977.

Act 2–51—Revenue Recovery Act of 1977—To provide for payment of money rewards to informants giving information leading to collection of taxes, penalties, or interest from tax law violators. Adopted by the Council on June 14, 1977. Signed by the Mayor July 5, 1977. Transmitted to the Speaker July 13, 1977.

Act 2–52—Water Conservation Act—To amend the Plumbing Code (Regulation 72–19, enacted August 26, 1972) to require the installation of water conservation devices in all new plumbing fixtures. Adopted by the Council on June 14, 1977. Signed by the Mayor on July 6, 1977. Transmitted to the Speaker July 13, 1977.

Act 2–53—Prevention of Child Abuse and Neglect Act of 1977—To (1) amend the mandatory reporting and other laws re child neglect and abuse, and investigation thereof; (2) establish a central registry of child abuse reports; and (3) establish procedures for terminating parental rights in certain situations. Adopted by the Council on May 31, 1977. Signed by the Mayor July 6, 1977. Transmitted to the Speaker July 13, 1977.

Act 2–54—Soil Erosion and Sedimentation Control Act of 1977—To amend Title 8 of the D.C. Health Regulations to regulate land distributing activities to prevent (1) accelerated soil erosion and sedimentation, and (2) sediment deposit in the Potomac River and its tributaries, including the D.C. sewer system. Adopted by the Council on June 14, 1977. Signed by the Mayor July 11, 1977. Transmitted to the Speaker July 18, 1977.

Act 2–56—Advanced Life Support Act of 1977—To amend the Good Samaritan Act (1) to promote the availability of advanced emergency medical care to needy persons by implementing communications and instructions between physicians at hospitals or clinics and paramedics on the scene, and (2) to establish a program for certifying emergency medical technicians/paramedics. Adopted by the Council on June 28, 1977. Signed by the Mayor July 8, 1977. Transmitted to the Speaker July 18, 1977.

Act 2–59—Health Service Rates Act of 1977—To amend Title IV of the License Fees and Charges Act of 1976 (effective Sept. 14, 1976; D.C. Law 1–82) to increase rates charged for medical care and mental health services provided to patients at D.C. General Hospital, D.C. Village, and Glen Dale Hospital. Adopted by the Council June 14, 1977. Signed by the Mayor July 13, 1977. Transmitted to the Speaker July 18, 1977.

Act 2–60—Poundmaster Fee Act of 1977—To amend the Revenue Act of 1878 (20 Stat. 173; D.C. Code, Tit. 47, Sec. 2001) levying a dog tax, to increase the poundmaster's fee (from $2 to $25) for reclaiming dogs. Adopted by the Council on June 28, 1977. Signed by the Mayor on July 18, 1977. Transmitted to the Speaker July 27, 1977.

THE NEED FOR MENTAL HEALTH INSURANCE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 15 minutes.

Mr. GONZALEZ. Mr. Speaker, during 1973 there were 5,475,000 patient care episodes in mental health facilities, a rate of 2,631 per 100,000 population.

Of the total episodes, 1,697,250, or 31 percent, were inpatient episodes; 3,558,750, or 65 percent, were outpatient episodes; and 164,250, or 3 percent, were day treatment episodes. The largest proportion of the total episodes were accounted for by freestanding outpatient clinics, accounting for 26.1 percent of the total episodes, followed by federally funded community mental health centers—22.9 percent—State and county mental hospitals—18.5 percent—and nonFederal general hospital psychiatric services—18.3 percent (National Institute of Mental Health, 1976).

During 1975 there were 6.9 million patient care episodes, or a rate of 3,316 per 100,000 population. Of the total number of episodes, 1,863,000, or 27 percent, were inpatient episodes; 4,830,000, or 70 percent, were outpatient episodes; and 207,000, or 3 percent, were day treatment episodes (Pollack, 1977).

Since 1955, the bulk of outpatient mental health care has spiraled from 23 percent in 1955 to 70 percent in 1975 (Pollack, 1977). Thus, of those who received mental health care, the majority were paying out of their pockets for mental health care. The very best that can be expected from the above data is that mental health clients are paying for health care on a sliding scale basis. When we consider our poor- and lower-income we are talking about an added hardship to their already existent meager income.

Ten percent of the population is predicted to eventually suffer from severe mental illness. Several mental illness in a family can mean one or more of several conditions.

The latest figures from the National Institute of Mental Health reveal that of all those who received mental health care during that year—3.1 percent were mentally retarded; 5.4 percent had organic brain syndromes; 22.5 percent suffered from schizophrenia; 15 percent from depressive disorders; 8.8 percent from alcoholism; 2.9 percent from drug disorders; 1.5 percent from other psychoses; a whopping 32.4 percent from a category listed as "all others" which includes personality disorders and various neuroses; and a disturbing 8 percent which were undiagnosed.

We, the elected representatives of the American people, owe it to the American people to provide for their health care; and, of course, health care includes both the mental and physical components of the individual. We are long past the point where we can continue to shortchange our constituencies by denying them the right to lead productive lives, but who cannot because they are afflicted by mental or emotional conditions which interfere with such things as getting and keeping a job; or raising children who are not plagued by child abuse and neglect.

That is why, Mr. Speaker, that I continue to reintroduce legislation which would provide comprehensive mental health coverage to all Americans through a program of national health insurance.

There are numerous reasons why a national mental health insurance bill should be passed in this Congress. The following are only a brief review of some of the existing reasons for why we need a national health insurance that includes comprehensive mental health coverage.

In spite of the various community mental health centers and clinics that operate on a sliding-scale fee basis, mental health care remains fairly unattainable for a large number of the American poor. Valde and Fiester (1976) found that of Spanish-speaking, Spanish-surnamed families patronizing a particular community mental health center, the modal annual income was $3,000 to $5,000. Over 50 percent of the families had an income that was less than $5,000 a year.

In addition to the limited income, 63.3 percent of the sample were prescribed some type of medication. So, when we look at the amount of annual income of the families, the fact that these families attend the community mental health center regularly, and the fact that these clients receive prescriptions for medication, and of course must pay for these prescriptions, we are talking about a service that becomes increasingly inaccessible over time because it gets more expensive over time.

Often, even a seemingly small fee of $5 a session is too much for a poor family. The poor tend to be multiple users of services, and therefore are paying more than the $5 a week for such health care services. It is the poor and the middle-income who experience the most difficulty with payments for mental health care services. Of course, if everyone—or even the majority of people—in our country was in the upper-middle or upper income, there would be no financial obligation to appropriate money for a national health insurance. However, this is not the case with the majority of the American people. According to the 1975 census, the mean family income was $10,401 for black Americans; $11,096 for Hispanic origin Americans; and $16,115 for non-Hispanic white Americans.

A national health insurance plan which includes complete mental health coverage would actually reduce the overall cost of national health insurance, because it would provide for coverage of those mental or emotional causes of symptoms such as lower back ache, headaches—which result in brain scans—and stomach problems—which precipitate explorations for ulcers or other stomach conditions. It is necessary for ulcers or other stomach conditions. It is necessary for us to start viewing mental health as an important component of the overall health of the individual.

The single largest category of human disability in our country is represented by mental disorders (Dorken, 1976). Additionally, physical diseases can be caused or aggravated by mental and mental and emotional factors (Dorken, 1976).

It has been found by both Follette and Cummings (1967) and Wamocher (1973) that people experiencing emotional distress are significantly higher users of both inpatient and outpatient medical facilities when compared to average health plan members. Lipsitt (1971) found that "chronic complainers and problem patients" who generally overutilized hospital services were suffering from masked depression. According to a study reported in the Washington Post (July 17, 1977), 15 percent of the adult population between the ages of 17 and 74 may suffer from some form of serious depression and for which they will not receive treatment.

Wiggins (1976) found that among a prepaid group practice plan, 68 percent of the doctor visits of 36 percent (480,000) of its 1.3 million participating members were for complaints for which no organic causes could be found. Goldberg, Krantz, and Locke (1970) similarly found that among a prepaid group practice medical program, patients referred for short-term outpatient psychiatric therapy resulted in an overall reduction in number of patients seen of 13.6 percent for nonpsychiatric services and 15.7 percent for laboratory or X-ray procedures. Therefore, the logical and only conclusion to be drawn from the foregoing is that a failure to treat the mental conditions of the individual results in higher medical costs by increasing the length of hospital stay, the frequency of outpatient visits, and causing medical doctors to order more laboratory tests (Goshen, 1963; 1969; 1970).

Funds for the program would be supplied through a mental health tax, similar to funding under some of the national health insurance program bills. The program I am reintroducing could be supplemental to any national health insurance program bills. The program I am reintroducing could be supplemental to any national health insurance plan or could be instituted as a separate program.

Services provided under the bill will include psychiatric hospital care, psychotherapy, prescription drugs, community health center services, and home therapy. Among innovative services that would be covered in the Federal program are halfway house care, day mental hospital care, and night mental hospital care.

The emphasis behind these services is to treat the person while in contact with the community and his or her family. This would lead to less institutionalization and permit the person to be productive in society.

Halfway house care for those who have been mentally ill is relatively new in this country. Historically there were a few halfway houses for persons who had been in penal institutions, but the use of a halfway house approach for persons who have been treated for mental illness is something which has occurred in recent years. It is a program that is worthy of more emphasis and greater expansion, if administered properly.

Presently, the halfway house program in San Antonio—the district I represent—operates on a combination of private fees, private contributions, and moneys from the Texas Rehabilitation Commission, the United Way, and the Texas Commission for the Blind.

Between 80 and 85 percent of the residents of the halfway house program in San Antonio pay either full or sliding scale fees to the program.

The emphasis of the halfway house program is to rehabilitate and to help those, who might be doomed to a life of institutionalization, to become functioning members of society.

The problem with today's inadequate mental health care services is that many mental patients are never brought to the point that they can become a resident of a halfway house, or if they do come to that point, there is not a halfway house available to them—either because none exists in their communities or the factilities that do exist are overcrowded and unable to accept any more residents.

Mr. Speaker, the best approach to any disease is prevention. One purpose of the bill—if not one of the most important—is to give to all Americans a right to obtain adequate preventive mental health care at a price they can afford.

With so many Americans affected by mental disorders of some form or another, it is time that we recognized mental and emotional illnesses as valid forms of illness that should be treated as such.

We are way behind in meeting this mental health crisis. We have a lot of catcing up to do, and one way to do this would be to start considering mental health insurance as a definite part of our national health insurance package and to get such a bill passed out of this Congress.

THE NEED FOR AUTOMATIC SPRINKLER SYSTEMS IN NURSING HOMES TO PREVENT MULTIPLE-DEATH FIRES

The SPEAKER. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 15 minutes.

Mr. PEPPER. Mr. Speaker, as you know, together with 107 of my colleagues, I have introduced legislation (H.R. 1129 and the equivalent bills, H.R. 5433, H.R. 5434, H.R. 5435, H.R. 7527, H.R. 7528, H.R. 7529, and H.R. 7530) which would require the installation of automatic sprinkler systems in all medicare and medicaid skilled and intermediate nursing homes.

In 1976, after two tragic nursing home fires in Chicago resulted in the deaths of 31 people and injuries to 50 others, I called upon the General Accounting Office to investigate steps that could be taken to prevent future tragedies. As a result of their investigation, GAO concluded that "Federal fire safety requirements do not insure life safety in nursing home fires" and recommended "that the Congress enact legislation requiring all nursing homes to be fully protected with automatic sprinkler systems." These conclusions were echoed in another report, "The Tragedy of Multiple Death Nursing Home Fires," by the Subcommittee on Health and Long-Term Care of the Select Committee on Aging, which I have the privilege of serving as chairman.

I would like to insert in the RECORD for my colleagues' information the address on this issue which was presented by Mr. Alan Zipp of the General Accounting Office before the American Association of Homes for the Aging's Legislative Workshop. Mr. Zipp, who has a well-deserved reputation as an expert in this area, articulately demonstrates the need for legislative changes to end senseless and preventable multiple death nursing home fires.

I call upon my colleagues, Representative DAN ROSTENKOWSKI, chairman of the Ways and Means Committee's Subcommittee on Health, and Representative PAUL ROGERS, chairman of the Interstate and Foreign Commerce Committee's Subcommittee on Health and the Environment, to act on this bill with the urgency it deserves.

The address follows:

NURSING HOME FIRE SAFETY

(By Alan S. Zipp)

FIRE SAFETY STANDARDS DO NOT INSURE LIFE SAFETY

During 1974, GAO made a study of nursing home fire safety and found that many nursing homes did not meet Federal fire safety requirements. In 1976, GAO again studied the problem and concluded that Federal fire safety requirements were not adequate to insure life safety. These are indeed two very bold conclusions.

FIRE IS THE BEST OF ALL SERVANTS: BUT WHAT A MASTER!

Scotch essayist Thomas Carlyle once wrote, "Fire is the best of all servants; but what a master!" Fire is truly a great servant, but nevertheless, each year thousands of people are injured or killed in fire related tragedies. In the case of the young and mobile person, evacuation is the most effective means of avoiding tragedy when fire strikes. Currently, a national campaign is underway to encourage the general public to install smoke detection devices in their homes, which give warning in case of fire, so that prompt evacuation can be accomplished.

But what about our frail, nonambulatory elderly? In many cases elderly people cannot walk, and evacuation may be all but impossible.

PANIC IS A PROBLEM

Another problem is that of panic. In a fire situation even the most stable individual could panic and act in a most irrational manner. Cases have been noted of people running into burning rooms to salvage personal belongings even after they were at places of safety. If stable people could panic, what about the frail, fragile older person who has lapses of memory, who suffers from chronic brain syndrome otherwise called senility, or who has other mental impairments which prevent consistent rational behavior? These people simply may not be able to act rationally in a situation where they can see the possibility of all their worldly possessions being destroyed by fire. This is a very real problem.

A nursing home may be an institution as far as the government is concerned, but to its residents it is their home. That home usually contains all of the things these people own; including: money; clothes; pictures of family, children, loved ones; and other mementos of their lives.

These tangible items are all that some people have left, after 70, 80, or 90 years of life. These items are sacred to them, and their destruction is tantamount to the destruction of the person and his past. When the risk of loss is so great, even a rational person would probably make every effort to prevent such loss.

These are only some of the problems to consider regarding nursing home fire safety. Nursing home residents present a particular problem because of several factors: (1) their advanced age (average 82), (2) their failing health (average four disabilities), (3) their mental condition (55 percent are mentally impaired), (4) their reduced mobility (less than half can walk), (5) their sensory impairment (loss of hearing, vision, or smell), (6) their reduced tolerance to heat, smoke, and gases, and (7) their greater susceptibility to shock.

EVACUATION MAY BE A WASTE OF TIME

Evacuation may be the most effective means of avoiding loss of life for a mobile person; but in the words of a nursing home physician who lived through a tragic nursing home fire, "evacuation of nursing home residents is a waste of time."

The physician testified before a congressional committee that:

"I think it is well to point out that if we were to go right now, to any nursing home, and drag 30 people down from the third floor, we are going to kill a substantial number. I think we have got to remember, and remember throughout the day, that evacuation is really futile. It is a waste of personnel and precious time. This tragedy took place in such a short number of minutes, that we had to limit our efforts to those which would save lives, and evacuation would not."

The physician further clarified the problem:

"To move a patient, without hurting a senile, fragile body, requires two members of the staff over a couple of minutes. When you think of the chaos and the pandemonium that reigned under the circumstances, and remember you are dealing with human elements, you have to remember that people are not functioning quite on the level that they would in a drill."

MANY NURSING HOMES DID NOT MEET FIRE SAFETY STANDARDS

In March 1975, GAO reported that many nursing homes did not meet major fire safety requirements. Specifically, based on a random sample of nursing homes, which were inspected by professional engineers, 72 percent were found to have one or more deficiencies in major Life Safety Code requirements. In the event of fire, every Life Safety Code deficiency noted could contribute to the spread of fire and smoke.

The most frequently observed deficiencies were violations of the requirement for automatic sprinkler protection and 1-hour fire-resistance separation for hazardous areas.

The Code requires complete automatic sprinkler protection in all nursing homes except those of certain fire resistant construction. However, GAO reported that 41 percent of those classified as exempt from the sprinkler requirement were improperly classified with regard to construction type.

According to the law, the automatic sprinkler requirement can be waived if the facility provides adequate protection through other means. HEW established standards which must be met before a sprinkler waiver could be granted. After its review, GAO reported that 79 percent of the waivers issued were improper, as the facilities did not meet the waiver standards.

With regard to the correction of previously identified Life Safety Code deficiencies, GAO reported that 60 percent of the nursing homes inspected for corrections had not made the corrections within the time required. The deficiencies had been identified from 9 to 25 months prior to the GAO visits. The average period of time the deficiencies remained uncorrected at the time of the GAO visits was about 22 months.

GAO recommended that HEW take specific actions to insure compliance with the Life Safety Code and improve fire safety conditions in federally funded nursing homes. In spite of the findings reported by GAO, HEW did not agree that it had not effectively administered and enforced Federal fire safety requirements for nursing homes. HEW recognized that Life Safety Code problems remained to be resolved, but said that its efforts had resulted in safer nursing home environments.

CODE STANDARDS DO NOT INSURE LIFE SAFETY

In February 1976, after two tragic nursing home fires killed 31 people and injured 50 others, Congressman Claude Pepper, Chairman of the Subcommittee on Health and Long-Term Care, House Select Committee on Aging, asked GAO to investigate these fires and recommend appropriate action to avoid similar situations.

In June 1976, GAO reported on the results of the investigation. GAO found that multiple deaths occurred in these, and several other nursing home fires in recent years, even though the buildings were of fire resistive construction and were in substantial compliance with the Federal fire safety requirements. Neither facility was fully protected with an automatic sprinkler system designed to activate an alarm and begin fighting the fire immediately. Although local fire departments responded promptly to both alarms, the fire departments were unable to prevent the deaths which occurred. Experts said that automatic sprinklers would have prevented the deaths in these homes.

AUTOMATIC SPRINKLERS PREVENT MULTIPLE DEATH FIRES

According to official records of the National Fire Protection Association, there has never been a multiple death fire in any nursing home fully protected with an automatic sprinkler system. The National Safety Council and the American Nursing Home Association have stated that:

"Automatic sprinkler systems provide the greatest safety to life feature available in the fire protection field. Not only can they automatically sound an alarm, but they will immediately start fighting the fire when activated. Automatic sprinklers are by far the most reliable and effective means of fire extinguishment. Other forms of protective equipment, as well as automatic alarms, have their special place, but none can ever be an effective substitute for automatic sprinkler systems."

Shortly after the two nursing home fires which resulted in tragedy, another nursing home fire was reported. This fire could have been as serious as the other two, except for one thing: the facility was fully protected with an automatic sprinkler system. The local fire chief attributed the absence of injuries and the prompt control of the fire to the sprinkler system and the quick employee response. The fire activated one of two sprinklers in the room which sprayed water on the fire. The sprinkler extinguished the fire before the firemen arrived, which was shortly after the alarm. Because the fire was promptly controlled, it did not generate sufficient heat to activate the second sprinkler in the room.

GAO RECOMMENDED AUTOMATIC SPRINKLERS

These two tragic nursing home fires demonstrated that deaths do occur because of fire, even in fire resistive buildings that meet the Federal fire safety requirements. GAO concluded that Federal fire safety requirements do not insure life safety in nursing home fires. As a result, GAO recommended that legislation be enacted to require that all federally funded nursing facilities be fully protected by an automatic sprinkler system.

LEGISLATION FOR SPRINKLERS WAS INTRODUCED

In September 1976, the Subcommittee on Health and Long-Term Care issued a report based on its investigation, including joint hearings with the Senate Subcommittee on Long-Term Care, on the subject of nursing home fire safety and the need for a national commitment to safety. Included in the report was a bill, H.R. 14406, introduced by Chairman Claude Pepper, which required all nursing homes to install automatic sprinkler systems, and provides for direct low interest loans to assist in financing the installations. At the close of the 94th Congress, this bill was cosponsored by 89 members of the House of Representatives. It was reintroduced by Congressman Pepper as H.R. 1129, on January 6, 1977, for action during the 95th Congress.

TODAY'S STANDARDS PROVIDE ONLY A LIMITED DEGREE OF SAFETY

The current status of nursing home fire safety is considerably better than it was in 1970. The 1973 edition of the Life Safety Code has replaced the formerly required 1967 edition. Improvements in Code standards and enforcement have been noted. However, the standards today provide only a limited degree of safety, not the maximum degree of safety which should be expected in our nation's nursing homes.

New standards are being considered and tested, particularly with regard to toxic gases resulting from burning carpets and other materials. The National Bureau of Standards is testing flame spread ratings of carpets to establish nationally acceptable standards for institutional facilities. And ongoing research is being done at numerous testing facilities throughout the country on the many phenomena of fire.

HEW REJECTS SPRINKLERS BECAUSE OF COST

The cost of nursing home fire safety has become a significant factor in the acceptance of new standards. Adoption of an automatic sprinkler system requirement has been consistently rejected by HEW officials on the basis that it is too expensive and not cost effective. The cost effectiveness of any proposal is determined by comparing cost to benefits received. If the benefits received are greater than the cost incurred the proposal is considered cost effective.

SPRINKLERS COST PENNIES A DAY

The cost of an automatic sprinkler system has been shown to be from $1.21 to $1.75 per square foot. For a 100-bed nursing home of 25,600 square feet the total cost could range from $31,000 to $43,000. As GAO reported, when the total cost is spread over a loan payment period of 20 years with a 9¼ percent interest rate, the monthly cost of a sprinkler system is $5.57 per bed, or about 19 cents per patient each day.

Considering cost effectiveness, it is hard to conceive that insuring the life safety of nursing home residents against death by fire is not worth 19 cents per day. From the perspective of the nursing home owner, there is minimal out of pocket cost, since under current law Medicare and Medicaid pay nursing homes for operating expenses which include depreciation and interest charges.

FUTURE DIRECTION OF NURSING HOME FIRE SAFETY

The future direction of nursing home fire safety looks very promising. There is little doubt that the Congress will enact legislation requiring automatic sprinkler systems in all nursing homes, and provide either grants or low interest loans for their financing. Also, it appears that flamability and toxic gas standards will be established for carpets and furnishings.

Cost benefit analyses will also be a key factor. Construction trade-offs for existing facilities will become more frequent and acceptable with the requirement for automatic sprinklers. Nursing homes may be granted waivers from costly improvements required by the Code because of the proven effectiveness of automatic sprinklers.

New construction, on the other hand, will face a much more critical analysis. Legislation or regulation may be enacted which will prevent any nursing facility, constructed after a specified date, from being certified for Medicare or Medicaid unless the facility complies with the Federal fire safety standards in every regard and without waivers.

As a result of this direction, national attention can again be focused on the need to upgrade the quality of care in nursing facilities. This will be the case, because the problem of multiple death nursing home fires will be limited to past history, not current events.

THE 19TH OBSERVANCE OF CAPTIVE NATIONS WEEK

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, despite the efforts of some of dampen the 19th observance of Captive Nations Week, it is plainly evident that the message of this week came across loud and clear. And that message is that a true conviction in human rights must be coupled with both a comprehensive knowledge of the imperio-totalitarian Communist world and a fixed courage to withstand any growl from the Russian Bear. Without the latter, the former stands unsupported.

As the following selected items show, Mr. Speaker, this 19th observance was widely diverse in activity and expression. I commend to the reading of my colleagues: The proclamations by Gov. Joseph P. Teasdale of Missouri and Gov. Richard A. Snelling of Vermont; the New York News report of July 18 "Captive Nations March: The Spirit Is Liberating"; the American Legion foreign relations bulletin on "What's Happened to Captive Nations?"; reports on the week in the July 18 New York Times and the Philadelphia Inquirer; a short address by Dr. Lev E. Dobriansky of Georgetown University on "Human Rights and U.S. Foreign Policy" that appeared prior to the week; and a religious appeal for the week by the Most Reverend Basil H. Losten of Philadelphia:

PROCLAMATION: OFFICE OF THE GOVERNOR, STATE OF MISSOURI

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czechoslovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania Ide-Uran Serbia, Croatia Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and

Whereas, the desire for liberty and independence by the overwhelming majority of people in these conquered nations constitutes a powerful deterrent to any ambitions of communist leaders to initiate a major war; and

Whereas, the freedom-loving peoples of the captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in bringing about their freedom and independence; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 86-90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayers, ceremonies and activities, expressing their sympathy with and support for the just aspirations of captive peoples for freedom and independence:

Now, Therefore, I, Joseph P. Teasdale, Governor of the State of Missouri, do hereby proclaim that the week commencing July 17, 1977, be observed as

Captive Nations Week in Missouri and call upon its citizens to join with others in observing this week by offering prayers and dedicating their efforts for the peaceful liberation of oppressed and subjugated peoples all over the world.

In testimony whereof, I have hereunto set my hand and caused to be affixed the Great Seal of the State of Missouri, in the City of Jefferson, this 29th day of June, 1977.

A PROCLAMATION

Whereas, the imperialistic policies of international communism have led, through direct and indirect aggression, to the subjugation and enslavement of many peoples thrcughout the world; and

Whereas, the desire for liberty and independence by the overwhelming majority of peoples in these conquered nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war; and

Whereas, the freedom loving peoples in the captive nations look to the United States as the citadel of human freedom and to the people of the United States as the leaders in bringing about their freedom and independence; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 86-90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayer, ceremonies and activities; expressing their sympathy with and support for the just aspirations of captive peoples;

Now, therefore, I, Richard A. Snelling, Governor of the State of Vermont, do hereby proclaim the week beginning July 17 through July 23, 1977, as Captive Nations Week in Vermont, and call upon the citizens to join with others in observing this week by offering prayers and dedicating their efforts for the peaceful liberation of the captive nations.

[From the New York News, July 18, 1977]

CAPTIVE NATIONS MARCH: THE SPIRIT IS LIBERATING

(By Bryant Mason)

Immigrants from 34 countries marked Captive Nation Week yesterday by holding a memorial service at St. Patrick's Cathedral and then marching up Fifth Ave. to the Goldman band shell in Central Park.

Leaders of the march said its purpose was to let the world know that citizens behind the Iron and Bamboo curtains would not be forgotten. Decked out in a national dress, they carried banners and flags from such lands as Estonia, Latvia, Lithuania, Turkestan and Croatia.

Rep. Mario Biaggi (D-Bronx) and Secretary of State Mario Cuomo and Barry Farber, both candidates for mayor, appealed to the 200 marchers at the band shell not to forget their countrymen who are less fortunate.

Nicholas Nazarenko, a former colonel in the Cossacks, was in the demonstration, wearing dress from his old cavalry troop. Nazarenko, 65, said he lost his family in Russian prisons and was forced to flee the country in 1943.

"It's a great day for us that we have been dreaming of—to live in a country where we can demonstrate for the freedom of others, said Nazarenko.

The meaning of the day was summed up by Ivan Docheff, chairman of Captive Nations Week. An escapee from Bulgaria, where he was mayor of Silistra, Docheff said: "It's an important thing to keep the spirit and not let memories of imprisoned countrymen fade. Sooner or later, we'll be able to break the Communist curtain and free these people," he said.

WHAT'S HAPPENED TO CAPTIVE NATIONS

Captive Nations Week is celebrated during the third week of July. Time was when the plight of Captive Nations was well publicized. The general public knew which nations were captive by Communist military power.

In 1977 the vision of "Captive Nations" has become somewhat blurred. Many Americans

don't know who they are or what they are. Many think the Captive Nations have been written off as lost forever or at least for the foreseeable years.

More than one billion people, and this is over 30% of all human beings on this planet, are now among the Captive Nations, enslaved to Communist power and ideology.

Captive Nations Week is dedicated to the commemoration of the fate of the millions of people denied basic human rights by Communist controlled governments. The first group of nations to become enslaved were the Caucasian states of Armenia, Georgia and Azerbaijan, those areas lying between the Black and Caspian Seas. These nations were captured in 1920 immediately following the Bolshevik Revolution. Turkestan in Central Asia was occupied in 1922 and Mongolia in the Far East was captured in 1924. Eventually, the Kremlin's leaders spread the Communist umbrella over 17 nations and these were named the U.S.S.R., Union of Soviet Socialist Republics.

The next big grab came in the early 40s. Soviet military forces occupied the three tiny but fiercely independent Baltic Republics of Estonia, Latvia and Lithuania. Then, beginning in 1943, Red Armies began the occupation of Poland, Hungary, Czechoslovakia, Bulgaria, Romania, East Germany, Albania and Yugoslavia.

To some, this brief recital of history seems so obvious, almost redundant, but President Ford's TV blunder on the enslaved status of Eastern European countries bears eloquent witness to the confusion of Americans regarding the captive nations, and the loss of human rights.

The last official listing of the captive nations appeared in the Congressional Record as follows: country, people, and year of Communist domination:

Armenia	1920
Azerbaijan	1920
Byelorussia	1920
Cossakia	1920
Georgia	1920
Idel-Ural	1920
North Caucasia	1920
Ukraine	1920
Far Eastern Republic	1922
Turkestan	1922
Mongolia	1924
Estonia	1940
Latvia	1940
Lithuania	1940
Albania	1946
Bulgaria	1946
Yugoslavia (Serbs, Croats, Slovenians, etc.)	1946
Poland	1947
Romania	1947
Czechoslovakia	1948
North Korea	1948
Hungary	1949
East Germany	1949
Mainland China	1949
Tibet	1951
North Vietnam	1954
Cuba	1960
Cambodia	1975
South Vietnam	1975
Laos	1975

Who's next? Angola and Mozambique will most likely be added in 1977 since they are under active communist domination. Ethiopia is said to be in the process of falling now. Somalia is under Soviet influence. Panama is seriously threatened. Then there are those other nations under serious threat: Taiwan, Thailand, South Korea, Rhodesia, Republic of South Africa, Republic of Transkei, Lesotho and Swaziland and the list of African nations could balloon to include that entire continent. Meanwhile, there are those who say, "What difference does it make?"

The best answer printed thus far came from the Postmaster Ms. Sophie Snarski of Cavendish, Vermont in writing about the current status of Aleksandr Solzhenitsyn, whose new home utilizes the Cavendish office. Said the Postmaster: "He (Solzhenitsyn) is free to write and that makes him really free". Think what it would be like to be unable to write, to speak, to gather with one's friends, to criticize fearlessly those in authority. That's what the celebration of Captive Nations Week is all about.

[From the Philadelphia Inquirer, July 18, 1977]

GATHERING IS SMALLER AND OLDER FOR CAPTIVE NATIONS WEEK RALLY

A march up Fifth Avenue and a colorful rally in Central Park by 250 demonstrators, mainly middle-aged and elderly Americans of Eastern European descent, marked the opening yesterday of Captive Nations Week.

The annual protest against the domination of 36 smaller nations and ethnic groups by the Soviet Union, China and Yugoslavia began with a Roman Catholic mass at St. Patrick's Cathedral and ended at the Central Park band shell, where two mayoral candidates and a United States Representative praised the protest as important to the struggle for freedom.

A few cyclists, strollers and joggers watched as folk dancers in Eastern European costumes and then a brass band made up of followers of South Korea's Rev. Sun Myung Moon performed for the crowd, many of whom were also wearing brightly colored costumes.

Standing in sweltering heat in full Cossack regalia, including white fur hat, silver sword, and flowing blue robes, Lieut. Col. Nicholas Nazuvenko, a march marshal, explained the purpose of the protest.

"It doesn't matter how many attend," he said. "As long as what we do here gets across the Iron Curtain, it gives encouragement," he said. As he spoke, the band in the background played "The Stars and Stripes Forever."

Other marchers agreed with his sentiments. "It shows we're still here, we still care about them," said Bobban Pylpiw, who is of Ukrainian descent. "It adds a psychological lift. Sure, it's little, but it has importance in the long run."

This year's protest began without the usual declaration from the President making the Captive Nations Week official. A White House spokesman said yesterday that he did not know why President Carter, who was at Camp David for the week-end, had not made the declaration.

But the marchers, whom Representative Mario Biaggi of the Bronx described as the "hard-core" of earlier, larger protests, seemed enthusiastic about the proclamation by Governor Carey making July 17 to 23 Captive Nations Week in New York, and the speeches at the rally predicting the eventual decline of Communist domination.

"More and more people are melting into the pot, getting more Americanized," said Meinhard Joks, a marcher of Armenian descent who carried an American flag. But he said the small size of the march did not deter him.

Mayor Frank L. Rizzo has proclaimed this week "Captive Nations Week in Philadelphia."

The mayor is honorary chairman of the Captive Nations Committee, which represents groups of Armenian, Cossack, Estonian, Hungarian, Latvian, Lithuanian, Ukrainian and Polish origin. The mayor's proclamation said that Americans wanted the people of captive nations to enjoy the same freedoms that the United States won 201 years ago.

[From the Chiana Post, Apr. 25, 1977]

HUMAN RIGHTS AND U.S. FOREIGN POLICY

Discussion in the United States is rapidly growing on human rights as the cornerstone of U.S. foreign policy. Human rights are being projected on a single standard, global basis, and will have inevitable impact on Asia.

Those who have supported the captive nations, especially mainland China and those nations in the Soviet Union, are thrilled by this new development because the captive nations theme always and consistently advanced the human rights denied to over 1 billion people.

President Carter's commitment to this issue is clear and firm. He has stated this time and time again. In his U.N. address, for instance, he made it perfectly clear that the repression of human rights by any member is the concern of all members. The sharp reaction by Brezhnev and Gromyko to this address contain points of argument that can be easily exploded. Brezhnev stressed the principle of non-interference in internal affairs, his right to talk openly about "the world of imperialism," and the non-existence of oppression and exploitation of classes and nationalities in the USSR. Gromyko emphasized the need for "peaceful coexistence."

COLONIAL EMPIRE

The facts are that the USSR itself, founded on subversion, war and conquest, is a colonial empire—an imperium in imperio—that does not qualify under this principle. The biggest political blunder of the Nixon-Kissinger period was to endorse this principle in relation to the USSR in the Moscow pact of 1972. Also, Brezhnev can't have it both ways, to insist on talking about some mythical "world of imperialism" outside the so-called Communist world prevent us from talking about the real imperialism and colonialism managed by Moscow in Eastern Europe and Asia. As to whether classes and nationalities in the USSR are oppressed and exploited, this will come out in the wash as the human rights issue is pressed. In the course of this healthy pressure, the falseness of Moscow's "peaceful coexistence" policy, in which systemic warfare against the free countries is an integral part, will also come out in the open before the court of world opinion.

"At last, on the offensive, the human rights denominator in U.S. foreign policy is a breath of fresh air from the concessive Kissingerism that dominated the past two Doministrations."

"It is erroneous to believe that President Carter's emphasis on human rights came of nowhere and into some void in our American society. Let alone the growing criticism of Kissingerism prior to 1975, from the time of our political defeat in Vietnam the blunders of the Ford Administration, largely dominated by Kissinger, mounted by leaps and bounds and intensified the criticism. The snubbing of Solzhenitsyn, the confusion over the Helsinki conference, the Sonneufeldt doctrine of organic relationship in Central Europe are just a few examples. Even at the Republican National Convention the cry was for morality in our foreign policy."

BLUNDER

"But the most revealing blunder came in the second debate of the Presidential campaign. When Ford insisted that there is "no Soviet domination of Eastern Europe," he disclosed how he and his Secretary of State viewed the condition of Eastern Europe. For me, though a life-long Republican, this was the last straw, and nationally I denounced this view and held this was no slip-of-the-tongue. If it were a slip, Ford could have corrected it that night or the following morning. It took him almost a week to admit his "mistake". Really, a Presidency was lost, because as his Pollster, Robert Teeter, admitted after the election, this unforgettable gaffe "left us dead in the water for about 10 days." The cost of irreplaceable time and the marginal swing of votes in heavily populated ethnic areas of New York, Pennsylvania, and Ohio made the defence in the outcome. The

chief point here is that an appreciation understanding of the captive nations and human rights was lacking in the previous Administration, whose views were largely dominated by Kissinger. If you've read all of Dr. Kissinger's works, you'd find that his comprehension of Russian imperial politics whether Czarist or Soviet, amounts to near-zero."

HUMAN RIGHTS

"Now for the substance of human rights. It was Thomas Paine who about 200 years ago wrote his classic the Rights of Man and said: "He who dares not to offend cannot be honest." On human rights our President dares to offend and has proven his honesty. Indeed, his statements so far have crystallized the human rights ingredients of the unique American tradition, ranging from the Declaration of Dependence, the Constitution, our Bill of Rights to Wilson's principle of national self-determination, Roosevelts' Atlantic Charter and Four Freedoms, and the U.N. Charter and Universal Declaration of Human Rights, to which my country contributed so heavily."

"Our new President's posture on this is special and selective. In the tradition, all of our Presidents have talked about freedom and man's rights. But none, will now, has specially selected the issue of human rights and proposes to make it the center piece, the cornerstone if you will, of our foreign policy. He has stated that this is a firm commitment, that it will be universally applied, and that it will be pursued prudently and with re-born convictions."

"In this truely new stance, emphasizing morality in our foreign policy, human rights become a common denominator for all other issues. It becomes a strong, foundational level even for all the freedoms we have been talking about for so long. In short, it will now be your right to be free, and no longer just wanting or desiring to be free. This is a significant shift in emphasis, with enormous possibilities of politico-economic, legal, cultural and other challenge and change."

BROAD CATEGORIES

"As popular discussion on this issue develops, it will become evident that human rights divide themselves into three broad categories. Below these categories is a metaphysical base, our understanding of and perceptions into man, as a home spiritualis, each a species into himself or herself. The first category or level is personal, rights—the right of the individual person to live, to multiply, to hold property, to develop and express himself, and soon; but always on this level and the others, with no encroachment or coercive effect upon others with similarly endowed rights."

"The second level or category is civil rights which come into play as persons aggregate, mobilize, associate and socialize. On this higher plane of collective expression, civil-rights of group assembly, worship, work, oral and writers speech, opportunities for development, representation and the like emerge."

"But there still is a higher plane of human rights, and that is national rights—rights expressive of a moral organism called a nation with all its attributes of geographical territory, history, language, religion and so forth. These rights encompass the right of national existence, development and growth, the balanced and responsible exercise of which safeguards the expression of personal and civil rights and contributes to international order, law, peace and an expanding community of free and responsible nations in whatever form of chosen state."

"The distinctions on human rights are vitally important if we're to avoid confusion in their applications. For example, dissidents in the USSR are not all of the same cloth of human rights. They differ in spheres and emphasis, though ofter there is over-spill finish dissidents largely seek the exercise of their personal rights to emigrate; Russian dissidents in the main express their civil rights for domestic liberalization and democratization; and non-Russian dissidents, like Lithuanians, national rights."

"The implications of this whole new, reborning development are dynamic and tremendous. Let me enumerate some of them:

(1) With the President's firm commitment to human rights, a new and strong moral U.S. leadership is in the making, a re-born America is emerging;

(2) Legal accountability will be presented on those states that are signatories to treaties and compacts dealing with human rights and yet brazenly repress them. The UN Charter, Universal Declaration of Human Rights, the Genocide Convention, the Helsinki Accords and others would be invoked. The forthcoming Belgrade Conference to evaluate compliance with the Helsinki Accords will be the first real test of the Administration's commitment to human rights;

(3) Since the greatest areas of the repression of human rights are the USSR and mainland China, a new world focus of attention, knowledge and discussion will evolve with respect to these primary areas;

(4) We will begin to cope better with so-called Euro-Communism by testing the Communist Parties in Western Europe as to their stand on the denial of human rights among the captive nations in Central Europe, within the USSR, in Asia and Cuba; and

(5) By way of tactful argument and persistent talk, certainly in tones of Cold War rhetoric, this global process will finally approach and tap the court of world opinion, with indefinable but peaceful results.

"A successful foreign policy requires the efficient combination of values (principles), means (powers of knowledge, will, politics, military, etc.) and strategy. I believe this combination can be achieved by the present Administration. It had better be, or all of us shall find ourselves in perilous trouble in the not too distant future. President Carter's start with the values of human rights is a strong and right one. Human rights, globally applied, that is what America is all about in the community of the human race."

IN OBSERVANCE OF CAPTIVE NATIONS WEEK

(By Basil H. Losten)

(Apostolic Administrator of the Philadelphia Archeparchy)

AN APPEAL TO THE CLERGY AND FAITHFUL OF THE UKRAINIAN PHILADELPHIA ARCHEPARCHY

For the past 18 years, the citizens of the United States of America have appropriately marked the annual observance of the Captive Nations Week, the third week in July in accord with the inspiring proclamation of President Eisenhower who gave the approval to Captive Nations Week on July 17, 1959: "until such time as freedom and independence shall have been achieved for all the captive nations of the world" (Public Law 86–90).

We have a great obligation to aid those people who are oppressed, deprived of fundamental human rights, amongst them the freedom to worship the Creator of Liberty. Recently on national television we witnessed a panel discussion between American and Soviet citizens at Georgetown University. More than anything, it becomes increasingly clearer that the Soviets do fear world opinion. You can help your suffering brothers and sisters in Ukraine and in other captive nations by observing the third week in July as Captive Nations Week. This you can do through local observances in your particular community, through Christian prayer, through the use of your particular talents and skills, and by making your annual contribution on July 17, 1977 through your parish church for the needs of the enslaved people in Ukraine.

RESOLUTION AUTHORIZING PRESIDENT TO CONVENE WHITE HOUSE CONFERENCE ON FAMILIES IN 1979

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. WOLFF) is recognized for 5 minutes.

Mr. WOLFF. Mr. Speaker, today I am introducing a resolution authorizing the President to convene a White House Conference on Families in 1979.

Last year, MILLICENT FENWICK, JIM BURKE, and I authored a similar resolution in hopes of stimulating a multidisciplinary, broadly based national examination of the Government and the family. Now the White House Conference on Families is a reality—President Carter, with our urging, has decided to initiate a substantive and serious inquiry into the functioning of the family, and the impact of governmental policies thereon, an initiative which must be given national priority.

As President Carter made clear during last year's campaign, the American family is a vital link in the social, religious, and economic fabric of our Nation. But having admitted the continuing central role of the American family, the task of our Government remains in the necessity of closely studying just how government interacts with the family. The American family is just as vital a resource as the precious oil and gas now being studied so intensively. But despite this, the American family remains one of the great unstudied resources of our country. Certain types of "facts" have been trumpeted in the mass media—rising divorce rates, juvenile crime, school problems, the plight of senior citizens on fixed incomes, tax advantages for single people and so forth—but we in government policies affect the American family for "better or for worse."

We have addressed this problem in the past as we have all too many other situations—in a piecemeal, "crisis" mentality which often breeds more long-range problems than the short-range concerns which predominate the discussions at hand.

At previous White House conferences on the economy and the problems of the aging, interested citizens, professionals, and Government experts have all gained insight into the interdependence of their particular points of view, and of the potential progress which mutual understanding can provide. I believe that these same benefits and insights can be gained from the holding of a conference on American families.

Mr. Speaker, the legislation reads as follows:

H.J. RES. 562

Joint resolution to authorize the President to call a White House Conference on Families in 1979, and for other purposes

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress finds that families are the foundation whereupon the Nation grows; that there is evidence that public policies in many areas have effects, positive and negative, intended and unintended, direct and indirect, on the welfare of families; that categorical, single-strategy programs, while effective in meeting

some of the needs of many families have failed to provide the support required by many families with multiple needs; and that statistics on divorce rates, rates of child abuse, crime, drug abuse, and increasing segregation by age are indicators of national inattention to the problems confronted by families in a rapidly changing society. It is therefore the policy of Congress to encourage a cooperative effort between the Legislative and Executive Branches, working jointly with citizens, the States, and local governments, to develop recommendations and plans for policy implementation which will provide an environment conducive to family stability. Therefore, it is deemed necessary and desirable that provision be made to facilitate discussion on this topic in an appropriate forum.

WHITE HOUSE CONFERENCE ON FAMILIES

SEC. 2. (a) The President is authorized to call a White House Conference on Families in 1979 (hereinafter referred to as the "Conference"), which will—

(1) increase the knowledge, understanding, and awareness of individuals regarding the problems encountered by families in the United States;

(2) reaffirm the goals and values of family life in a changing society;

(3) acknowledge the diversity and pluralism that characterize American families;

(4) encourage the Federal government, and State and local governments to consider the economic and social impact which any of their actions may have on families;

(5) focus attention on the means by which existing policies and institutions already affect families and examine the problems and opportunities which result therefrom.

(b) The Conference shall be planned and conducted under the direction of the Secretary of Health, Education, and Welfare (hereinafter referred to as the "Secretary"). The head of any Federal department or agency, shall, upon request of the Secretary, cooperate with, and furnish appropriate assistance to the Secretary.

CONFERENCE REPRESENTATIVES

SEC. 3. The Conference shall bring together representatives of the Federal government, State and local governments, the general public, and professional and other persons involved with families and in the delivery of social services to families.

PREPARATION FOR THE CONFERENCE

SEC. 4. (a) The Secretary shall render necessary assistance to each State to enable each State to organize and conduct conferences on families before the Conference is held. The Secretary shall make available financial assistance to each State with respect to such conferences on families.

(b) The Secretary shall prepare and make available such background materials for the use of the Conference as the Secretary considers appropriate.

ADVISORY COMMITTEE

SEC. 5. (a) The Secretary shall establish an advisory committee to the Conference.

(b) The Advisory Committee shall be composed of 28 members appointed by the Secretary. Members shall be appointed from among persons who are specially qualified to serve on the advisory committee because of their education, training, or experience.

(c) The Advisory Committee shall gather such information as will be of assistance to the Conference in carrying out the activities described in Section 2 (a).

(d) The Secretary shall designate one member of the advisory committee as Chairman.

(e) Members of the advisory committee who are officers or employees of the Federal government shall serve without compensation for their services as such. Any other member of the advisory committee shall receive a per diem allowance in an amount to be determined by the Secretary but not to exceed the rate of basic pay payable for level —— of the Executive Schedule (5 U.S.C. ——).

(f) Any member of the advisory committee who is an officer or employee of the Federal government shall be allowed travel expenses in accordance with section 5702 of title 5, United States Code, and any other member of the advisory committee shall be allowed travel expenses in accordance with section 5703 of such title.

REPORTS

SEC. 6. (a) The Conference shall submit a report to the President no later than 180 days after the calling of the Conference. Such report shall be available to the public and shall contain a detailed statement of the findings, conclusions, and recommendations of the Conference.

(b) Not later than 120 days after the Conference transmits the report required under subsection (a) of this section, the Secretary shall transmit to the President a report containing recommendations for such legislation and administrative or other action as may be necessary to carry out the recommendations of the Conference.

AUTHORIZATION OF APPROPRIATIONS

SEC. 7. There are authorized to be appropriated the sums of $3,000,000 for fiscal year 1978 and $3,000,000 for fiscal year 1979 to carry out the provisions of this joint resolution.

SEC. 8. For purposes of this resolution, the term "State" means the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Trust Territory of the Pacific Islands, and any other territory or possession of the United States.

THE CONGRESSIONAL BLACK CAUCUS "LOVES THE TRUTH" TOO

The SPEAKER. Under a previous order of the House, the gentleman from Michigan (Mr. CONYERS) is recognized for 60 minutes.

Mr. CONYERS. At the President's recent press conference, Mr. Carter chose to characterize Vernon Jordan's criticisms of the administration as "erroneous" and "demogogic." Whatever the President's motivation or emotions that led him to use those terms, I regard them as profoundly unfortunate choices, thoroughly unfounded in the context of Mr. Jordan's address to the National Urban League Convention, and open to interpretations potentially damaging to the President's relationship with his black constituents and their leadership.

As a longtime friend and supporter and admirer of Jimmy Carter, Mr. Jordan tried to convey a constructive message, in a positive voice, to the man that black people, with virtual unanimity, indicated as their choice for President. He said, without any rancor or bitterness, in straightforward and unthreatening language, that black people are "disenchanted with the administration they elected . . . they feel that their hopes and needs have been betrayed." The words were strong, but the truths and facts behind them are even stronger. I unequivocably support Vernon's statement as an accurate and fair assessment of the critical problems afflicting black Americans.

Mr. Speaker, I ask unanimous consent that the Congressional Black Caucus' statement which, unanimously to a man and a woman, affirms and supports Vernon Jordan's message to the National Urban League conference, be included at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The material referred to is as follows:

KEYNOTE ADDRESS BY VERNON E. JORDAN, JR., EXECUTIVE DIRECTOR, NATIONAL URBAN LEAGUE AT 67TH ANNUAL CONFERENCE OF THE NATIONAL URBAN LEAGUE, JULY 24, 1977

Once again we meet in our nation's capital. Once again, the National Urban League Movement convenes to press the just demands of black citizens upon a newly-installed national government.

It is well to recall that our last Annual conference in this City was held while guns and bombs were bringing death and destruction in Vietnam, while high officials were covering up the Watergate scandal, and while a hostile Administration was trying to roll back the gains made by black citizens.

Today, the atmosphere is radically different The guns of war are silent. Corruption, cover-up, and the abuse of power have gone out of style. And a new Administration is openly consulting citizens' groups in policy formulation, while giving new recognition to the sanctity of human rights.

In the White House, we have a President whose devotion to equal opportunity is unquestioned. Long before he became our President, Jimmy Carter was our friend. Long before he was even a candidate for the Presidency, Governor Jimmy Carter of Georgia came to Urban League meetings proudly wearing our equality pin in his lapel. And now, as President of the United States, he will honor us by coming to speak at this National Urban League Annual Conference.

In the short time he has been President, Mr. Carter has impressed us with his personal style. He has helped heal the wounds of a divided nation by deflating the "imperial Presidency," by reaching out to his fellow citizens, and by backing an amnesty program that seeks to put the horrors of Vietnam behind us.

President Carter has touched us deeply by stressing the importance of human rights in a world that commonly flaunts those precious innate rights, and this is a cause that speaks to our hearts with a special significance.

President Carter has won our admiration by pursuing an African policy that, for the first time in our history, treats the aspirations of Black Africa with respect and encouragement.

These, and other accomplishments of the new Administration have won our support. The style of openness and access to decision-makers have breathed new life into our form of government. The symbolic acts of the Administration have put us back in touch with our leaders.

Why then, do we convene in Washington with troubled minds and heavy hearts? Why then, are black people disenchanted with the Administration they elected? And why do so many black people feel that their hopes and their needs have been betrayed?

The sad fact is that the list of what the Administration has not done far exceeds its list of accomplishments. The sad fact is that the Administration is not living up to the First Commandment of politics—to help those who helped you.

The Administration has formulated a new foreign policy, a new defense policy and a new energy policy. But it has *not* adequately addressed itself to a new domestic policy. We have no full employment policy. We have no welfare reform policy. We have no national health policy. We have no urban revitalization policy. We have no aggressive affirmative action policy. We have no na-

tional solutions to the grinding problems of poverty and discrimination.

To paraphrase Winston Churchill, "Never have so many expected so much and received so little."

A limited jobs program is not enough. An enlightened African policy is not enough. An expanded housing policy is not enough. A handful of top black appointments is not enough. An open style without substantive change is not enough. And it is not enough to do better than Nixon or Ford. Black people didn't vote for Nixon and didn't vote for Ford. They voted for President Carter, and it is not enough for President Carter to be just a little better than his predecessors.

Black people, having tasted the sweetness of victory in November, resent the sour taste of disappointment in July. Black people and poor people resent the stress on balanced budgets instead of balanced lives. We resent unfulfilled promises of jobs, compromises to win conservative support, and the continued acceptance of high unemployment.

Our resentment is fueled by impatience. We, who have been patient for so long are finally running out of patience. The cries of pain from impoverished rural areas and urban slums ring out, and cannot be stilled by minor measures. Our longing for true equality will not cease, nor will it be diverted by stylistic flourishes.

In some ways, ours has been a learning experience. Black people are learning the callousness of political reality. We are learning that electing a President is not enough. We are learning that the forces of entrenched power will not easily accommodate our demands for change. We are learning that we must raise our voices and must use our political power with the same determination as do those who oppose us. We are learning that even an Administration sympathetic to our needs and in harmony with our aspirations needs sustained pressure.

We are here in Washington to apply some of that pressure. We are here in Washington to call on this Administration to fulfill its promises. We are here in Washington to recall this Administration to what we feel is its true spirit, the spirit of social reform and racial equality. We are here in Washington to help it escape from the evils of premature political compromise, narrow fiscal conservatism, and indefinite delays in implementing reforms. We are here to file our claim, to collect on the campaign promises made in black churches and black neighborhoods.

We understand that the nature of the political process is such that all of our needs cannot be met at once. But we call on the Administration to start sending signals that indicate it understands our needs and will make them its own.

One such signal should be the immediate withdrawal of the disastrous proposal to abolish the Electoral College in favor of direct popular election of the President. This seemingly democratic change would have undemocratic results. It would weaken the political power of the cities and the poor, and it would unbalance our political system. Do away with the Electoral College, and in 1980 the black vote will not make the difference it did in 1976.

It is unseemly for an Administration that owes its existence to solid black electoral support to propose a new system whose effect would be to sabotage that support by diluting black voting power. And it is outrageous that the Congress has forced the Administration to compromise its plan for a system of universal Election Day registration.

Another signal should be for the Administration to come up with a serious program to save our nation's cities. The so-called urban crisis has become almost a cliche, stripped of meaning by repetition and misunderstanding.

There are those who believe the urban crisis is really just a fiscal crisis, and that shoveling Federal dollars into city treasuries will solve it. But the problem goes far deeper, for the urban crisis has a human face to it. It is a crisis of national morality and of our national willingness to tolerate poverty and despair. And it is the direct result of over two decades of conscious public and private policies designed to de-populate cities and stripe them of their economic capabilities.

Public and private policies moved population and job opportunities to the suburbs, and at the same time restocked the cities with poor people. Now there is general recognition that the process has gone too far. An energy-dependent society is beginning to realize that energy-efficient cities are necessary once more. The suburban dream has become tarnished and middle class people are again looking to the cities, where abandoned housing and cheap land are economically tempting to developers.

Race and economics once more interact to the detriment of the black poor. Black slums have suddenly become targets for "rehabilitation." Speculators reap profits while black homeowners and renters are squeezed by the cycle of high demand, rising land values, and higher property taxes.

If our cities are dying it is not through natural death or even self-inflicted suicide; it is through local policies aimed at killing inner-city neighborhoods that they may be reborn for the benefit of the well-off. HUD's tougher policy ensuring that bloc grants are used, as the law demands, for poor people's housing is a commendable attempt to counter this growing phenomenon.

The process of saving the cities must not be a process of driving out the poor to house the middle class, but a process of helping the poor to become middle income. The ultimate future of our cities and of our nation may depend upon the success of that effort.

We stepped to the edge of the abyss the other day, when the plug was pulled on New York's electricity. The looting that occurred could have happened in any city in our country. All our cities contain large numbers of people who have no stake in this society, who are without jobs or hope, whose despair and anger simmers continually, until it boils over, past the limits of accepted behavior.

They are the victims of a society that willfully destroys its own cities. The destruction they wrought was a more violent mirror image of the destruction of lives and neighborhoods caused by impersonal forces in our society—discrimination, unemployment, poverty. Lawlessness cannot be condoned, but our society must draw the right conclusions from such terrible incidents—people have to be assured of a stake in the society; they must have jobs and decent housing if we want them to act in conformity with society's rules. The resources that will be spent to repair the damages could have been better spent in preventive programs that might have avoided the disaster.

But the tragedy in New York offers the President an opportunity to exercise bold leadership. We ask tonight that President Carter signal to the nation his concern for the cities and for the poor who live in them by going to New York; by speaking with the looters and the looted in the South Bronx, Harlem and Bedford-Stuyvessant. A nation of cities is adrift in confusion and the President of all the people has to show his concern. He has to show he understands the despair and the anger, the hopes and the needs, of the urban poor. Yes, if the President can go to Clinton and to Yazoo City, he can go to New York.

We call on the President and the Congress to formulate a national urban policy that deals with the human problems of people who live in cities. Cities have to be saved, not for those who abandoned them and then changed their minds, but for those who live in them today.

And a national urban policy cannot be restricted to bricks and mortar showpieces, or to further wasteful revenue sharing programs. It must have three major components:

(1) Federally-supported and directed increases in basic social services—health, education, transportation, and youth programs,

(2) Massive creation of housing opportunities for low and moderate income families, within a national housing policy that assures a decent, safe and sanitary home for every family, and

(3) A federal urban economic development program that includes guaranteed jobs for all who can work and an income assistance system.

Finally, the Administration should signal the nation's poor that their interests will be met by meaningful reform of the welfare system that is supposed to provide assistance to those most in need, but does not. Candidate Carter called it a "disgrace," and President Carter has ordered his Administration to come up with a reform proposal.

The basic outlines of the Administration's package have been made public, and they indicate that a real change is not in sight. Although the reform was to result in a system that would be equitable, simple to administer, promote family stability, and help the poor, we are likely to have to fight a plan that is inequitable, an administrative nightmare, promotes family instability and leaves many poor people worse off.

This plan founders on major conceptual flaws. Among them are the mandates to keep a ceiling on costs no greater than present welfare-related programs, categorization of the poor, and a work requirement. Such measures would continue to stigmatize poor people while perpetuating negative myths about the poor. And a bad plan may be made even worse. There was one proposal to eliminate the federal housing subsidy program in order to transfer the money to the welfare program, a step that makes no sense at all. It would have destroyed already under-funded federal housing programs while further distorting welfare reform and like other elements of the welfare reform plan, it would take from some poor people to give to other poor people.

The core of the welfare reform proposal links work to welfare, and thus perpetuates the vicious myth that poor people don't want to work. The fact is that poor people do want to work and do work. The fact is that poor people are as work-oriented as middle class people.

Our purpose tonight is not to further criticize a bad plan but to offer an alternative that would benefit poor people and the nation.

The National Urban League is on record in support of a long-range plan to use a refundable credit income tax as the means of assuring a minimum income level beneath which no family could fall. We continue to support that plan, but recognizing that political reality now prevents its acceptance, we call tonight for an interim plan that would supplement the present welfare system and ease the plight of poor people while putting in place structures for ultimate reform.

Our interim plan includes four major steps:

(1) A massive job-creation program. We should have an expanded federal program of public service jobs, and job-creation incentives to private industry, targeted to high unemployment areas.

(2) Food Stamp expansion. The food stamp program has become a major source of income assistance. By eliminating the cash requirement, simplifying and broadening eligibility, and launching an aggressive outreach program, food stamps can become the vehicle for helping all of the poor and near-poor.

(3) Major improvements in social insurance programs including a national health insurance plan. Extending and improving programs that cushion the effects of unem-

ployment and economic losses due to health problems will reduce the numbers of people forced to resort to welfare assistance.

(4) A refundable tax credit. Ultimately, we envisage this as a means to drastically shrink the welfare rolls, but a start can be made now by using the tax system to provide modified income assistance.

Thus by instituting a refundable tax credit and applying it to grants for low-income families, even a modest grant would remove significant numbers of people from the welfare rolls while providing aid for those whose welfare benefits are inadequate and those who are poor or near-poor and do not receive welfare payments. This proposal would shrink the welfare rolls and would reduce the dependence on the welfare system through a more equitable tax system.

This interim plan would be real reform. By instituting this plan, the Administration can refuse to become part of the institutional retreat from civil rights that is infecting the nation. In almost all sectors of national life we see former friends relaxing into indifference, and former foes back on the attack. National policies of neglect and recession have combined to make many people in the private sector less concerned with fulfilling their responsibilities.

The Congress seems more anxious to ban busing, to limit affirmative action programs and to bar Medicaid funds for abortions than it is to improve the schools, enforce civil rights, or to enable meaningful life after birth. But that same Congress was giving every indication of being willing to pour billions of dollars down the drain on the B–1 bomber before the President's bold and far-sighted decision not to go ahead with production.

The symbol of institutional retreat is the Supreme Court. Once the proud defender of the rights of minorities and the disadvantaged, this Nixon-dominated Court has become a source of denial of equal opportunities. The protector of our rights has slowly slid into the position of becoming the enemy of those rights.

The Court has retreated to the cramped narrow legalisms of supposed neutrality and objectivity. It has formulated the legal doctrine of "intent to discriminate" as a replacement for the more realistic legal requirement of proving discriminatory effects. In its last term, the Court upheld discriminatory zoning laws and discriminatory seniority systems. It denied to poor women the opportunity for abortion available to more affluent women, and it is shocking for the Administration and the Congress to have supported the Court in this callous act.

It is in this Court then, so vastly different from the Warren Court that protected and extended civil rights, that the Bakke case will be decided.

We urge the Administration to recognize the importance of this case and the issues involved by filing an amicus brief asking the Court to uphold the University's admissions program.

By the standards of legality, morality and plain common sense, affirmative action programs are legitimate and necessary. And the intensity of the opposition to affirmative action is yet another example of the painful fact that the national mood still resists accommodation to the just needs of black and minority people. It still resists making necessary changes in our society to provide equal opportunity. The national search for roots is degenerating into mere nostalgia, instead of drawing lessons from the hardships forced upon our forebears and those of other ethnic groups.

And yet, because we hear the true call of our roots, because we draw inspiration from those who came before us and on whose accomplishments we build, we are unshakable in our determination to overcome. While we continue to impress upon the Administration, the Congress, and the public and private sectors, the justice of our cause, we have another job to do.

We must capitalize on the latent strengths of the black community. We must marshal our considerable economic and political power to improve our communities. We must bend every effort to instill in our young people a devotion to excellence and a determination to succeed.

Those of us in leadership positions have a still larger responsibility. We cannot lessen our pressures for constructive change. We cannot allow our personal or political loyalties to deflect us from the task of fighting for our rights. This applies as much to local leadership as it does to the national leadership of black institutions.

It is in this context that we must urge our black brothers and sisters in government to recognize the important role they can play. We are proud of them. Every announcement from the White House of the appointment of a black person to a federal position was met with pride. At long last there are enough black people at the higher echelons of government to form a critical mass capable of exerting a major influence on policy. Most of these black federal executives come from backgrounds of militant activism, and the fervor and passion they brought to the civil rights movement must continue to characterize their actions.

Just as they were on guard for civil rights 24 hours a day, so too must they continue that vigilance in their new jobs. Just as they once prodded the Executive Branch, the Congress, and the courts with ceaseless demands for change, so too must they continue to raise the kinds of issues we have raised tonight.

Black federal executives are uniquely situated to become catalysts of change. They can maximize their strengths by coming together in an informal network of conscious interdependence and shared resources. All of our nation's institutions have run on the wheels of a well-oiled "buddy system" of mutual protection and mutual aid that excluded blacks and other minorities. So the inevitable lesson is that black and minority officials should come together in a similar system of shared support that will increase the influence of black executives and, more importantly, of the policies they are fighting for.

I cannot urge greater mutuality and cooperation among black federal executives without recognizing the need for closer cooperation among national black leadership. With a national mood that ranges from indifference to hostility, with crucial national decisions being made without due consideration of their impact on black people, and with black institutional strength diluted because of lack of unified strategies, it is time for black leadership to come together once again.

Of those occasions when we have coordinated strategies, such as last year's voter registration campaign, we have been successful. It is time now to extend that success to other areas and other issues. It is time now for national black civil rights leadership to come together in a revived leadership group, in structured, planned meetings of heads of national organizations to pool our strengths and strategies.

So I call tonight on my colleagues to join me in a meeting next month to begin the process of coordination on behalf of all of America's black and poor people. Our meetings should be held in private. They should deal with issues and strategies. They should be structured around the concerns of our constituents.

I am confident they will share my belief that it is imperative for black leadership to create a new structure that will enable us to act in unison and to maximize our efforts on behalf of our constituents. For if we don't do it, who will? We can call on the President to push for social changes; we can call on the Congress, we can call on the private sector, but in the last analysis what must be done, we must do ourselves. We need alliances and coalitions but the initiative and the urgency must be ours.

We take our cue from Frederick Douglass, who wisely counseled: "Who would be free, themselves must strike the blow. . . . You know that liberty given is never so precious as liberty sought for and fought for. The man outraged is the man to make the outcry. Depend on it, men will not care much for a people who do not care for themselves."

I am confident that we can succeed, we shall overcome. The path, as always, will be difficult, but it is an American path, and that is why I am confident.

Last year I was in South Africa and two weeks ago I was in Russia. Seeing oppressive dictatorships of the right and the left convinces me that however far America may be from attaining its national goals and ideals, America is fertile soil for human fulfillment.

The plane that brought me home from Russia landed in New York during the blackout. The lights were out all over the city. But despite the inconvenience and the attendant problems, I'd rather be here in the United States with the lights out than behind the Iron Curtain with the lights on. We have many just criticisms to make of our nation, but this speech could not be given in Russia or South Africa, and we could not dissent from national policies or pressure national leadership in Russia or South Africa.

Having visited such countries that are built on vicious denial of human rights, I take heart from our new national policy of worldwide support for the sanctity of human rights. When a Vorster kills young black people in Soweto, when a Brezhnev sends dissenters to prison camps, when an Amin senselessly slaughters his own people, all mankind is diminished. All mankind bleeds on the rack of the torturers, whoever they may be and wherever they may commit their crimes.

But this new American crusade for human rights and decency in the world must not become prey to hypocrisy and to cynicism. Our nation cannot call for respect for human rights while it lacks the moral courage to save its own cities, its own poor, its own minorities whose rights are trampled upon. The real moral equivalent of war in our times is the moral challenge to construct a just and equal society.

So our concern with human rights in the world must be joined by similar concern for basic human rights here at home. As long as our society denies equality of opportunity for its minorities, jobs for all who can work and income security for all who need it, our advocacy of human rights will be met by scorn throughout the world. We cannot preach at others and sin ourselves.

It is the mission of the Urban League Movement to remind our nation of this, and to toil on behalf of black people, of minorities, of all poor people. As we begin this Conference, let us be mindful of that mission. Let us not forget who we are, from whence we came, and why we are here.

Most of us at this Conference are working; our incomes place us in the middle class. We are educated; we are among DuBois' talented tenth, and among us are found many of the black intelligentsia. We are professionals, semi-professionals, blue and white collar workers; we represent business, labor, public and private sectors.

Our forebears were slaves. Our parents struggled to put us where we are. We are the first or second generation of our families to earn degrees. We are just a step ahead of the fathers and mothers, brothers and sisters who helped us. We know our roots. We know the years of toil and sweat; we know the ghettos from which we came, we remember the inferior segregated schools, the

inequitable welfare system, the walls of discrimination in jobs and housing. Yes, we know all of this first-hand and because we know what it means to be black and poor in this society, we are painfully aware that our personal gains are tenuous and insecure. We know we cannot breathe easy while our brothers and sisters are still under the heel of poverty and hardship and discrimination.

We are here at this Conference then, not for ourselves, but for them. We are here on behalf of our brothers and sisters, some of whom don't know who we are or what we're about, but they send us a message, an urgent message, to lead, to produce, to make their futures brighter and more secure. They're depending on us. Who will speak for them? Who will fight for them? In a society that consigns black people to the bottom rung, it is the Urban League and other institutions in the black community that stand by their goals, their interests, their needs.

So we're here in Washington to work for the brothers and the sisters. We're not here to party or to play, but to plan and to pressure. We have to demonstrate that we have not forgotten our blackness, our roots, the poverty of our people. We are a movement with a mission, and as we begin this Conference let us recall James Weldon Johnson's invocation of remembrance of homage to roots sunk deep and true:

"God of our weary years,
God of our silent tears,
Thou who has brought us thus far on our way,
Thou who has by Thy might
Led us into the light,
Keep us forever in the path, we pray;
Lest our feet stray from the places, our God, where we met Thee,
Lest our hearts drunk with the wine of the world, we forget Thee;
Shadowed beneath Thy hand,
May we forever stand,
True to our God, True to our native land."

Mr. CONYERS. Mr. Speaker, Vernon Jordan challenged the administration to live up to the promises articulated by Mr. Carter during the campaign with respect to full employment, urban revitalization, welfare and national health care reform that does not penalize the poor. The challenge stands, notwithstanding the President's defensive response and personal rebuke to Vernon. The President and his advisors were not accused by Vernon of not caring about the poor and minorities. Vernon acknowledged the President's deep concern for the have-nots in America. But Vernon did say, as judged by the President's policies and programs thus far, the administration has misjudged the fundamental nature of the black crisis in America, especially the desperate realities of massive unemployment and subemployment.

Mr. SCHEUER. Mr Speaker, will the gentleman yield?

Mr. CONYERS. I yield to the gentleman from New York.

Mr. SCHEUER. Mr. Speaker, I thank the gentleman very much for yielding.

I regret the phraseology used by the President. I think perhaps the words were formulated in a fleeting moment of fatigue and annoyance. I do not believe that the President's statement at the press conference reflects his true feelings about Vernon Jordan or about the frustration of the black community.

I would hope that the President would be tolerant of those of us who feel that the administration has done less than what we hoped to see done. For example, with respect to assistance to our beleagured urban areas, the administration has certainly not behaved up to our admittedly high expectations.

Anyone in New York City has to be depressed as we see our neighborhoods deteriorate month after month and as we desperately hope for some kind of programmatic support, something that will help us rebuild those neighborhoods.

Anyone who has spent time in the black community, as I have, since the unfortunate combined coincidence of the blackout and the sporatic looting and violence that took place which was so ill representative of the minority communities, has to be aware of the deep sense of frustration in the minority communities about the lack of employment opportunities. One has to be cognizant of the painful and tragic impact of structural unemployment in those communities. The desperate desire of young black men and women to participate in our economy, to reflect the work ethic in their lives, to be proud and to have the self esteem that comes from gainful employment, and the independence of moving off the welfare rolls and on to the tax rolls is obvious.

All of us in the cities can hope for and work toward some kind of progress in the area of welfare reform that will produce a fair, equitable, manageable, and cost effective system.

I think that without the slightest criticism of the President's bona fide interest and his deep concern and identification with the problems of all Americans, we can say that as of now we in the cities do have a certain letdown feeling because our expectations and hopes have not been fulfilled. We hope that in the months to come the administration's program in helping revitalize the public service employment programs that provide upward mobility, on-the-job training, and hope for the structurally employed as well as its efforts in the area of welfare reform, will all begin to take shape.

I think President Carter has done a truly magnificent job in his first 7 months of his Presidency. I think he can rightfully take credit for some enormous achievements. But it is inevitable that the costs of the next 3½ years will be great as he strives toward a balanced budget. As we are fighting for an increased share of the pie, those of us who have particular concerns, be it a farm interest or an urban interest or any other interest in our economy, are going to be expressing hope for more progress. This does not reflect any diminution of our enormous admiration and respect for the President and our pride in the job that he has done as a Democratic President. I think his job has been truly remarkable in many, many ways. But I, too, would join the gentleman in saying that I cannot help but say we in the cities hope for more.

Mr. CONYERS. I appreciate my colleague's comments, because I know that he personally knows Vernon Jordan as an urbane and sophisticated and restrained speaker at all times, and that any characterization of Vernon Jordan as being demagogic would have to be very, very far out of character for the Vernon Jordan that we have come to know across the years.

Mr. SCHEUER. And I cannot help but feel that it is also out of character for the President, whom I have come to know and respect, to have made that remark. I just cannot help but assume that it was a remark that he may have made because of fatigue or momentary irritation and annoyance. It simply does not reflect the very thoughtful, very cool, and very kind President that we have all come to know and respect.

Mr. CONYERS. I do not know whether my colleague, the gentleman from New York, has in fact read the speech that Vernon Jordan made—and I will put it in the RECORD as a result of tonight's activities—but he spoke of the New York crisis and in that direction urged that the President come to New York to visit the looted and the looters as well, as a symbol of his understanding of the pervasiveness of the problem in New York to be one beyond the shortage of electricity. I think the gentleman has made that point in his own way in his usual eloquence.

Mr. SCHEUER. Let me just add one more random thought on that incident in New York. I think the press did a very unfortunate job of reporting the looting. I happened to be in New York the night of the blackout, and I traveled all over the city as I did 2 days later with the congressional delegation. The remarkable thing about the blackout is that in Harlem, as well as in the rest of the city, blacks and other minorities were out on the street with their flashlights directing traffic, helping elderly people across the streets, and assisting the elderly and the handicapped up the stairs. Blacks were coming out of their apartments linking arms to protect the streets on their block until the owners of stores could arrive on the scene. It was really a moving sight.

Mr. CONYERS. May I say to my colleague it was quite inadequately reported.

Mr. SCHEUER. It was not only inadequately reported, it was grossly distorted. I think the print media and the television, in reaching for the spectacular, the violent, and the illegal, completely overlooked the overwhelming supoprt of the minority communities in our city for law and order, for preserving the communities, and for protecting the property rights of the store owners who had gone home. It was perfectly clear that the looting threatened their communities and was not a communal activity.

They had been through that whole scene before. They did not want to foul their own nests. Many of the community residents tried with varying degrees of success to save the stores. I think we should be impressed with the job that the overwhelming percentage of the minority community did in helping to cool things off and in containing the violence and the looting.

This is a very important part of the blackout story that was not told by the

press. From my point of view it may have been the finest hour for the overwhelming percentage of the black community, but it certainly was not the finest hour for the electronic and print media.

Mr. CONYERS. Mr. Speaker, New York City's blackout and the looting in its aftermath revealed, not an energy crisis, but a jobs crisis—a crisis of surviving with 80 percent unemployment and subemployment rates. Vernon Jordan noted that—

> The tragedy in New York offers the President an opportunity to exercise bold leadership.

With restrained eloquence Vernon Jordan said:

> We ask tonight that President Carter signal to the Nation his concern for the cities and the poor who live in them by going to New York; by speaking with the looters and the looted in the South Bronx, Harlem, and Bedford-Stuyvesant. A nation of cities is adrift in confusion and the President of all the people has to show his concern.

Mr. Speaker, I appreciate my colleague, the gentleman from New York (Mr. SCHEUER) making this contribution to the special order.

The President's initial response to Vernon Jordan's critical views was to ask for patience in view of the fact that the administration is only 6 months old. The President rightly claimed to have inherited deep-seated economic and social problems affecting blacks—problems of longstanding that obviously could not be remedied quickly. The President stressed that the long-awaited results, especially in terms of jobs, would be forthcoming soon as the predicted fruits of his programs, only recently legislated, could come into being.

I think there are two fundamental aspects about this excuse that we ought to examine. First, since its inception the administration has proceeded piecemeal with legislative and budget proposals, for economic stimulus and job creation, energy, welfare reform, community development aid to cities, and others, but without an overall planning framework. The Congressional Black Caucus has unsuccessfully attempted to meet with the President to urge him to develop his domestic policy reforms within a comprehensive, long-range economic strategy and program, such as the one embodied in the Humphrey-Hawkins bill (H.R. 50). Given our lack of success in arranging a meeting with the President several months ago, the Black Caucus should be faulted, if for anything, for excessive patience, rather than sharing with Vernon Jordan the President's criticism of unreasonable impatience.

Second, I question the administration's so-called full employment strategy. The President has adopted as his central and overriding goal a balanced budget by 1981, at the inevitable expense of social programs, on the premise that his economic programs would result in "full employment." But I know, and have repeatedly stated over the past 6 months, that the administration's economic strategy for the next 3 years is basically faulty. My analysis and conclusions recently have been corroborated by the Congressional Budget Office, the Brookings Institution, the General Accounting Office, and even the Department of Commerce itself.

Worse still, at the heart of the dilemma shared by President Carter, Vernon Jordan and the black community, is the well documented fact that the administration's conception of "full employment," at a level of 4.7 to 5 percent official unemployment but as late as 1981, even if it is achievable, still will leave the majority of black youth without work and as many as 15 percent of black adults without fulltime jobs—in other words, still at depression level unemployment.

Furthermore, Vernon Jordan clearly stated that the challenge of saving the cities is inextricably linked with the fate of black Americans. In the preceding 8 years, the previous administrations turned their back on the cities and the crisis in black urban America.

As a result in the 15 largest metropolitan areas the percentage of poor people who are black has risen from 37 percent to 50 percent over the past 15 years and this is during the period when our gross national product exceeded $1 trillion. The economic and social gulf between black and white Americans increased incredibly and still continues to grow.

I cannot believe that President Carter does not understand at least the broad dimensions of this tragic situation.

I would like to point out as well that the diminution of support that Vernon Jordan referred to which began in November at about 91 or 92 percent recently went down to about 83 percent in April and last month, that is in June, his rating was down to 69-percent approval rating in the black communities of America. I really have no idea what it is going to be for July or August, especially under the present circumstances.

It seems to me that what we need to reinforce is the need for dialog, because together with the Congressional Black Caucus and other leadership organizations and individuals across the country, we have offered to cross this river, as I would look at it, with the President, to share in the burdens and the risks; but this potentially potent partnership requires mutual understanding of the real nature of the problem to be solved, of mutual commitment to meaningful and effective remedies and, not least of all, mutual respect in the long and hard journey that lies ahead for all of us.

Mr. Speaker, I ask unanimous consent to include the keynote address of Vernon Jordan, the executive director of the National Urban League.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. CONYERS. Mr. Speaker, the press release follows:

CONGRESSIONAL BLACK CAUCUS URGES CARTER TO HEED URBAN LEAGUE MESSAGE

WASHINGTON, D.C.—At the President's press conference yesterday morning, President Carter chose to characterize Vernon Jordan's criticisms of the Administration as "erroneous" and "demagogic." Members of the Congressional Black Caucus regard these comments as profoundly unfortunate, thoroughly unfounded in the context of Mr. Jordan's address to the National Urban League Convention, and open to interpretations potentially damaging to the President's relationship with his Black constituents and their leadership.

Our purpose in calling this press conference is to express unequivocal support for the entirety of Vernon Jordan's views as expressed at the National Urban League Convention; to continue the Caucus' effort to have the President recognize the full depth and extent of the critical problems afflicting Black Americans; and to continue efforts to bridge the widening gap between the Black community of this nation and the Administration.

On Sunday evening, Vernon Jordan spoke for Black America. As a long-time friend, supporter and admirer of the President, Jordan tried to convey a constructive message in a positive manner to the President, a man for whom Blacks voted with virtual unanimity. He said in straightforward and unthreatening language without rancor or bitterness that Black people are "disenchanted with the Administration they elected. . . . Black people feel that their hopes and needs have been betrayed." The words were strong, but the truths and facts behind them are even stronger.

Vernon Jordan said publicly what many have said privately. Black leaders have attempted to express these concerns to the President in private. On March 7, the Congressional Black Caucus asked to meet with the President on the nation's most pressing issue, unemployment, and was denied that opportunity.

We had great hope that fundamental change could be made. Instead, we have heard that the goal is a 5 percent unemployment rate, which we know means at least 10 percent for Blacks and much more for Black teenagers. Instead, we have heard that the budget must be balanced, and that in order to do so we will perhaps have to cut health, education and welfare funds. Instead, we have heard proposals from the Office of Management and Budget that money for a reform of the welfare system be taken from other programs to aid the poor.

It is time to reorder national priorities. A fundamental shift from aiding the wealthy through the tax system and the military through the defense budget to aiding the poor can occur.

We believe that the President does recognize that policies have not yet been set in motion to achieve fundamental change. He deserves credit for some of the accomplishments that he lists. But we do not see a vision of the future that includes reducing unemployment to the point that every person desiring work may do so, as provided for in the Hawkins-Humphrey Full Employment Act. Nor do we see a program aimed at revitalizing the cities.

There must be a close working relationship between Black leaders, the Black community and the President. It must begin with increased access to the President and it must continue with actions to achieve shared goals through shared efforts.

Mr. METCALFE. Mr. Speaker, will the gentleman yield?

Mr. CONYERS. I yield to the gentleman from Illinois.

Mr. METCALFE. Mr. Speaker, I appreciate this opportunity to state my support for Vernon Jordan and the views he expressed in his keynote address to the 67th annual conference of the National Urban League.

I think that Vernon Jordan knows what is happening in the urban streets of the Nation and in the black neighborhoods in particular. Jordan has been an

able, accurate, and articulate spokesman for minority aspirations and urban needs. He has tried to tell it like it is to America and to a friendly administration. Indeed, what are friends for if it is not to tell them the truth?

In my own congressional district last week 2,000 people lined a full city block waiting to apply for 300 jobs at a new grocery store opening soon on Chicago's South Side. According to news reports, most were high school graduates and eager for work. This illustrates to me the widespread hunger for jobs in the urban areas of our country.

It is unfortunate that there is criticism of Vernon Jordan for presenting these and other needs of urban and black Americans in a forceful way. But he did not create these needs. He merely brought home the message.

I hope that the outcome of recent events will be a new recognition of the urgency for the administration to address visibly and effectively the critical problems facing Black Americans. I hope for renewed efforts to bridge the widening gap between the black community and the administration.

This administration did not create urban problems either. I know that the President's goal is to revitalize the economy and to deal with minority and urban problems at the same time. He is to be commended for his accomplishments to date. For example, in my view one of President Carter's very vital contributions so far is his genuine, personal relationship with blacks that reflects respect and a true democratic spirit. But I look forward to more substantive action that will justify sustained hope on the part of America's blacks.

Mr. Speaker, I commend the President for his commitment to human rights. But the President must be reminded that one of the most basic of human rights is a right to a job. To speak of human rights without so much as a nod to this basic human right points up an inconsistency in the President's program. I am certain that he will want to move with all dispatch to correct this inconsistency. That, after all, is the purpose of this special order—to have his friends emphasize their concerns to him.

Mr. Speaker, the newspaper article follows:

[From the Washington Star, July 27, 1977]

2,000 CHICAGOANS SCRAMBLE FOR 300 SUPERMARKET JOBS

CHICAGO.—The crowd of 2,000 surged into a new supermarket, hungry for work, not food. There were seven applicants for each job.

"We're desperate," one black woman cried. "Desperate for jobs."

"I need this job bad," Bernard Meeks declared. "I've been out of work for nearly five years."

This was Chicago's South Side on a day when 300 jobs, most of them part-time and paying only $3.05 to $3.90 an hour, became available.

"Tell President Carter that black people here are trying to get a gig," declared one woman. "Gig" is a musician's word for a job.

"These people are just looking for a job," said Police Sgt. Lorenzo Chew. "They aren't breaking any laws. I guess this shows what the unemployment situation is in this community."

While the State says unemployment is only 4.3 percent for the Chicago metropolitan area, for the city itself it is 5.8 percent—and, the mayor's Office of Manpower says, the rate of black unemployment in Chicago is 10 percent.

Dennis McAvoy, research director for the manpower office, adds that the figures don't include those too discouraged to keep on looking for work. If they did, he said, black unemployment here would be more like 20 percent—and even higher among unskilled young black men.

Chicago is also not the only city with such a situation in the inner city.

When it was time to apply for summer jobs in New York City earlier this year, thousands of youngsters lined up the night before—at some spots 15 applicants for each job. In Los Angeles, a handful of civil service openings also drew long lines—and last year, one opening as an elevator mechanic's helper for Los Angeles drew 917 applicants.

In Chicago, an Urban League study of unemployment in black neighborhoods blames much of the trouble on a loss of manufacturing.

"The city's population and work force are increasingly black and Latino. But the metropolitan area is losing employment, and 't is primarily the central city where those jobs are being lost," the study said.

It said the Chicago area did worse during the first half of this decade than the nation as a whole in every kind of industry.

"Within the black ghetto," it said, "some community areas have unemployment rates approaching those of the Great Depression."

I appreciate the gentleman from Michigan yielding to me.

Mr. CONYERS. I appreciate my colleague's comments. I can only observe that had those numbers of jobs been opened in Detroit or Harlem or Los Angeles or Cleveland, that the lines would have been equally as long.

Mr. METCALFE. If the gentleman will yield further, this article I am attaching to the RECORD indicates what has happened in New York and other cities where the number has been as proportionate of applicants for jobs as it was in this one particular incident which happened in Chicago. So, the gentleman in the well is absolutely correct. This is not an isolated incident. This is national in scope, national in importance.

Mr. CONYERS. I thank the gentleman.

Mr. SIMON. Mr. Speaker, I rise to commend my colleague, Representative JOHN CONYERS, and the members of the Black Caucus for their fortright statement.

Unfortunately the media will probably play all of this as a continuing Vernon Jordon versus President Jimmy Carter fight. It is much more than that.

We are discussing the fundamental course of the Nation. Shall we solve our problems of unemployment, to take one example, by timid efforts or by more aggressive action? My guess is that if we came up with the latter answer you would see the stock market suddenly pick up, providing capital for jobs that are needed, providing the Nation a sense of direction, and most important, providing everyone a chance to meaningfully participate in the forward thrust of this Nation and of their families.

This dialog should not quietly die—and must not quietly die—in a chamber in which only a few Members hear the eloquent words of my colleague from Michigan.

This dialog must continue—until we have the good sense to vigorously move on the fundamental problems this Nation faces.

I am confident that if President Carter feels that he has the backing of this Congress and the people of this Nation to move in that direction, we will move.

I for one want to give him that assurance.

Mr. RANGEL. Mr. Speaker, last week Vernon Jordon of the National Urban League rebuted the accomplishments of the Carter administration in reference to the black community. In his remarks, Mr. Jordon delineated the concerns of many of our Nation's black leaders.

As a former chairman of the Congressional Black Caucus and a black elected official, I wholeheartedly concur with Mr. Jordon. For the past 8 months a head of steam has been building up for a confrontation with the President. During this time, the President has failed to develop comprehensive programs to assist the black community, those areas most neglected have been welfare, and full employment.

President Carter has failed to fulfill his obligation to the black voters of America. Since his election he has appointed only 32 blacks to key governmental positions. This number falls far short of his stated commitment to that segment of the national community which has been given credit for his election victory.

I call upon the President to take the initiative and develop those necessary changes that the administration must make to regain the respect of blacks throughout America. This is not the time to issue statements calling truthful, however incisive criticisms "erroneous and demogogic". This is the time for immediate and effective action.

Mr. FORD of Tennessee. Mr. Speaker, I rise today to express my support and concurrence of the views stated by Mr. Vernon Jordan, the executive director of the National Urban League, last week during their national convention.

Fully cognizant of the risk involved, Mr. Jordan expressed the views and concerns of black and poor people across this country. We must understand the frustration that black and poor people experienced during the past 8 years.

During his campaign, Mr. Carter raised the level of the hopes and aspirations of black and poor people to an unprecedented level. It is understandable, therefore, that 6 months later black and poor people are now very apprehensive. They feel that the administration should be more sensitive and responsive to their needs.

In spite of the initiatives President Carter has implemented and notwithstanding those he is proposing, blacks still have an unacceptable rate of unemployment, and scores of other unfulfilled promises. Promises such as equal opportunity, welfare and education reform, and urban revitalization. Crime in the black community continues to increase; most, if not all of the socioeco-

nomic conditions that existed during the past still exist today.

Black and poor people are disappointed to date. They are growing impatient with statements that more time is necessary. Many feel President Carter should practice what he teaches in Sunday school and abroad. They believe there is a great imbalance between Carter's foreign and domestic policies. It is unfair to expect an unemployed, undereducated, black or poor person who lives in the ghetto to fully understand, accept, or appreciate the relevance of President Carter's human rights offensive.

I believe that it is the responsibility of this Congress to remind the President through our action on the floor that we are indeed concerned with the plight of the millions of poor people across the Nation.

It is our duty and moral commitment, in fact, to insure that we have equal opportunity, full employment, welfare and education reform, and urban revitalization.

Mr. Jordan should be commended for his eloquent yet forceful statements. And, at this time, I am doing just that—commending Mr. Jordan for taking the initiative with his statements.

GENERAL LEAVE

Mr. CONYERS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of this special order, and that the gentleman from Illinois (Mr. METCALFE) be permitted to attach an article to his remarks.

The SPEAKER pro tempore (Mr. ECKHARDT). Is there objection to the request of the gentleman from Michigan?

There was no objection.

PROBLEMS IN SUMMER YOUTH EMPLOYMENT PROGRAM

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from New York (Ms. HOLTZMAN) is recognized for 60 minutes.

Ms. HOLTZMAN. Mr. Speaker, several months ago I pointed out severe problems of mismanagement and abuse in last summer's youth jobs program in New York City. I asked the General Accounting Office to study the program's operation this summer to determine whether the problems I pointed out had been remedied and the commitments of improved management made by the U.S. Department of Labor and the city of New York had been kept.

Last week GAO reported to me on its early findings in this investigation. As the following memorandum prepared by my office points out, virtually nothing has been done to improve the program.

[Memorandum]

GAO BRIEFING ON NEW YORK CITY'S SUMMER YOUTH EMPLOYMENT PROGRAM

On July 25th, the General Accounting Office, conducting an investigation of New York City's federally funded 1977 Summer Youth Employment Program, briefed me on its "observations as of this time." [1]

GAO characterized the City's administration as "disorganized at best." GAO stated that the City does not have "adequate controls" in place "to see that its own goals are met" or "to control federal monies" being spent.

Certain procedures have been changed in response to my prior criticisms of the program, but according to the GAO there has been little meaningful implementation of most of these changes.

The GAO also felt the Department of Labor was inadequately staffed to assure that the program was run in compliance with federal laws and regulations.

I. NON-MERIT SELECTION OF PROJECT SPONSORS

Despite repeated U.S. Department of Labor (DOL) commitments to the contrary (see appendix), project sponsors that performed poorly in 1976 were not barred from the 1977 program.

a. Sponsors Who Flunked City's Test Allowed Back In

Of last year's 119 job sponsors, 38 (or 32 percent) failed the City's own test for determining satisfactory prior year performance.[2] Yet 31 of these failing sponsors were permitted to participate in this summer's program.[3] These sponsors are responsible for 43 percent of the 1977 program. They received the same number of job slots and the same amount of administrative funds as if they had passed, instead of failed, the City's performance evaluation.

The evaluation procedure was instituted by the City at the request of the Department of Labor as a result of my earlier criticism that nearly 90 percent of the 1976 program was allocated to 1975 sponsors regardless of performance or merit.

Nevertheless, it seems clear that the merit system which the evaluations should have created was never implemented. According to the GAO, "the basic decision as to who was to sponsor the program was made in February" long before the evaluation of past performance was completed.

b. City's Evaluation Procedure Inadequate

GAO criticized the City's evaluation standards because too little emphasis was given to actual program content. Thus, the evaluation permitted a job sponsor to pass despite failing, for the most part, to provide meaningful work.

The Department of Labor approved these evaluation standards.

c. Department of Labor Did Not Oversee City's Evaluation

Despite repeated DOL assurances that it would monitor and participate in the evaluation process (see appendix), DOL did not obtain a copy of the City's evaluations of individual sponsors until June 30th, two working days before the program began. It took no action on the City's inclusion of the 31 sponsors who failed the evaluation test, nor has it reviewed the City's evaluation in depth.

II. INADEQUATE MONITORING OF THE PROGRAM

The City is responsible for monitoring the program to assure that sponsors comply with their contracts and provide youngsters with adequate work experience.

According to GAO, the City has significantly increased its number of monitors. Nevertheless, and despite repeated DOL commitments to assure adequate monitoring (see appendix), the City's monitoring effort has not substantially improved.[4]

a. As of Friday, July 22nd, the City Did Not Know Where All Youngsters Were Assigned to Work or What They Were Supposed To Do.

As of Friday, July 22nd, three weeks after the program started, the City did not have a complete list of the locations at which youngsters were supposed to be working and an adequate description of the work that was supposed to be done. It could not, therefore, conduct a complete monitoring effort.

According to GAO, because some work sponsors failed to list job sites, the City could not compile a complete list even if it wanted to. Also, according to GAO, the City says it does not think such a list is necessary.

b. The City Will Not Monitor All Sites at Which Youngsters Were Supposed to Be Working.

Originally, the City planned to visit each of the anticipated 9,000 work sites at least once during the summer, and allowed for follow up visits to sites which had problems (see appendix). However, during the first week of the program, GAO was told that there was "not too much active monitoring." Because there was no centralized site list and because many of the sponsors' plans were still outstanding the City's Area Managers could only put together monitoring schedules on a week-to-week basis.

By the third week of the program, the City's original monitoring plan was scrapped and a two-tiered system was adopted.[5] One tier, called "regular" monitoring,[6] will be applied to the programs of 134 project sponsors. Instead of visiting each of their work sites once and following up on identified problems, the City will monitor only roughly 25 percent of these project sponsors' sites with "follow-up as needed."

The second tier, called "continuous" monitoring, will apply to a select group of six project sponsors: the four I studied and two additional sponsors which had been selected, at random, by GAO for study this summer. According to the City, "continuous" monitoring means every day monitoring and it is supposed to be more intense. GAO is trying to ascertain the exact meaning of the phrase.

The City's reason for this change, according to GAO, is that the City claims these are the "problem sponsors." While this is certainly true of the four cited by me, the sponsors selected at random by GAO performed better last year, according to the City's evaluation test, than a number of other sponsors. The City's decision closely to monitor these sponsors suggests, therefore, that it is more concerned with what GAO might find, than with assuring that "problem sponsors" perform satisfactorily.

Although it is too early fully to assess the effectiveness of the City's monitoring program, the prospects are not encouraging because (1) the City does not know where, or at what task, the youngsters are working (2) the decision not to monitor all sites and (3) the diversion of monitoring resources to duplicate the work of GAO.

III. PROGRAM BEGAN BEFORE SPONSORS' PLANS WERE REVIEWED

a. The City Conducted No Complete Review of Sponsor POPs.

The City did not begin to review project sponsors' Project Operation Plans (POP)—which describe what work youngsters will be doing and where—until June 6.[7] By the time the program began on July 5, this review had not been completed, and, the City admitted to GAO, half of the 140 project sponsors had not even submitted POPs for review.

GAO was told that this review of sponsors' plans which began on June 6th was a review only for "blatant illegalities and inconsistencies." Only after July 18, when the POPs had been inspected in this preliminary review, did the City begin to give the POPs a "thorough going over." The process has still not been completed although the program is already half over.

According to GAO, the reason the review process began so late is that the City re-

Footnotes at end of article.

turned all POPs to project sponsors in late May. The City claimed this was necessary so that more detailed information could be added to one section and so that the plans would reflect the fact that the sponsor would be supervising additional participants due to a second allocation of funds.[8]

GAO criticized this procedure, believing that requiring project sponsors to submit a contract modification would have accomplished the same goal.

b. DOL Failed to Follow Through On Its Own Review of Sponsors' Proposals.

As the City began receiving POPs in June, copies of the documents were made available to the DOL Regional Office for review. DOL felt many were too general and some contained illegalities and had omissions. DOL's comments were transmitted "informally" to the City. DOL did not follow up on its comments.[9]

IV. CITY'S COORDINATION WITH STATE'S ADMINISTRATION OF THE FOOD PROGRAM HAS BEEN LIMITED AND INEFFECTIVE

According to GAO, the promised coordination between the administration of the food program and the jobs programs (see appendix) has been "limited and ineffective."[10] GAO places the blame on the City.

There was one meeting in May at which my report on fraudulent connections between these programs was discussed by State Education Department (SED) and Department of Employment (DOE) representatives. It was agreed that they would work together and exchange information of mutual interest. On May 20th SED gave DOE a list of approved food program sponsors and vendors and on June 30th DOE sent SED a list of jobs sponsors.

The City has not provided the State Education Department with any list of work sites or work sponsors. Thus, SED cannot verify for the City that job sites which are claimed to be feeding sites actually have a feeding program. Nor can it advise the City when feeding sites which are also job sites have been cancelled.

V. GAO'S REVIEW RESULTS IN CITY'S SUPERSEDING LOWER EAST SIDE COMMUNITY CORPORATION

As a result of problems discovered by GAO in the Lower East Side Community Corporation's program, the City itself took over administration of that program.

GAO, upon visiting a Lower East Side site which was supposed to be a food program site, found:

No food program was in operation;

73 youngsters were assigned to the site but there was no work; and

GAO was refused access to the site's time card records.

City officials subsequently discovered a questionable lease agreement and found that the corporation had represented that it was a food program sponsor when it was not.[11]

The City has superseded the Community Corporation's Executive Director and taken over responsibility for that program.

VI. REGISTRATION PROCESS PLAGUED BY SERIOUS PROBLEMS

Although GAO did not monitor the registration process, DOL observed registration at 40 sites through the City, According to GAO, DOL noted:

Evidence of pre-registration in violation of the regulations' first-come first-served rule;

Frequent certification of family income at exactly the maximum allowable level, indicating probably registration of ineligibles.

According to GAO, DOL has concluded that the registration procedure needs to be revised, but has not decided how to do it.

VII. INADEQUATE OVERSIGHT BY DOL

DOL has a professional staff of two people assigned to the oversight of this program. DOL's professional staff is supplemented by two college interns hired for the summer. GAO feels that this small number of people cannot adequately monitor the City's operation of this $35 million program which supposedly employs 70,000 disadvantaged youngsters nor can it insure that federal monies are spent in accordance with federal law.

FOOTNOTES

[1] After exposing gross mismanagement by the City of New York and the U.S. Department of Labor in connection with the 1976 summer jobs program, I had requested the General Accounting Office to review this year's Summer Youth Employment Program to determine whether promised improvements had been made. The briefing by the GAO was of its findings "as of this time." (i.e. July 25, 1977). The GAO's review of the program will continue for the balance of the summer and a final report will be made.

[2] The City had devised an 100-point system for evaluating 1976 performance. A score of 70 was needed to pass the City's evaluation test. Those sponsors who scored less than 70 were to be excluded from this summer's program unless they submitted an acceptable written plan which would "demonstrate" that they were "capable" of running an adequate program this summer.

The 31 sponsors who failed this test and were permitted to participate in this summer's program never submitted a written plan to demonstrate that they could improve their performance.

[3] GAO has not determined if the 7 sponsors which failed and are not in this summer's program were excluded or simply did not reapply.

[4] The need for improved monitoring was pointed out in my report of March 27, 1977, which noted that many sites were not monitored at all, that the City took no action to remedy problems diclosed by monitoring reports, and that the monitoring form used did not elicit crucial information.

[5] Actually, only the concept of a two-tiered system was then adopted. The mechanism was not scheduled to be fully in place until Friday, July 29th.

[6] "Regular" monitoring consists of: (1) reviewing the project sponsor itself three times during the summer to determine if it is fulfilling all of its contractual obligations and keeping adequate records; (2) visiting ¾ of the work sponsors engaged by the Project Sponsor; (3) monitoring ⅓ of the sites operated by those work sponsors.

[7] Review of the substance of these POPs is important to determine if adequate plans have been made by the sponsors for the participants assigned to them. In addition, the FOPs are only documentary source of data on where the youngsters are assigned to work. Without the POPs the City has no ability to monitor the program.

[8] The City was not taken by surprise by this second allocation. In fact City officials expected it and were planning for it. Their program regulations which are dated March 1977 indicate that additional funding was a possibility and correctly estimated that $6 million more would be forthcoming.

[9] The need for evaluation of these proposals was pointed up in my earlier criticisms of last summer's program in which sponsors were allowed to participate regardless of the merits or weaknesses of their proposals.

[10] The need for such coordination was pointed out by my revelations that the jobs program and food program were used to shield fraudulent activities in each other.

[11] The Corporation was not certified as a sponsor of the food program until June 22nd. It was then clear that its food program could not begin until several weeks into the jobs program. Lower East Side failed to reassign youngsters to sites which would have work for them to do, and allowed them instead to "participate in recreational activities, such as going to the beach and going to parks."

APPENDIX—U.S. DEPARTMENT OF LABOR FAILS TO KEEP COMMITMENT TO UPGRADE THE PROGRAM

In a series of meetings and letters (see attached documents), the U.S. Department of Labor made a number of commitments to improve the operation of the Summer Youth Employment Program in New York City this summer. As a result of the GAO briefing it is apparent that virtually every one of these commitments has been broken, including the following:

1. Project Sponsors' 1976 performance would be evaluated and a Sponsor would be allowed to participate in the 1977 program only if its performance had been found adequate.

2. All 1977 proposals would be fully evaluated before funding with DOL staff involved.

3. City monitoring and management follow-up on findings would be strengthened.

4. Arrangements would be made to coordinate the Summer Youth Employment Program with the Department of Agriculture's Summer Feeding Program.

5. The City would hire one monitor for every 15 job sites and anticipated that each site would be visited at least two times during the summer.

6. The Department of Labor would assure the monitors are properly trained and would conduct training sessions.

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Virginia (Mr. HARRIS) is recognized for 5 minutes.

Mr. HARRIS. Mr. Speaker, on page 25528 of the CONGRESSIONAL RECORD, I am recorded as voting "aye" on the de la Garza amendment to the agriculture bill, H.R. 7171. I should have been recorded as voting "nay" since I was opposed to the amendment.

THIRD STATUS REPORT PURSUANT TO HOUSE RESOLUTION 252

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Georgia (Mr. FLYNT) is recognized for 5 minutes.

Mr. FLYNT. Mr. Speaker, I submit for inclusion in the CONGRESSIONAL RECORD the third monthly report on the status of the investigation being conducted by the Committee on Standards of Official Conduct pursuant to House Resolution 252.

That resolution directed the committee to investigate allegations that the Government of South Korea, either directly or through its agents, has attempted to influence congressional action by the bestowal of things of value on Members of Congress.

The current report deals with the committee's activities and those of its special staff during the month of July 1977. Previous reports were published in the CONGRESSIONAL RECORD on June 30, page 21688 and on June 7, page 17726. Additional reports will be made periodically in keeping with the committee's desire to keep the Congress and the public informed on the continuing progress of the investigation, and to assure the Congress and the public that progress has been substantial.

STATUS REPORT ON KOREAN INFLUENCE INVESTIGATION AS OF JULY 31, 1977

This is the third status report of the Committee on Standards of Official Conduct on the status of the investigation ordered by House Resolution 252, adopted by the House on February 9, 1977.

That Resolution directed this Committee to make a full and thorough investigation of allegations that Members of the House of Representatives have been the objects of efforts by certain foreign governments, particularly the Government of the Republic of Korea, or agents thereof, to influence Members' official conduct through gifts of things of value to them directly or indirectly.

This report is made in keeping with the Committee's purpose to keep Congress and the public informed on the progress of this investigation. Prior reports were printed in the Congressional Record of June 7, 1977, and June 30, 1977, and deal with the status of the investigation during the periods prior to these dates. It is the Committee's intention to file such reports frequently until the investigation has been concluded and the final report filed.

Major progress has been made since the filing of the June 30, 1977, report.

The Committee has negotiated an agreement with the Central Intelligence Agency for access to classified material vital to the investigation. It has received helpful cooperation from other agencies including, but not limited to, the Department of State, the Department of Justice, the National Security Agency and the National Security Council.

On July 15, former special counsel transmitted to the Committee a letter of resignation as Special Counsel. On July 20, the Committee by roll-call vote of 9 to 3 defeated a substitute motion that the Committee continue the services of such former special counsel.

On July 21, by roll-call vote of 10 to 0 with one Member voting present and one Member absent, the Committee at the request of the Chairman appointed Leon Jaworski, Esquire, as Special Counsel to direct the investigation and the Special Staff conducting it.

A "Memorandum of Understanding" between the Committee and Mr. Jaworski gives the Special Counsel full and complete independence in the fact-finding process of the investigation and broad authority to pursue the investigation to a successful conclusion. The Committee approved Mr. Jaworski's designation of Peter White to act as Deputy Special Counsel.

During July, the Committee held four meetings, most of which were open to the public except when the Rules of the House and of the Committee required executive sessions. The Committee plans to hold frequent meetings as necessary until the investigation is completed.

During July, 1977, the 18 member Special Staff in charge of the investigative work has stepped up its pace without interruption. No member of the special staff has resigned except former Special Counsel.

The Committee authorized 46 additional personal subpoenas, for a total of 129; and 55 subpoenas for the production of documentary evidence, for a total of 117. In addition, the staff interviewed 82 additional witnesses, some under subpoena and some not under subpoena, bringing the total number of witnesses interviewed to 180. Thousands of documents bearing on the investigation were obtained and reviewed and are being collated.

Responses to questionnaires sent by the Committee to Members and former Members early in June have been excellent and most helpful in the Committee's effort to determine if a pattern of efforts to influence the official conduct of Members existed. The response provided much information and leads are being actively followed up.

Responses have been received from 423 incumbent Members of the House and from 228 of the 279 former Members to whom the questionnaires were sent, thus bringing the total number of individuals from whom statements of some kind have been taken to 831.

The Committee has approved requests for immunity from prosecution for 10 witnesses or potential witneses whose testimony is deemed essential to the investigation. Of these, 3 requests have received United States District Court approval and 7 are presently under consideration.

At the request of Special Counsel, the Committee has declined to set a timetable in which the investigation should be completed. The Special Counsel, Mr. Jaworski, has agreed to provide an estimate of a timetable as expeditiously as possible, including the time that would be appropriate to conduct public hearings. The Committee and Special Counsel are in agreement that to conduct public hearings prematurely would be unwise and could result in unwarranted injury to reputations and might jeopardize the entire investigation.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. DERRICK (at the request of Mr. WRIGHT), for August 1, 2, and 3, on account of a death in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. RUDD) and to include extraneous material:)

Mr. FORSYTHE, for 10 minutes, today.
Mr. FINDLEY, for 5 minutes, today.
Mr. WHALEN, for 10 minutes, today.
Mr. KEMP, for 30 minutes, today.

(The following Members (at the request of Mr. CONYERS), to revise and extend their remarks, and to include extraneous matter:)

Mr. KRUEGER, for 5 minutes, today.
Mr. ANNUNZIO, for 5 minutes, today.
Mr. FORD of Michigan, for 5 minutes, today.
Mr. DIGGS, for 10 minutes, today.
Mr. GONZALEZ, for 15 minutes, today.
Mr. PEPPER, for 15 minutes, today.
Mr. DODD, for 5 minutes, today.
Mr. FLOOD, for 5 minutes, today.
Mr. WOLFF, for 5 minutes, today.
Mr. CONYERS, for 60 minutes, today.
Ms. HOLTZMAN, for 60 minutes, today.
Mr. HARRIS, for 5 minutes, today.
Mr. FLYNT, for 5 minutes, today.
Mr. HOWARD, for 5 minutes, today.
Mr. KOCH, for 60 minutes, on August 2.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. ARCHER, to revise and extend his remarks immediately following the remarks of Mr. CONABLE during general debate in the Committee of the Whole today.

(The following Members (at the request of Mr. RUDD) and to include extraneous material:)

Mr. FORSYTHE in two instances.
Mr. CRANE in five instances.
Mrs. PETTIS.
Mr. DERWINSKI in three instances.
Mr. BURGENER in two instances.
Mr. MARTIN.
Mr. GUYER.
Mr. DEL CLAWSON.
Mr. ARMSTRONG.
Mr. SHUSTER.
Mr. CONTE.
Mr. FRENZEL in three instances.
Mr. FREY.
Mr. ASHBROOK in two instances.
Mr. BROYHILL.
Mr. RUDD.

(The following Members (at the request of Mr. CONYERS) and to include extraneous matter:)

Mr. FORD of Michigan.
Mr. EILBERG in 10 instances.
Mr. OBEY.
Mr. RAHALL.
Mr. EDGAR.
Mr. JOHNSON of California.
Mr. PATTISON of New York.
Mrs. SCHROEDER.
Mr. BYRON in 10 instances.
Mr. ROSENTHAL in 10 instances.
Mr. SISK.
Mrs. LLOYD of Tennessee in five instances.
Mr. ANNUNZIO in six instances.
Mr. ANDERSON of California in three instances.
Mr. GONZALEZ in three instances.
Mr. BROWN of California in 10 instances.
Mr. HAMILTON in 10 instances.
Mr. MOORHEAD of Pennsylvania in 10 instances.
Mr. LEHMAN.
Mrs. KEYS.
Mr. DRINAN.
Mr. NEAL.
Mr. DODD.
Mr. TEAGUE.
Mr. SCHEUER.
Mr. LEDERER.
Mr. PATTEN.
Mr. LEVITAS.
Mr. WAXMAN.
Mr. RANGEL.
Mr. JONES of Oklahoma.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 705. An act to amend the Public Health Service Act to revise and strengthen the program under that Act for the regulation of clinical laboratories; to the Committee on Interstate and Foreign Commerce and the Committee on Ways and Means; and

S. 1539. An act to authorize appropriations for fiscal year 1978 for intelligence activities of the U.S. Government, the Intelligence Community Staff, the Central Intelligence Agency Retirement and Disability System, and for other purposes; to the Select Committee on Intelligence.

ENROLLED BILL SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 7558. An act making appropriations for Agriculture and related agencies programs for the fiscal year ending September 30, 1978, and for other purposes.

ADJOURNMENT

Mr. METCALFE. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 7 o'clock and 23 minutes p.m.), under its previous order, the House adjourned until tomorrow, Tuesday, August 2, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2041. A letter from the General Counsel, U.S. General Accounting Office, transmitting confirmation of the release of certain budget authority, the rescission of which was proposed by the President but not approved by the Congress; to the Committee on Appropriations.

2042. A letter from the Secretary of Health, Education, and Welfare, transmitting the annual report on poverty-related research and demonstration projects, covering fiscal year 1976 and the transition quarter, pursuant to section 232(b) of the Economic Opportunity Act of 1964, as amended (81 Stat. 703); to the Committee on Education and Labor.

2043. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations governing the award of Domestic Mining and Mineral and Mineral Fuel Conservation fellowships, pursuant to section 431(d)(1) of the General Education Provisions Act as amended; to the Committee on Education and Labor.

2044. A letter from the Chairman and Acting Executive Director, Pension Benefit Guaranty Corporation, transmitting the second annual report of the Corporation, pursuant to section 4008 of the Employee Retirement Income Security Act of 1974; to the Committee on Education and Labor.

2045. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed contract with Anschutz Coal Corp., Denver, Colo., for a research project entitled "Demonstration of Longwall Mining in a Steeply Dipping Coal Seam," pursuant to section 1(d) of Public Law 89–672; to the Committee on Interior an Insular Affairs.

2046. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed contract with Booz-Allen and Hamilton, Inc., Cleveland, Ohio, for a research project entitled "An Automated Rail Haulage System," pursuant to section 1(d) of Public Law 89–672; to the Committee on Interior and Insular Affairs.

2047. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed contract with FMC Corp., Santa Clara, Calif., for a research project entitled "Multipurpose Test Chassis," pursuant to section 1(d) of Public Law 89–672; to the Committee on Interior and Insular Affairs.

2048. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed contract with the Bendix Corp., Englewood, Colo., for a research project entitled "One-Inch Flexible Drill for Resin Bolter Module," pursuant to section 1(d) of Public Law 89–672; to the Committee on Interior and Insular Affairs.

2049. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed contract with the Bendix Corp., Englewood, Colo., for a research project entitled "Development of Mechanical Anchor Bolter Module for Low Coal," pursuant to section 1(d) of Public Law 89–672; to the Committee on Interior and Insular Affairs.

2050. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed contract with Ingersoll-Rand Research, Inc., Princeton, N.J., for a research project entitled "Development of Mechanical Anchor Bolter Module for Low Coal," pursuant to section 1(d) of Public Law 89–672; to the Committee on Interior and Insular Affairs.

2051. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed contract with Iowa State University of Science and Technology, Ames, Iowa, for a research project entitled "Geology of Deep Coal Beds in Iowa," pursuant to section 1(d) of Public Law 89–672; to the Committee on Interior and Insular Affairs.

2052. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed contract with Mathtech, Inc., Princeton, N.J., for a research project entitled "Analysis and Development of Operating Guidelines for Dozer/Dragline and Loader/Truck/Dragline Tandem Mining Systems," pursuant to section 1(d) of Public Law 89–672; to the Committee on Interior and Insular Affairs.

2053. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed contract with Rapidex, Inc., Gloucester, Mass., for a research project entitled "Experimental Study of the Self Advancing Miner for Coal," pursuant to section 1(d) of Public Law 89–672; to the Committee on Interior and Insular Affairs.

2054. A letter from the Acting Director, Defense Security Assistance Agency, transmitting notice of the Air Force's intention to offer to sell certain defense articles to Korea (Transmittal No. 77–49), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

2055. A letter from the Acting Director, Defense Security Assistance Agency, transmitting notice of the Army's intention to offer to sell certain defense articles to Germany (Transmittal No. 77–52), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

2056. A letter from the Acting Director, Defense Security Assistance Agency, transmitting notice of the Navy's intention to offer to sell certain defense articles and services to Germany (Transmittal No. 77–53), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

2057. A letter from the Comptroller General of the United States, transmitting a report that military compensation should be changed to a salary system (FPCD–77–20, Aug. 1, 1977); jointly, to the Committees on Government Operations and Armed Services.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. HAWKINS: Committee on House Administration. House Concurrent Resolution 263. Concurrent resolution providing for the printing of 3,000 additional copies of the report by the Subcommittee on Domestic Marketing, Consumer Relations, and Nutrition of the Committee on Agriculture entitled "The Role of the Federal Government in Nutrition Education" (Rept. No. 95–550). Referred to the House Calendar.

Mr. HAWKINS: Committee on House Administration. House Concurrent Resolution 241. Concurrent resolution providing for the printing of 100,000 additional copies of the subcommittee print of the Subcommittee on Consumer Affairs of the Committee on Banking, Finance and Urban Affairs entitled "Give Yourself Credit: Guide to Consumer Credit Laws"; with amendment (Rept. No. 95–551). Referred to the House Calendar.

Mr. HAWKINS: Committee on House Administration. House Concurrent Resolution 205. Concurrent resolution to authorize the printing of a revised edition of "Our American Government" as a House document; with amendment (Rept. No. 95–552). Referred to the House Calendar.

Mr. HAWKINS: Committee on House Administration. House Concurrent Resolution 204. Concurrent resolution to authorize the printing of a revised edition of "Our Flag" as a House document; with amendment (Rept. No. 95–553). Referred to the House Calendar.

Mr. HAWKINS: Committee on House Administration. House Resolution 490. Resolution to provide for reprinting of House Report 94–1688 and House Report 94–1757 (Rept. No. 95–554). Referred to the House Calendar.

Mr. HAWKINS: Committee on House Administration. House Resolution 608. Resolution providing for the printing of the final report of the American Indian Policy Review Commission (Rept. No. 95–555). Referred to the House Calendar.

Mr. HAWKINS: Committee on House Administration. House Resolution 654. Resolution authorizing the printing, as a House document, of a certain committee print of the Subcommittee on the City of the Committee on Banking, Finance and Urban Affairs. (Rept. No. 95–556). Referred to the House Calendar.

Mr. DELANEY: Committee on Rules. House Resolution 728. Resolution providing for the consideration of H.R. 2176. A bill to amend the Accounting and Auditing Act of 1950 to provide for the audit, by the Comptroller General, of the Federal Reserve Board, the Federal Reserve banks and their branches and check clearing, wire transfer, and security facilities, the Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency. (Rept. No. 95–557). Referred to the House Calendar.

Mr. BOLLING: Committee on Rules. House Resolution 731. Resolution waiving certain points of order against the conference report on S. 826. A bill to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes. (Rept. No. 95–558). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

Mr. ULLMAN:

H.R. 8655. A bill to increase the temporary debt limit, and for other purposes; to the Committee on Ways and Means.

By Mr. DERWINSKI:

H.R. 8656. A bill to prohibit the use or expenditures of Federal funds for the publication or dissemination of weather information in terms of the metric systems without a specific authorization by the Congress for

such use or expenditure; to the Committee on Science and Technology.

Mr. FINDLEY:

H.R. 8657. A bill to amend subtitle C of the Solid Waste Disposal Act relating to hazardous waste management to require public ownership of future hazardous waste facilities and of privately owned facilities upon the termination of treatment and disposal operations; to make further requirements with respect to the location and safety of such facilities; and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. FLORIO (for himself and Mr. EILBERG):

H.R. 8658. A bill to repeal section 3402(q) of the Internal Revenue Code of 1954 which requires, for income purposes, amounts to be withheld from certain gambling winnings; to the Committee on Ways and Means.

By Mr. FLYNT (for himself and Mr. BARNARD):

H.R. 8659. A bill to establish a Department of Education; to the Committee on Government Operations.

By Mr. GONZALEZ:

H.R. 8660. A bill to provide adequate mental health care and psychiatric care to all Americans; to the Committee on Ways and Means.

By Mr. HAMMERSCHMIDT (for himself and Mrs. SPELLMAN):

H.R. 8661. A bill to amend title 38 of the United States Code to deny veterans' benefits to certain individuals whose discharges from service during the Vietnam era under less than honorable conditions are administratively upgraded under temporarily revised standards to discharge under honorable conditions; to the Committee on Veterans' Affairs.

By Mr. McKAY:

H.R. 8662. A bill to authorize the Secretary of the Army to convey to Utah State University certain real property in Logan, Utah; to the Committee on Armed Services.

By Mr. NEAL (for himself, Mr. WHALEN, Mr. BRODHEAD, Mr. BURGENER, Mr. CONTE, Mr. DOWNEY, Mr. EILBERG, Mr. ERTEL, Mr. FLORIO, Mr. GUYER, Mr. HAMILTON, Mr. HOWARD, Mr. JENRETTE, Mr. JONES of North Carolina, Ms. KEYS, Mr. LENT, and Mrs. LLOYD of Tennessee):

H.R. 8663. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide that rescue squad members are entitled to death benefits made available under such act; to the Committee on the Judiciary.

By Mr. NEAL (for himself, Mr WHALEN, Mr. LUNDINE, Mr. MINETA, Mr. MOAKLEY, Mr. MURPHY of Pennsylvania, Mr. OTTINGER, Mr. PANETTA, Mr. RANGEL, Mr. RICHMOND, Mr. ROE, Mr. TRIBLE, Mr. VENTO, Mr. WHITEHURST, Mr. WHITLEY, and Mr. WINN):

H.R. 8664. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide that rescue squad members are entitled to death benefits made available under such act; to the Committee on the Judiciary.

By Mr. OBEY:

H.R. 8665. A bill to provide that, in computing certain Federal payments to local governments based on amounts of Federal public land within their boundaries, certain amounts of such land which heretofore have been excluded shall be included, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. QUIE (for himself and Mr. GOODLING):

H.R. 8666. A bill to amend title 38, United States Code, to provide for the payment of supplemental tuition allowances to certain veterans pursuing educational programs for purposes of offsetting the differences in States educational costs; to the Committee on Veterans' Affairs.

By Mr. RAHALL:

H.R. 8667. A bill to extend and improve certain provisions relating to the treatment to be accorded disaster victims in the administration of the supplemental security income program under title XVI of the Social Security Act; to the Committee on Ways and Means.

By Mr. SARASIN (for himself, Mr. BEDELL, Mr. BENJAMIN, Mr. BLOUIN, Mr. BUCHANAN, Mr. BUTLER, Mr. CLEVELAND, Mrs. COLLINS of Illinois, Mr. CORNELL, Mr. COUGHLIN, Mr. DRINAN, Mr. FAUNTROY, Mr. KINDNESS, Mr. LAFALCE, Mr. LEACH, and Mr. LEHMAN):

H.R. 8668. A bill to amend title XVIII of the Social Security Act with respect to the types of transportation for patients which may be included in the definition of medical and other health services under such title; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. SARASIN (for himself, Mrs. LLOYD of Tennessee, Ms. MIKULSKI, Mr. MOAKLEY, Mr. MURPHY of Pennsylvania, Mr. NOLAN, Mr. O'BRIEN, Mr. OTTINGER, Mr. PEPPER, Mr. ROE, Mr. SIMON, Mrs. SPELLMAN, Mr. STOKES, Mr. TREEN, Mr. VENTO, and Mr. WINN):

H.R. 8669. A bill to amend title XVIII of the Social Security Act with respect to the types of transportation for patients which may be included in the definition of medical and other health services under such title; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. SOLARZ:

H.R. 8670. A bill to amend section 701(j) of the Civil Rights Act of 1964 with respect to accommodation of religious observances or practices of employees in certain cases; to the Committee on Education and Labor.

By Mr. WHALEN (for himself, Mr. PATTISON of New York, Mr. PEASE, Mr. STEERS, Mr. ABDNOR, Mr. ALLEN, Mr. AMMERMAN, Mr. ARCHER, Mr. ASHLEY, Mr. AUCOIN, Mr. BARNARD, Mr. BENJAMIN, Mr. BENNETT, Mr. BEVILL, Mr. BONKER, Mr. CORCORAN of Illinois, Mr. COUGHLIN, Mr. EDWARDS of Oklahoma, Mr. EILBERG, Mr. ERTEL, Mr. FASCELL, Mr. FREY, Mr. GEPHARDT, Mr. GRASSLEY, and Mr. HAGEDORN):

H.R. 8671. A bill to provide that any increase in the rate of pay for Members of Congress proposed during any Congress shall not take effect earlier than the beginning of the next Congress; to the Committee on Post Office and Civil Service.

By Mr. WHALEN (for himself, Mr. PATTISON of New York, Mr. PEASE, Mr. STEERS, Mr. HARRINGTON, Mrs. HECKLER, Mr. HIGHTOWER, Mr. HORTON, Mr. HYDE, Mr. IRELAND, Mr. JACOBS, Mr. LAFALCE, Mr. LEACH, Mr. MCCLOSKEY, Mr. MCHUGH, Mr. MANN, Ms. MIKULSKI, Mr. MOLLOHAN, Mr. MURPHY of Illinois, Ms. OAKAR, Mr. OBERSTAR, Mr. PANETTA, Mrs. PETTIS, and Mr. PICKLE):

H.R. 8672. A bill to provide that any increase in the rate of pay for Members of Congress proposed during any Congress shall not take effect earlier than the beginning of the next Congress; to the Committee on Post Office and Civil Service.

By Mr. WHALEN (for himself, Mr. PATTISON of New York, Mr. PEASE, Mr. STEERS, Mr. PRITCHARD, Mr. QUAYLE, Mr. RAHALL, Mr. ROBINSON, Mr. ROUSSELOT, Mr. RUDD, Mr. RUSSO, Mr. STOCKMAN, Mr. STUDDS, Mr. TRIBLE, Mr. TUCKER, Mr. VAN DEERLIN, Mr. WALGREN, Mr. WALSH, Mr. WEAVER, Mr. WHITEHURST, and Mr. BOB WILSON of California):

H.R. 8673. A bill to provide that any increase in the rate of pay for Members of Congress proposed during any Congress shall not take effect earlier than the beginning of the next Congress; to the Committee on Post Office and Civil Service.

By Mr. WINN (for himself, Ms. KEYS, Mr. GLICKMAN, and Mr. SEBELIUS):

H.R. 8674. A bill to provide for the distribution of certain funds appropriated to pay judgments in favor of the Delaware Tribe of Indians and the Absentee Delaware Tribe of Western Oklahoma in Indian Claims Commission dockets numbered 27A, 241, and 289, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. WIRTH (for himself, Mr. BROYHILL, Mr. BAUCUS, Mr. MOFFETT, and Mr. OTTINGER):

H.R. 8675. A bill to amend the Communications Act of 1934 to provide for the regulation of utility pole attachments; to the Committee on Interstate and Foreign Commerce.

By Mr. WOLFF (for himself, Mr. DOWNEY, and Mr. WEISS):

H.R. 8676. A bill to restore to certain institutions of higher learning their rights to determine academic standards of progress with respect to veterans and to provide counseling to veterans whose educational assistance allowance is discontinued under certain circumstances, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. WOLFF (for himself and Mr. KRUEGER):

H.R. 8677. A bill to provide coordinated veterans readjustment training and supportive services, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. BROYHILL (for himself, Mr. LAFALCE, Mr. VENTO, Mr. GUYER, Mr. WALKER, Mr. MADIGAN, Mr. LAGOMARSINO, Mr. QUIE, Mr. PRITCHARD, Mr. EDWARDS of California, Mrs. HECKLER, Mr. BENJAMIN, Mr. GOODLING, and Mr. JENRETTE):

H.R. 8678. A bill to regulate commerce by establishing national goals for the effective, fair, inexpensive, and expeditious resolution of controversies involving consumers, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CAPUTO:

H.R. 8679. A bill to amend the Internal Revenue Code of 1954 to provide for the issuance of nontaxable bonds for the furnishing of electric energy not produced by petroleum or natural gas; to the Committee on Ways and Means.

By Mr. CAPUTO (for himself, Mr. ZEFERETTI, Mr. SCHEUER, Mr. LENT, Mr. SOLARZ, Mr. FISH, Mr. ADDABBO, Mr. WYDLER, Mr. WOLFF, Mr. GILMAN, Mr. WEISS, Mr. BADILLO, Mr. BINGHAM, and Ms. CHISHOLM):

H.R. 8680. A bill to amend the Internal Revenue Code of 1954 to provide for the issuance of nontaxable bonds for the furnishing of electric energy in a taxpayer's service area no greater than a city and a contiguous county; to the Committee on Ways and Means.

By Mr. FITHIAN:

H.R. 8681. A bill to amend the Federal Insecticide, Fungicide, and Rodenticide Act, as amended; to the Committee on Agriculture.

By Mr. JONES of Oklahoma (for himself, Mr. HUCKABY, Mr. SAWYER, and Mr. CONTE):

H.R. 8682. A bill providing that the tax treatment of certain transportation expenses between a taxpayer's residence and place of work shall be determined without regard to Revenue Ruling 76–453; to the Committee on Ways and Means.

By Mr. KEMP:

H.R. 8683. A bill to protect communications among Americans from interception by foreign governments, and for other purposes; jointly, to the Committee on International Relations, and Judiciary.

By Mr. KRUEGER:

H.R. 8684. A bill to require that meat and meat food products made in whole or in part of imported meat be subjected to certain tests and that such meat or products be identified as having been imported; to require that the cost of conducting the inspection and labeling of imported meat and meat food products be borne by the importers of such articles, and for other purposes; to the Committee on Agriculture.

By Mr. WOLFF (for himself and Mr. BURKE of Massachusetts):

H.J. Res. 562. Joint resolution to authorize the President to call a White House Conference on Families in 1979, and for other purposes; to the Committee on Education and Labor.

By Mr. NOWAK:

H.J. Res. 563. Joint resolution to authorize the President to proclaim the last Friday of April each year as National Arbor Day; to the Committee on Post Office and Civil Service.

By RAHALL (for himself, Mr. BEARD of Rhode Island, Mrs. HECKLER, and Mr. VENTO):

H.J. Res. 564. Joint resolution to authorize National Shut-In Day; to the Committee on Post Office and Civil Service.

By Mr. DORNAN (for himself, Mr. GUYER, Mr. FREY, Mr. BURKE of Florida, Mr. PEPPER, Mr. KEMP, Mr. TRAXLER, Mr. BLANCHARD, Mr. MURPHY of Pennsylvania, Ms. OAKAR, Mr. ROE, Mr. HORTON, Mr. EDWARDS of Oklahoma, Mr. MARKS, Mr. MCCLORY, Mr. PRICE, Mr. KOCH, Mr. MITCHELL of New York, Mr. TREEN, Mr. MCDONALD, Mr. ADDABBO, Mr. OBERSTAR, Mr. WALSH, Mr. CORRADA, and Mr. BAUCUS):

H. Con. Res. 319. Concurrent resolution expressing the sense of the Congress with respect to the Baltic States; to the Committee on International Relations.

By Mr. BOLAND:

H. Res. 729. Resolution to provide funds for the expenses of investigations and studies to be conducted by the House Permanent Select Committee on Intelligence; to the Committee on House Administration.

By Mr. HUGHES:

H. Res. 730. Resolution urging the expeditious completion of the Subcommittee on Communication's review of the Communications Act of 1934; to the Committee on Interstate and Foreign Commerce.

MEMORIALS

Under clause 4 of rule XXII,

238. The SPEAKER presented a memorial of the Legislature of the State of New Jersey, relative to environmental cancer; to the Committee on Interstate and Foreign Commerce.

EXTENSIONS OF REMARKS

EAST ASIAN PERSPECTIVE

HON. LOUIS FREY, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. FREY. Mr. Speaker, a constituent of mine, Bradley Hahn, recently spent 54 days touring Tahiti, New Zealand, Australia, Singapore, Thailand, Hong Kong, Taiwan, South Korea, and Japan. Mr. Hahn has a background in intelligence and during this tour, which was taken at his own expense, made notations of his personal observations and impressions and has provided me with a summation of his thoughts. I thought that other Members of Congress might, perhaps, be interested in his comments:

EAST ASIAN PERSPECTIVE

(By Bradley Hahn)

1. Contrary to popular belief, the China and Korean questions are very much interrelated and not distinct separate issues. If you take the "view from Peking" (Looking eastward across the western Pacific Ocean), the Korean peninsula and the island of Taiwan form a strategic gateway to the most vulnerable area of mainland China. Korea is now and has been of greater obvious value and strategic consequence in U.S. relationships with Asia (particularly the two principle powers—PRC and Japan) than Vietnam ever was. The PRC today considers Korea and Taiwan as distant provinces of mainland China.

2. Three major wars have been fought because of Korea during the past 80 years—two involved China directly (1894–5; 1950–3); one involved Russia and Japan (1904–5). In addition, World Wars I and II involved China, Korea, Japan, USSR and the U.S. along with a number of Asian and European nations.

3. The PRC and USSR are only using the power of the United States to improve their respective Asian positions. When the U.S. no longer becomes useful for their purposes, either or both will turn against the U.S.

4. Both South Korea and ROC Taiwan are pacing Japan in rapidly developing viable competitive economic systems.

5. Knowledge of non-communist societies with markedly higher standards of living (i.e., Taiwan, South Korea, Singapore) continues to cause dissatisfaction, dissension, and unrest and frequent attempts to escape oppression on mainland China and North Korea.

6. PRC needs to eliminate opposing competitive enterprise systems such as Taiwan, South Korea, Singapore and Japan. In order to influence, pressure and threaten her Asian neighbors, the PRC has embarked upon an extensive maritime development program. In less than 25 years time, the PRC has initiated and expanded an Ocean Merchant Service to at least 8 million deadweight tons. Today this service probably ranks within the top 15 world merchant marines. Concurrently, the PRC has constructed the World's largest "small ship" Navy, which ranks second in numbers of operational anti-ship missile ships and craft along with the third largest ocean going submarine fleet. In January 1974 China for the first time in over 75 years used maritime power to return claimed territory to her possession. Future small scale naval operations may be anticipated in light of the PRC's expanding energy needs. Peking has often claimed extensive offshore mineral and fishing right from the Ryukyus to the Malacca Straits.

7. The fundamentally important question of territorial waters will find the PRC and North Korea along with a number of other small nations attempting to increase contiguous sea bed control. The latest friction issue has already caused the PRC this year to protest to Japan over the recent conclusion of a South Korean-Japan agreement to jointly develop underwater oil resources along their respective coastal approaches. The PRC has indicated its intention of extensive extraction operations in the East China Sea area which overlaps the Korean continental shelf. For many reasons the coming decades will be years of change and uncertainty concerning the use and legal regime of the seas. Absence of national jurisdiction may well prove impossible to sustain in light of modern technology.

8. Both the PRC and USSR, who maintain sizable economic and military aid missions in North Korea, have been instrumental in expanding the North Korean Navy by 500% since 1970. Of particular significance is their two regiment sized amphibious commando assault capability using high speed specially equipped landing craft which have the appearance of PT boats.

9. Supporters of U.S. disengagement in Asia should realize that:

a. The 1950 Korean war resulted from the removal of U.S. Ground Forces from Korea in June 1949 followed by public proclamation that Taiwan and South Korea had been excluded from U.S. defense requirements. Since the end of that war more than 50 American Army, Navy and Air Force personnel h..ve died at the hands of the North Korean military; similarly more than 1,000 North and South Koreans have been known to be killed; at least 5 U.S. Army, Navy and Air Force aircraft have been reported shot down; 35,000 violations of the 1953 Armistice have been recorded, 7,600 of these infringements occurring after North Korea's endorsement of the famous 1972 North-South Communique seeking peaceful unification of the peninsula; some 2,000 shooting incidents have been reported. In addition hundreds of maritime incidents have been caused by the policies and maritime forces of the PRC and North Korea, which include international waters seizures of ships and craft, use of South Korean coastal waters for agent infiltration activities, and general harassment of fishing fleets.

b. Reintroduction of U.S. Ground Troops in a war on the Korean peninsula violates the "Guam Doctrine" of 1969 barring American forces from any further Asian land conflicts.

c. Withdrawal program raises a critical issue of American credibility and resolve.

d. The Japanese Constitution prohibits the use of Japanese armed forces except in self defense if attacked.

e. Withdrawal of American military forces in the immediate future from South Korea and Taiwan would inevitably tip the military and psychological balance in favor of the PRC, North Korea and USSR.

f. Threat of the use of nuclear weapons may not be a deterrent in itself as the PRC, North Korea and USSR have extensive systems of underground shelters, factories, defense installations, storage facilities, key military command and control centers.

g. Aggressive initiatives by the North Korean government would have the tacit approval of either or both the PRC and USSR.

h. Increased defense costs at this time for South Korea and ROC Taiwan could materially affect economic interdependency of Taiwan, South Korea, Singapore and Japan, and renew efforts by Communist elements to escalate internal dissention and disorder,

which in turn would ultimately lead to aggressive actions by the PRC, North Korea and possibly the USSR.

10. The lack of a forceful U.S. defense posture in East Asia may cause the threat of nuclear blackmail to become a real and serious problem for America in the not too distant future. Current administration has twice failed to obtain Communist China and French backing on a world ban on all nuclear testing. The PRC on 19 May 1977 stated its intention to continue test firing nuclear weapons.

11. If China follows the teachings of Sun-Tse, a philosopher who lived about 500 years before Christ, political and psychological subversion may become the cornerstone of the PRC's foreign policy during the last quarter of this century. According to Sun-Tse, there is no higher art than that of destroying the enemy's resistance without a fight on the battlefield. Only such "indirect" tactics can lead to real and lasting "victory". Subvert anything of value in the enemy's country; implicate the emmissaries of major powers in criminal undertakings; undermine their positions and destroy their reputations in other ways as well, and expose them to public ridicule of their fellow citizens.

12. Naval power also provides another "indirect" tactic in the evolution of national doctrine.

13. People from different economic stations of society in Singapore, Thailand, Hong Kong, Taiwan, South Korea, and Japan repeatedly asked, "why does America always hurt her friends to help their enemies?"; "why should we sacrifice ourselves to help America make accommodations with the Communists?"; "what about our human rights to survive with a system of living of our own choice?"

RESOLUTION TO ESTABLISH A CONGRESSIONAL PAGES SCHOOL BOARD

HON. EDWARD W. PATTISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. PATTISON of New York. Mr. Speaker, I have recently cosponsored a resolution establishing a Congressional Pages School Board. The pages are high school students brought to the Capitol from their homes all over the country for the purpose of serving the Legislative Branch and learning first-hand about some of the processes of Government. They work on the House and Senate floors, in their respective cloakrooms, and in the several office buildings. Previous to their workday in the Capitol, each page is required to go to the special page school, set in the Library of Congress. In practice, the page experience should be the ideal way to learn about Government: Observation of lawmaking on a daily basis coordinated with a comprehensive program of related and unrelated studies. Unfortunately, the page system falls uncomfortably short of all reasonable expectations.

Recently, it has come to the attention of the Congress that there exists grave flaws in the manner in which the page system is supervised. Reports of a poorly administered school, of undisciplined young people throwing wild parties, and of bad working conditions have filtered through to the Congress itself, raising some questions about the validity of the experience. In addition, the pages have contended that educationally, the system is worthless. Last June the House Education and Labor Committee held a series of hearings into the school situation. Its findings supported the complaints of the pages. At this time, however, the committees' report has not been adopted and no definitive action has been taken to improve the problem.

Certain complaints stand out rather conspicuously. There is no correlation between work and school, for instance. The pages claim that there is never any reference to the legislation they see considered daily, nor of "special events" such as a State of the Union message or a speech by a visiting dignitary. Witnessing such an event without really understanding it is next to meaningless.

In addition, the length of classes is inconstant, ranging from 7 minutes to 45, depending on what time the House or Senate convenes. Tests are often postponed until a class period long enough to take them occurs. Needless to say, this disrupts the educational process significantly. The problems are numerous, and extend much further. College counselling is painfully inadequate. The school library is virtually nonexistent, and students do not have access to the Library of Congress stacks which are just below their school. The pages themselves complain of a lack of discipline. They blame the school and its teachers. The administrators of the school name the Congress as the source of difficulties. Where does the buck stop?

As Members of Congress who are ultimately responsible to the pages and their well-being, it is our duty to oversee the page program and make is as educationally beneficial as possible for the students. It is tragic that the system, potentially so terrific, does not function as well as it should. Although the flaws range beyond the school, perhaps beginning at the Capitol Page School is a good way to begin solving problems. The resolution I am cosponsoring sets up a board which will be required to monitor the pages' education and supervise the administration of the Page School. This plan is not an extreme measure, and will not work miraculous changes, but it will increase congressional input into the page system. Hopefully, it will begin the motion providing a permanent solution to the problem.

PERSONAL EXPLANATION

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. LEHMAN. Mr. Speaker, on Thursday, July 28, I missed the vote on the Wolff amendment to H.R. 7171. Had I been present, I would have voted "aye."

CUT DOWN ON GOVERNMENT, JONES' POLL SAYS

HON. JAMES R. JONES

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. JONES of Oklahoma. Mr. Speaker, we have concluded in my district our first sampling of public opinion during this first session of the 95th Congress.

The people of Oklahoma's 1st Congressional District expressed strong opposition to big Government and its bureaucratic inefficiency. They want reform.

Sunset legislation was favored by 94 percent of the more than 7,000 people who responded to the questionnaire over the past 30 days. The message on reorganization of Government, sunset laws and cutting back on the size of the Federal executive establishment came through loud and clear.

People also expressed strong feelings on the national energy program.

The administration has proposed a tax on crude oil at the wellhead in an effort to reflect its true replacement value, based on the selling price of foreign oil. Eighty percent of the first district opposed this tax.

However, if such a tax were implemented, the poll shows people would favor some of it being returned to producers for exploration and development of new energy sources or having the tax replaced by a gradual decontrol of oil prices.

Eighty-five percent of the people responding do not favor funds from such a crude oil tax going into other Government programs such as highways or welfare reform.

The people do not want to give the President power to raise the tax on gasoline at his discretion. Seventy-eight percent of those answering our questionnaire were opposed to the administration's request for a standby gas tax if gasoline consumption increased over a certain amount in 1978.

Fifty-eight percent of those polled like the President's so-called "gas guzzler" tax on big, fuel-inefficient cars. They do not favor a tax rebate to small car buyers, however. And 78 percent of the people responding thought foreign cars should not be eligible for any rebate.

Most respondents oppose proposals for any social security tax change. Seventy percent were against a larger tax being placed on employers. Sixty percent oppose the use of funds from the U.S. Treasury to help pay the cost of the social security program.

Fifty-four percent of the district, according to the poll, would like to see the Department of Health, Education, and Welfare broken up and a separate Cabinet-level department created for education.

I am very pleased with the response to this questionnaire. Over 7,000 were returned and that's up considerably over

last year. Obviously the people of the first district are active and concerned.

POST OPPOSES PUBLIC FINANCING

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. FRENZEL. Mr. Speaker, on Sunday, July 31, the Washington Post presented me a great birthday gift in the form of its lead editorial, which was a most sensible statement against taxpayer financing of congressional elections.

The Post correctly points out: First, that "the most corrosive kinds of interest group money" have either been illegal for decades, or were curbed by disclosure rules and contribution limits of the 1974 act; and second, that the rule of PACs and big donors would not be necessarily reduced by the bill pending in the Senate.

The Post properly identifies the need for inclusion of primaries, and the implication is clear that a nonprimary bill is either seriously deficient or hypocritically concerned.

Finally, the Post asks the question which other editorialists have not grasped, and proponents have not considered: "To what extent should government regulate political activity?"

I commend this article to all Members as an unusually thoughtful statement. If you read it, you will have trouble escaping the Post's conclusion—that the 1976 experiment was worth repeating in 1980, but that Congress should not pass public financing for congressional elections now.

The article follows:

CAMPAIGN MONEY AND PUBLIC TRUST

President Carter used familiar and fashionable language the other day in endorsing S. 926, the pending bill for partial public financing of Senate campaigns. He said the bill would "help restore the public's confidence and trust in officials" by removing "the appearance of obligation to special interests." Now, that sounds soothing—but this is no time for the Senate to relax. There is more than cosmetics involved here, and the effects of this legislation in its present form might not be as restorative as the advertising suggests.

Consider the matter of "special interests," which has become shorthand for corruption. Any two people could argue all day about which interest groups—bankers or doctors or unions or whatever—are "special" in the pejorative sense, and what their political role should be. Regardless of where one comes out, two points seem clear to us.

First, the most corrosive kinds of interest-group money, the huge, often covert donations such as those revealed in recent years, either have been illegal for decades or were curbed by the disclosure rules and contributions limits enacted in 1974.

Second, the role of political-action committees and big donors would not necessarily be reduced a whit by S. 296. Public matching of small private gifts would give Senate nominees less need to court big contributors. But the bill does not cover primaries, where some elections are settled and early, big donations can have the greatest effect. Moreover, as the Supreme Court emphasized last year, the First Amendment gives individuals and groups the liberty to spend as much as they want on independent, parallel campaigns for candidates. Last fall, while Mr. Carter's election drive was being publicly financed, labor unions were spending, by one estimate, over $11 million independently on his behalf. So when Mr. Carter says that public financing for presidential campaigns "worked very well last year [pause . . . laughter]" without any of the candidates "being obligated to anyone," we get the joke—but not the argument.

The advocates of public financing also claim that it would open up the system and, in Mr. Carter's words, "help enable deserving candidates to run for office even if they are not rich." This also sounds good—but also raises large questions about the nature of political competition and the proper role of government.

It's true that competition is inhibited by the high and rising cost of getting political messages into the marketplace at all. If a candidate can't afford advertising, voters have no way to gauge whether he is "deserving" of support. Especially in primaries, one can justify more public-service broadcasts, publicly financed mailings and perhaps modest matching grants. But public-financing's advocates have much more in mind. They want to assure challengers not just basic access but equal funds. S. 926 would promote parity by setting spending limits as a condition of public aid. And if one candidate foregoes that aid and exercises his right to spend more in private money, his opponent would get extra subsidies.

What's wrong with this? For one thing, it reflects a simplistic view of the role of money in campaigns. More dollars don't always mean more votes. In the past five years, 17 men have come to the Senate the hard way, by beating incumbents; nine of those 17 won even though they were outspent. Beyond that, S. 926 would legislate a value judgment: Big spending is bad. But if a candidate with wealth or access to large sums does spend millions, as long as his financing is lawful and fully disclosed, who should decide whether that's fair or wholesome? Since the record suggests that lavish spending is not necessarily decisive and can itself become a campaign issue, why not let the voters make these judgments on a case-by-case basis?

That leads to the rock-bottom question: To what extent should government regulate political activity? Public financing of presidential campaigns, of course, also poses that question and in time may help to answer it. In our view, that experiment worked well enough last year to be continued in 1980. It was, however, limited to contests for one nationwide office. And it did affect the structure of politics, especially the nature of fund-raising and the role of political parties, in ways that are not yet entirely clear. The problem of dealing fairly with third-party and independent candidates remains unsolved and may be unsolvable.

Finally, the whole regulatory effort launched in 1974 has produced not just administrative burdens and snarls but also a worrisome degree of official involvement in the details of political practices. That, more than anything else, suggests that Congress should not rush into public financing for Senate and House campaigns across the land. A law meant to return politics to the people would defeat its own purpose if it turned out, instead, to be dictatorial and stultifying.

HOME OF GUIDING HANDS

HON. CLAIR W. BURGENER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. BURGENER. Mr. Speaker, the cause of the mentally retarded has always been one which has been dear to me, and in the years I have been involved with helping the mentally retarded help themselves, I have witnessed heartwarming individual and institutional successes in this endeavor, along with troubling individual and institutional failures and shortcomings.

One of the most inspiring efforts throughout my entire involvement with the cause of the mentally retarded has been the birth, growth and eminent success of the Home of Guiding Hands, a private, nonprofit facility in service to the mentally retarded. The home is located in Lakeside, Calif., in the 43d Congressional District, which I am privileged to represent.

The Home of Guiding Hands this year celebrates the 10th year of its founding and its achievements in serving the mentally retarded have paralleled the vast gains in understanding, treatment and integration into society's mainstream of the mentally retarded. This exemplary facility, which serves 400-plus mentally and physically handicapped youngsters, has pioneered forward-looking treatment and rehabilitation programs, and was a forerunner in providing normal home environment and independent living facilities for these youngsters.

The Home's programs have shown the San Diego County community that the biggest handicap of all is the lack of understanding by normal citizens of the somewhat special, yet very real, problems of the mentally retarded, and the Home has served as an inspiration to the communities in which it serves.

In short, Mr. Speaker, on this 10th birthday of the Home of Guiding Hands, I would like to render a very special congressional salute to the Home, its very special residents, and the extraordinary people whose caring makes it one of the best facilities of its kind in the country.

RESCUE SQUAD BILL GAINS MOMENTUM

HON. STEPHEN L. NEAL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. NEAL. Mr. Speaker, today Representative CHARLES WHALEN and I are reintroducing legislation to amend the Public Safety Officers' Benefits Act to provide coverage for rescue squad personnel. We are pleased to add 29 cosponsors to the bill, including Chairman JOSHUA EILBERG of the Subcommittee on Immigration, Citizenship, and International Law to which the bill was referred.

We feel strongly that the men and women in our Nation's rescue squad units, who often serve side by side with firemen and law enforcement officers, deserve the same protection for their families which we provided for their colleagues.

Under the present law, if a rescue squadsman and a police officer both were killed while working together to save a victim's life at the scene of an accident, the police officer's family would receive

the $50,000 payment which the Government has made available, but there would be no such assistance for the family of the rescue squad member. This same inequity would occur in the case of a fireman and rescue squad member who were both killed while working to save a person trapped in a burning building.

We do not think it was the intent of the Congress to create such an inequitable situation. We hope that the subcommittee will take quick and favorable action on our legislation to correct this flaw in the 1976 law.

LACK OF COORDINATION IN ADMINISTRATION HOUSING PROGRAM

HON. RAYMOND F. LEDERER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. LEDERER. Mr. Speaker, I want to bring to the attention of my colleagues a problem in the city of Philadelphia which may be happening in other districts as well.

The Department of Housing and Urban Development is developing solutions to the housing shortage and vacant housing overload in Philadelphia. This is an admirable and long overdue action. I am glad the new Carter appointees are acting to solve this problem which plagues not only Philadelphia but other cities across the Nation.

However, in attempting to find solutions, HUD officials are not dealing with or through the existing governmental and community bodies set up to administer and advise on the housing situation.

The mayor has worked hard with his administration on the housing problem. Councilman Janotti of Philadelphia has presented his homesteading plan to revitalize slum neighborhoods. The Philadelphia Community Development Administration which has administered Federal funds along with city needs has also offered to work with HUD to put people into vacant homes and redevelop slum areas. Moreover, there are a number of organized community groups who have been working with the city and Federal Government to represent the interests of the residents in the affected areas. These groups have also worked with State officials such as Senator Herb Arlene who have been trying to solve the problem.

HUD officials have not yet used these government officials and community groups as the resource and administrative body for housing programs in Philadelphia. Instead HUD has proposed arrangements with non-representative community groups in the city which do not speak for the affected communities nor the city.

The effect has been to stir up the resident groups who have been working for relief through regular channels in cooperation with city, State, and Federal authorities. This uncoordinated action by HUD only serves to set back the progress made by all parties to solve the housing needs of our communities.

I hope that the administration will rethink its procedures and approach the problem in a more orderly manner consistent with the needs of all people involved. In this way, we can reach a fair and speedy solution.

SSI DISASTER RELIEF AMENDMENTS

HON. NICK JOE RAHALL II

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. RAHALL. Mr. Speaker, I have introduced today a bill to protect disaster victims from having their supplemental security income benefits either reduced or terminated.

The Social Security Administration has informed me that my amendments will present no significant administrative problems. But, these measures will provide valuable protection for aged, blind, and disabled recipients who have been adversely affected by a disaster. In many cases these individuals have already suffered substantial losses. To my way of thinking, our Nation should do everything possible to insure that they do not suffer any further hardship.

My bill is designed to achieve this in two ways. First, it would make permanent the protection provided which was enacted into law last year. The effect is that SSI recipients would not have their benefits reduced or terminated because:

They receive Federal disaster assistance; or

They must move into the household of another for up to 18 months while their home is repaired or replaced.

There have been approximately 40 Presidentially declared disasters. Nearly 94,000 persons—many of whom are SSI recipients—have applied for assistance under the Disaster Relief Act.

My proposal would help low-income aged, blind, and disabled SSI recipients by assuring that they would not incur unintended hardships.

Second, my bill would provide further protection for victims of the West Virginia flood disaster and others similarly situated.

The West Virginia disaster victims received financial assistance under legislation I sponsored to compensate them for lost housing and other property damage. However, it will take these persons considerable time to rebuild or repair their housing because of the massive reconstruction in the area.

Under these circumstances, this assistance can become a resource for determining SSI eligibility. Existing law permits SSI recipients to have up to $1,500 in countable assets for a qualifying individual and $2,250 for a couple.

My bill would help to remedy this problem by exempting disaster assistance compensation as a countable resource for 9 months after SSI beneficiaries receive these payments because of a Presidentially declared disaster. The purpose is to allow SSI disaster victims sufficient time to make suitable arrangements to replace or repair damaged property without being penalized. The Secretary of Health, Education, and Welfare would also have authority to provide an extension of time for good cause. Finally, my proposal would exclude as countable income any interest earned on disaster compensation payments for 9 months. Here again, the Secretary would have authority to provide an extension for good cause.

America is a humane Nation. We have repeatedly helped others in time of tragedy, whether they live here in the United States or elsewhere throughout the world. We have compiled a record of which we can be proud.

SSI disaster victims should not be further penalized by having their benefits reduced or terminated.

My bill would provide fair treatment for these individuals, as well as assure that their assistance payments are not diluted when their need may be the greatest.

For these reasons, I urge prompt approval of this legislation.

THE INEQUITY OF VETERANS' BENEFITS

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. PATTEN. Mr. Speaker, last week, an editorial in the Woodbridge, N.J., News Tribune, addressed the problem which New Jersey and other States in the Northeastern United States face with getting less benefits for their veterans than other areas of the country. The editorial points out that because of the high cost of living in New Jersey and the rest of the Northeast, veterans in these jurisdictions cannot afford to use the benefits for which they qualify.

This is a serious problem, because the individuals suffer, and because the program is not serving our veterans equally. I am looking into ways to alleviate these inequities, and want to share my concern, and this editorial with my colleagues:

INEQUITIES IN VETERANS' BENEFITS APPALLING

An inequity in veterans' benefits has been revealed as another example of economic discrimination against the Northeast.

According to a study by the Northeast-Midwest Research Institute—the research arm of a coalition of congressmen—veterans in the Northeast are getting less in benefits than those in the South and the West.

Specifically, the study showed that since 1968, although there were approximately equal numbers of eligible veterans in the three regions, individuals and schools in the Northeast have trailed the other regions in benefits by about $3.6 billion.

For the most part, the disparity was blamed in the study on the government's method of allocating educational aid in flat grant amounts which do not take into account the differences in living and educational costs among the affected regions.

The cost of living in the New York-New Jersey area is higher than it is in most of the

rest of the country, for example. Furthermore, there is more available in the southern and western states by way of low-cost public education than there is in the older Northeast.

The implications of that are that veterans in the Northeast are more likely to pass up their benefits than are their counterparts.

In California, for instance, where there is an extensive low-cost public education system, more than 52 per cent of eligible veterans use their benefits in order to attend college. The corresponding figures in Alabama and North Carolina, as examples, are 39 percent and 38 percent respectively.

Representative Northeast figures, on the other hand, are New Jersey, less than 20 percent; New York, 30 percent; Ohio, 23 percent; and Illinois, 29 percent.

These figures demonstrate an extension of a pattern in which the Northeast is continuously shortchanged in federal programs. It was recently revealed by a New York tax study that New Jerseyans are receiving only a dollar in federal benefits for every $1.30 they pay in federal tax dollars.

When this disparity is as statistically clear as it is in the case of veterans' benefits, the need for remedy is obvious.

What is needed is a review of the method of establishing benefit grants so as to assure veterans in the Northeast that they will not be penalized because of economic conditions in the region.

BERT LANCE'S UNUSUAL LOAN

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. DRINAN. Mr. Speaker, disturbing questions have been raised, and not answered, concerning the financial dealings of Bert Lance, President Carter's very powerful Budget Director.

Although he insists upon a balanced budget for the country, Mr. Lance has been a powerful exponent of going into enormous debt personally. Without prejudicing the ongoing investigation by the Comptroller of the Currency, or prejudicing in any way whether Mr. Lance conformed to the high standards rightly demanded of all public officials, I believe it must be noted that serious questions remain about the propriety of Mr. Lance's $3.4 million personal loan from the First National Bank of Chicago.

I must disagree with my distinguished colleague, Senator RIBICOFF, who said recently that the press wants to "get" Mr. Lance. I think all the press wants to "get" is the truth. The media have acted responsibly in investigating whether Bert Lance used his public position for private gain. I hope the media will continue to pursue this matter as aggressively as they exposed the transgressions of Richard Nixon.

A splendid example of the press' diligence in this case is an editorial published July 28, 1977 in the Worcester, Mass., Telegram. I would like to share that editorial with my colleagues:

BERT LANCE'S UNUSUAL LOAN

Bert Lance found a willing audience in the Senate's Government Affairs Committee Monday. Willing, that is, to believe everything the Georgia banker had to tell them and eager to exonerate President Carter's budget director of conflict of interest charges.

But despite the clean bill of health issued by the committee, serious questions of impropriety remain. And they are not likely to be erased by Sen. Abraham Ribicoff's odd charge that the press is out to "get" Bert Lance.

Ribicoff and the other senators who fawned over Lance at the committee hearing would do well to ponder the full impact of their spectacle. Public confidence in government continues at low levels. It is not likely to be increased by Monday's hearing.

Lance, sometimes dscribed as the second most powerful man in Washington after the President, was called before the committee to discuss his personal finances. He did so in a cordial fashion and managed to escape without fully answering some of the more important questions.

Questions like the propriety of a $3.4 million loan he got from a Chicago bank last December, after it was clear he would wield considerable influence in the new administration. The Comptroller of the Currency, who regulates banks, is still looking into that one as is another Senate committee.

Did Lance use his government position, or the promise of his government appointment, to get that loan, or was he treated like just an average banker? Did he, as New York Times columnist William Safire suggests, use his public job to "line his own pockets?"

Those are disturbing questions. They must be explored. All the smokescreen created by Ribicoff and others about a vicious press out to bring down Carter's right-hand man didn't answer those questions. All the Georgia charm exuded by Lance at the perfunctory hearing didn't answer those questions.

Lance has his hands on the pursestrings of the nation. He is not just another banker. His private financial dealings do have some bearing on his public responsibilities.

It was only two decades ago that the gift of a vicuna coat meant the end of Sherman Adams' career as President Eisenhower's chief of staff. Since then, the nation has struggled through Watergate and been promised a new, tougher set of moral standards for those in public office. President Carter has been particularly insistent on that.

Lance may have done nothing illegal. But the circumstances of his $3.4 million loan do not inspire confidence that a brave new era of rectitude has arrived in Washington.

CONSUMER CONTROVERSIES RESOLUTION ACT

HON. JAMES T. BROYHILL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. BROYHILL. Mr. Speaker, today, I am reintroducing with additional cosponsors H.R. 2965 because I believe that this bill could have a positive impact on consumers in resolving disputes with businesses quickly, inexpensively, and fairly. It is difficult for consumers to adequately resolve disputes with businesses within the formal inflexible confines of today's judicial system without substantial expense, difficulty, and delay. Problems such as crowded court calendars, complicated court procedures, inability to pay for attorneys, difficulty in enforcing a judgment, need to miss a day or more of work; all of these and more plague the consumer as he attempts to seek redress through the courts. All of these factors point to the need for consumer legislation in this area. The bill being introduced today would protect consumers by establishing small claims courts, arbitration programs, and other mechanisms which would resolve consumer disputes more effectively, far quicker and with less expense.

Specifically, this legislation would establish within the Department of Commerce an Office of Consumer Redress which would administer a program for matching grants to the States so that they can develop a comprehensive system at the State level for the resolution of consumer complaints. The grants would be on a 70-percent Federal—30-percent State matching basis. Additional funds in the form of discretionary grants would be available to local governments and private nonprofit organizations and demonstration projects. Enactment of H.R. 2965 would give States for the first time the moneys and the incentive to develop and maintain innovative consumer redress mechanisms to deal with these problems.

IN MEMORIAM—DR. RALPH E. RASOR

HON. TENNYSON GUYER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. GUYER. Mr. Speaker, all too many of us are prone to forget that great person in our lives—the family doctor.

I officiated at the funeral service of an outstanding man on July 21 1977. That man was Ralph E. Rasor of my hometown of Findlay, Ohio.

Dr. Rasor was a great American, a dedicated community leader, an outstanding medical doctor, a loyal Christian, and close personal friend.

He represents those wonderful people "with healing in their touch," who serve when life begins, and are at bedside still laboring when life often must answer a higher summons.

The poem appearing herein is one I wrote as a last tribute to one whose memory is a benediction, and whose life is an imperishable flower in the garden of our remembrance.

Our little world is sad today
Since Doctor Rasor slipped away

A silent voice—a vacant chair
A pall of sadness in the air

When I returned to my hometown
I knew that Ralph would be around

It's good to know, in a world of care
Our family doctor would be there

He brought our family through its ills
More by skill and love, than pills

I guess we felt his grandest worth
When he brought Rosie to this earth

His schedule knew no stated hours
His workshop had no scented flowers

Many a night he watched 'til morn
Until that tiny tot was born

He toiled when others were in bed
When life hung by a slender thread

I've heard him cry in a sheltered way
When a patient-friend had slipped away

He gave "for free" his astute knowledge
To serve the teams at Findlay College

He used his HANDS with healing touch
And HEART to those he loved so much

We never know what doctors weigh
Until they too are called away

Like the Great Physician, they are known
Because like HIM, they loved their own

Their work is done—their sure reward
Is life eternal with their Lord

So we who loved him till the end
Now entrust him to his Friend

And may the object of our Love
Find consummation in life above.

ELECTRIC UTILITY RATE REFORM

HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. ARMSTRONG. Mr. Speaker, high utility bills are cutting deeply into the pocketbooks of a number of Americans, particularly those living on fixed incomes. There are many in this Congress who seek to reform electric utility rate structures to give Americans a "break" from high energy prices.

This is, of course, a highly emotional issue. But it is important that Congress resolve this issue from a factual perspective. One of the best discussions I have read appeared in a response the general manager of the Mountain View Electric Association wrote to a couple concerned about higher energy prices. I hope my colleagues can take a few minutes to read Mr. A. C. Payne's excellent letter.

MOUNTAIN VIEW
ELECTRIC ASSOCIATION, INC.,
July 7, 1977.

DEAR FRIEND: It is always disturbing to me to hear from our members who express dissatisfaction with the way our rates are established. From what I have heard and read on the subject of rate structures, there are many concepts about rates.

In our recent filing, we hired an outside consulting engineer—Merrick and Company of Denver, Colorado, to make a study of all of our rates and to determine for us whether or not all classes of consumers were paying their fair share of costs. It is our understanding that the Public Utilities Commission would not approve a rate increase for us without such a study.

The rates which we applied for and which were approved by the Public Utilities Commission, after a public hearing, were based directly on our cost of serving each class of consumer, as reflected by the Merrick and Company cost of service study.

I might add that the basic rate structure of MVEA has not changed since we started doing business back in December of 1942, and is the same basic rate structure in effect when you first received service from us in 1955.

Through the years, MVEA has grown from a small cooperative serving slightly over a thousand consumers to one with over thirty-five hundred miles of line and almost nine thousand consumers. In order to serve these consumers, MVEA has had to borrow substantial sums of money. At the end of 1976, we had long-term debt in excess of twelve million dollars and plant in service of over sixteen million dollars.

MVEA has certain fixed costs which it must meet such as:

Depreciation	$421,000
Property tax	143,600
Other tax	20,200
Interest on debt	412,000
Cost of power	1,383,900

In addition to these costs, of course, we have all of the usual expenses associated with maintaining our plant in good condition to render reliable service to you, to bill our consumers, collect our revenue, and to do all other things necessary to operate a successful business.

Except for the cost of power, practically all of these costs continue regardless of whether we sell one-hundred million kilowatts a year, or fifty million kilowatts a year. The same thing reflects in your bill—it costs us (except for the cost of power) no more to sell you 8,000 kwh a month than to sell you 800 kwh a month. This is the real reason you see no substantial reduction in your bill when you conserve because you are, in fact, conserving on the least expensive kilowatts.

There are many changes in rate philosophy taking place today. Some are recommending "Life Line Rates," a rate that would allow a fixed number of kilowatt hours usage at a very low rate on the theory that this would help people on low or fixed incomes. To the best of my knowledge, there are no studies which show that there is necessarily any relationship between the number of kilowatt hours used and a person's income.

This type of rate could very well benefit the most affluent people who happen to own more than one home—such as summer cabins or ski homes. The problem here also is that the remaining consumers would have to make up the losses by even higher rates.

Much has been written about "time of day metering." This means that there would be different rates for use during different times of the day. In a system as small as MVEA, we do not believe that the savings at this time would justify the additional plant investment.

There are numerous other approaches, such as incremental pricing and flattening rates, which have been under study for some time by the National Association of Regulatory Utilities Commissioners, IEE, NRECA, ERDA, and other organizations—but the final results on these approaches are not in.

The Colorado Public Utilities Commission will be holding generic hearings (general) this fall when they will be taking testimony from most of the electric utilities, the general public, and many special interest groups such as the senior citizens, people on welfare, and numerous other groups. If you desire to see a change in utility rate structures, this would be an excellent opportunity for you to participate.

It is our hope that the Legislature, either state or federal, does not become involved in establishing rates. They have already caused us enough problems with "clean air," "environmental controls," "land use," "increased interest rates," "severance taxes," and many others which wind up as additional cost on your monthly power bill. The problem here is that these costs don't show up on your bill for from five to eight years after the action has been taken.

As one who is about to join the fixed income-senior citizen group, I can personally assure you that I am vitally concerned with what is going to happen to the cost of electrical energy in the future. I would, however, be somewhat less than honest if I did not tell you that the cost is going to continue to rise, probably on an annual basis for the foreseeable future.

I am sure that this letter is much too long, but I did want you to know some of the problems MVEA is facing with continued inflation.

Sincerely,

A. C. PAYNE,
General Manager.

NEW ENERGY SOURCES AND THE FUTURE: A REPORT TO CONGRESSMAN EDGAR

HON. ROBERT W. EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. EDGAR. Mr. Speaker, I formed last April an Energy Advisory Committee, comprised of energy experts in my congressional district, to help me understand the need for various proposals for a national energy policy. Mr. Joseph Woods, an employee of Scott Paper Co., is the chairman of this committee. Subcommittees were formed to examine in detail important components of the President's energy plan, and the impact of these components on the county I represent in Congress.

Yesterday, I met with the committee to share with them the actions which have been taken in the House to advance the energy bill through the legislative process, and to receive the final reports from the subcommittees. I was impressed by the diversity of views represented on this committee, and by the cooperation which had to be necessary to come to a consensus on many controversial issues. The committee members represent a cross-section of opinion, and are representatives of organizations such as Common Cause, the Chamber of Commerce, Sun Co., the Sierra Club, the Delaware County Planning Commission, Philadelphia Electric Co., educational institutions, and the scientific community.

I am pleased to share with my colleagues the report submitted by the subcommittee chaired by Dr. William Eidson, head of the Department of Physics and Atmospheric Science of Drexel University, entitled "New Energy Sources and the Future." As we begin debate today on a comprehensive bill which will be the cornerstone of national energy policy, I believe it is appropriate that we review the report of Dr. Eidson's subcommittee. It provides an excellent perspective of our ability to supply this Nation's energy needs in the future:

NEW ENERGY SOURCES AND THE FUTURE

A subcommittee report prepared for Congressman Robert W Edgar by Francis Davis, Medard Gable, Joseph Krug, Donald Larson, William Eidson, Chairman

THE PROBLEM

Recent studies of accessible U.S. fuel reserves indicate that at current import levels we will run out of oil and natural gas in about 11 years and coal in about 300 years. When oil and gas supplies are depleted a total coal economy would force consumption of the coal at 6 to 7 times the existing rate, and coal reserves would last less than 50 years. The cost of converting to a coal econ-

omy has been estimated to be $400 billion, probably much greater.

The fuel reserves problem has been exacerbated by three factors: (1) population in excess of 200 million; (2) energy consumption rate in excess of 12 kw per capita, which is about 7 times the world average. The product of these two numbers gives a figure of about 2.8×10^{12} watts (2.6 million million watts) for the average U.S. consumption rate, which is about ⅓ of the world total; (3) because of the coupling between GNP and power consumption, a growing economy forces an even more rapid depletion of fuel reserves.

The size of the numbers indicates the staggering size of the problem. But worse, time is ever more critical, since any conversion or new technology will take time to implement on a 10^{12} watt scale. Our home heating, transportation, jobs, food supply, and gross national product (GNP) are totally dependent on fossil fuels which have a finite and short lifetime. A complication arises in that oil and gas, in some cases coal, are so easy to use that replacements often appear more costly and/or inefficient in the short run, so many feel "why bother."

Conservation can help alleviate some of the time problem, but it is not a cure. At best, conservation might add a couple of years to current oil and gas reserves. A better way to look at conservation might be to call it waste elimination, which is indeed the case. There is much waste and inefficiency in our current fuel usage, and making the system waste less implies a more efficient economy, and a stronger position in the world economic market.

We in the United States have spent our energy rapidly, much faster than the world average, from the very beginnings of our country. Our early settlers were busy people. They had much to do and cut down trees for fuel, for boats, for wagons and for homes. Indeed, the availability of readily available energy has already been linked to the GNP, and may be essential to the very fabric of the freedoms we enjoy. "Conservation," taken to the extreme, could impair or curtail some of our freedoms and thus the Committee feels that the theme of "Waste Elimination" be maintained in the "National Energy Plan." Not that "conserving," that is turning down the thermostat, will make the problem go away. Clearly, it will not even if all thermostats are turned off permanently since that would eliminate only 20 percent of our national energy demand.

The committee concludes that it is of paramount importance to the future of our nation and to the freedoms we enjoy that new sources of energy be found and put to work on a large scale. It is critical that timing be folded into the problem, since there could quickly come a time when it would be too late to implement new sources of energy. If the implementation of these new sources is not begun on a 10^{12} watt scale during the early 1980's then (1) it will be too late to change, (2) we will be forced to escalate imported fuels to even higher levels, or (3) convert to an expensive coal-based economy, since conversion to a coal-based economy will also take many years and even more dollars. It is unlikely that coal can more than dent the problem during the next 11 years. It is also unlikely that the oil and gas exporting nations will continue to track our rapidly growing oil needs, and provide all that we need. The recent MIT study showed that foreign oil exporters will not be able to meet our needs by 1981. Note that 50 percent of our energy demand is provided by oil, and 50+ percent of this is currently imported; thus 25 percent of our entire energy demand is based on (unreliable) foreign sources.

CONCLUSION

The committee feels that new sources of energy should be researched and/or put into use on a 10^{12} watt scale with the urgency and national priorities of the "Manhattan Project" of World War II. The alternative appears to be disaster. The primary deterrent is that the public is not really convinced that the problem is real, but rather politically contrived. Public education must be the keystone of any and all national energy plans.

SPECIFIC RECOMMENDATIONS ON NEW ENERGY SOURCES

Solar

1. Solar water-heating for residential and commercial applications is technologically feasible now. It is also cost-effective in comparison to electric water-heating in those areas of the country with high electric power rates. Nevertheless payback periods in excess of 5 years are required under favorable conditions so that Federal incentives will be required to minimize payback periods and consumer education programs will be required to make life-cycle costing more widely acceptable. The present HUD program which provides funding for $400 grants from the State of Pennsylvania to individual homeowners and grants to motel and hotel operators is an excellent program which should be continued on a larger scale throughout the country.

On a practical basis if an individual would spend $1,000 for a solar domestic hot water system, they could expect a savings of $250 a year. Putting $1,000 into an annuity, would give a person a guaranteed lifetime income of about $50 to $60 per year or if a tax-free bond was purchased, this would give an income of about $90 per year.

Therefore, purchase of a solar system really makes sense and all figures we use are at today's rate, tomorrow, should even be better.

Solar water heating systems are relatively simple to design and install and their widespread application will assist in the development of the more complex and expensive spaceheating systems. In order for spaceheating systems to become economically feasible, Federal incentives will be required. The proposed tax credit—40 percent of the first $1,000 and 25 percent of the next $6,400—will provide a boost to the solar energy industry and assist in the implementation of solar energy on a larger scale. In addition to the tax credit more funds should be provided for residential demonstrations. The emphasis should be on cost-effectiveness and more consideration should be directed to conservation practices and passive and hybrid solar energy systems. The larger scale commercial demonstrations should have lower priority as they have generally been too expensive and, therefore, they have not provided the incentive for companies to go ahead with non-federally funded projects.

2. Production of electricity from solar energy is currently available in two ways that are presently technically feasible:

Solar Cells.—10 percent efficient high cost, and the difficulties of storing the produced electricity, indicate many problems in any large scale applications of solar cells to the production of electricity. Cost reduction seems likely from current technological trends, but the problems of efficiency—large land areas—and storage—when the sun doesn't shine—have no tracetable solutions at this time.

The conversion of solar energy to heat—say, 500° C or greater—has been demonstrated as feasible, on a large scale. Heat is easy to store and can be used at any time of day. At 500° C, steam can be produced to run a conventional steam-turbine electric generator with a production efficiency of 30 percent, a 300 percent improvement over solar cells. Solar-thermal-electric would seem to be an idea whose time has come, but so far, has received little, if any, Government support.

The efficiency of conversion of sunlight to plant growth would seem too low—less than 1 percent—to provide any large scale energy source, but research in this area is moving rapidly and should be encouraged and stimulated. This general area, called photosynthesis has only recently been tackled by the quantitative tools of biochemistry and biophysics.

Fusion

Stated simply, fusion is the process of forcing light nuclei together to form heavier nuclei. This technique is exothermic—releases energy—only for the nuclei of light atoms. Since all nuclei are positively charged, they would normally repel each other. In order to overcome this repulsion and obtain a net energy production, one must maintain an environment of high pressure, high temperature and high density until these nuclei can fuse together. This has proved to be a very difficult task and, so far, no solution has been presented in the open literature.

There are three general methods proposed for fusion: magnetic confinement, laser pellet implosion, and heavy ion beam pellet implosion. The magnetic confinement method has received the most attention and effort historically, and has come very close to the needed temperatures and pressures, but some years' development is still needed. The pellet implosion techniques are much more recent. Laser implosion appears intriguingly promising, but higher laser power will be needed. Heating and crushing a pellet with a pulse of heavy ions from several accelerators appears to be the most promising, but the costs—mainly the cost of the accelerators—is currently non-competitive with conventional fuels by a factor of about four.

There have been reports and rumors of major advances in fusion research, but details are difficult to obtain since most of the work is classified. The military significance of fusion power is nil compared to currently available H-bombs. The recent disclosure of the "Neutron Bomb" implies that classified military fusion technology has progressed beyond that which is reported in the open literature. Why this work is classified is unknown but it would be much easier to assess the total energy future if it were not. This is an area in which technical cooperation with the Soviet Union could only be of help to us all.

The National Energy Plan is woefully weak on fusion. Basically, the three paragraphs on page 78 imply that after many years' work, there has been no success and we should not expect any. The only positive statement is that fusion could provide the neutrons to help breed fission fuel. This is consistent with the small Federal funding of fusion and plasma physics over the past several years. The entire federal program this year is funded at about 10 percent of the cost of a single conventional nuclear plant.

Fusion is a much cleaner energy supply than fission, and the fuel is almost limitless and no terrible environmental problems are involved. Fusion research must be pushed and pushed hard, since fusion is one of the few energy alternatives that we have that does not put us at the whim of nature, as do solar, wind, etc.

The lack of support for fusion in the National Energy Plan could be the result of military importance or simply discouragement over the past 25 years of work, or, most likely, poor information. A major program in fusion R. & D. should continue. The technology is too close to give up on this potentially excellent energy source.

Geothermal

In order to estimate the available supply of geothermal energy, let us do a simple calculation. A conservative estimate would be to assume that we could extract the heat from a 10 km thick layer which lies at an

average depth of 40 km below the surface of the earth. Since this rock has been heated by radioactivity in the earth's interior to a temperature of 1000° C, a simple calculation shows that there is about 3×10^{21} kwh of energy in that layer. This is millions of times the current world yearly energy demand.

Clearly geothermal has the potential of providing for our energy needs for millions of years. The problem is getting at this heat and cleaning it so that it can be safely used. Geothermal heat is abundant, but known methods of extraction, such as forcing water down and getting steam in return, bring up enormous quantities of pollutants to the surface of the earth. This is a dangerous pollution level which must be handled carefully.

The difficulties of drilling to depths of 20 to 30 miles is far beyond current technology. This is particularly true for speculated geopressurized resources, such as those along the Gulf Coast, which require deep water, hard-rock drilling down to at least 15,000 feet. While not as deep as the average "hot" layer, they supposedly lie under deep water, are hard rock capped, and present enormous problems of access and control. All non-natural geothermal sources present these enormous technical challenges that will require research, development and time. The National Energy Plan appears to be a bit optimistic, in view of the technical difficulties. This is particularly true of the geopressurized sources in the Gulf whose use is at least as speculative as fusion.

In areas where geothermal sources occur naturally, such as in the Western United States, Iceland, Italy, New Zealand, etc., geothermal heating and electric production is already happening. Pollution is still a problem, but tractable. The tapping of natural geothermal sources should be encouraged, as indicated in the National Energy Plan.

Energy from the wind

There is considerable energy available in the Earth's wind systems. The kinetic energy in the world's wind systems is about 10^{20} watts. This represents stored resources and could not be used beyond the replenishment level of 10^{16} watts.

Nonetheless, moving air provides a practically unlimited source which is constantly being replenished by nature, and controllable pitch propellor air turbines can produce significant power when the wind blows.

A well designed windmill can extract 40 percent of the kinetic energy of the wind. The power depends on the square of the diameter of the rotating blades (D^2) and the cube of the wind speed (V^3). The relationship can be expressed as $P=kD^2V^3$.

Because of variability in natural wind speeds, provision for controlling the pitch of the blades is necessary to provide a steady rotating speed, and some storage facilities would be necessary for periods of low wind speed—below about 7 mph. Storage might be accomplished by (1) compressing air, (2) pumping water to higher levels, (3) super flywheels, (4) batteries or hydrolysis to create hydrogen for fuel.

It is now entirely feasible to construct 1 mw windmill generators. The cost for building and installing 4000 such units would be about $400 to $600 per kw, a cost comparable to that for constructing nuclear or fossil fuel plants. The operating costs of windmill generators would be relatively small.

The environmental impact of windmill generators would be very small. There is no rejected heat to be dissipated, only a very frictional heat conversion. While there is some visual or esthetic pollution, windmill "farms" consisting of 1000 one mw generators could be housed on land whose area is comparable to that required for an equal capacity nuclear or fossil fuel plant. It would be easy to increase the capacity of the farm if the need develops, and breakdowns of individual components would have no great impact on operation.

A recent Gallup poll indicates that the use of wind to produce electrical energy is favored by 60 percent of the people. In that poll only 12 percent were opposed while 28 percent had no opinion.

Wind power is capable of supplying 10 percent of the Nation's electrical energy requirements by the mid 1990's at competitive cost and without any deleterious effects on the envirmonment.

EVAPORATIVE HYDROELECTRIC

There are many places on Earth where evaporation far exceeds rainfall. This happens in areas of the oceans, for example, the Indian Ocean. If a dam can be placed across or around such an area, then the water level will drop on the arid side, and the imbalance in heights allows for conventional hydroelectric power generation.

The power potential is quite large. For example, one could tunnel Pacific Ocean water to Death Valley, and simply let Death Valley fill to a constant depth of 200 feet below sea level. Because the evaporation rate is so high, the flow of water in and subsequent fall could generate about 200 mw of electric power through conventional hydroelectric techniques, plus providing much needed moisture to the southwest.

This is another form of solar power worth consideration and development.

HYDROGEN

Since there are no known supplies of free hydrogen on earth, hydrogen is not a source of energy but rather provides a means of storing and transmitting large quantities of energy efficiently and over large distances.

Hydrogen is produced by separating it from the oxygen in the water molecule (H_2O). The passage of an electric current will produce hydrogen at an efficiency of about 70 percent—Electrolysis. Some plants and lower animals—such as photosynthetic bacterial—release hydrogen as a consequence of one of the steps of photosynthesis or nitrogen fixation.

Hydrogen can then be stored as a gas, just like methane: natural gas, compresed into a (cold) liquid, run through pipes, shipped, trucked, etc. The energy content is only about ⅓ by weight that of methane, but moves through pipes almost three times more easily due to the lighter weight.

Hydrogen can then be burned, restored, or used directly in a fuel cell to produce electricity. A fuel cell is much like a big battery, except that it does not even run down as long as it has a supply of oxygen and air. In the fuel cell, the hydrogen recombines with oxygen, produces electricity at an efficiency of about 70 percent, with the only byproduct being slightly warm water, just what we started with. The environmental loop is thus completed, and the overall efficiency $0.7\times0.7=0.49$, is about 50 percent.

Several homes on the west coast have been powered totally with hydrogen fuel cells for several years with no problems. A hydrogen based economy is just around the corner and solves the storage and transmission problems envisaged for many of the "new" energy sources.

TIDAL

The motion of the Moon around the Earth causes, by gravitational interaction, a bulge in the Earth's water on both the Moon side and on the opposite side of the Earth. As the Earth turns, the bulges remain in a line—roughly—with the Moon, and thus twice each day, all of the water on the Earth rises and falls. In some areas, such as the Bay of Fundy on the Eastern Canadian coast—near Maine—the motion of the water is restricted and rises a much larger amount than the Earth average.

The drag between the Earth and the water causes the Moon to slow down. The measured slowing is about 0.001 sec. per 100 years. This is small indeed, but predicts that the total tidal energy available is $3x10^{12}$ watts. This is about the same as the current United States power demand, and, since only a small fraction is available, tidal power cannot hope to solve our problem.

However, the Bay of Fundy can easily generate 20,000 mw, enough to provide electricity for all New England, conserving precious oil reserves. Tidal power is a most important addition to our energy arsenal, and needs rapid implementation.

TACTICS

1. Legislative inducements are essential if any new, replenishable sources of energy are to be significantly used. Some possible incentives are listed below.

(a) Tax Credits—one of the best and certainly the simplest to deploy;

(b) Low interest loans;

(c) "Public" utilities are making excessive profits, much of it legislated by law. The utilities must cooperate or be required to cooperate with progressive customers who, for example, produce their own electricity via wind power or other means.

Note: It is felt that in most cases, Federal grant programs do not provide the most efficient approach to encourage widespread use of a "new" energy source. In many cases, tax credits are to be preferred and would be much more economical to implement, since the IRS structure is already there.

2. Existing systems and planned developments should be maximized and matched for thermodynamic efficiency.

3. Local and State zoning codes must reflect energy perspective and concern.

4. All manufactured products should carry an energy label, reflecting, say, the number of kilowatthour needed to make the item, as well as recycling information. From an energy picture, there is a gain of a factor of 25 in using recycled aluminum versus new aluminum. The equivalent factor for copper is 17, for glass, 1.

5. All exploratory programs that seek such knowledge about non-traditional energy sources should, in principle, receive encouragement and funding.

6. There are many innovative tactics not mentioned in the National Energy Plan which should be publicized and explored.

7. International cooperation should be encouraged and may prove necessary. For example:

(1) Tidal power from the Bay of Fundy requires United States and Canada cooperation. There is a significant amount of energy available there, in excess of 20,000 MWe continuous, and this should be used. This is probably the safest, most non-polluting form of energy, and should be used.

(2) Wave power also provides an enormous energy potential, but much of the research has been done in England. Again, international cooperation is the key.

(3) Fusion has been supported for many years for both peaceful and military uses in both the United States and in the Soviet Union. For many areas of the world, fusion offers real hope of improving the lot of the population or reducing dependency on rapidly dwindling oil and gas reserves.

International cooperation on the peaceful generation of power would seem desirable and humane.

8. Many potent energy sources are difficult to reach or to develop without international cooperation, big resources, and long-range planning. An example is the enormous wind power resource of antarctica which could provide electricity-hydrogen-shipping fuel cells for the entire world. In order to facilitate such resources, an International Energy Utility is recommended which would have large resources and natural cooperation.

ENERGY FROM OCEAN WAVES

Waves are a clean, nondepleting energy source of incredible magnitude. One recent British estimate of the wave power potential of just shore-based wave harnessing power plants was put at 40 trillion kwh. Other floating wave power devices for harnessing the waves out at sea would increase this figure much further. So far the only actual utilizations of wave power—that this author knows of—to produce electrical energy have been the 1909 Huntington Beach "Ideal Wave Motor" built by the California Wave Power Company that lit lamps on the wharf—until a storm washed the machine away—and over 300 Japanese buoys that use waves to power 10 watt power units. There are currently at least seven different serious proposals/designs for harnessing the waves for power production. Because of the technological feasiblity and the vast wave power potential of the United States, it is recommended that the United States undertake an expanded research and development program in wave energy, preferably in conjuction with other countries such as Great Britain.

ENERGY FROM THE WIND (SUPPLEMENT)

ERDA is currently contracted to build one 2.5 mw windmill power plant—to be the world's largest windmill—and two somewhat smaller units of 2 mw each. These large systems—300 ft. and 200 ft. diameter blades respectively—will be used by existing utilities to supplement their power production. The mass production—100 units or more—of these size wind systems makes the cost of power from the wind competitive with conventional power plants. These technological and economic feasibilities, coupled with the wind power potential of the United States—estimated at over 3000 trillion kilowatt hours—makes windpower even more attractive than its current level of funding would indicate. It is recommended that funding be increased for both the above-mentioned large-scale wind conversion systems as well as smaller scale—50 kw and less—wind systems that would be useful for the individual home owner.

THE HIDDEN OIL SHORTAGE

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. COLLINS of Texas. Mr. Speaker, there are two ways to close the gap between U.S. oil consumption and production, and both have been used. First, crude oil may be imported from abroad and, second, domestic crude oil may be produced faster than the replacement rate, thereby depleting existing reserves and reducing future productive capacity.

The importation of crude oil has received a great deal of attention. It covers what may be called the visible shortage which ran approximately 42 percent of domestic consumption in 1976, up from 37 percent the year before.

Reserve depletion, the hidden shortage, accounted for an additional 27 percent of domestic consumption in 1976. Together, the visible and hidden crude oil shortages amounted to 69 percent of consumption, up from 52 percent in 1974. The drastic increase in total crude oil shortage since 1974, the year that brought both Project Independence and multitiered crude oil price controls, is shown in the following table:

THE CRUDE OIL SHORTAGE UNDER PRICE CONTROLS

[Billions of barrels per year]

	1974	1975	1976
Consumption	6.1	5.9	6.4
Visible shortage:			
Volume	2.2	2.2	2.7
Percent	36	37	42
Hidden shortage:			
Volume	1.0	1.6	1.7
Percent	16	27	27
Total shortage:			
Volume	3.2	3.8	4.4
Percent	52	64	69

The national energy plan now before Congress contains essentially no incentives for arresting, let alone reversing, the current trend towards increased crude oil shortages and greater dependence on foreign sources of energy. Our projected total shortage under the plan is 90 percent in 1985. It is absolutely essential that consideration be given to greater U.S. exploratory efforts, through decontrolled crude oil prices.

NEGATIVE ASPECTS OF AFFIRMATIVE ACTION

HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. SCHEUER. Mr. Speaker, I have always believed that the Constitution prohibits discrimination on the grounds of race, color, sex, religion, or national origin. The Constitution directs us to judge each other on the basis of individual merit without regard to labels of race, color, or creed. In the past, and to some extent today, some religious, ethnic, and racial groups have been denied their full rights and educational opportunities

The time has long passed for us to recognize that discrimination of any type is abhorrent, no matter who benefits and at whose expense. Our goal must be to insure that every American man and woman has a full and equal opportunity to develop his or her full potential, and not be shackled by either discriminatory policies or inadequate educational opportunities.

Two years ago, my distinguished colleague from California (Mr. WAXMAN) and myself offered an amendment to the Health Manpower Act in the Interstate and Foreign Commerce Committee which would have prohibited preferential admissions policies—based on race, color, sex, religion, or national origin—by health professional schools receiving assistance under the Health Manpower Act. However, at the same time, that amendment affirmed the value of affirmative action programs—so long as they were not based upon race—to provide compensatory education programs to disadvantaged individuals in meeting admission requirements.

Although that amendment was not included in the final language of the Health Manpower Act, the issue is still very much alive today. I commend for my colleagues' attention the following article entitled "The Need for Elite Education: Declining Standards Cheat Students and Society Alike." The article appeared in the June issue of Harper's and was written by John R. Silber, the president of Boston University;

THE NEED FOR ELITE EDUCATION

(By John R. Silber)

The only standard of performance that can sustain a free society is excellence. It is increasingly claimed, however, that excellence is at odds with democracy; increasingly we are urged to offer a dangerous embrace to mere adequacy.

By this I do not mean that our performance is necessarily becoming worse. In the sports in which precise comparison is possible we excel our predecessors with a consistency and regularity that threaten to become monotonous. Athletes have never run so fast, jumped so high, or sunk so many baskets. Even as we recognize what appears to be our prevailing inability to teach most chldren to read and write, we reassure ourselves that educational opportunity has never been greater and that science and mathmetics have never been taught more effectively. Consumer goods have been developed to such a degree of sophistication, low cost, and reliability that one can now buy for a few dollars a tiny device whose capabilities were unavailable forty years ago in any size and at any price: the pocket calculator.

Our flight from excellence is different and apart from this progress. It is profoundly philosophical. Out of a well-intentioned but inept concern with equality of opportunity, we have begun to reject anything that exceeds anyone's grasp. Some might argue that it is our right to engage in this curious flight, and so it is, the right of free men to be fools. But do we have the right as citizens in a free society to reject excellence on behalf of others who may not be so foolish?

Much of the present-day rejection of standards is precisely by people and institutions that act in trust for others. This is flagrantly true of higher education, and especially regrettable because higher education purports to be and has been a repository for the highest standards.

One of the most obvious examples here is the war against grading. While there are many motives and rationales behind the movement to substitute pass/fail or pass/no-entry "grading" for the traditional scales, all begin with the same crucial assumption: that there is no compelling reason to distinguish between excellence and adequacy, and that it is wrong—either educationally or morally—to record evidence of inadequacy or failure. A related phenomenon is grade inflation, whereby teachers behave as if all students are equally gifted and hardworking. Declining standards are also reflected in the relaxed indifference shown by many professors and institutions to the wholesale and retail distribution of plagiarized materials by corporations selling term papers and other academic assignments. In all cases the threat to ex-

cellence is obvious, for our refusal to reject inauthentic work or to identify excellence will eventually render us unable to recognize it or care about it.

Last year the City University of New York abandoned open enrollment. It did not, however, return to its earlier admissions standards, but instead established as the minimum qualification for admission the competence expected of an eighth-grade education. This is less an indictment of the standards of CUNY, which was, after all, seeking rather tentatively to step back from the abyss, than it is of the high schools. For while prospective students at CUNY must now have reached an eighth-grade level, they must also be high-school graduates—so, in theory, they must also have attained a twelfth-grade education. Implicit in the admissions standards of CUNY is a one-third devaluation of the New York high-school diploma.

It is to the credit of the City University that it has introduced very extensive remedial programs to upgrade the competence of incoming freshmen. But should this extensive remedial work, requiring at least one full year to complete, be carried on in the context of a great university? It is hardly higher education, since it is no higher than the work expected of high-school students. Surely this work could be done more economically and appropriately by the high schools or community colleges.

Every day it becomes more obvious that a technologically sophisticated society will need more, not fewer, educated citizens. Postindustrial society will be grim for a functional illiterate, and it will itself be badly disrupted by the presence of large numbers of semiliterates whose skills, if any, are suited to a world that no longer exists. A restoration of excellence is therefore in the interest of society at large and of each of its members.

Some people believe that the pursuit of excellence is essentially antidemocratic. This fallacy is most obvious in the commonly voiced charge that educational institutions with high standards of excellence in admissions and faculty recruitment are "elitist," a term that for most people is redolent of special and unearned privilege and suggests that these institutions are havens for the incompetent offspring of the rich.

Our society is ambivalent about elitism. We refer easily and unself-consciously to Ruth, Gehrig, and Mays as the elite of baseball, to Simpson and Baugh as the elite of football, to Jones, Palmer, and Trevino as the elite of golf, and to Zaharias, Thorpe, and Owens as the elite of athletics itself; but outside of sports we use the word as a reproach. This confusion did not afflict Jefferson or Adams. "That all men are born to equal rights is true," said Adams.

"Every being has a right to his own, as clear, as moral, as sacred, as any other being has. . . . But to teach that all men are born with equal powers and faculties . . . is as gross a fraud, as glaring an imposition on the credulity of people as ever was practiced."

Jefferson recognized a natural aristocracy based on virtue and talents. He contrasted to this aristocracy an artificial one, founded on wealth and birth without regard to virtue or talent. The natural aristocracy, Jefferson believed, was "the most precious gift of nature." He not only acknowledged, but embraced, the idea that people are born with varying degrees of intelligence and talent.

Speaking on the occasion of receiving an Alumnae Award recently at Boston University, Rep. Barbara Jordan pointed out that our confusion has had deleterious effects on the federal government's effort to aid higher education. She said:

"We have been so brainwashed by an erroneous definition of democracy that we have difficulty prescribing any program or formula, or giving any grant which is better or more than some other grant, because we don't want to be accused of being antidemocratic because we recognize that some people are excellent. . . . As members of Congress, we should not be engaged in a leveling process. . . . We ought to enunciate and promote those policies which would lead absolutely, categorically, and without hesitation, to the best this country has to offer."

Calls for the maintenance of standards are often denounced as racist and sexist, but only a sexist or racist could believe that women or members of minorities are in fact inferior to everyone else, and would be unable to compete on an equal basis if judged by performance alone. If our society really did hold and maintain high standards, we would expect up to 51 percent of all partners in Wall Street law firms to be women and 11 percent of all surgeons to be blacks. The extent to which we fall short of these figures shows how far we are from honoring excellence as a criterion. Rejecting excellence in the interest of women and minorities is in effect a condescending adoption of a lower standard for them.

The movement to establish the United States as a bilingual nation provides a striking example of this condescension. Until recently, the United States was unique in the world as a very large nation covering a great land mass that maintained a single national language with dialects that were easily mutually intelligible. It is remarkable that a nation of such ethnic diversity has not been torn apart by intercommunal violence. Our comparative peace and the single language are almost certainly related: unlike Canada, Belgium, and other nations with explosive linguistic problems, the United States has been able to sustain its diverse culture within the context of one official language. Recent attempts to require bilingual ballots erode the position of the national language by assuming that it is possible to be a citizen even if one is literate only in the language of one's ethnic group.

The proposal is designed to exempt one large group of citizens from a requirement that has hitherto been expected of all citizens, the acquisition of some modest competence in the national language. This reduces the standard of performance expected of citizens to a derisory level. It patronizes the Hispanic culture by implying that it cannot survive coexistence with the English language. And it has racist overtones, suggesting that Spanish-speaking American citizens cannot be expected to acquire the same level of competence that was acquired by immigrants from Germany, Italy, Russia, Poland, Greece, and many other countries, and that was until recently expected of Spanish-speaking citizens. (Such an ill-advised motion should not be confused with the thoughtfully established programs of bilingual education which have been designed to induct children into the use of the national language. This process is a burden that obviously ought to be assumed by our society as a logical consequence of having a national language in the first place, and as essential to the provision of equal educational opportunity.)

A similar question arises with regard to the various dialects of English. In 1974 the National Council of Teachers issued a position paper maintaining that students who grow up speaking dialectal variants of English should not be required to learn standard English. On a recent television program an obviously intelligent and educated young black student said it was plain that students who grew up speaking dialects arrived in school ill prepared to function in the standard dialect. He did not think that attempts to require these students to use the standard dialect grew out of "overt racism or elitism. . . . That's the way it's mapped out by society." Recognizing that the good intentions of such attempts precluded their being *overly* racist, he nevertheless left the impression that he considered them part of unconscious societal racism.

Nothing could be farther from racism or elitism than requiring students from the ghetto to learn standard English. For this is to treat them as the equals of the great majority of students.

It is particularly reprehensible for white professors and white middle-class students to encourage black students in the mistaken belief that it does not matter whether they learn to speak and write with educated middle-class proficiency. The black student who speaks only ghetto English is not able to communicate fully. He can communicate effectively only with those who speak his own dialect, but an educated black can converse with anyone in the English-speaking world. White professors and students, already proficient in standard English, retain their monopoly in it and protect themselves from black competition by encouraging blacks to renounce their educational opportunities. Thus blacks may remain tragically isolated from the mainstream of their national culture, and pay the price for the ideological whims of whites.

Lowered expectations are a threat to all our students, since their ability to develop is very largely dependent upon the goals we establish for them. But it is not students alone who need a vision of excellence. Writing in 1830, Alexis de Tocqueville noted that in times of faith, people concern themselves with a distant supreme goal beyond this life. In so doing, "they learn by imperceptible degrees to repress a crowd of petty passing desires in order ultimately to best satisfy the one great permanent longing which obsesses them. When these same men engage in worldly affairs, such habits influence their conduct. . . . That is why religious nations have often accomplished such lasting achievements. For in thinking of the other world, they have found out the great secret of success in this."

But in skeptical ages, Tocqueville continued, the vision of the life to come is lost, a problem that is exacerbated in democracies, where people are set free to compete with each other to improve their situations. In such a combination of circumstances, "the present looms large and hides the future, so that men do not want to think beyond tomorrow." Tocqueville thought it especially important that the philosophers and rulers in skeptical democracies should always "strive to set a distant aim as the object of human efforts; that is their most important business." He did not specify the nature of the goals which need to be set in such ages, but we can hardly doubt that such goals require the best efforts not merely of individuals but of the society as a whole. In a secular age in which few believe in a life to come and in which God is, if not dead, at most indifferent, a vision of excellence—a secular kingdom of God—in which individuals fulfill themselves through education and useful public service may be essential.

A TRIBUTE TO MR. WILLIAM FRAZIER

HON. CLAIR W. BURGENER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. BURGENER. Mr. Speaker, this past June 30, one of my constituents retired from his position of superintendent of schools in Fallbrook, Calif., a posi-

tion in which he had served for 20 years. Both here and abroad, Mr. William Frazier has demonstrated his vigor and dedication to the development of young minds. It is fitting that Congress pay tribute to Mr. Frazier on his retirement, for this marks the end of over 40 years of distinguished service in the field of education—a record not easily matched.

Mr. Frazier began his eminent career as a teacher in Tombstone, Ariz., upon graduation from Arizona State University at Tempe in 1934. His native State, however, called him back, and he returned to California to teach in Riverside from 1937–44. Mr. Frazier's educational career was interrupted by World War II, where he served as an officer in the U.S. Navy. Following the war, he returned to Riverside, this time in the capacity of a school principal. He received his M.A. at Claremont Men's College, where he earned degrees which included teaching and administering credentials in both elementary and secondary education. Mr. Frazier's administrative and educational skills were further broadened in the 6 years he spent in Caracas, Venezuela, as the superintendent of American schools. Returning to California in 1957, the Frazier family settled in Fallbrook, where Mr. Frazier served as superintendent of schools until his recent retirement.

Mr. Frazier's selfless dedication does not end at the schoolroom door; he is one of Fallbrook's prominent civic leaders. He has served as an officer or on the directing board of many community, cultural, service, and professional clubs. The Fallbrook Union School District has lost an outstanding educator, but the community of Fallbrook is retaining the skills and devotion of an unrelenting leader.

TEMPLE UNIVERSITY DOCTORAL CANDIDATE WINS BROADCASTERS' ESSAY CONTEST

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. EILBERG. Mr. Speaker, it gives me pleasure to announce that Ms. Marilyn A. Lashner, a doctoral candidate in communications and theater at Temple University, Philadelphia, Pa., has won first prize in an essay contest sponsored by the National Association of Broadcasters.

Ms. Lashner's essay, entitled "The First Amendment and the Electronic Media," was entered in the NAB's contest to stimulate analysis and discussion of the rights of the public and the responsibility of broadcasters under the first amendment. I am a member of the board at Temple, Mr. Speaker, so I am proud that one of our students won first prize.

Now there are some points in Ms. Lashner's essay with which I do not agree, Mr. Speaker. But one of the wonderful things about America is its diversity, which enriches our democratic process. The right to hold differing points of view, and to respect other people's right to do the same, is an integral part of a true democracy.

It is in that spirit of defending the rights of all to speak out freely, that I extend my congratulations to Ms. Lashner for her victory in this contest, and place in the RECORD the full text of her essay:

BROADCASTING AND THE SEPARATE TRADITIONS OF FIRST AMENDMENT THEORY

The electronic press—while being hailed as equal to the printed press in importance to American society—is saddled with governmental requirements that restrict its freedom in ways consistently upheld as unconstitutional when applied to the printed press. Since 1791 when freedom of speech and press gained constitutional sanction, these guarantees have been revered by Americans as being the indispensable requirements for democratic society. But these guarantees have not been static; in the course of history, the simple words have been interpreted and reinterpreted, defined and redefined, idealized and compromised—each time in the light of contemporary social, psychological, political and economic experience. What we term first amendment theory is the constellation of interpretations, definitions, prescriptions and proscriptions which articulates the American commitment to freedom of expression. This essay will analyze the trends in first amendment theory which have permitted two separate and conflicting traditions of press policy: a laissez-faire policy for print and a restrictive policy for broadcasting. It will address the charge that many aspects of broadcast regulation, though upheld by the courts as consistent with first amendment theory, have in fact compromised the rights of both journalists and the public and thus have served to repress the very freedoms the first amendment was designed to protect.

THE ENIGMA OF THE FIRST AMENDMENT

The first amendment simply states: "Congress shall make no law . . . abridging the freedom of speech, or of the press . . ." But the amendment, while guaranteeing freedom of expression, is set forth in language that is at once vague and specific. It specifically names Congress as the addressee of the protection but is vague as to the recipient; it is rigid as to the guarantee but vague as to the substance of the guarantee. This failure to define the major concepts has caused a swell of confusion. Today scholars are still asking: Freedom of the press for whom? From whom? Where? When? To what degree? Which press? What speech? Is the right absolute or qualified? Does it guarantee publisher's autonomy or the people's right to know or the people's right of access? Is it oriented toward issues or toward persons? Is its purpose to free the publisher from the government or to free the people from the publisher? Does it confer special privileges on the press that are not conferred on ordinary citizens? Does it differentiate between expression on public and on private property? And most germaine, does it guarantee different freedoms for broadcasting than it does for the printed press?

TWO TRADITIONS OF FIRST AMENDMENT INTERPRETATION

Broadcasting in the United States has been variously described as "the almost press," "the half-opened media," "distant cousins," and as having second-class status under the first amendment. What is common to these observations is disapproval of public policy which forces broadcasting to straddle two conflicting lines of first amendment interpretation. On the one side is the laissez-faire commitment to free expression where government maintains complete separation from functions of the press. On the other side is the governmentally supervised affirmative approach where government licenses, oversees, evaluates, requires and punishes.

The laissez-faire interpretation—rooted deep in the libertarian philosophy of Milton, Locke, Mill and Supreme Court Justices Holmes, Brandeis, Black and Douglas—gives trust to man's reason and to his ability to seek out truth in the marketplace of ideas. In this context—which we shall call the Journalism Tradition—freedom of the press means editorial autonomy, no governmental restraint prior to dissemination but post-dissemination punishment for transgressions committed. Here is the arena where broadcast journalists march side-by-side with print journalists to fight the battles of prior restraint, subpoenas, gag rules, defamation, invasion of privacy, obscenity, newsman's privilege, contempt citations, and government secrecy.

The printed press functions entirely within this Journalism Tradition, but broadcasting is required additionally to function within a newer affirmative interpretation which sanctions Government involvement. Grounded in fear of the technological revolution, in a less optimistic view of man and society, and in doubts about the efficacy of the libertarian philosophy, this affirmative interpretation reflects the 20th century commitment to social responsibility and a new perspective to first amendment theory that identifies the people's right to know as the paramount guarantee. Under this interpretation, the rights of broadcasters are secondary to those of the public, and the Government asserts its social responsibility to "maintaining and enhancing" free expression by implementing measures designed to neutralize the potentially tyrannizing affects of scarce resources, big business, new technology, depersonalized living and monopoly. Freedom of the press in this context—which we shall refer to as the Regulation Tradition—means government oversight where, in the name of protection, economic and editorial freedoms are compromised by an authoritarian system of rules and regulations enforced by a hierarchy of punitive sanctions.

JOURNALISM TRADITION VS. REGULATION TRADITION

We speak, then, of two traditions under first amendment theory: the Journalism Tradition and the Regulation Tradition—the former governing the affairs of both broadcasting and print, the latter governing only broadcasing, each upheld by the Supreme Court as clearing the barriers of the first amendment. At times the basic assumptions of these traditions coincide. Both profess a commitment to first amendment values of "uninhibited, robust, wide-open" debate on public issues. In ideal, if not in practice, both are rooted in the principle of localism—newspapers by historical accident, broadcasting by design. Both are committed to the profit motive. And both profess commitment to self-regulation and to professionalism.

But there are five major areas where the assumptions of these separate traditions clash, where the values inherent in one tradition deny the values inherent in the other. Essentially grounded in economic theory, these differences are:

(1) Concept of Unlimited Resources vs. Doctrine of Scarcity;

(2) Resource Allocation by Market Controls vs. Resource Allocation by Government Decision;

(3) Laissez-faire vs. Government Licensing;

(4) Private Ownership vs. Public-trustee Principle; and

(5) Journalistic Autonomy vs. Government Management of Information.

It is at these tension points where the assumptions of the Regulation Tradition articulate what amounts to the essence of broadcast public policy in the United States. Consequently, it is here where the widespread criticism and concern as to broadcasting's eroding first amendment rights is focused.

CONCEPT OF UNLIMITED RESOURCES VS. DOCTRINE OF SCARCITY

The essential resource in publishing is paper whereas the essential resource in broadcasting is the electromagnetic spectrum. In economic terms, these essential resources are similar in that each is limited in amount and has potential for scarcity. But spectrum space is obviously and immediately limited and scarce whereas the finiteness of paper is less evident. In an effort to deal with the scarcity issue made abundantly apparent by intolerable interference. Congress in 1925 passed a resolution declaring the ether as "the inalienable possession of the people of the United States" and embarked on a policy of controlling and limiting its use. Though economists criticize the premise that scarcity is a phenomenon unique to spectrum space, and even though in practice there are today more broadcasting stations than newspapers in this country, the Doctrine of Scarcity as the reason for licensing remains the keystone of the Regulation Tradition.

RESOURCE ALLOCATION BY MARKET CONTROLS VS. RESOURCE ALLOCATION BY GOVERNMENT DECISION

Publishing operates according to a free-enterprise system where the ordinary pricing mechanism determines the economic value of essential resources and ultimately resource allocation. On the other hand, Congress has chosen to remove broadcasting from the dynamics of the free market in favor of a system of nonmarket allocation which preserves government ownership of spectrum space while removing true economic value from frequencies. According to public interest standards, the Government administers spectrum assignments at no substantial cost to the user—a system which, according to one economist, tends to promote political influence and windfall profits while denying the usual advantages of free enterprise: precise monetary measures of cost-benefit, flexibility and resource efficiency.

LAISSEZ-FAIRE VS. GOVERNMENT LICENSING

Except for general public interest regulation such as anti-trust and civil rights laws, the laissez-faire assumption of the Journalism Tradition rejects government regulation and oversight whereas the licensing assumption of the Regulation Tradition permits infiltration of Government into most precincts of broadcasting affairs. Federal licensing of radio stations has been practiced in this country since 1912. Whereas the earliest broadcasting legislation was interpreted as doing little more than mandate the issuance of licenses, later legislation granted to the FCC the discretionary power to license against a standard of "public interest, convenience and necessity." Based on this power, regulation has extended over the past two-thirds century to such areas as engineering specifications, network arrangements, multiple and cross-media ownership, business practices, commercial advertising, employment practices, procedures for accountability, and—most important from a first amendment standpoint—program content.

PRIVATE OWNERSHIP VS. PUBLIC-TRUSTEE PRINCIPLE

The public-trustee principle is the heart of the Regulation Tradition. It is an ingenious construct which combines public ownership, private use, government licensing, nonmarket allocation of spectrum space, free expression, and public interest obligations. Publishers, operating in the open-market system, own their enterprise and their resources and, except for anti-trust considerations, are free to use them and to transfer them at will. Such is not the case with broadcasters. On the theory that the public owns the airwaves, the broadcaster is considered a "public-trustee" and as such is permitted private gain from use of public property so long as he uses that property in the public interest. The license is nothing more than a franchise to use the assigned portion of the spectrum for a particular period in a particular way, and transfer procedures are rigid and subject to review.

JOURNALISTIC AUTONOMY VS. GOVERNMENTAL MANAGEMENT OF INFORMATION

In the American experience, journalistic freedom subsumes two parameters: no restraint prior to dissemination and subsequent punishment for unprotected speech. While the economic assumptions of the Journalism Tradition forge a system where predissemination journalistic autonomy is guaranteed, the Regulation Tradition's public-trustee principle—with its emphasis on public interest obligations—invites prior governmental intrusion into program content. Though the Communication Act expressly forbids censorship, proscriptive and prescriptive rulings directed at programing have supported, in fact, a pattern of information management carefully designed to avoid the appearance of blatant censorship. With punitive sanctions as leverage, no prior restraint has given way to a framework of prior standards in which journalistic autonomy has become "journalistic discretion," and FCC definitions of obscenity and other types of unprotected speech are more restrictive than the established Supreme Court definitions. Proscriptive content intrusion has focused on such areas as false and misleading advertising, deceptive program materials, excessive commercial practices, obscenity, indecency, violence, children's programing, and more. However, it is the prescriptive rulings focusing on programing balance, responsiveness to local needs, and fairness in political and public affairs programing which have generated the most severe First Amendment criticism. Of these, section 315 political broadcasting requirements and the Fairness Doctrine, clearly articulated as "the single most important requirement" and as the "sine qua non" for license renewal, have received the most vocal attention. Both require the broadcaster to conform to prescribed standards of content selection, emphasis, orientation, time and cost considerations; and failure to comply has been cause for governmental sanction ranging from fine to refusal to renew the license.

CONCLUSIONS

To function, as do broadcasters, under two separate traditions of first amendment theory is analogous to dual citizenship whereby allegiance is confused and the individual is beleaguered with competing reporting forms, obligations and standards. To the extent that broadcast policy continues to support conflicting traditions, the broadcaster and the public must suffer—as ultimately must our republic. For the first amendment goal of producing an informed electorate requires at the very least the free flow of ideas, an independent press insulated from Government, and respect for the citizen as rational, able and well-motivated. What we now have in broadcasting is an affront to the press, the citizens and to the ideal of free expression. First, we have a managed press where broadcasters in pursuit of self-preservation are forced to compromise and retreat and where blandness, sameness and triviality oft-times become attractive for their safeness from government reprisal. Secondly, in place of trust in citizen's reason, broadcasting today operates in a spirit of paternalism directed toward a naive, inept public which must be protected, carefully briefed and properly exposed to "fair" pictures of reality. If the libertarian ideal sees truth as emanating from the free market of competing ideas, by contrast, the Fairness Doctrine—the functional embodiment of the public-trustee principle—imposes on the public the Government's and the broadcaster's definitions of "controversial issues," "public importance," and "opposing points of view." Thus, in the name of "fairness," an elitist perception of truth and reality substitutes for honest truth—at once homogenizing controversy while limiting the horizons, demeaning the dignity and eroding the rights of the citizenry.

Logic demands a new broadcast policy orientation. Given the Supreme Court's premise "that a free press is a condition of a free society," and given research showing television to be the dominant medium for news information, it follows that a vigorous and free electronic press is a prime requisite for a vigorous republic. To the extent that broadcasting policy mitigates or eliminates the clash points of the discordant first amendment traditions, to the extent that the Regulation Tradition is brought closer to the Journalism Tradition, we can expect a more vigorous, more responsible, more honest press. Habit and an entrenched policy must not continue to deny the American people their basic rights. Over the years, first amendment theory has demonstrated remarkable resilience. The time is ripe for another great challenge.

THE HYBRID VEHICLE

HON. WILLIAM J. HUGHES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. HUGHES. Mr. Speaker, last year, in response to the growing petroleum shortages, and the need to find private passenger transportation for the Nation's citizens that does not depend upon gasoline, the Congress enacted the Electric Hybrid Vehicle Research Act of 1976. This legislation was enacted notwithstanding the objections of the President.

Many Americans understand the concept of the electric vehicle, which is not at all a new idea. In fact it has been around for years. However, less people are aware of the hybrid electric vehicle, which our legislation of last year also seeks to promote.

A citizen of my congressional district, Mr. Harry Haldeman, has taken an active interest in promoting electric vehicles and hybrid vehicles. I recently had occasion to read a brief article he prepared on this important subject, which is intended to acquaint the average person with the concept of the hybrid electric vehicle. I feel that Mr. Haldeman has prepared an excellent article on the subject, and I wanted to share it with my colleagues:

WHAT IS A HYBRID VEHICLE?

The Congress of the United States believed the energy crisis was real in September 1976 (before Carter) and passed an act over the veto of President Ford. It is now the law and entitled "Electric and Hybrid Vehicle Research Act of 1976," P.L. 94, to reduce our dependence on foreign oil.

In the title of the Act, the word "Hybrid"

stands out. What is a "Hybrid" vehicle? A hybrid is described as a vehicle with a combination of electric and internal combustion power. Two examples came to mind of hybrid vehicles that have been around for years:

1. The submarine—battery powered with diesel generator; and

2. Diesel locomotive—D.C. traction motor with diesel generator.

Would a "Hybrid" auto work? Volkswagen of Germany thinks so. They are the first large auto manufacturer in the world to have a hybrid in production. On a micro-bus chassis, the first one has logged over 25,000 miles in regular taxi service. In Britain, where gasoline costs more than double ours, there are more than 175,000 electric vehicles in operation; 75,000 of them being delivery vans. They have a prototype "Hybrid" with an 8 hp traction motor, and a 3.5 KW generator driven by a 400 cc gasoline engine.

Would a "Hybrid" reduce our dependence on foreign oil? Conventional electric cars won't sell because of their limited range. If you would like to take your wife to visit your mother-in-law 40 miles away in a conventional electric car upon arrival the conversation might go like this—"Mom I don't have enough juice left in my batteries to get home, is it ok if I plug in to recharge."

Mom might reply, "I don't have an extension cord." Upon which you would say, "Mom I brought one with me." As the electric meter spun merrily, mom would probably think, "besides feeding them, now I have to supply juice for their car." She may not invite you back.

The "Hybrid" gives unlimited range. You could drive coast to coast with an occasional stop for gasoline. Since most electric cars produced have less than a 10 hp dc motor, the "Hybrid" would need an on-board 10 hp gas driven generator to keep the batteries charged on a long trip. This should give good gas mileage because the generator would run at a constant speed and load until the batteries are full and then shut off automatically.

For commuting, the present 50 mile range of batteries would be sufficient in most cases. Charger would be plugged in at night during "off-peak" load hours. "High density" storage batteries have been promised for the near future, which would lower the weight of electric vehicles.

Electric autos produced in this country have been made by small companies and individuals with limited capital and engineering. The new law, PL 94–413, will give government support to all manufacturers.

FOOTNOTE ON RHODESIA

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. CRANE. Mr. Speaker, on October 19, 1973, the 93d Congress passed the Board for International Broadcasting Act of 1973. It was stated in the act that the Congress finds and declares: "(1) That it is the policy of the United States to promote the right of freedom of opinion and expression, including the freedom to 'seek, receive, and impart information and ideas through any media and regardless of frontiers,' in accordance with Article 19 of the Universal Declaration of Human Rights; (2) that open communication of information and ideas among the peoples of the world contributes to international peace and stability, and that the promotion of such communication is in the interest of the United States."

I do not recall the Congress either repealing or amending the 1973 act. As we did not repeal or amend the act, I question President Carter's efforts to close down the Rhodesian Information Office and ask if the President's actions in this matter are not outside and above the laws of the United States.

If we are to continue to promote human rights and freedom, including the freedom of speech and information, let us make sure that our own house is in order. I would like to insert an editorial which appeared in the Washington Post last week:

FOOTNOTE ON RHODESIA

With apologies for tardiness, we come forward today in protest against the Carter administration's misguided effort to close down the Rhodesian Information Office in Washington. The effort was undertaken to put pressure on the white-minority government of Ian Smith. But it is an affront to the American belief in the free international flow of information and to the whole idea of fairness, and it conveys to the Third World that the United States shares its conviction that information is properly the servant of politics.

The issue arose late in May when the United States joined a Security Council resolution closing the window by which Rhodesia funds its Washington office (and lesser ones in France and Australia). On Capitol Hill and elsewhere, among critics of Ian Smith as well as among his sympathizers, a clamor arose, but the State Department stuck to its guns. Sens. Clifford Case (R-N.J.) and Dick Clark (D-Iowa) then introduced a resolution saying that "any foreign country should be allowed to maintain an information office in the United States." So Mr. Carter, savvy in tactic if not sound in principle, backed off and decided to suspend putting the U.N. resolution into effect.

Important as is the issue of information, there may be more at stake. The United States is trying to make Mr. Smith form a new democratic government with the black majority of Zimbabwe. But it maintains contact with him only through occasional visits to Salisbury by the American Ambassador to Zambia. Such calculated detachment is appreciated by the other African states, but does it serve the process of diplomatic communication? Just as it is only fair to let the Rhodesian government, and its rivals, offer their views to the American public, so it could be useful to keep the (professionally staffed) Information Office here open and available for diplomatic exchanges.

ENERGY: THINK SMALL

HON. MARTHA KEYS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mrs. KEYS. Mr. Speaker, nowhere in the whole range of thinking about energy do we need more emphasis on thinking small than in the area of energy production. For some reason, the term "energy production" always seems to be used when referring to production of oil, natural gas, coal, or even nuclear power. Have we failed to understand that production of small amounts of energy from renewable sources adds up to the most important answers to our future energy supply? The point is well made in a recent editorial from the Washington Star, which I would like to share with my colleagues.

[From the Washington Star, July 31, 1977]

ENERGY: THINK SMALL

The tendency is to think cosmically about new sources of energy. Like harnessing the sun or the ocean waves, or turning vast stores of coal into oil and gas through exotic and expensive conversion methods.

But when the eye is riveted on the big picture, the little things that can help often get overlooked.

Take those small dams that once served commonly as energy sources, running mills and machinery in 19th Century America. There are thousands of them on old mill runs around the United States, lovely to look at but serving no other purpose. Thousands of more dams are located on recreational reservoirs and other water impoundments.

There are an estimated 48,000 dams that might be put to work generating electricity. According to an article in The Christian Science Monitor, an Army Corps of Engineers report requested by President Carter in his April energy message estimates that these dams, if power-generating turbines were placed on them, would produce seven times more energy than the administration anticipates from solar heating in 1985 and almost the same amount of electricity produced by all the nuclear plants in operation today.

Not only would there be small environmental damage in harnessing these dams, but the cost would be considerably less per kilowatt of output than for coal and nuclear power plants.

Ironically, turbines for the small dams can't be found in the United States, according to the Monitor; one has to shop for them in Europe where they've been thinking small as well as cosmic thoughts for a long time. American manufacturers, it seems, think only in terms of huge turbines to fit the multi-million-dollar dams that congressmen think about when they're porkbarreling.

We assume that President Carter is going to follow through on the Corps of Engineers study. Before long, perhaps small generators will be humming throughout America, and young lovers once again will find inspiration down by the old mill streams.

Who knows? If this thinking small works out, maybe people will rediscover bicycles—and feet—for short travels. And hand-operated can openers, and slicing knives without motors.

This energy business takes some big thinking, of course. But that isn't all of it. Not by a dam site.

PUBLIC WORKS JOBS FIASCO

HON. EDWIN B. FORSYTHE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. FORSYTHE. Mr. Speaker, I have yet to see the positive results of programs attempting to stimulate a lagging economy by intruding Government into the private marketplace through expensive programs such as the inaptly titled, "Local Public Works Capital Development and Investment Program."

First billed as a quick-cash, one-time stimulus to move us from a recession, the program is now in its second generation, looking toward its third, with $4 billion of the $6 billion still to be distributed and

with few indications that such stimulus is actually having the intended effect. In fact, the economy has already recovered to the extent that the program may have the opposite effect intended by feeding inflation.

In spite of my philosophical reservations about such programs in general, however, I have particularly strong negative criticisms of this specific program due to the way it has been administered by the Economic Development Administration, particularly in round II. This second round of substantially increased funding was supposedly to be distributed in light of what we had learned through the problems and mistakes of round I. As is indicated by the stops and starts, the false hopes, the general lack of information, and the apparent lack of controlling logic, I think we have learned little if anything from either round I or round II of this program except that we are better leaving economic stimulus to more reliable means than the massive involvement of the Federal Government.

An additional problem in the administration of the program perhaps peculiar to certain areas of the country is the failure of the EDA to cope adequately with different types of political jurisdictions. In the case of my State of New Jersey, this confusion resulted in substantial changes in the revised target allocations for round II which were just recently released. In a program supposedly designed around local priorities, the Federal bureaucracy failed to even discover the proper local governments to which the funding should have been directed.

During rounds I and II of the local public works program I have been contacted by almost every local government and many local school districts and other government bodies in my congressional district. I have found much dissatisfaction even on the part of those receiving some funding.

As an indication of the widespread frustration with the administration of this program, I would like to bring to the attention of my colleagues here in the House the following letter from one of the mayors in my district. Keeping in mind the fact that the township/municipality distinction is one that was also a source of confusion in implementing the general revenue sharing program, but a confusion that was successfully cleared up by the Treasury Department in administering that program since 1972, you can well understand the frustration with the heavy-handed, insensitive management of this program by the Economic Development Administration.

The letter follows:

TOWNSHIP OF DELRAN,
Burlington County, N.J., July 18, 1977.

MRS. JUANITA KREPS,
Secretary, Department of Commerce, Washington, D.C.

DEAR MRS. KREPS: I feel it is necessary to bring to your attention the continued unbelievable attitude of the Department of Commerce and all federal agencies when it comes to recommendation of political subdivisions within the State of New Jersey. The problem of the different forms of government came to the attention of all federal agencies when the first federal revenue sharing legislation was enacted.

I think to continue with the excuse that townships are not a recognizable form of government by the federal bureaucracy is unbelievable. There are forty municipalities in Burlington County, and of the forty at least twenty-two are incorporated as townships. Delran Township was incorporated in approximately 1882 and now has a population of approximately 17,000.

For some unknown reason the residents of our township are recognized when it comes to paying federal taxes, but are not recognized when it comes to federal funding. With all the shenanigans that were involved by the Department of Commerce (EDA) in deciding who was eligible and who was not for funds under Phase II of the Public Works Job Program, I cannot believe the fact that so many municipalities were not considered because they are a township.

With all the computer technology that is used by federal agencies, surely there must be a way to program the machine so that townships will receive the same consideration as cities, boroughs, and towns.

I would like to ask that you take immediate action to make sure that this excuse is not used again when another major funding program is enacted by Congress.

Thank you for any consideration you might extend to us.

Sincerely,

(MRS.) LORRAINE SCHMIERER,
Mayor, Delran Township.

CAPTIVE NATIONS WEEK RESOLUTIONS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. DERWINSKI. Mr. Speaker, last week, the Members know, was Captive Nations Week, which was appropriately observed in the Congress even though the President very belatedly issued the proclamation for the week. I direct the attention of the Members to the Captive Nations Week Resolution adopted by the Chicago Captive Nations Week Committee and an emergency resolution adopted by that group dealing specifically with the issue of our continuing relations with the Republic of China on Taiwan. I insert both resolutions into the RECORD:

RESOLUTIONS

Whereas, the Senate and the House of Representatives have authorized the President of the United States of America to proclaim the third week of July as Captive Nations Week, and

Whereas, communist imperialism has already enslaved one third of mankind and is making further inroads in Asia, Southern Europe, Africa and Latin America, and

Whereas, the military strength of the Western Powers is declining relative to the strength of the Soviet Union, making it harder to deal from a position of strength, and

Whereas, Western political and Business leaders, are making further concessions to the Soviets, concessions which only strengthen the power that oppresses tens of millions of Eastern European and Asian people, and which threatens all free countries, and

Whereas, the Soviet Union has failed to live up to the provisions of the Helsinki Conference concerning the basic human rights of individual and Religious Freedom and freedom of movement.

Now, therefore, be it resolved, by the Chicago Captive Nations Week Committee, to urge the United States to assume real and moral leadership in dealing with these problems. We urge the United States to consider beforehand, the effect any of its agreements and policies with the Soviet Union may have on the oppressed people of Eastern Europe, Asia and Cuba. We remind the United States and the Western countries that, agreeing to the Soviet Unions illegal annexations and occupations would set a precedent for accepting international lawlessness.

Be it further resolved, that the restoration of the sacred rights of all nations based on principles of democracy, self-determination, and sovereignty within their respective boundaries, must become the goal of Western and Soviet Policy. Only then will the world have a chance for a just and lasting peace. The United States is deceiving itself if it thinks it can bring peace to Europe as a partner of the Soviet Union while ignoring the wishes of the captive people of Europe.

Be it further resolved, that the United States maintain its strong stand on human rights at the Belgrade conference, dealing with the violations of the Helsinki Agreement as outlined in the House of Representatives, resolution No. 249 and Senate resolution No. Con. 24.

Be it further resolved, that the United States stop selling equipment and technology to the Soviet Union, which enhances the ability of an oppressive Soviet Government to stay in power.

Be it further resolved, that the United States, build up its military power relative to the Soviet Union. The present decline in United States power, if it continues, could prove fatal to the United States.

Be it further resolved, that the United States abstains from giving diplomatic recognition to Cuba and aid its Communist government through trade.

Be it further resolved, that the United States continues its support of a Free Republic of China.

Be it further resolved, that this committee, once again urge the establishment of the permanent Captive Nations Committee (House Resolution 211) and Freedom Academy, which is long overdue.

VIKTORS VIKSNINS,
Chairman, Captive Nations Committee.

AN EMERGENCY RESOLUTION

Urging the President of the United States to maintain diplomatic relations and the mutual defense treaty with the Republic of China based on Taiwan, and do not recognize the regime of Red China.

Whereas, communist imperialism has already enslaved one third of mankind and is making further inroads in Asia, Southern Europe, Africa and Latin America, and

Whereas, the Chinese Communist regime has massacred as many as sixty million chinese people after its usurpation of power on the Chinese mainland. It had directly intervened in the Korean war, actively supported the North Vietnamese in the Vietnam war, and has continuously supported the Communist elements in Southeast Asia, Latin America and Africa purposing to subvert the free and independent government and to advance its cause of world communization; and

Whereas, the Republic of China was a founding member of the United Nations and has always been a law abiding member of the community of nations; and

Whereas, the people of the Republic of China based on Taiwan have built a successful, prosperous, free economy out of the ashes of a half century of revolution, invasion and civil war and now serve as an

important trading partner of the American people; and

Whereas, the Republic of China based on Taiwan is of great strategic importance in the defense of East Asia and the Pacific and had always utilized its military power in the interests of the free World; and

Whereas, the people of the Republic of China based on Taiwan have been among the most trusted friends and allies of the people of the United States since the founding of the Chinese Republic in 1912; and

Whereas, President Jimmy Carter has repeatedly stated that he will pursue an open and just foreign policy, based on morality; and

Whereas, President Jimmy Carter has also repeatedly stated that he will not compromise the freedom and security of the people of the Republic of China on Taiwan, and will stand by the U.S. commitments to that country; and

Captive Nations Committee.

U.S.S. "PHOENIX"—POWER FOR PEACE

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. RUDD. Mr. Speaker, I was most privileged last Saturday to participate in ceremonies marking the keel-laying of the U.S.S. *Phoenix*, to be the Navy's newest nuclear-powered attack submarine.

This was an honor, indeed, because the principal speaker at that august ceremony, representing the city of Phoenix and our great State of Arizona, was our distinguished Minority Leader, the Honorable John J. Rhodes.

The keel initialer of the U.S.S. *Phoenix* was Mrs. Betty Rhodes, wife of the distinguished Minority Leader, who was introduced by Adm. Hyman G. Rickover, a great Naval commander in the annals of naval history and the father of America's nuclear fleet.

Mr. Speaker, it was a proud moment at Groton, Conn., to witness this keel-laying event. The U.S.S. *Phoenix* will be the Nation's 15th Los Angeles Class nuclear-powered attack submarine, joining 41 nuclear-powered ballistic-missile submarines, as well as 4 aircraft carriers and 9 guided-missile cruisers in our impressive surface nuclear fleet.

The U.S.S. *Phoenix*, along with the other attack submarines of its class, will have a higher speed capability than its predecessors. It will also have the most advanced antisubmarine warfare capabilities.

The plaque marking the keel-laying of the U.S.S. *Phoenix* states so truly the vital importance of this vessel, named after Arizona's capital and most populous city:

"This ship symbolizes our awareness that the oceans are our first line of defense. It accentuates our determination to negotiate from strength in our quest for peace and protection of freedom around the world. May the U.S.S. *Phoenix* be successful in all her missions."

Mr. Speaker, the remarks at the keel-laying ceremony by John Rhodes clearly and proudly stated my sentiments—and the sentiments I am sure of all Arizonans—as construction begins on this ship.

It was a privilege to hear these sound and articulate words by a great leader in American public life. In order that all Members of Congress and the American public might benefit from these good views, I would like to include the full text of John Rhodes' speech at this point in the RECORD:

THE USS PHOENIX: POWER FOR PEACE

My wife Betty and I are honored deeply to represent the city of Phoenix—and our great sunny State of Arizona at this keel-laying ceremony for the latest vessel in Uncle Sam's fleet of nuclear submarines.

The Phoenix name has a long and honorable link with the U.S. Navy—and our Nation's history. In 1778 a packet bore that name—and in 1811 a Navy schooner. The city itself was first honored by the light cruiser *Phoenix* built in 1938. It saw service in World War II—was decommissioned and now is a part of the Argentine Navy.

Today we take part in an event with far more significance than just the start of construction on another undersea ship. It represents affirmation of the need for a modern navy. It is, in fact, a peacetime departure from our historical past. It signals determination by our Government that we intend to maintain our military strength on and under the oceans of the world.

Coming from Arizona, I am perhaps, more keenly aware than many others in the Congress, of the mistakes in military policy we made in the past—errors in judgment repeated too often in this last half century. Again and again we have allowed our preparedness to go by the boards, in the vain hope that aggression would not break out among nations of the world.

There was another great naval ship which honored our State. On December 7, 1941, it was bombed and sent to the bottom at Pearl Harbor. Today, the battleship *Arizona* is a national monument—a shrine which honors all those who gave their lives in service at sea during World War II. It is, at the same time, a grim reminder of the heavy cost we paid because we failed to maintain our defenses. Our leaders then were certain that no country would dare attack the mighty United States. They were wrong.

Yet, despite the lessons of the past, today in Congress—in some of the decisions made by the executive branch—and views held by many naive people across the land—we hear the echo of the same siren song. After a few years of peace, too many yield to the temptation to let down our guard. We hear voices that say, "Let us take those defense dollars, distribute them among our people and create a utopia here in the United States." They argue that war is unthinkable in the era of the hydrogen bomb. They claim we can negotiate our way to peace in perpetuity and beat our swords into plowshares. No one wishes more devoutly than I that this were true. It is not.

We live in a perilous world. We do not wish it that way. We have not sought to be the leaders of the Free World. The unrivaled success of our system has bestowed that role upon us. It has incited the envy—and incurred the enmity of nations whose progress is burdened by the strictures of statist totalitarianism.

Currently we are engaged in preliminary talks aimed at eventual disarmament. We all pray for their success. We would, at the same time, be foolish to ignore the steady buildup of military capability by the Soviet Union even as they sit across the bargaining table.

We cannot brush aside as of no consequence their increase in forces, development of weapons, and construction of vast numbers of ships, tanks, and aircraft.

It is ominous that they are working feverishly on civil defense. They have ambitious projects to move productive facilities underground and provide massive shelters for the populace.

Are they thinking the unthinkable? Are they calculating the odds on a nuclear showdown? Or is this another facet of psychological warfare aimed at stampeding us into various concessions as the price of peace? We do not know. But we cannot afford to underestimate their intentions nor to take steps to protect our own people.

If we listen to those who want to cut back our defenses, we could face future nuclear blackmail. A fully prepared adversary could issue an ultimatum—a bluff of one sort or another—and we would be in no position to call it.

We hear also the idea that we can build a bristling defense of our shores, sit safe and secure in fortress America, and let the rest of the world go by. This myth is born of wishful thinking but defies actuality.

Our tremendously productive industrial economy imports the major share of the raw material we turn into a cornucopia of products. We import from everywhere. We thus have a vested interest in other countries for we depend on them for our own economic vitality. In addition, we have developed vast export markets for our goods. Our fertile farms provide tons of food and fiber for export to feed and clothe a world of burgeoning population and growing demands.

Clearly—we are in the world and of the world. We have a great stake in keeping the sealanes open. They are our economic lifelines and channels of supply and trade that keep our economy going.

Construction of this ship—nuclear powered and armed—will help maintain our muscle and assert our determination to keep free the pathways of commerce—not to be interfered with by unfriendly powers. Long ago the Soviet Union recognized the crucial role of the oceans in global affairs. They have launched an intensive shipbuilding program, expanded their fishing fleet, and beefed up their military seapower.

Our answer to this potential threat is submarines such as the *Phoenix*. They can range the globe, carry various kinds of missiles. They have mobility and great striking power. We all can feel a bit safer knowing that our Navy has these advanced weapons. They are our front line deterrent against miscalculation of our capability and will to preserve freedom and peace. As long as I am in the Congress, I will fight for the very best defenses in the world for the United States.

We should have learned by now that in the realm of international affairs—being a second best military power is not enough. It has been likened to holding the second-best hand in a poker game. It costs you lots of money but cannot win you anything.

It is a pleasure for Betty and me to have had this opportunity to visit this fabulous construction facility here in Groton and to lend the name of our city of Phoenix to the submarine being built here.

This keel-laying is a proud moment for us—for Phoenix—for Arizona, and for the United States Navy.

May the U.S.S. *Phoenix* be successful in all her missions.

CONGRESSMAN HOWARD INTRODUCES H.R. 8648—THE SURFACE TRANSPORTATION ASSISTANCE ACT OF 1977

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. HOWARD. Mr. Speaker, on Friday, July 29, 1977, I introduced H.R. 8648, the Surface Transportation Assistance Act of 1977.

This legislation is a fundamental approach to some of the basic problems which confront us today in two of our major areas of transportation—public transportation and highways. It runs the gamut from capital construction to highway safety and from offsystem roads in rural areas to operating subsidies under the public transportation program. It has been introduced as a result of extensive hearings that have already been held by the Subcommittee on Surface Transportation of the Committee on Public Works and Transportation. Further hearings are contemplated in September and all those who are interested and wish to testify on these programs which are vital to our Nation's development will have an opportunity then to express their views.

Under leave to extend my remarks and for the information of my colleagues, I include herewith a copy of the introduced bill.

H.R. 8648

A bill to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Surface Transportation Assistance Act of 1977".

TITLE I

SHORT TITLE

SEC. 101. This title may be cited as the "Federal-Aid Highway Act of 1977".

REVISION OF AUTHORIZATION FOR APPROPRIATIONS FOR THE INTERSTATE SYSTEM

SEC. 102. Subsection (b) of section 108 of the Federal-Aid Highway Act of 1956, as amended, is amended by striking out "the additional sum of $3,625,600,000 for the fiscal year ending September 30, 1980," and all that follows down through the period at the end of the sentence and by inserting in lieu thereof the following: "the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1980, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1981, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1982, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1983, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1984, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1985, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1986, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1987, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1988, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1989, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1990, the additional sum of $4,000,000,000 for the fiscal year ending September 30, 1991, and the additional sum of $1,850,000,000 for the fiscal year ending September 30, 1992.".

AUTHORIZATION OF USE OF COST ESTIMATES FOR APPORTIONMENT OF INTERSTATE FUNDS

SEC. 103. The Secretary of Transportation shall apportion for the fiscal year ending September 30, 1980, the sums authorized to be appropriated for such periods by section 108(b) of the Federal-Aid Highway Act of 1956, as amended, for expenditures on the National System of Interstate and Defense Highways, using the apportionment factors contained in revised table 5 of Committee Print 95—of the Committee on Public Works and Transportation of the House of Representatives.

HIGHWAY AUTHORIZATION

SEC. 104. (a) For the purpose of carrying out the provisions of title 23, United States Code, the following sums are hereby authorized to be appropriated:

(1) For the Federal-aid primary system in rural areas, including the extensions of the Federal-aid primary system in urban areas, and the priority primary routes, out of the Highway Trust Fund, $2,100,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982 For the Federal-aid secondary system in rural areas, out of the Highway Trust Fund, $650,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(2) For the Federal-aid urban system, out of the Highway Trust Fund, $800,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(3) For forest highways, out of the Highway Trust Fund, $33,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(4) For public lands highways, out of the Highway Trust Fund, $16,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(5) For forest development roads and trails, $140,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(6) For public lands development roads and trails, $10,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(7) For park roads and trails, $30,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(8) For parkways, $45,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982. The entire cost of any parkway project on any Federal-aid system paid under the authorization contained in this paragraph shall be paid from the Highway Trust Fund.

(9) For Indian reservation roads and bridges, $83,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(10) For economic growth center development highways under section 143 of title 23, United States Code, out of the Highway Trust Fund, $50,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(11) For necessary administrative expenses in carrying out section 131 and section 136 of title 23, United States Code, $1,500,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(12) For carrying out section 215(a) of title 23, United States Code—

(A) for the Virgin Islands, not to exceed $5,000,000, per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(B) for Guam, not to exceed $5,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(C) for American Samoa, not to exceed $1,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

Sums authorized by this paragraph shall be available for obligation at the beginning of the period for which authorized in the same manner and to the same extent as if such sums were apportioned under chapter 1 of title 23, United States Code.

(13) For authorized landscaping, including, but not limited to, the planting of flowers and shrubs indigenous to the area, and for litter removal, an additional $25,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(14) For the Great River Road, $10,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982, for construction or reconstruction of roads not on a Federal-aid highway system; and out of the Highway Trust Fund, $25,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982, for construction or reconstruction of roads on a Federal-aid highway system.

(15) For control of outdoor advertising under section 131 of title 23, United States Code, $25,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(16) For control of junkyards under section 136 of title 23, United States Code, $15,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(17) For safer off-system roads under section 219 of title 23, United States Code, $200,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(18) For access highways under section 155 of title 23, United States Code, $15,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(19) For traffic control signalization under section 146 of title 23, United States Code, out of the Highway Trust Fund, $75,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(20) Nothing in the first ten paragraphs or in paragraph (12), (13), (14), (17), (18), or (19) of this section shall be construed to authorize the appropriation of any sums to carry out sections 131, 136, or chapter 4 of title 23, United States Code.

(b)(1) For each of the fiscal years 1980, 1981, 1982, and 1983, no State, including the State of Alaska, shall receive less than one-half of 1 per centum of the total apportion-

ment for the Interstate System under section 104(b)(5) of title 23, United States Code. Whenever amounts made available under this subsection for the Interstate System in any State exceed the estimated cost of completing that State's portion of the Interstate System, and exceed the estimated cost of necessary resurfacing, restoration, and rehabilitation of the Interstate System within such State, the excess amount shall be transferred to and added to the amounts last apportioned to such State under paragraphs (1), (2), and (6) of section 104(b) in the ratio which these respective amounts bear to each other in that State, and shall thereafter be available for expenditure in the same manner and to the same extent as the amounts to which they are added. In order to carry out this subsection, there are authorized to be appropriated, out of the Highway Trust Fund, not to exceed $125,000,000 per fiscal year for each of the fiscal years ending September 30, 1980, September 30, 1981, September 30, 1982, and September 30, 1983.

(2) In addition to funds otherwise authorized, $75,000,000 out of the Highway Trust Fund, is hereby authorized for the purpose of completing projects approved under the urban high density traffic program prior to the date of enactment of this paragraph. Such sums shall be in addition to sums previously authorized.

(c) In the case of priority primary routes, $75,000,000 per fiscal year of the sums authorized for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982, by subsection (a)(1) of this section, shall not be apportioned. Such $75,000,000 of each such authorized sum shall be available for obligation on the date of apportionment of funds for each such fiscal year, in the same manner and to the same extent as the sums apportioned on such date, except that such $75,000,000 shall be available for obligation at the discretion of the Secretary of Transportation only for projects of unusually high cost which require long periods of time for their construction. Any part of such $75,000,000 not obligated by such Secretary on or before the last day of the fiscal year for which authorized shall be immediately apportioned in the same manner as funds apportioned for the next succeeding fiscal year for such routes, and available for obligation for the same period as such apportionment.

(d)(1) Thirty six per centum or more of the apportionment for each fiscal year to each State of the sum authorized in paragraph (1) of subsection (a) of this section for the Federal-aid primary system (including extensions in urban areas and priority primary routes) for such fiscal year shall be obligated in such State for projects for the resurfacing, restoration, and rehabilitation of highways on such system.

(2) Thirty six per centum or more of the apportionment for each fiscal year to each State of the sum authorized in paragraph (1) of subsection (a) of this section for the Federal-aid secondary system for such fiscal year shall be obligated in such State for projects for the resurfacing, restoration, and rehabilitation of highways on such system.

INTERSTATE SYSTEM RESURFACING

SEC. 105. In addition to any other funds authorized for the Interstate System, there is authorized to be appropriated out of the Highway Trust Fund not to exceed $175,000,000 per fiscal year for each of the fiscal years ending September 30, 1980, September 30, 1981, September 30, 1982, and September 30, 1983. Such sums shall be obligated only for projects for resurfacing, restoring, and rehabilitating those lanes on the Interstate System which have been in use for more than five years and which are not on toll roads.

DEMONSTRATION PROJECTS—RAILROAD HIGHWAY CROSSINGS

SEC. 106. (a) Subsection (m) of section 163 of the Federal-aid Highway Act of 1973 (Public Law 93-87) is amended to read as follows:

"(m) The Federal share payable on account of such projects shall be 95 per centum of the cost.".

(b) Subsection (o) of such section 163 is amended by striking out "and $51,400,000 for the fiscal year ending September 30, 1978, except that" and inserting in lieu thereof the following: "$51,400,000 for the fiscal year ening September 30, 1978, $90,000,000 for the fiscal year ending September 30, 1979, and $110,000,000 per fiscal year for each of the fiscal years ending September 30, 1980, September 30, 1981, and September 30, 1982, except that".

TOLL ROADS

SEC. 107. Subsection (c) of section 129, United States Code, is amended to read as follows:

"(c) Funds authorized for expenditure on any of the Federal-aid systems, other than the Interstate System, shall be available for expenditure on projects approaching any toll road, bridge, or tunnel to a point where such project will have some use irrespective of its use for such toll road, bridge, or tunnel. Funds authorized for expenditure on the Interstate System shall be available for expenditure on projects approaching any toll road, bridge, or tunnel.".

TRAFFIC CONTROL SIGNALIZATION

SEC. 108. (a) Chapter 1 of title 23, United States Code, is amended by inserting immediately after section 145 the following new section:

"§ 146. Traffic control signalization program

"(a) The Secretary is authorized to make grants to States for traffic control signalization projects that are designed to conserve motor vehicle fuel, decrease traffic congestion, increase the capacity of existing highways, improve air and noise quality, and improve highway safety on any toll-free highway which is under the jurisdiction of and maintained by a public authority and open to public travel. Projects shall be selected by each State highway department in consultation with appropriate local officials. Priority shall be given to projects which provide coordinated signalization of two or more intersections.

"(b) The Federal share payable on account of any project under this section shall be the same as that provided in section 120(c) of this title.

"(c) On October 1 of each fiscal year the Secretary shall apportion the sums authorized to be appropriated to carry out this section for that fiscal year among the several States in the ratio which the population in urban areas, or parts thereof, in each State bears to the total population in such urban areas, or parts thereof, in all of the States as shown by the latest available Federal census, except that no State shall receive less than one-half of 1 per centum of each year's apportionment. Sums apportioned under this section shall be available for obligation and expenditure in the same manner and for the same period as if such sums were apportioned for the Federal-aid primary system under this chapter.

"(d) In any State where the State highway department does not have legal authority to construct or maintain a project under this section, such State highway department shall enter into a formal agreement for such construction or maintenance with the appropriate local officials of the county or municipality in which such project is located. The requirements of section 116 of this title that the State highway department maintain, or cause to be maintained, any project constructed under this section shall include the duty to operate such project, and the State's duty to maintain, or cause to be maintained (including the operation of) any such project shall exist whether or not the project is part of the Federal-aid system.".

(b) The analysis of chapter 1 of title 23, United States Code, is amended by striking out

"146. Repealed."

and by inserting in lieu thereof:

"146. Traffic control signalization.".

(c) Section 120(d) of title 23, United States Code, is amended by inserting after "section 130 of this title," the following: "and for any project for traffic control signalization, other than a project for which a grant is made under section 146,".

OVERSEAS HIGHWAYS

SEC. 109. Subsection (b) of section 118 of the Federal-aid Highway Amendments of 1974 (Public Law 93-643) is amended to read as follows:

"(b) There is authorized to be appropriated, out of the Highway Trust Fund, not to exceed $143,000,000 to carry out such projects.".

FEDERAL SHARE

SEC. 110. (a) The first sentence of subsection (a) of section 120 of title 23, United States Code, is amended by striking out "70 per centum" each place it appears and inserting in lieu at each such place "80 per centum".

(b) Subsection (d) of section 120 of title 23, United States Code, is amended by striking out "70 per centum" and inserting in lieu thereof "80 per centum".

(c) The first sentence of subsection (f) of section 120 of title 23, United States Code, is amended by striking out "70 per centum" and inserting in lieu thereof "80 per centum".

(d) Subsection (g) of section 131 of title 23, United States Code, is amended by striking out "75 per centum" and inserting in lieu thereof "80 per centum".

(e) Subsection (i) of section 136 of title 23, United States Code, is amended by striking out "75 per centum" and inserting in lieu thereof "80 per centum".

(f) Subsection (d) of section 144 of title 23, United States Code, is amended by striking out "75 per centum" and inserting in lieu thereof "90 per centum".

(g) Subsection (e) of section 148 of title 23, United States Code, is amended by striking out "70 per centum" and inserting in lieu thereof "80 per centum".

(h) Subsection (b) of section 155 of title 23, United States Code, is amended by striking out "70 per centum" and inserting in lieu thereof "80 per centum".

(i) Subsection (a) of section 215 of title 23, United States Code, is amended by striking out "70 per centum" and inserting in lieu thereof "80 per centum".

(j) Subsection (a) of section 118 of the Federal-aid Highway Amendments of 1974 (Public Law 93-643) is amended by striking out "70 per centum" and inserting in lieu thereof "80 per centum".

(k)(1) The first sentence of subsection (d) of section 402 of title 23, United States Code, is amended by inserting "provisions relating to the Federal share," immediately after "other than".

(2) Subsection (d) of such section 402 is amended by inserting immediately after the first sentence thereof the following new sentence: "The Federal share payable to implement highway safety programs under this section shall be 90 per centum of the cost thereof.".

(l) The last sentence of subsection (c) of section 406 of title 23, United States Code, is amended by striking out "title shall not

exceed 70 per centum" and inserting in lieu thereof "section shall not exceed 90 per centum".

(m) The amendments made by subsections (a) through (l) of this section shall take effect with respect to authorizations for appropriations for fiscal years beginning after September 30, 1978.

PAVEMENT MARKING

SEC. 111. Section 151(e) of title 23, United States Code, is amended by striking the period at the end thereof and adding the following: "for the Federal-aid primary system. On October 1 of each fiscal year the Secretary shall allocate the sums authorized to carry out this section for that fiscal year among the several States in such manner as he deems most appropriate to expedite the completion of pavement marking of all highways. Any amounts allocated to the States remaining unobligated at the end of the fiscal year following the fiscal year for which such amounts are authorized shall immediately be reallocated by the Secretary among the other States.".

ACCELERATION OF CONSTRUCTION OF INTERSTATE SYSTEM

SEC. 112. If a State has not expanded or otherwise obligated any of the funds apportioned to it for the Interstate System for any fiscal year which begins on or after October 1, 1978, before the first day of the fiscal year for which such funds are authorized, then all funds authorized to be apportioned to such State for the Interstate System for the next fiscal year shall be immediately available for obligation in any State which has obligated all of its apportionments other than an amount which, by itself, is insufficient to pay the Federal share of the cost of a project on the Interstate System which has been submitted by such State to the Secretary for approval. The amount of the apportionment made for the next succeeding fiscal year to such State for the Interstate System shall be reduced by the amount obligated under this section in the preceding fiscal year by such State, and a State whose apportionment for the preceding fiscal year was made available for obligation by another State shall receive an apportionment for such preceding fiscal year in an amount equal to the amount so made available. No State shall have made available to it in any fiscal year for obligation under the first sentence of this section an amount in excess of the amount which the Secretary determines may be apportioned to such State in the next succeeding fiscal year.

COMPENSATION OF INTERSTATE SYSTEM

SEC. 113. Paragraph (2) of subsection (e) of section 103 of title 23, United States Code, is amended by inserting a period after "five hundred miles" and by striking out the remainder of such paragraph and inserting in lieu thereof the following: "Every route on the Interstate System which is in a rural area, as such route is identified in Committee Print 95–18 of the Committee on Public Works and Tranpsortation of the House of Representatives and in the fiscal year 1977 estimate of the cost of completing the Interstate System transmitted to Congress by the Secretary of Transportation shall be constructed, and paragraph (4) of this subsection shall not apply to such a route. Every route on the Interstate System which is in an urban area, as such route is identified in Committee Print 95–18 of the Committee on Public Works and Transportation of the House of Representatives and in the fiscal year 1977 estimate of the cost of completing the Interstate System transmitted to Congress by the Secretary of Transportation and which is classified as an essential gap in such committee print, shall be constructed and paragraph (4) of this subsection shall not apply to such a route. Every other route on the Interstate System which is in an urban area, as such route is identified in Committee Print 95–18 of the Committee of Public Works and Transportation of the House of Representatives and in the fiscal year 1977 estimate of the cost of completing the Interstate System transmitted to Congress by the Secretary of Transportation shall be constructed and paragraph (4) of this subsection shall not apply to such a route unless the Secretary withdraws approval for such a route in accordance with such paragraph (4) before July 1, 1979. Every route approved by the Secretary as part of the Interstate System on or after January 1, 1976, shall be constructed and paragraph (4) of this subsection shall not apply to such a route.".

APPALACHIAN DEVELOPMENT HIGHWAYS

SEC. 114. Subsection (f) of section 201 of the Appalachian Regional Development Act of 1965 is amended to read follows:

"(f) Federal assistance to any construction project under this section shall be 90 per centum of the costs of such project.".

ACCESS CONTROL DEMONSTRATION PROJECTS

SEC. 115. (a) The Secretary of Transportation is authorized to carry out access control demonstration projects designed to demonstrate whether preserving the capacity of existing highways to move traffic safely by acquiring and controlling the right of access to such a highway is a cost effective alternative to the construction of additional highways. Such demonstration projects shall be carried out (1) on highways which are on the Federal-aid primary or secondary system, and are well maintained and in good condition, and (2) in traffic corridors which are not already subject to heavy industrial, commercial or residential development. The Secretary of Transportation shall carry out one such demonstration project in each of five States.

(b) There is authorized to be appropriated to carry out this section, out of the Highway Trust Fund not to exceed $50,000,000 for the four fiscal year period ending September 30, 1982.

(c) Funds authorized by this section shall be available for obligation in the same manner and to the same extent as if such funds were apportioned under chapter 1 of title 23, United States Code.

(d) No project shall be carried out under this section in any State which will not pay 20 per centum of the cost of acquiring land and rights of access. All other costs of such projects shall be borne by the United States.

TITLE II

SHORT TITLE

SEC. 201. This title may be cited as the "Highway Safety Act of 1977".

HIGHWAY SAFETY

SEC. 202. The following sums are hereby authorized to be appropriated:

(1) For carrying out section 402 of title 23, United States Code (relating to highway safety programs), by the National Highway Traffic Safety Administration, out of the Highway Trust Fund, $200,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(2) For carrying out section 403 of title 23, United States Code (relating to highway safety research and development), by the National Highway Traffic Safety Administration, out of the Highway Trust Fund, $50,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(3) For carrying out section 402 of title 23, United States Code (relating to highway safety programs), by the Federal Highway Administration, out of the Highway Trust Fund, $25,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(4) For carrying out section 154 of title 23, United States Code (relating to the national maximum speed limit), out of the Highway Trust Fund, $50,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(5) For carrying out sections 307(a) and 403 of title 23, United States Code (relating to highway safety research and development), by the Federal Highway Administration, out of the Highway Trust Fund, $10,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(6) For bridge reconstruction and replacement under section 144 of title 23, United States Code, out of the Highway Trust Fund, $2,000,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(7) For carrying out section 151 of title 23, United States Code (relating to pavement marking), out of the Highway Trust Fund, $75,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, September 30, 1982.

(8) For projects of high-hazard locations under section 152 of title 23, United States Code, and for the elimination of roadside obstacles under section 153 of title 23, United States Code, out of the Highway Trust Fund, $150,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(9) For carrying out subsection (j)(2) of section 402 of title 23, United States Code (relating to incentives for the reduction of the rate of traffic fatalities), out of the Highway Trust Fund, $7,500,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(10) For carrying out subsection (j)(3) of section 402 of title 23 United States Code (relating to incentives for reduction of actual traffic fatalities), out of the Highway Trust Fund, $7,500,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(11) For carrying out section 406 of title 23, United States Code (relating to schoolbus driver training), out of the Highway Trust Fund, $7,500,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

RAIL-HIGHWAY CROSSINGS

SEC. 203. (a) The first sentence of paragraph (1) of subsection (b) of section 203 of the Highway Safety Act of 1973 (Public Law 93–87) is amended by striking out "and $125,000,000" and inserting in lieu thereof "$125,000,000", and by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "and $150,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.".

(b) The first sentence of subsection (c) of section 203 of the Highway Safety Act of 1973 is amended by striking out "and $75,000,000" and inserting in lieu thereof "$75,000,000", and by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "and $100,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.".

SEC. 204. The sixth sentence of subsection (c) of section 402 of title 23, United States Code, is amended by striking out ", except

that" and all that follows down through the period at the end thereof and inserting in lieu thereof a period.

TITLE III

SHORT TITLE

SEC. 301. This title may be cited as the "Urban Mass Transportation Act Amendments of 1977".

FEDERAL FINANCING ASSISTANCE AUTHORIZATIONS

SEC. 302. Subsection (c) of section 4 of the Urban Mass Transportation Act of 1964 is amended by inserting "(1)" immediately after "(c)" and by adding at the end thereof the following new paragraphs:

"(2) Notwithstanding paragraph (1) of this subsection or any other provision of this Act, no part of the authorizations contained in paragraph (1) of this subsection shall be obligated after September 30, 1978.

"(3) There are authorized to be appropriated for grants and loans under sections 3 and 9 of this Act, per fiscal year, for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982, the following amounts for the following purposes:

"(A) $150,000,000 for assistance (including construction and operating expenses) in rural areas and those urban places designated by the Bureau of the Census as having a population of five thousand or more which are not within an urbanized area as defined for the purposes of section 5 of this Act. In making any grant from such $150,000,000 for the payment of subsidies for operating expenses, preference shall be given to a private bus operator who lawfully has provided transportation to such a rural area or urban place during the one-year period preceding the date of application for such a grant over routes or within the general area for which such financial assistance is to be provided, over any other operator to provide such service in such area or place.

"(B) $60,000,000 for grants under section 9.

"(C) $600,000,000 for the purchase of buses.

"(D) $500,000,000 for the purchase of rolling stock for fixed rail.

"(E) $500,000,000 for modernization, rehabilitation, and expansion of existing public mass transit systems, other than the purchase of buses and rolling stock for fixed rail.

"(F) $600,000,000 for fixed guideway public mass transit systems construction of which was begun after October 15, 1970.".

URBAN MASS TRANSIT PROGRAM AUTHORIZATION

SEC. 303. Subsection (c) of section 5 of the Urban Mass Transportation Act of 1964 is amended by renumbering paragraph (2) of such subsection as paragraph (4) and by inserting immediately after the period at the end of paragraph (1), the following new paragraphs:

"(2) Notwithstanding paragraph (1) of this subsection or any other provision of this Act, no part of the authorizations contained in paragraph (1) of this subsection shall be obligated after September 30, 1978.

"(3) There is authorized to be appropriated for grants under this section $1,000,000,000, per fiscal year, for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.".

GENERAL AUTHORIZATION

SEC. 304. Subsection (d) of section 12 of the Urban Mass Transportation Act of 1964 is amended to read as follows:

"(d) There is authorized to be appropriated to carry out this Act, other than sections 3, 5, 9, 16, and 17, $150,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.".

EMERGENCY OPERATING ASSISTANCE

SEC. 305. (a) Subsection (d) of section 17 of the Urban Mass Transportation Act of 1964 is amended by striking out "(4)" and all that follows down through and including the period at the end of such subsection and inserting in lieu thereof the following:

"(4) 80 percent thereafter.".

(b) Subsection (f) of section 17 of the Urban Mass Transportation Act of 1964 is amended by inserting "(1)" immediately after "(f)" and by adding at the end thereof the following new paragraph:

"(2) There is authorized to be appropriated to finance assistance under this section $40,000,000 per fiscal year, for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.".

SUBSTITUTE PUBLIC MASS TRANSIT PROJECTS

SEC. 306. (a) There is authorized to be appropriated for liquidation of obligations incurred for public mass transit projects substituted for routes on the Interstate System under section 103(e)(4) of title 23, United States Code, $600,000,000 per fiscal year for each of the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982.

(b) Notwithstanding the seventh sentence of section 103(e)(4) of title 23, United States Code, the authorization contained in subsection (a) of this section shall be the only authority for appropriations for liquidation of obligations incurred for public mass transit projects substituted for routes on the Interstate System under such section 103(e)(4) of title 23, United States Code.

LONG-TERM AUTHORIZATIONS

SEC. 307. The Urban Mass Transportation Act of 1964 is amended by adding at the end thereof the following new section:

"AUTHORIZATIONS

"SEC. 18. There is authorized to be appropriated to carry out this Act and section 306 of the Urban Mass Transportation Act Amendments of 1977, $4,200,000,000 per fiscal year, for each of the fiscal years ending September 30, 1983, September 30, 1984, September 30, 1985, September 30, 1986, September 30, 1987, and September 30, 1988.".

SALE OF F-15 FIGHTERS ADDS TO THE "ARMS PILE"

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. EILBERG. Mr. Speaker, recent news reports have indicated the concern of many Members of the House and Senate about the proposed sale of F-15 fighter planes to Saudi Arabia.

I share this concern, because I believe the sale of such sophisticated arms to Saudi Arabia could upset the delicate balance of power in the Middle East, and the equally delicate discussions which hopefully will lead to peace talks.

I commend to the attention of my colleagues an editorial on this subject from the Philadelphia Inquirer of July 28, 1977. The editorial points to the efforts of Senators HUMPHREY and CASE on the issue, and the danger inherent in the plan to sell the F-15 fighter planes to Saudi Arabia:

IS NEW ARMS SALE POLICY SO AT VARIANCE WITH OLD?

In a joint letter to Secretary of State Cyrus Vance, Sen. Clifford Case (R., N.J.) and Sen. Hubert Humphrey (D., Minn.), have raised pertinent questions about the proposed sale of 60 F-15 supersonic fighter planes to Saudi Arabia, at a price in the neighborhood of $1 billion.

Among other things, the two influential members of the Senate Foreign Relations Committee would like to know when the offer to sell the planes was made, by whom, under what commitment if any, and why, and how if at all the Congress has been consulted on the deal. Is the Administration carrying out a commitment made by its predecessor? Or is it making a new commitment?

Like the decision to sell the Shah of Iran seven highly complex airborne radar systems, at a price of $1.23 billion, the proposed deal raises other questions. Do the Saudis need the plane, and for what purpose? Or is it that the U.S. Air Force needs, or thinks it needs, to sell them the plane in order to reduced unit costs on the F-15s it is buying for itself?

All of which raises the central question, which is simply this:

How does the Carter Administration's new policy of curbing sales of U.S. weapons abroad differ in practice from the old policy of its predecessors—a policy Mr. Carter derided as "moral bankruptcy"?

In principle, of course, the differences are vast. Under the former policy, U.S. arms manufacturers were encouraged to compete for sales abroad, and the armed services competed with each other to encourage such sales.

Under the new policy, which Mr. Carter enunciated last May, the U.S. "will remain faithful to treaty obligations, and will honor historic responsibilities to assure the security of the state of Israel." Where other nations are concerned, however, arms transfers are to be viewed "as an exceptional foreign policy instrument," with "the burden of persuasion" to be "on those who favor a particular arms sale rather than those who oppose it."

What, then, is "exceptional" about the proposed sale of F-15s to Saudi Arabia? Mainly, an exceptional irony. In his statement last May, Mr. Carter also said that the U.S. would sell major arms to other nations "where I determine that countries friendly to the United States"—which both Saudi Arabia and Iran are—"must depend on advanced weaponry to offset qualitative and other disadvantages to maintain a regional balance."

The irony is that the advanced weaponry to be sent to Iran, Saudi Arabia's rival for influence in the Persian Gulf, upsets the regional balance, which then can be rectified Saudi Arabia. And so the arms pile up in that volatile area. Who knows whom they might be used against or how the U.S. might become involved, as an ally or even as target?

It is true, as the administration warned Congress in an official report a few days ago, that curbing the international arms traffic is not easy: "The prospect that other countries will voluntarily and spontaneously follow our model of restraint is unlikely." What is still not clear, however, is whether that model of restraint is being followed by the administration itself.

DROUGHT SPARKS NEED FOR AUBURN DAM

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. JOHNSON of California. Mr. Speaker, throughout my career in Government, at the local, State, and Federal level, I have supported development of

the water resources of the Central Valley in California.

I have found that although the investment is large, the benefit to all the American people is great.

Today California, and much of the West, is caught in the grip of a 2-year drought. Because our water resources have been developed to the extent they have, we have been able to continue our normal activities with a minimal sacrifice.

I would like to include an article from the July issue of California Constructor which carefully describes the benefits of the Central Valley project.

DROUGHT SPARKS NEED FOR AUBURN DAM

While the safety question on construction of the $710 million Auburn Dam project is still under study by Federal and State consultants, one question seemingly overlooked by some people remains unanswered. Where would Californians be today if they didn't have the present water storage capacity in the Central Valley Project?

The answer might appear obvious as we sit smack dab in the middle of the second year of a drought that has all the makings of being the worst two-year period in history. This year already is the worst on record. The second driest year was 1924. The third driest? 1976. In 1976 and 1977, State, Federal and locally-built reservoirs were and are "life-savers" to much of California's economy.

Still, there have been public statements to the effect that "the policy of building dams is bankrupt as witness conditions in California in this drought year" and "new reservoirs aren't needed—if they're built, new demands will grow and in a drought everyone will be just as bad off."

The above quotes were attributed to Secretary of Interior Cecil Andrus and John Bryson, Chairman of the State Water Resources Control Board. Undoubtedly neither of them is fully aware that the economic impact of the Central Valley Project (CVP) is overwhelming as is demonstrated by its past accomplishments.

Most major Central Valley dams were designed to "carry-over" water through a drought like the seven-year dry spell—worst in history (unless the current drought continues past 1977)—between 1928 and 1934. However, many people seem to forget dams aren't built solely to protect the population against the occurrence of dry years. They are constructed to be used every year to store winter flows for regulated release later to produce hydroelectric power, control floods, deliver water for irrigation and municipal-industrial use, fish and wildlife enhancement and, to provide recreation opportunities through sustained river flows and maintenance of surfaces for boating.

What do these benefits mean in dollars and cents?

The California Constructor set out to uncover the economic facts by studying past U.S. Bureau of Reclamation records on the CVP and by talking with water experts, attorneys and consulting civil engineers.

Before delving into the statistical data, first we must acquaint ourselves with the Central Valley Project. The Project consists of a series of dams, canals, power plants and related facilities designed primarily as an irrigation program but serving many other purposes. Almost all of the operating and maintenance costs are paid by irrigation, power and municipal water beneficiaries. Ninety percent of the capitol cost of constructing the various dams and canals are returned to the Federal Treasury over differing periods of time depending on the law at the time the projects were authorized. The other 10 percent of the capital costs represent flood control, navigation and fish and wildlife activities that are non-reimbursable under long standing National policies.

The CVP extends from north of Redding (the Trinity/Shasta area to south of Bakersfield—nearly 500 miles.) It covers much of the Central Valley basin which is almost 120 miles wide and contains more than one-third of the land in California.

Leading the list of "products" received from the CVP is the water delivered. According to Bureau records, since 1949 there has been a total of 74.9 million acre feet of water delivered to farms, municipalities and industries served by the CVP. The largest annual total was in 1975 when 6.5 million acre feet were delivered. Even though 1976 was the third driest year in the state history, the CVP, while providing more outflow from the Delta than it was designed to furnish, was still able to deliver 5.6 million acre feet. How impressive is this amount? To put it into perspective, consider, if you will, the total annual water consumption of Los Angeles is 600,000 acre feet.

Where does the water go? About 96 percent of the water delivered by the CVP in the 1949–76 period went to agriculture users. The remainder was delivered to municipal and industrial users.

The San Joaquin Valley is the biggest, richest agriculture producing area in the world. In fact the irrigated land in the valley constitutes more than one-sixth of all irrigated land in the United States. Fresno, Tulare and Kern Counties are the leading counties in the nation in value of farm products sold.

According to the Bureau, the gross value of crops produced on land receiving CVP water since 1947 totals $12.9 billion. Still, even in a drought year like 1976, the crops produced were valued at $1.4 billion. Over the past 30 years the average annual gross crop value has been nearly $430 million. But, bear in mind this figure is equated to the dollars of the time. If rated on present day inflated dollars that annual gross crop value would easily triple.

Over the past 30 years the CVP has delivered full or partial supplies of water to a total of 31.5 million acres of land. Since 1973, and for each of the past four years, this averages out to almost two million acres irrigated annually. Although California's population has grown dramatically, the increase in CVP service area has been even more dramatic. For example, in 1950, the state population was 10 million and the acres irrigated with full or partial CVP supplies 473,662. Today the population is doubled and the acres being irrigated by CVP have nearly quadrupled. And this is only a start.

Over the next 20 years plans call for one and one-half to two million additional acres need to be irrigated in order to compensate for the population figure for the year 2000 which is projected at 35 million people. Yes, water looms important in order that agriculture can feed these additional people (as well as those in many other states and in foreign markets) and it is also necessary for industry which will be providing jobs for the increasing population.

Along with water, energy is also needed by farms, industry and the public. Much of the CVP service area also is furnished water by pumping groundwater and this takes energy. Since 1944, the gross power generated by the CVP totals nearly 120 million kilowatt hours. Translated into laymen's terms the hydroelectric power being generated over this 34-year period represents a saving of about 190 million barrels of fuel oil that did not have to be imported. At today's prices of up to $17 a barrel, those dollars quickly add up. Approximately 85 percent of the CVP-generated energy is sold commercially. For example, the Sacramento Municipal Utility District consumes nearly two billion hours annually in providing energy for our State Capitol City and its surrounding urban and farming areas. Among other customers are the cities of Redding, Roseville, Palo Alto and Santa Clara and Pacific Gas and Electric Company.

And still there are other benefits to spell out the year-in, year-out value of the Central Valley Project. According to Corps of Engineers records, since 1950 the estimated savings due to prevention of flood damages attributed to CVP reservoirs is $339.7 million. In drought-years, of course, there are no floods, but the Corps estimates the damages prevented amounted to $88.9 million in 1965, $56 million in 1955 and $59 million in 1974. The 28-year average amounts to $12.5 million annually in preventing flood damages.

As one water expert states "There is nothing as unexciting as a flood that doesn't occur." Yet few people realize that the Folsom Dam wasn't even finished in 1955 when it caught the largest flood of record up to that time and managed to tame it. Folsom tamed an even larger flood in 1964. Neither do people consider the fact that if Oroville Dam had been in place in December, 1955 flood damages which occurred because of the Yuba City levee break would never have happened.

Finally, the economic value of recreation benefits attributed to the CVP is hard to translate into dollars. Bureau records show that since 1959 a total of 100,318,362 visitor-days were recorded in all Central Valley Project facilities (A visitor-day is one person spending part or all of one day at a facility). An easier way to relate to this figure is to note that for the past 17 years daily visitation was equivalent to an average of 5.9 million people staying one day at the CVP reservoirs each year. Putting a two dollar economic value on each visitor-day adds up to 11.8 million in benefits.

Yes, where would California be today if it didn't have the CVP and its series of dams and canals designed to regulate and deliver water each year and to carry water over the wet years to succeeding dry years? The economic impacts quoted above spells out that while a dry year (or two years back to back that we are presently experiencing) is dramatic, the plain fact of the matter is the benefits of the dams and reservoirs are on an every-year basis adding up to dollars, jobs and just plain existence. As one expert pointed out, without water supplies and water quality improvement by the CVP, industries in the north coast of Contra Costa County wouldn't exist in their present form. Nor would the communities of Antioch, Pittsburg, Concord and Walnut Creek.

Are Auburn and New Melones needed? Consider the following:

The two dams would provide nearly 700,000 acre feet of water for irrigation, water quality and fishery purposes.

Together the dams would generate an additional one billion kilowatt hours of clean hydroelectric energy.

Auburn will add needed flood protection to Metropolitan Sacramento and New Melones will do the same for the Lower Stanislaus and San Joaquin Rivers.

Auburn and New Melones lakes will create new recreational opportunities.

Auburn will enhance the present attractions of Folsom Reservoir, one of the most heavily visited lakes in California.

Economically speaking, the reservoirs are being built to meet the needs of the people in one of the fastest growing states. In terms of agriculture and industrial needs, will the two dams provide the solution?

You be the judge. The facts speak for themselves.

THE WEST NEW JERSEY CONCESSIONS

HON. EDWIN B. FORSYTHE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. FORSYTHE. Mr. Speaker, during the week of July 4, I had the extremely pleasurable experience of participating in a celebration in Camden, N.J., honoring the tricentennial of a unique historical document, the New Jersey Concessions.

Officially referred to as the "Concessions and Agreements of the Proprietors, Freeholders and Inhabitants of the Province of West New Jersey in America," the Concessions is a document not widely known outside the present-day New Jersey, but is one of those seminal documents in the history of human freedom which have far-reaching impact.

West New Jersey no longer exists on a map, but the foundation laid by the document established a climate of respect for human rights and civil liberties which eventually was responsible for the freedoms which I enjoy today as a citizen of New Jersey and of this great country. As Edward Mauger, assistant dean of the Rutgers University Camden College of Arts and Sciences, has stated:

This noble document put New Jersey firmly on record as a supporter of the most honorable political principles.

I would like to bring this document to the attention of my colleagues here in the House, those who are now the guardians of those "honorable political principles," by inserting in the RECORD of these proceedings an article from the New York Times which provides a good overview of the Concessions and their place in history:

1677 "CONCESSIONS": PRELUDE TO CONSTITUTION

(By Donald Janson)

CAMDEN, July 6—Last year the nation celebrated its Bicentennial and the 200th anniversary of the Declaration of Independence. Today academicians, students and the general public gathered on the Camden campus of Rutgers University to celebrate the tricentennial of another remarkable document dedicated to democracy.

The document, Concessions and Agreements of the Proprietors, Freeholders and Inhabitants of the Province of West New Jersey in America, formed the basis for the first government in New Jersey and is considered by historians to be an embodiment of Magna Carta and a forerunner of the United States Constitution.

"No inhabitants of the said province of West New Jersey shall be deprived or condemned of life, limb, liberty, estate, property or any ways hurt . . . without a due tryall," Chapter 17 of Concessions asserts.

Almost two centuries later, the 14th Amendment of the Constitution declared that no person shall be deprived "of life, liberty or property without due process of law."

This is but one of a number of striking similarities in the two documents, one document familiar to most American citizens and the other to few.

Historians spoke today, but the star of the gathering was the original handwritten, leather-bound copy of the 300-year-old document itself, still in excellent condition because it so rarely leaves the vault in Burlington, where the Council of Proprietors of West Jersey zealously guards it.

Concessions and Agreements was written in England by the New Quaker Proprietors of West New Jersey in 1676 and brought to New Jersey by Quaker settlers in 1677.

PENN SIGNED CONCESSIONS

Most prominent of the proprietors, and signers of the document, was William Penn. There is no record to prove which of the signers granted the Concessions, but many historians say it was Penn.

Harry Emerson Wildes, who spoke here today, says in his biography of Penn that "this remarkable document was the embodiment in constitutional form of the lessons drawn by Penn from his bitter experience in the English courtroom six years before."

Dr. Wildes noted that Penn was a Jerseyan, as a proprietor in England gave years before the King of England gave him Pennsylvania and he assumed his well-known role as founder of Pennsylvania.

In an interview, Dr. Wildes described how Penn and his associates in the persecuted Society of Friends bought out John Lord Berkeley's interest in New Jersey in 1674 for 1,000 pounds. Edward Byllynge, a London brewer and signer of the Concessions, is the Quaker credited with handing over the cash.

When Byllynge developed financial difficulties, Penn and two other Quakers were named trustees for the West Jersey proprietorship, though Byllynge became the first Governor of West New Jersey.

In 1676, Penn persuaded Sir George Carteret, who with Lord Berkeley had been given the New Jersey peninsula in 1664 by King Charles II, to divide the province into East and West Jersey.

COUNCIL STILL IN EXISTENCE

The line runs roughly from Tuckerton on Little Egg Harbor on the Atlantic Ocean through the Princeton area to the Delaware River in lower Sussex County.

The Council of Proprietors of West Jersey was established in 1687 to handle land transactions as land of the original proprietors was bought and sold over the years. The council is still in existence, although now it is primarily a keeper of old deeds and documents. Its headquarters remains in Burlington, which was settled by the Quaker proprietors 300 years ago as the West Jersey capital.

Former State Senator Henry S. Haines, a Burlington real-estate man, is president of the council now. He brought the Concessions with him today, gave everybody a good look, then took the big book back to the vault in Burlington.

The Concessions were never used in West Jersey as a constitution, although they formed the basis for government, human rights and civil liberties until all of New Jersey was merged into a Crown colony in 1702.

The Quaker colonizers said of the Concessions:

"There we lay a foundation for after ages that they may not be brought in bondage but by their own consent, for we put the power in the people."

No 17th-century charter, according to Richard P. McCormick, a Rutgers professor of history, was more advanced in its provisions for a democratic government and guarantees of personal freedom.

So all inhabitants might understand their privileges, the Concessions were ordered "writt in fair tables" in every court in the province and read aloud "in a solemn manner" four times a year by magistrates.

"No men nor number of men on earth hath power or authority to rule over men's consciences in religious matters," the document said, guaranteeing full freedom of religion and separation of church and state.

The document also did the following:

Vested almost unlimited power in an Assembly elected not only by proprietors but also by freeholders and "inhabitants."

Prescribed elections by secret ballot.

Specified that no property or religious requirements restrict suffrage.

Disqualified for life public officials found guilty of fraud.

Ordered trials held in public so nothing could be done "in a corner nor in any covert manner."

Prohibited taxation except by the elected Assembly.

Ordered that Indians accused of crime be tried by a jury of six Indians and six whites.

Burlington, now a quiet town of 12,000 rather than the major river port it was in Colonial days, also will honor the Concessions this year. The little city will sponsor a seminar of historians Sept. 24 on the Concessions as part of the city's own tricentennial.

SUPPORT FOR THE AGENCY FOR CONSUMER PROTECTION

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. WAXMAN. Mr. Chairman, a 95-member coalition of consumer and labor groups has launched what they call "The Nickel Campaign" in support of the creation of the Agency for Consumer Protection. Because it will cost the average American just 5 cents to create this much needed agency, the coalition is encouraging thousands of consumers to send nickels and letters to undecided Members of Congress. Their goal is to demonstrate a level of local support that will encourage Members to vote for H.R. 6805.

Their effort, in my view, is a model of what democratic organizing and petitioning under the first amendment is all about. Their chosen symbol—the nickel—effectively makes the point that this controversial agency is indeed small, no matter how much big business opponents exaggerate its size, and that consumer nickels can out-lobby the big-business dollars now being spent.

The nickel campaign was officially started in late June and is scheduled to conclude in early August. The campaign has focused on 84 Representatives. Since many of us who are not on their "swing list" are accidently and randomly getting a few nickels from an ever-eager public, I would like to insert in the RECORD a list of those Members who, in fact, are subjects of this campaign's attention. Unlike some other lobbying groups, the consumer lobby has chosen to openly disclose their lobbying tactics.

I am also submitting a useful article from Congressional Quarterly which summarizes the purpose and scope of this consumer campaign.

The list and article follows:

LIST OF TARGETED DISTRICTS AND REPRESENTATIVES

Alabama, fifth, Flippo.

Arkansas, first, Alexander; fourth, Thornton.

California, 11th, Ryan; 12th, McCloskey; 14th, McFall; 17th, Krebs; 42d, Van Deerlin.
Colorado, first, Schroeder; second, Wirth; third, Evans.
Delaware, AL. Evans,
Georgia, fifth, Fowler.
Illinois, second, Murphy; 16th, Anderson.
Indiana, first, Benjamin; eighth, Cornwell; ninth, Hamilton.
Iowa, first, Leach; second, Blouin.
Kansas, second, Keys; fourth, Glickman.
Kentucky, third, Mazzoli; seventh, Perkins; first, Hubbard; second, Natcher.
Louisiana, fifth, Huckaby.
Maine, second, Cohen.

[From the Congressional Quarterly, July 9, 1977]

78 Members "Nickeled" in Lobbying Campaign for Consumer Agency

All members of Congress are constantly lobbied. Most are, on occasion, pressured. An unfortunate few have been physically assaulted.

And now, courtesy of the interest groups struggling for the creation of a new federal Consumer Protection Agency, a new verb has been coined. Seventy-eight selected representatives from 33 states are being nickeled.

The word originated, in this context, with the June 29 announcement of a campaign to shower Congress with nickels and letters supporting the bill to establish the agency (HR 6805).

The nickels symbolize the argument of consumerists that the agency would cost the average American only 5 cents to get started. This is in contrast, said Ralph Nader, a leader of the drive, to the millions of dollars "big business" is spending on "massive lobbying and full-page ads."

After the announcement of the nickel campaign, representatives of the 95 sponsoring organizations set up shop in the 78 congressional districts. At shopping centers and bus stops—and in at least one movie line—they collared passersby and asked for their help. Special envelopes containing a pocket for a nickel were sometimes provided.

The campaign was in full swing during the Fourth of July recess, when members of Congress were in their home district. The first measurements of its effectiveness would not be known until Congress reconvened July 11.

But spokesmen for the coalition of consumer groups, labor unions and other organizations supporting the agency bill said they were pleased with the initial response. "The momentum is really contagious," said Kathleen F. O'Reilly, executive director of the Consumer Federation of America, in a telephone interview from Detroit. "It's a tremendously exciting signal that the grass-roots consumer movement is effective."

O'Reilly held a news conference in Philadelphia June 29 to announce the campaign. Then she traveled through target districts in Pennsylvania and Michigan, handing out pamphlets and buttons. The campaign was launched the same day at news conferences in Washington, D.C., New York City, Chicago, Louisville and St. Louis.

Its targets were the constituents of the 78 House members deemed to be "wavering" on HR 6805, to use Nader's words. Their votes, the coalition believes, will determine what happens to the bill.

Before the nickel campaign began, even the supporters of the proposed agency conceded that the bill was in trouble. Despite the personal intervention of President Carter, they were saying in June that the bill would be defeated by 20 to 30 votes if the House were to take it up at that time. The picture was somewhat brighter in the Senate, although opponents promised a filibuster. (*Weekly Report p. 1147*)

House Democratic leaders, expecting defeat for the administration-backed bill, have been reluctant to take it up. Senate leaders prefer House action before they move on it.

As a result of the nickel campaign, supporters hope to see enough evidence of a shift to convince Speaker Thomas P. O'Neill Jr. (D Mass.) to bring the bill to the floor. Although they would like a House vote before the August recess, a knowledgeable staff man on Capitol Hill said a vote would be unlikely that soon.

Of all the persons interviewed by Congressional Quarterly, O'Reilly was the most confident that the vote, when it was taken, would go her way. "I was 80 percent certain before I started the campaign," she said, "and now I'm 98 percent certain."

Everyone else on the consumer side was more guarded in his or her assessment, even though the proponents of H.R. 6805 were encouraged by the early readings from the nickel campaign.

Their reasons for caution are well grounded. Vigorous lobbying, much of it at the grass-roots level, has been conducted by business interests that have opposed the idea of a consumer protection agency since its inception eight years ago. They have been an important factor in thwarting the formation of the agency. But not until this year have they been up against a President who strongly advocates the idea.

The bill's opponents downgrade the effectiveness of the nickel campaign. The whole campaign, said Jeffrey H. Joseph, director of government and consumer affairs for the U.S. Chamber of Commerce, is "symbolic of Nader economics." To send a nickel to Washington, he explained, costs 18 cents—the coin and a 13-cent stamp. "That's the whole problem in a nutshell," said Joseph. The national Chamber and its local affiliates have been among the most active lobbyists against H.R. 6805.

Also in the forefront of the lobbying against the consumer agency has been the National Federation of Independent Business. Washington counsel for the federation is James D. (Mike) McKevitt, a one-term (1971–73) Republican representative from Colorado.

McKevitt refuses to concede that the nickel campaign has made inroads in the early advantage built up in Congress by the flood of mail inspired by business groups. "We feel we're in the fifth quarter of a football game with the score 21–14 in our favor, but nobody blew the whistle yet," he said. "I don't want to be overconfident, but at this point we've got it whipped." McKevitt added later that "nothing's in the bag until the final vote."

He criticized the approach of the consumerists. "Nader by his tactics is losing friends," said McKevitt in reference to a threat Nader made in launching the nickel campaign.

"The 'Nickel Brigade' will make members understand that if they vote pro-consumer here, we'll applaud them," said Nader in his announcement. "But if they vote anticonsumer, consumers won't forget them at election time."

Mark Green, director of Nader's Congress Watch, defended the nickel campaign and claimed it was capturing the attention of the targeted representatives. "The nickel campaign has gotten them off the dime," he said. "The bill now turns on the success of the nickel campaign."

The campaign, Green explained, is employing the same kinds of techniques used in election campaigns. Buttons and brochures are being distributed. Local volunteers are setting up booths in crowded locations, with posters bearing messages such as this: "Help Jimmy Carter and Ralph Nader get a consumer champion in Washington." Sponsors of the campaign describe as being "nickeled" the undecided members whose votes are sought.

Although the impact of the campaign is unknown, it is starting to be felt on Capitol Hill. Mike Podhorzer of the Consumer Federation said he knew of one congressional district from which more than 1,000 nickels were sent in. Many others had sent in between 200 and 500, he said.

The pro-agency forces make much of their limited financing, as contrasted with the far greater resources of the business lobbyists. "We're going to depend on people power, not money power," said Mark Green. The total cost of the nickel campaign—about $15,000—roughly equals the cost of one full-page newspaper ad that the bill's opponents have run, he said.

Jeffrey Joseph of the Chamber denies the consumerists' charges that the anti-agency mail has been a product of business manipulation. On the contrary, he and McKevitt contend, the outpouring has resulted from honest disgust over governmental growth.

"Nader and Co. still need to hold it up to the big, bad guy," said Joseph. "It's the world against Ralph Nader, and they just don't want to admit that." The target list of 78 districts reflects a loss of ground since the last Congress, "and it's Democratic ground," he said.

"Hogwash" is the world McKevitt used to describe the assertion of the agency's supporters that their bill would create a small, inexpensive, non-regulatory operation, an independent consumer advocate within the federal government. "It'll grow in numbers, in budget and in power," he said. "And people are sick of government."

His organization is now concentrating on assuring the votes of 20 to 30 members, McKevitt said. He would not disclose their names. "I don't think it's good strategy," he said.

Supporters of the agency admit that they are playing catch-up against the vote-swaying letters of the opponents. One business lobbyist cited the number of negative House committee chairmen as evidence of the success of the opponents.

One chairman who has switched from support to opposition is Thomas S. Foley (D Wash.) of the Agriculture Committee. "The consumer interests are not defined in the bill," he said in a news release issued by his office. "This opens the way for new bureaucracy to establish a whole new set of nitpicking rules and standards."

But another chairman, Al Ullman (D Ore.) of Ways and Means, might respond to the nickel campaign, an aide said. He has yet to take an official position.

"When your mail is 300-to-1 against, what are you going to do?" said the aide to Ullman, who reported that the first effects of the nickel campaign were being felt. "Three weeks ago, I would have said he was definitely against. But it may be a different ball game now."

HATCH ACT SHOULD NOT BE REPEALED

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. DERWINSKI. Mr. Speaker, one of the journalists who is truly knowledgeable on the functioning of our Federal Government is Mr. Herman J. Obermayer, editor and publisher of the Northern Virginia Sun. His publication is read by many Federal employees, serving as it does the Arlington, Fairfax, Falls Church, McLean, and Vienna, Va., areas.

In a front page editorial on July 15, Mr. Obermayer makes a strong case for maintaining the present Hatch Act. The editorial follows:

HATCH ACT SHOULD NOT BE REPEALED

Admitting judgment errors is always unpleasant. Retracting a one-shot editorial is difficult. But confessing to a continuing campaign's unsoundness is downright painful.

This newspaper has consistently supported Hatch Act repeal or modification. I am now convinced we were wrong.

The Hatch Act prohibits partisan political activity by federal employees. It protects civil servants from political intimidation, while limiting an incumbent administration's ability to manipulate the bureaucracy.

We lamented the civil servants' predicament. Although they have the same stake as their neighbors in tax assessments, school budgets, police efficiency and zoning restrictions, they cannot campaign, contribute or hold office. They can vote on election day. That is all.

With the passage of time the Hatch Act's province grew. Today, it also protects elected officials from coercive pressure by government employees.

Both functions are important. Repeal would not mean the end of the civil service system, but it could make Congress a captive of the bureaucracy.

Repeal will sooner or later result in the politicizing of the bureaucracy. If a unionized bureaucracy can force legislators to increase wages, benefits and administrative prerogatives, the structure of American democracy will have been significantly altered.

BUREAUCRATIC CLOUT

Without legal restraints, the bureacracy could become the single most important political force in the country. It is hard to envision a highly educated, goal oriented, well paid, professionally directed and strategically placed government worker group failing to achieve most of its objectives over the long pull.

The intent of the Civil Service Act of 1881 was to make the administration of the law fair, impartial and non-political. Hatch Act repeal will re-politicize it.

The Hatch Act became law just before FDR's third-term campaign. Congressional leaders feared partisan exploitation of the New Deal's burgeoning bureaucracy. They feared the Civil Service Act's reforms might be undone.

In the past 40 years, federal payrolls have grown eight fold. The docile, low-profile public employee unions have become aggressive, belligerent and highly political. They have the capacity to bring all government to a standstill.

PRESSURE POINT

Elected officials respond to public pressure far more quickly than businessmen. It is difficult to imagine politicians turning down pay demands by government worker unions with Hatch Act roadblocks out of the way.

Civil service raises always follow a pattern with everybody getting a piece of the action from top to bottom. High-level bureaucrats have little to gain by standing alone.

Most big cities do not have local Hatch Acts. Many of their economic problems are attributable to the political muscle and ruthless drive of municipal worker unions.

Swollen payrolls, low productivity, archaic work rules and legally permitted featherbedding have more to do with New York's problems than generous welfare programs. Pension contributions cost New York City more than twice as much as welfare.

Although federal employees' political freedom is presently restricted, there is an offsetting freedom from political coercion by either superiors or co-workers. These safeguards will be weakened by repeal.

There are times when a few must sacrifice for the majority's good. Everybody will lose if the bureaucracy becomes the dominant political force in America. Without the Hatch Act, that threat would be real.

WHAT ABOUT CASTRO'S PRISONERS?

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. CRANE. Mr. Speaker, the present administration's verbal commitment to the promotion of human rights is certainly commendable. Unfortunately, the application of this commitment in practice has been highly selective, often overlooking substantial violations in Communist countries. A prime example of this blind spot is in Cuba, which today stands as one of the world's most oppressive regimes.

In light of President Carter's moves toward a "normalization" of relations with Cuba, while certain non-Communist countries with fewer violations have had to suffer strained relations with the United States, I would like to insert an article entitled "What About Castro's Prisoners?"

ALLAN C. BROWNFELD—WHAT ABOUT CASTRO'S PRISONERS?

The Carter administration has, unfortunately, been highly selective in its application of "human rights" standards to the nations of the world. Chile, Argentina, South Africa, South Korea and other friends of the United States have been held to a stringent standard. Communist China, Communist Cambodia, North Korea, Cuba and other states unfriendly to the United States have been overlooked. Sen. Mark Hatfield (R-Ore.) recently noted that, "We have a President who has made a lot of speeches about human rights. Well speeches are one thing, but action is another. I have observed that this same President has been very selective in his application of the doctrine of human rights."

In the case of Cuba, what we are overlooking is a brutal regime which has imprisoned thousands for political reasons and treated them in a brutal manner.

2,000 OR 20,000?

In an interview on U.S. television, Fidel Castro admitted that Cuba had between "2,000 and 3,000 political prisoners." State Department estimates put the number at between 15,000 and 20,000. Professor Edward Gonzalez of U.C.L.A., after visiting Cuba, wrote in 1974 that Castro's jails held between 25,000 and 80,000 political prisoners. Soviet dissident Andrei Sakharov estimates that Russia, with a population of 250 million to Cuba's 9.5 million, has about 10,000 political prisoners.

Havana itself has acknowledged that it has 56 prisons and jails, 23 work camps and 108 penal farms. If Castro's estimate of 2,000 to 3,000 prisoners were true, this would mean that each institution would hold only 10 to 15 prisoners.

In a pamphlet entitled "Cuba: Island of Terror" (Published by America's Future, 542 Main St., New Rochelle, N.Y.), Philip C. Clarke, at one time Associated Press Caribbean bureau chief in Havana and a veteran of 35 years in journalism, describes the manner in which a totalitarian state enslaves the Cuban people. He writes that, "Castro boasts of having nearly three and a half million members in so-called Committees for the Defense of the Revolution, or CDR. They act as informers or 'chivatos' who watch their neighbors in every city block and every village neighborhood, and denounce any suspicious act or utterance. Castro counts more than a quarter of a million men and women in his armed forces—the largest in all Latin America. The National Federation of Cuban Pioneers, embracing 1.2 million children of school age, handles indoctrination from kindergarten up . . . In all, there are more than 7 million Cubans who are now watching the remaining 2 million . . ."

In a publication entitled Of Human Rights, a small group of exiled Cuban intellectuals at Georgetown University documents evidence of executions and torture in Cuban prisons. The evidence was gathered by such groups as the International Rescue Rights of Man, Amnesty International and Committee, the International League for the the Inter-American Commission on Human Rights. The latter Commission reported to the Organization of American States on what it called the "inhuman treatment" of prisoners in Cuba during the past five years. Instead of softening its treatment of these prisoners, says the report, the Castro regime continues "to reveal a complete disdain for the dignity of the human beings."

TORTURE AND EXPERIMENTS

The Commission's 83-page report cites evidence of numerous instances of death by torture or through denial of medical attention. In a letter smuggled out of one Cuban prison and delivered to the Commission, a group of prisoners told of being experimented on by Russian, Czech and Cuban doctors. "They come to the cells to weigh us," said the letter. "They observe us, they evaluate our reactions, they alter our metabolism with unknown substances incorporated in the food. We are not men, we are spectres, skeletons covered with skin, human rags. . . ."

Of Human Rights, in its first issue, reprints a letter smuggled from La Cabana prison by Major Huber Matos, a one-time officer in Castro's revolutionary army. In December 1959, he was sentenced by a revolutionary court to 20 years imprisonment after he resigned from the army in protest against Communist infiltration of the Castro government. Matos, who had been a school teacher, is now half-blind and desperately weak in body—but not in spirit. He writes that, "After more than 15 years of harsh imprisonment, the bars and their shadows do not in-

timidate me . . . we belong to another world . . . we are buried in the bowels of the earth."

Matos' son, 33-year-old Huber Matos Jr., conducted a campaign for his father's release—in December 1976 he was ambushed and wounded by a carfull of unidentified gunmen as he entered his apartment in San Jose, Costa Rica. Police blamed the assassination attempt on Castro agents trying to silence him.

Philip Clarke expresses the view that, "Americans could be excused, perhaps, for once having swallowed the myth of Castro the 'agrarian reformer' . . . but such delusions are badly out of place in today's infinitely more dangerous world. Reality has shown Castro to be a savage tyrant capable of carrying out everything in the Communist book from deception to mass murder—and of writing some new chapters of his own."

Yet, in the face of Castro's barbarity, members of the U.S. Senate—such as South Dakotans McGovern and Abourezk—visit him and urge recognition of his government. And President Carter's "human rights" campaign overlooks him as the Carter administration moves, in spite of Castro's aggression in Africa, toward "normalization." Why such a strange double standard exists is something about which Americans should begin to ask serious questions.

H.R. 336

HON. CHRISTOPHER J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. DODD. Mr. Speaker, I recently had the pleasure of appearing before the Ways and Means Subcommittee on Social Security on a matter of great concern to me.

I would like to call the attention of my colleagues to the problems with the conditions governing the eligibility of blind persons to receive disability insurance benefits and request that my testimony be inserted in the RECORD.

The text of my statement follows:

TESTIMONY OF MR. DODD BEFORE THE WAYS AND MEANS SUBCOMMITTEE ON SOCIAL SECURITY, REGARDING H.R. 336.

Mr. Chairman, I would like to thank you for the opportunity to appear before your committee today to discuss with you and your colleagues the conditions governing the eligibility of the blind for disability benefits.

My foremost reason for being here today is to express my support of the efforts of this Congress and this administration to join with the blind and all of the handicapped to establish once and for all their rightful claim to the status of first class citizens and, likewise, to help them eliminate all forms of discrimination with their attendent barriers—whether they be physical barriers, employment barriers, or financial barriers in general.

In this regard, I might add, this legislation—passed in the Senate on several occasions—which deals with the blind, may raise questions about the impact of the social security disability benefits system on other handicapped groups. It may be that their employment potential has also been adversely affected, and I feel that we should be open to the consideration of this larger situation at a future point in time.

It is for these reasons, then, that I bring to your attention my shared concern with the members of the blind population that the present law fails to adequately respond to the financial disadvantages which confront the blind.

I submit that while the present law endeavors to compensate the blind for loss of earnings, due to their disability, it discourages, at the same time, the gainful employment and, ultimately, the financial independence of this population.

It is my opinion, Mr. Chairman, that we have a responsibility to promote such employment as well as financial security to the degree possible and to eliminate those aspects of the law which act as negative incentives to gainful employment of the blind—otherwise, we do a great disservice to this population and to us all.

I would like to stress that I am aware that it is not the intent of this Congress, nor of this law, in theory, to in any way encourage an individual's subsisting at the poverty level or his remaining unemployed rather than sacrifice the financial security provided by his disability benefits.

However, I would like to bring to your attention my dissatisfaction with the present requirement that limits the income of the blind to $200 per month in most cases, and as little as $140, in some cases, in addition to their disability benefits.

I am further distressed to know that the present law makes no allowances for the individual who establishes himself as a working, tax-paying member of society but who is limited by his disability to a relatively low-paying position or who, as a result of his disability, is forced to take a considerable cut in pay.

This individual is exempt from consideration for disability benefits for his loss of income, and I believe that we have the opportunity here to rectify such situations.

An illustration of such cases is an individual who wants to work and who is offered a job which pays $300 per month, for example. First of all, this will be taxed money. Were he not to take this job, he could remain unemployed and collect in the neighborhood of $262 per month, tax free. I might add that this figure is based on the social security estimate of the average disability benefits payment.

On the other hand, this individual could decide—rather than take the job—to supplement his benefits with a part-time job with earnings of anywhere from $130 to $200 per month, depending on the particular circumstances of his case. This would bring his monthly income in the range of $392 to $462. The majority of which is tax free. There is no incentive here for this person to accept the initial job offer.

The most striking aspect of this kind of speculation is that in the case of a disabled individual who is limited to earnings in the range of $130 to $200 because of limited skills or his disability, the prospect of a salary increase of a minimal amount would potentially disqualify him from continued benefits and, in effect, reduce his income by more than half.

It is not surprising, in my estimation, that an individual would choose to by-pass such employment opportunities, whether it be a raise or a position advancement, if it were to severely reduce his income. I think it is clear that the present system for qualifying for benefits on what is largely an all or nothing basis is unrealistic and counterproductive.

A more reasonable alternative to this situation would be to offer a reduced benefit payment to the individual who has the opportunity to advance his position and his earning potential.

I would like to emphasize to the committee, Mr. Chairman, the fact that I am not convinced that a proposal to extend benefits to those who are ineligible under the present requirements should have to provide across the board benefit payments of like amounts for the unemployed, the low income, the middle income and the high income blind population.

Rather, I would like to ask that the committee consider, in its review of the proposed amendment to title II, the possibility of incorporating a graduated scale of payments, which would have a designated ceiling at which point payments would be superfluous and cease.

In this way, Mr. Chairman, I think that we would eliminate the implicit and explicit barriers to the gainful employment of the blind, while retaining the necessary financial security and providing an incentive to the blind to improve their employment possibilities and promote their personal, financial independence.

THE OSHA ALBATROSS

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. BAUMAN. Mr. Speaker, one of the fruits of Congress passion for establishing regulatory bureaucracies to handle every conceivable aspect of American life is the throttling of small businesses by the Occupational Safety and Health Administration. Since Congress established OSHA, the horror stories of nitpicking and useless rulings against small businesses by the agency have made headlines across the Nation's press.

Secretary of Labor Marshall's recent announcement that small businesses employing 10 or less people will now be exempt from part of OSHA's paperwork requirement is one small step in the direction of sanity. The Star-Democrat, of Easton, Md., one of my district's leading newspapers, recently commented on this issue. The editorial summarized the issue in the commonsense fashion the people of the First District would like very much to see more in evidence on this illustrious floor. I commend the editorial to the attention of my colleagues:

THE OSHA ALBATROSS

The paperwork mountain constructed by the federal bureaucracy is finally being scaled—down, that is.

It could do much to revive small business enterprise in this nation.

Two months ago, the U.S. Labor Department ordered the Occupational Safety and Health Administration (OSHA) to stop its nitpicking and concentrate on serious health and safety hazards in business and industrial plants.

Small business had lamented many of OSHA's regulations which were sometimes so costly to implement as to gobble up a small firm's profits.

On Tuesday, the Labor Department went one step further, again taking OSHA to task.

Labor Secretary Ray Marshall announced that the nation's 3.4 million firms with 10 or fewer employees would be exempt, starting next year, from filling out OSHA's complicated and time-consuming health and safety forms.

Marshall also called for public comment on a similar plan to halve the paperwork burden for an additional 1.5 million businesses with more than 10 employes. The two moves together could save business $100 a million a year, Marshall estimated.

The impact of Marshall's orders, particularly on small business, could be immense, economically. OSHA, in its zeal, imposed health and safety requirements with bureaucratic abandon, many of which were impractical and-or ridiculous.

Under the Labor Department's new orders, small businesses, theoretically, will have to continue to comply with the job safety and health regulations, but they won't have to maintain the records detailing their compliance.

Large firms have hired safety inspectors and additional office personnel to assure compliance with OSHA regulations and to maintain the necessary records. Small businessmen simply can't expand payroll for nonrevenue producing personnel and we have known some who, under the OSHA burden, have simply thrown in the towel and called it quits.

The removal of the OSHA albatross from the neck of small business could provide a significant stimulus to that segment of the nation's commerce.

And as small business goes in the United States, so do we all.

VICTOR LASKY PUTS IT IN PERSPECTIVE

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. ASHBROOK. Mr. Speaker, Victor Lasky's best selling masterpiece, "It Didn't Start With Watergate," is again given sharp focus in an important book review. Despite the efforts of the New York Times, the Washington Post, and their ilk to downplay the important message of this nonfiction analysis of "other" Presidents, the American people have taken it with the seriousness it deserves, rewarding author Lasky with the honor of being one of the Nation's best known and admired authors.

Mr. Lasky has traveled the United States with his gracious wife, Patty, to promote the book and, more important, to promote the honesty of its message in bringing some balance to the feverish attack of the media against former President Nixon. Just this past weekend out of the mouth of a Texan who evidently wants to meet his Maker without the taint of L. B. J.'s big scandal on his heart comes one more vindication of the pages of "It Didn't Start With Watergate." The Lasky book told all about the infamous Coke Stevenson campaign that launched that other President the press treated differently.

Barron's, the national business and financial weekly, had an execllent review of the Lasky book in its June 27 edition. I include it at this point with these remarks:

WATERGATE: VICTOR LASKY PUTS IT IN PERSPECTIVE

(Reviewed by John Chamberlain)

What was Watergate all about? Victor Lasky accepts the verdict of Nicholas Von Hoffman, who, though he bears no love for Richard Nixon, has laughed it off as "a third-rate cover-up of a third-rate burglarly attempt." The mystery is that it convulsed the country, even though nothing happened at Watergate that had not previously happened in spades under every 20th Century President from Franklin Roosevelt on down to Lyndon Johnson.

Victor Lasky's conclusion, based on most voluminous documentation, is that Richard Nixon was clobbered for what had, unfortunately, become standard operating procedure under "strong" presidencies. This does not absolve Nixon; it merely puts a lamentable business into perspective. And what a lurid perspective, as Lasky develops it, it is.

In the circumstances that had prevailed during earlier "imperial" presidencies, the anti-Castro Cubans who staged the original 1972 break-in at Democratic National Committee headquarters would have been let off with minimal fines, if they had been pursued at all. The Cubans were seeking evidence that Fidel Castro was interfering in U.S. politics. No doubt the Watergate "higher-ups," such as Howard Hunt and Gordon Liddy, deserved punishment for manipulating the Cubans, but what was Watergate to justify turning the nation upside down for two critical years? Was it worth the loss of the war to the Communists in Southeast Asia? Was it worth the death of a million Cambodians?

Victor Lasky would admit that Nixon was technically guilty of an impeachable offense in trying to protect his "jackass" friends in the White House. But the Nixon lies, as they were exposed by the tapes, were those of a rattled man trying to be loyal to dummies. As Lasky says, other Presidents before Nixon had lied. Johnson lied about Vietnam, Franklin D. Roosevelt lied about not getting involved in foreign wars, Eisenhower lied about the U–2 flight, and Kennedy lied about the Bay of Pigs. In each of these cases, far more was at stake than at Watergate, where, as Lasky observes, nobody died.

In choosing Nixon over McGovern in November of 1972, despite the Watergate break-in, the voters had spoken. What puzzles Victor Lasky is the excess of zeal with which a vindictive Washington press corps, in league with a few Democratic politicos, worked overtime to reverse a landslide election result. The same press corps and the same politicos had accepted, with great complaisance, far worse White House invasions of the peoples' civil liberties throughout the Kennedy and Johnson Administrations. Indeed, as Lasky has put it pithily, "it didn't start with Watergate."

BEGAN WITH FDR

When did it start? The business of phone tapping, Lasky tells us, began with Franklin Roosevelt and Secretary of the Interior Harold Ickes. As with Watergate, the bugging was not always successful: in 1936, a GOP security expert uncovered a phone tape in the office of the Republican campaign chairman, John Hamilton. Roosevelt bugged as he pleased, authorizing taps on the home phones of his own advisers, Harry Hopkins and Tommy ("the Cork") Corcoran. It was not that Roosevelt distrusted his lieutenants. What concerned him was their wives' propensity to gossip.

Harry Truman was bored with a transcript that had Mrs. Corcoran making appointments with her hairdresser, but he did not cut off the Corcoran tap. More than 175 reports overheard on this tap were delivered to the White House prior to 1948.

The dirty business of phone tapping flourished in the Kennedy and Johnson years. Martin Luther King was pursued by electronic buggers even to his hotel rooms. Goldwater was bugged in 1964 by a Johnson Administration that managed to get copies of his speeches before they were delivered to Goldwater himself. Anna Chennault, widow of Flying Tiger General Claire Chennault, had her phone tapped when she was raising money for the 1968 Nixon campaign. And Senator Kenneth Keating, when he was annoying John F. Kennedy with attempts to prove that the Soviets were moving atomic weapons into Cuba, didn't dare talk in his own office for fear that an electronic spy was at work on the premises.

Victor Lasky pushes his investigations far beyond the business of electronic surveillance. "Imperial presidents" before Nixon used the Internal Revenue Service to harass political opponents. Roosevelt tried to "get" Charles Lindbergh by setting the IRS on his trail, but Lindbergh, who always spent weeks on his own tax reports, proved that he had overpaid his taxes as a matter of generosity to a country which he loved.

Lasky wonders about the hypocrisy of Democrats on the Ervin committee who were so incensed at the Nixon cover-up of Watergate. After all, they had sat mum in the Senate when efforts were made to push a real investigation of the Bobby Baker case. Republicans such as Connecticut's Senator Lowell Weicker might have tried to broaden the scope of the Watergate investigation to include all phases of the "imperial" presidency. But they muffed the chance. They let their man in the White House go down in disgrace for doing what had been commonplace in Democratic Administrations.

Lasky mentions Franklin Roosevelt's far from neutral behavior in the days before Pearl Harbor plunged us into a war that Roosevelt wanted. But, though Lasky cites William Stevenson's recent "A Man Called Intrepid" in a footnote, he neglects a story from that book that Nixon might have used to show that Presidents, in times of acute stress, broke the law in the national interest. When the German battleship Bismarck was loose in the Atlantic, threatening to cut the British lifeline in 1941, Roosevelt put U.S. Navy planes and personnel at the disposal of Churchill in hunting for the Bismarck's whereabouts. It was a U.S. Navy ensign, Leonard Smith, who spotted the Bismarck and signaled her position to the British Admiralty. We were not then at war with Germany. But Roosevelt got away with his impeachable act. Nixon was not so lucky.

A CITIZEN'S PLAN TO RESTORE CHECKS AND BALANCES TO THE FOURTH BRANCH OF GOVERNMENT

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. LEVITAS. Mr. Speaker, much has been said about the growth of the fourth branch of Government, the regulatory agencies made up of civil servants not responsible to the electorate and in some cases responsible to no one. A concerned citizen, McNeill Stokes, has proposed a plan to establish a system of checks and balances for this fourth branch of Government and thereby insure greater accountability by these agencies to the public and to the other branches of Government.

Mr. Stokes, an attorney from Atlanta, Ga., brings to this study his perspective of dealing with the regulatory agencies for many years. Most recently, he argued the case of Irey against OSHA before the Supreme Court which questioned the constitutionality of OSHA on the basis of the seventh amendment right of judicial review with jury trial.

In his proposal, "A Citizen's Plan to Restore Checks and Balances to the Fourth Branch of Government," Mr. Stokes outlines a seven-point plan, three of which I have excerpted for the review of my colleagues. His other recommendations include a check on agencies' attempts at unlimited search warrant powers, independent administrative law judges, simple uniform rules of practice for all agencies, and education programs to be conducted by the agencies to help citizens understand their rules and regulations.

I commend this study to the attention of my colleagues for their serious consideration:

A CITIZEN'S PLAN TO RESTORE CHECKS AND BALANCES TO THE FOURTH BRANCH OF GOVERNMENT

INTRODUCTION

The Founding Fathers viewed government as the enemy of freedom and they restricted the scope and power of government. Jefferson said, "That government is best which governs least." When they had won their freedom from England, they formed a government of limited powers. They drew constitutional lines that instituted checks and balances to prevent the President, Congress or the courts from assuming all power. This separation of federal powers was further strengthened by the division of powers between the states and federal government.

Nearly all of the Founding Fathers knew that there is more to fear from government oppression than from the excesses of the private sector. As Thomas Jefferson said, "The natural progress of things is for liberty to yield and government to gain ground." Perhaps their vision was especially clear because they had just freed themselves from the same kind of bureaucratic burden we now carry.

In order to act affirmatively and to carry out innumerable social action programs, it has become necessary to create a bureaucracy, a fourth branch of government made up of servants not responsible to the electorate and in some cases responsible to no one. This is a new threat to freedom brought on by social action which it was designed originally to promote. There are no checks and balances on the bureaucracy which has become a dominant force in the federal government. While only about 400 laws were passed by Congress last year, over 60,000 pages of regulations which have the force of law were promulgated by the bureaucracy. We have slipped under a Napoleonic Code which is published daily in the Federal Register.

In our highly interdependent society there cannot be complete freedom from government, but we must preserve freedom under government. Few could seriously contend in our modern technological society that the government should not provide for reasonable protection against securities fraud, or guard against price-fixing and unreasonable restraints of trade. Nor could the government abandon machinery for the orderly process of collective bargaining. We must, however, shift emphasis of the bureaucracy from penalizing and stifling citizens to aiding citizens.

It is obvious that our society has achieved a new stage of maturity. It is no longer young. It is middle-aged. We are in an age of transition moving toward greater interdependence and a more industrialized and urbanized pattern of life. There is no need to bemoan our fate. There is no turning the clock back. The question is how our ancient virtues can be inculcated in people on a new stage, under different circumstances, in a new setting. We must understand the issues and continue to draw the line between government interference and personal freedom.

The line must now be drawn by our generation. It may well be that the value of freedom is only truly appreciated after it is lost. I hope not. I hope that we appreciate freedom before we lose it and that we struggle courageously to protect it at every turn. The challenge before us now is to make the transition to freedom under government. We have inherited freedom from previous generations and it is our heritage and obligation to leave a basic freedom to future generations.

One basic concept of our constitutional form of government which has been ignored in the past in setting up administrative agencies has been the concept of checks and balances which restrain the power of the other three branches of government. Too often, agencies combine the roles of legislator, policeman, prosecutor, judge and jury. Administrative agencies are not subject in a meaningful way to the checks and balances of the three constitutional branches. The concentration of the various forms of power in one agency is a dangerous experiment in a democratic society. History has shown quite clearly the abuses that can result from such a concentration of the executive, legislative and judicial functions. If one agency of government can be the legislature, policeman, prosecutor, judge and jury in determining penalties against its citizens, then much of the checks and balances of the Republic will have been lost.

In the implementation of agency policy, we need to restructure basic legislation undergirding many legislative schemes which emphasize penalizing citizens rather than aiding citizens to comply with the law and its policy. Unless some remedial action is taken, the trend apparently is to adopt more and more schemes of implementation which are tied closely to the penal factor. With the low reputation of bureaucrats in general, and Washington bureaucrats in particular, held among our current society any spirit of cooperation or good will is totally destroyed by the penalizing attitude prevalent among many agencies. Surely this is not the most effective or efficient way for the government to educate or encourage efforts by citizens for the betterment of society.

I believe that the final end of government is not to penalize citizens, but to do good. The following are some suggestions as to how we can reform the bureaucracy and restore the principles upon which our government was established.

THERE MUST BE LEGISLATIVE REVIEW BY ELECTED OFFICIALS OF AGENCY RULEMAKING

The pattern is often repeated in which Congress passes a law aimed at a problem, sets up an agency to deal with the problem, funds the agency with large amounts of money and then delegates the head of the agency the "power to promulgate such rules and regulations to effectuate the purposes of this Act." With those words and its unlimited delegation, the checks and balances of the legislative branch are lost because the elected officials have delegated the making of the law of the land to some faceless bureaucrat who is responsible to no one.

Under formal rulemaking a citizen can present the agency his views. But he is often ignored and there is no meaningful way for a citizen to check the bureaucracy's determination even if that citizen is a member of Congress. And the problem is compounded because the bureaucracy knows it. If a citizen wishes to change a rule, the normal tendency is to contact his congressman or senator. The citizen usually gets back a reply in which the congressman may agree or disagree, but the congressman normally says that the regulations were made by an independent agency and not within his power to change. If Congress did have a practical ability to change an agency's regulations, then the bureaucracy would be much more responsive to the individual's needs, and the elected representatives could not pass the buck and say there is nothing they can do.

We must provide for meaningful legislative review of agency rulemaking authority. The present format of providing for judicial review of rulemaking is meaningless. The courts are simply not set up reflect the public judgments. Courts are basically set up to handle and review disputes. The courts may determine if the agency followed its procedure but the courts cannot function like the legislature and dictate public opinion. Nor does the congressional oversight process provide a meaningful way to influence agency action. Oversight hearings simply impose a distasteful day during which the agency head must testify before Congress and then he goes back to running the agency the way he did before the hearing.

One of the key changes necessary in agency rulemaking is to give the Congress ultimate control of agency rules and regulations. This ultimate control could be provided by the congressional veto contained in the Administrative Rulemaking Control Act introduced in the last two sessions of Congress by Congressman Elliott Levitas of Georgia, as well as others. This concept, which has found great favor in Congress, envisions putting the representatives elected by the people back in legitimate control of making all of the law, including administrative regulations and rules which have the force of law. While the magnitude of administrative rulemaking is obviously too great to expect Congress to be actively involved in the making of all regulations, and indeed this would contradict the concept behind delegating rulemaking to the agencies, an ultimate veto over agency rulemaking would mitigate against unchecked bureaucratic arrogance. It would encourage more deliberate consideration by the agency of their rules before they are proposed and adopted. While the details of this plan could be fashioned in many different manners, and there is considerable controversy about setting up of such a veto scheme, the need to restore the legislative checks and control on rulemaking should be pursued as a primary goal for the future.

Another control on rulemaking which desperately needs to be adopted in more permanent form is a requirement of an economic impact statement before the adoption of new regulations. Just as Congress must keep in mind fiscal restraints of its actions, so must agencies be aware of the economic effects of their actions on the government and citizens. This requirement which has existed on a temporary basis for the last few years would add much less of a burden to the rulemaking process than the burden currently imposed on American citizens by the many regulations which are hastily adopted without any knowledge of their economic considerations. This concept needs to be expressed in legislation applicable to all agencies, rather than applied on a hit and miss basis under an executive order, as is presently the case.

THERE MUST BE JUDICIAL REVIEW OF AGENCY ENFORCEMENT

The ultimate restraint on agency enforcement action is effective judicial review of agency action. While some enabling statutes provide for judicial review of agency rulemaking and adjudicatory decisions, the judicial review requirements are haphazard at best. However, under the current state of the law, that is virtually the only authority upon which reliance can be placed for judicial review, since the Supreme Court in Califano v. Sanders, 45 U.S.L.W. 4209 (1977), ruled that Section Ten of the Administrative

Procedure Act, does not afford an independent grant of jurisdiction to federal district courts.

In the Third Circuit Court of Appeals case of Frank Irey, Jr. v. OSHRC, 519 F.2d 1200 (3rd Cir. 1975), the issue was the right to judicial review with jury trial under the Seventh Amendment. Although that issue was lost in the Supreme Court, the majority opinion on the en banc Third District Court of Appeals was very instructive on the need for judicial review by agencies:

While the prospect of burdening the courts with large numbers of appeals is a matter of concern from the standpoint of efficient judicial administration, we think experience demonstrates rather conclusively that in cases of this nature de novo review is seldom requested. It is the availability of the remedy, not its infrequent utilization, which is important to the cause of justice. The mere existence of a local fire department is a source of satisfaction to a citizen, even though he would hope that he would never be forced to seek its assistance.

We perceive no overriding consideration which favors the congressional policy of recent years to insulate administrative adjudication from the open and searching examination that full judicial review provides. The necessity for an administrative agency on occasion to submit its determination to the scrutiny of a jury of citizens would be a healthful and discipling experience.

A VINDICATED CITIZEN SHOULD BE REIMBURSED ATTORNEY'S FEES

A restraint that is desperately needed to discourage harassment and vindictive prosecutions by agencies vested with the sole discretion on how and when to prosecute violations and regulations, is the award of attorney's fees and costs to citizens who are successful in resisting an agency prosecution where the citizen is involuntarily dragged into court or an agency proceeding. As an example, the Privacy Act and Freedom of Information Act provide for attorney's fees to be reimbursed where the citizen substantially prevails in a suit brought against the agency for violation of those Acts. If attorney's fees for an offensive suit by the citizen are justifiable, then reimbursement of attorney's fees are even more justifiable to a citizen who is hauled into a proceeding by an agency, subject only to that agency's sole discretion.

The plight of a litigant against an agency is pointed out in a case of Beall Construction Company of Lincoln, Nebraska, in which I was involved. The company received a $244 penalty for an alleged violation of the Occupational Safety and Health Act. Mr. John Beall did not contest the fine because he felt that it was not economically practical for him to hire a lawyer to appeal the citation and proposed penalty through expensive and burdensome appeals. Because he did not contest the citation, basic fine and abatement order set by the inspector in the field, it became a final adjudication and was not subject to further review by an agency or court. Mr. John Beall then wrote a letter to Senator Carl T. Curtis (Nebraska) supporting his proposed amendments to the Occupational Safety and Health Act.

Several months later, the Area Director of the Occupational Safety and Health Administration in Omaha, Nebraska, spoke on the telephone to Mr. Hugh Beall, also of Beall Construction Company, and Mr. John Beall's brother, accusing him of writing a letter to Senator Curtis criticizing the Act. Approximately three days later, federal inspectors reinspected the work site and alleged that Beall had not abated the safety violations. Beall was fined $750 per day for each day the safety violation had not been corrected, which amounted to $31,744. This is a high price to pay for exercising a citizen's constitutional right to communicate with his elected representatives. Mr. Beall had to take the offense to prove himself innocent and contest the daily penalties, which as a small businessman, he found depressing, since the fine was more than double his annual income.

In a dissent by the Chairman of the Occupational Safety and Health Review Commission, Robert Moran, he found that Beall had been so wronged by the government overreaction, that the citizen should be entitled to attorney's fees. Chairman Moran labelled the government's announcement of its proposed penalty by press release "extraordinary and deserving of comment." Noting that Beall had been subjected to "personal embarrassment and loss of business reputation as a consequence of complainant's publication of the unjustified charge", Moran thought it only just that the "Commission should not close its eyes to such abuses", but should order OSHA to pay Beall's attorney's fees and other expenses connected with its defense. The issue was then taken to the Eighth Circuit Court of Appeals and the Court held that without statutory authority, attorney's fees could not be awarded, even to this citizen who had been so grossly wronged.

There simply must be remedial legislation passed, similar to legislation that has been passed in recent years in the Privacy Act and the Freedom of Information Act to provide for attorney's fees for a vindicated citizen who successfully defends against all the might and power of an agency of the United States Government.

CONCLUSION

Action must be taken now to revitalize and restore the principles of government long ago established in the Constitution. Although system of checks and balances still governs the daily acts of the judiciary, the Congress, and the President, our government is clearly threatened by the unparalleled growth of the bureaucratic fourth branch of government to which the other constitutional branches of government have willingly ceded sweeping powers.

The Supreme Court's recent decision in the Irey case that agencies may exercise the judicial power without providing judicial review and trials by jury, foreshadows a day when other basic rights of liberty from government oppression may be lost to this fourth branch, unless action is taken now to stem the tide of bureaucratic power.

Normally, law abiding citizens are incensed at the idea of having to expend large sums of money to comply with ridiculous and meaningless regulations, and they are frustrated by the enforcement procedures which far outweigh a citizen's opportunity to contest, and which go far to break his will to contest.

The stakes are higher in this challenge to restore the checks and balances to the fourth branch of government. Our action will either set the highwater mark beyond which the police powers of the executive branch of government cannot go without providing the constitutional guarantees, or our inaction will be the breach in the dike and set off a virtual tidal wave of unchecked agency rulemaking and enforcement procedures which force a citizen to surrender cheaply rather than fight dearly.

Respectfully submitted.

McNEILL STOKES.

VIETNAM, THE U.N. AND CHINA

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. DERWINSKI. Mr. Speaker, as the Members know, I am a supporter of the United Nations, but I recognize that there are imperfections in that body. The administration's Asian policy is, in my judgment, in total disarray. Among the glaring misdirections are moves to placate Vietnam and the continuing moves to placate the dictatorship of the People's Republic of China.

The Chicago Tribune addressed this subject in their lead editorial of July 27, and I insert it in the RECORD at this point:

VIETNAM, THE UN, AND CHINA

Having duly flunked the major qualifications for membership in the United Nations, Vietnam will be elected at the fall session of the General Assembly.

This would be a shocking travesty of the purposes of the UN if one were still capable of being shocked by anything the UN did. According to its charter, membership is open to "peace-loving states which accept the obligations contained in the present charter." The charter is based on "faith in fundamental human rights" and on "the dignity and worth of the human person." The Carter administration has adopted human rights as a key criterion of its foreign policy. Viet Nam is a country created by an aggressive war and maintained by the wholesale violation of human rights in what was formerly South Viet Nam.

Yet absurdity is so normal at the UN that scarcely an eyebrow was raised when the Carter administration dropped American opposition to Viet Nam's membership and the Security Council recommended it.

In practice, the standards for admission to the UN are about as stringent as those for admission to the State Street subway. It contains such peace-loving countries as Libya, a notorious troublemaker, and such champions of human rights as Uganda, Cambodia, Albania, and Ethiopia.

So we may as well accept the UN for what it has become in practice—a forum in which every country has a voice regardless of principle; a place where a two-bit dictator can make a speech and have it translated simultaneously into five languages on the theory that having had his moment of glory he will forego any aggressive tendencies he may have.

Fair enough. If the UN is to serve only as an amoral escape valve for world tensions, then it is probably reasonable enough to accommodate the sinners along with the saints.

Which brings us to Taiwan, a country of 17 million inhabitants [bigger than most UN members]—a country that has never conquered anybody, has a thriving free economy, and demonstrates a good deal more respect for human rights than most UN members. Taiwan was thrown out of the UN in order to turn China's seat over to the mainland government in Peking, the principle being that a country is entitled to only one seat and that Taiwanese membership would conflict with Peking's claim to sovereignty over all of China.

Which, in turn, brings us to Byelorussia and the Ukraine, which are full-fledged charter members of the UN even though the Soviet Union [and everybody else] considers them part of it. Moscow has certainly never felt that their membership conflicted with its sovereignty; in fact, they were admitted at its insistence.

What is the difference in principle between Taiwan's membership and the Ukraine's? Or is it just that the Ukrainian delegate happens to vote the way Moscow tells him to and a Taiwanese delegate would not listen to Peking?

But here we are wasting time trying to judge the UN on the basis of logic and fairness. We should have known better.

CONGRESSIONAL SALARIES, BENEFITS, ALLOWANCES, EXPENSES

HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. ARMSTRONG. Mr. Speaker, during the past several months the House has taken several actions to make more information available regarding the operation and cost of House committees and the offices of individual Members. However, as a practical matter, the actual amount of congressional salaries and allowances is still a mysterious and controversial matter to most of the general public.

From time to time, my constituents ask for information on this subject. I have, therefore, prepared the following report on the costs of running my office:

SALARIES AND BENEFITS

Members of Congress are paid an annual salary of $57,500, an increase from the prior level of $44,600. For reasons which I have previously made clear, I disapprove the increase. It is unjustified and untimely; the backdoor means by which it was initially granted, without a vote of the Congress, is improper, in my opinion. I particularly object to raising congressional salaries during the current term of office. Members should forego the raise until after the next election. In my own case, I have decided to donate the amount of the raise to worthwhile private charitable causes for the balance of my current term of office.

Group life insurance coverage is automatically provided—monthly payroll deduction of $46.14—unless declined. Members are eligible to participate in the Civil Service Retirement System—payroll deduction of eight percent. Limited medical services are provided without cost in the Capitol while health insurance coverage is available on a voluntary basis. I participate in group life and retirement coverage, decline health insurance.

FACILITIES

Each Member is furnished space—usually three rooms—in one of the House office buildings in Washington and is entitled to one or more offices in his home district. I maintain two such offices: one in Aurora, the other in Colorado Springs. Office furnishings, decoration, plants and various services—research, maintenance, folding, radio-television and so forth—are also provided. Parking facilities are furnished to each Member and some staff.

In Washington, each office is permitted to have $9,000 of electrical and mechanical equipment such as typewriters, dictating equipment, etc. Each district office is entitled to lesser amounts of equipment.

STAFF ALLOWANCE

During 1976 the staff allowance available to each Member of the House was $243,724.00. Of this amount I authorized spending $179,693.09 to employ staff in Washington and Colorado; $64,030.91 remained unspent.

MAILING

Members of Congress are permitted to mail under frank—that is, under their own signature—and, in addition, are supplied some regular postage stamps. During 1976 my office did not receive any such postage.

TELEPHONE

Each office was permitted to use up to 125,000 units of long distance telephone service—each minute of long distance service equals 4 units—per Congress. During 1976, my office used 107,673 units. Each office was also given access to a Federal Tele-Communications System line, without charge against the unit allowance, for long distance telephoning before 9 a.m. and after 5 p.m. on weekdays. District office telephone service consists of fulltime FTS service and commercial telephone.

TRAVEL

Members of Congress received reimbursement for one round trip between the Member's home district and Washington at the beginning of each session. During each Congress, Members were permitted reimbursement for up to 26 additional round trips. Each office was also allowed a maximum of 6 round trips for staff travel.

OTHER ALLOWANCES

Each Member was given $6,500 per regular session to cover the cost of stationery and office supplies and $500 per quarter for district office expenses. These allowances were taxable income but Members were permitted to deduct the actual cost of expenses incurred whether more or less than the allowances. The following is a summary of allowances and expenses in my office during 1976:

Allowances:	
Travel	$9,105.52
Stationery	6,500.00
District office	2,000.00
Miscellaneous	4,246.91
Total	21,852.43
Expenses:	
Travel	$6,366.26
Office supplies and miscellaneous	9,399.10
Dues, subscriptions	1,689.06
District office	776.73
Entertainment	924.81
Miscellaneous	691.71
Total	19,847.67

CONCLUSIONS

Although I do not think Members of Congress can or should be preoccupied with the administrative details of their office operation, we have a duty to hold the cost of our own operations to a reasonable level and to set an example of cost-consciousness for other agencies of Government. It is for this reason that I have prepared the foregoing report.

DEMOCRATS TREAT ETHICS AS A PARTISAN MATTER

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. McCLORY. Mr. Speaker, the danger of a lopsided majority in the Congress of the same party as the President of the United States appears clearly in the manner in which charges against the Director of the Office of Management and Budget have been handled.

Mr. Speaker, the contrast between this obvious "appearance of impropriety"—even impropriety itself—and the unfair and purely partisan criticism directed to our former colleague and former Secretary of the Army Howard "Bo" Callaway is illustrated clearly in the editorial which appeared Saturday July 30, in the Daily Courier-News published in my congressional district in Elgin, Ill.

Mr. Speaker, I am attaching copy of that editorial for the edification of my colleagues and in the hope that greater objectivity and less partisanship will characterize any future similar incidents of this administration:

AS WE SEE IT—QUESTION OF ETHICS AND PARTISANSHIP

"I'm not sure I agree that the appearance of impropriety should be enough to convict government officials of wrongdoing. But it is."—Jim Polk, NBC.

Well, it is and it isn't. If, in this post-Watergate era, the appearance of impropriety were enough to convict a public official, budget director Bert Lance would be well on his way home to Georgia, or at least in boiling hot water with the Senate Governmental Affairs Committee.

But Mr. Lance, despite all sorts of appearances of impropriety, has just been given the committee's okay and the sympathy of its chairman, Senator Abraham Ribicoff. If one suspects that something other than the appearance of impropriety is necessary to convict, one suspects rightly. And that something happens to be partisan politics.

Mr. Polk whom we quote above, was the NBC reporter who in 1976 unearthed the fact that President Ford's campaign manager Howard "Bo" Callaway, while Secretary of the Army met with agriculture department officials to discuss a forest service decision concerning Snodgrass mountain in Colorado, which Mr. Callaway in partnership with others wished to develop.

Two months later Senate testimony unanimously confirmed that in no way did Mr. Callaway "offer . . . anything of value or threaten or pressure" any one in regard to any decision affecting Snodgrass mountain. But so much for official testimony, which came too late to help Mr. Callaway, who had by then not only resigned from Mr. Ford's campaign but also retired from politics, his reputation ruined. All this because Mr. Polk presented a fact—that Mr. Callaway once met with agriculture department officials to talk about his Colorado property—in a political atmosphere that induced everyone to believe the worst of Mr. Callaway.

As Jim Houghan illustrates in the current issue of Harper's magazine, this atmosphere was created by certain citizens around Snodgrass mountain with the help of Colorado Senator Floyd Haskell, who happened to chair a subcommittee with jurisdiction over the area.

The subcommittee's report, though full of the facts exonerating Mr. Callaway, nevertheless criticized Mr. Callaway's "behavior" and called the whole incident "a sorry history of partiality and favoritism," The report was approved 5 to 4—5 Democrats for; the four Republicans against So did partisan politics finish the job on Mr. Callaway that the "appearance of impropriety" had started.

It is a commentary on the state of affairs in Washington that Mr. Lance, guilty of the new political sin of "appearance of impropriety," will not suffer the fate of Mr. Callaway. Mr. Lance and his National Bank of Georgia "appears" to have benefited from one, perhaps two "sweetheart" loans. Mr. Lance "appears" to have profited unusually by the Teamsters' Central States Pension Fund, a fund still under labor department investigation. And Mr. Lance "appears" to have used his cabinet office to benefit old banking contacts.

Mr. Lance should be grateful that he is a Democrat and that Democrats these days occupy all the high places. And that, despite the tortuous moralizings of his boss, the President, ethics is still a matter of politics.

REPENT AT LEISURE

HON. DEL CLAWSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. DEL CLAWSON. Mr. Speaker, leisurely repentance by the House of Rep-

resentatives is a luxury the American people can ill afford in the opinion of some of us in the House. It is a point we may have seemed to belabor recently, and, therefore, it is good to note outside support for that point of view in an editorial appearing in today's issue of the Wall Street Journal. The column is included at this point in the CONGRESSIONAL RECORD with strong endorsement for its central theme:

REPENT AT LEISURE

Speaker Tip O'Neill intends to get the Carter energy package passed this week even if it means keeping the House in session 10 hours every day. No wonder he is in a hurry. Congress begins its August vacation Friday and if the House postpones the vote and takes a month for sober reflection, it surely will kill the energy scheme.

Seldom has such a legislative mishmash gone so far. It is not overly pessimistic to estimate that it will inflict a half trillion dollars in unnecessary costs and taxes on Americans over the next eight years. It will certainly increase, rather than decrease, U.S. dependence on imported fuels. It will throw the electric utility industry into such a state as to practically guarantee frequent power shortages in the 1980s.

And yet Tip O'Neill wants the House to hurry. But lest we seem too harsh on the Speaker, it should be noted that speed at the expense of sanity has characterized the energy program from the start. A White House energy team, employing a dubious set of economic theories, threw it together in a scant 90 days. The resulting confusion was such that administration officials initially quoted widely varying figures on how much tax they planned to levy on industry and how much oil and gas they hoped to save as part of the program to convert industry and electric utilities to coal.

No one asked whether it was humanly possible to get an extra 600 million tons of coal in the time allotted. Or how much it will really cost to equip the coal-burning utilities with scrubbers. Or what you do with all the sludge and how you get all the limestone for scrubbing?

The proposed $1.75 per thousand cubic feet price ceiling that now will apply to both intrastate and interstate sales of gas was plucked out of thin air. Only later was an unconvincing rationale offered. Gas men say that since it is at least 25 cents under the present marginal price for gas, it will mean less, not more natural gas production.

The House has done little better. Ways and Means voted to apply the "gas guzzler" tax on big cars to "retiring" the national debt, not bothering to explain how you start retiring a debt before it stops growing. The master work in terms of speed was Tip O'Neill's hand-picked ad hoc Energy Committee. He loaded it with the likes of Henry Reuss and John MOSS, who adore the kind of political manipulation of economic resources the package so richly embodies. The committee didn't lay a finger on all the absurdities. In the best tradition of South Boston politics the Speaker truly "delivered."

Almost anyone could make a rough calculation of the costs this slipshod work will inflict on an already wavering economy. But for a detailed analysis we turn to Milton R. Copulos of the Heritage Foundation. His cost figures are in billions, for the first eight years 1978 through 1985, unadjusted for depreciation of the dollar:

Tax on oil, less rebate	$56.1
Taxes of natural gas	44.2
Gasoline taxes (new 4-cent tax plus extension of present 4-cent tax)	58.8
Gas guzzler tax	10.0
Coal taxes	1.81
Added cost of imported oil	57.8
Added federal income taxes caused by energy cost inflation	98.0
Utility coal conversion costs	50.6
Total	377.31

It is possible to quibble with some of these numbers. The existing gasoline tax, although due to expire, is not an added cost. It may be reaching a bit to include a number that represents added personal income taxes as taxpayers move into higher brackets because of inflation attributable to the energy package. And if utilities and industrial plants convert to coal quickly enough they will escape some tax penalties.

But the numbers are probably conservative, particularly since they make no allowances for generalized inflation. There also is no allowance for the amounts consumers could save, mainly through not having to switch to more expensive fuels, if Congress deregulated natural gas prices. Half a trillion dollars as the cost of the energy package is not unreasonable.

What will all that money buy? Maybe some aid for troubled federal welfare and Social Security programs. A little help for mass transit, although judging from the fantastic costs of the recent mass transit projects, that's no bargain. A bonanza certainly for folks who make scrubbers or sell coal or limestone. Additional contentment for the Arabs.

It will also buy a greatly expanded energy bureaucracy and just quite possibly, a whopping big recession that will sweep Mr. Carter and his fellow Democrats out of office. Tip O'Neill has every reason to be worried about the possibility Congress will give the package more thought than it has so far.

PAYMENTS IN LIEU OF TAXES

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. OBEY. Mr. Speaker, I am today introducing a very simple bill to correct a serious inequity in the Payments in Lieu of Taxes Act (P.L. 94-565). This law was passed a year ago to authorize annual Federal payments to local governments to compensate them for tax revenues lost because of the tax-exempt status of Federal lands within their boundaries. Payments were to be made on the basis of a formula which took into account the number of acres of Federal land and the amount of current receipts returned to the State or local areas. However, a last minute amendment to the bill excluded certain lands from being counted for purposes of computing the long overdue Federal payments. The effect of this provision in the law is that many areas, including several counties in my district, will not be compensated adequately for the services that local governments must provide to maintain and protect these Federal lands and the people who use them.

The bill that I am introducing eliminates the exclusion of Federal lands that were tax-exempt prior to the time the Federal Government took them over. The effect of my bill would be to count all existing Federal land located within the boundaries of local governments as eligible for payments in lieu of taxes. It will restore the original intent of the payments program and recognize that Federal compensation should be provided regardless of their prior status of lands which the Federal Government now owns.

I think that it is fair to say that the amendment which my bill seeks to repeal was not subject to an extensive debate. While it appeared to be harmless at the time it was proposed, the fact is that its effect is to deny just compensation to local governments for up to 40 percent of the Federal lands that fall within their boundaries.

The basic issue comes down to a question of equity. If local governments must supply such services as road maintenance, fire protection, law enforcement, health facilities and rescue operations to federally owned lands, there should be some compensation provided by the Federal Government. That is the principle embodied in the Payments in Lieu of Taxes Act.

It makes no sense to draw a distinction between lands that were on tax rolls before the Federal Government took them over and lands that States or local jurisdictions held as a result of private tax delinquencies. The Federal Government received these lands for national forests, national parks, wilderness areas, and other public purposes without regard to their prior tax staus. In my district, most of these lands that were so-called tax-exempt were actually held by local governments for a brief period during the depression years of the 1930's when people who owned them could no longer afford to pay property taxes. Local officials had to assume the lands. They had no choice in most cases. And instead of reselling them to private interests, local officials transferred the lands to the Federal Government so that the natural resources could be developed for public purposes.

Today those lands, regardless of prior tax status, are maintained in part by local tax dollars. The financial burden on local governments has been a difficult one to bear. Local taxpayers have had to shoulder the expense of services on lands that do not produce tax income on their own. But the Congress recognized the problem last year and designed a program to help. I want to simply insure that the program works properly and equitably.

That is what my bill seeks to do. It will amend the law to allow all otherwise eligible Federal lands to be counted for payment purposes. The bill does not change any other provision of the law as enacted last year. But it will make a big difference in the assistance it provides to local governments. In addition, it will relieve much of the administrative confusion and paperwork that have been generated by the existing exclusion in the law.

I hope that this measure will get an early hearing and can be brought to the House floor as soon as possible. I urge my colleagues to join me in support of it.

Thank you.

NO FORWARDING ADDRESS FOR FORD/MITRE STUDY GROUP

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. TEAGUE. Mr. Speaker, the Ford/Mitre study entitled "Nuclear Power: Issues and Choices," released in March of this year has been frequently quoted and been used as the basis of much new energy policy.

In March of this year the Committee on Science and Technology's Subcommittee on Fossil and Nuclear Energy Research, Development, and Demonstration invited members of the Ford/Mitre study group to testify at a hearing in an effort to explore the conclusions reached by the group.

After the hearing, the staff of the subcommittee mailed 14 pages of questions related to the information contained in the report, "Nuclear Power: Issues and Choices," to the study group for further elucidation. No answers to the questions have been received by the subcommittee and none can be expected in the future because the study group has disbanded. No provisions were made for responsible reply to questions or to substantiation of data included in the report.

The subcommittee questions encompassed the areas of resource—supply—international/proliferation, timing for breeder technology, reprocessing, demand, import policy, coal mining and transportation, and environment, health and safety.

A complete set of the subcommittee's questions is contained at the back of the Committee on Science and Technology's print entitled "ERDA Authorization Hearings for Fiscal Year 1978 on Nuclear Power: Issues and Choices."

These queries are extremely relevant to the upcoming vote on the Clinch River breeder reactor because they intensively question the basis upon which a deferral of the CRBR was recommended.

An example of the kinds of questions which the subcommittee staff sought to have answered are included below:

You state that the Clinch River Demonstration Plant is not necessary in a restructured program and "could be cancelled without harm to the long term prospects of breeders." Yet you also state that the restructured program should emphasize base technology. Have you investigated, and with whom, the relationship between a base technology program and a demonstration plant which embodies the base technology? Do you believe that an effective base technology program can be carried on indefinitely without integral demonstration of the technology?

You write that a premature demonstration of a non-competitive breeder could be detrimental to its ultimate prospects. This implies that it will some day be possible to build a fast breeder demonstration plant which will be competitive when built. Do you believe that? Does the idea of looking at many different breeder cycles but not putting any of them into demonstration plants leave one on solid ground relative to deployment?

If, despite domestic banning of plutonium, other nations proceed to use plutonium as a fuel, how much different will the risk of terrorist use of plutonium within the United States be than if plutonium were permitted to be used in the United States?

Mr. Speaker, I seriously question the conclusions of the Ford/Mitre study because in the summary that the study group presented before the Fossil and Nuclear Energy Subcommittee they stated:

The report does not deal with the immediate problems of petroleum and natural gas supplies, but taking a longer view of the energy economy emphasizes that the world is not running out of energy.

There will probably prove to be considerably more uranium available at competitive costs in the future than presently is estimated.

The report further concludes that these anticipated long-term increases in energy costs will not have a fundamental effect on economic growth and need not affect basic lifestyle.

These are very lofty assumptions on which to base the indefinite deferral of nuclear fuel reprocessing and the construction of the demonstration breeder at Clinch River.

The Ford/Mitre conclusions were given substantial credibility in the development of the administration's new energy proposal. Without the benefit of having members of the study group available to substantiate their recommendations with further information, I ask all of my colleagues to consider the upcoming decision on the Clinch River breeder reactor in a more realistic framework.

TAXPAYERS SHOULD NOT BE FORCED TO SUBSIDIZE THE PERFORMING ARTS

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. CRANE. Mr. Speaker, a new special interest is gathering its forces together to lobby for its chunk of the Federal pie: the American performing arts. Various proposals have been put forward including the addition of a new check-off box on the Federal income tax form for funding of the arts.

While the arts in America are a deserving cause worthy of support and encouragement, Federal subsidization is not the answer. Patrick Buchanan, in his Los Angeles Times column of July 24, 1977, argues persuasively against Federal funding for the arts. His premise—that those who enjoy should underwrite—while somewhat optimistic, is one which should be considered with care before we act on this issue.

The article follows:

TAXPAYERS SHOULD NOT BE FORCED TO SUBSIDIZE THE PERFORMING ARTS

(By Patrick J. Buchanan)

WASHINGTON.—Buffeted by rising prices and reduced private giving, the performing arts are in uncharted and perilous seas. So writes Robert Brustein, dean of the Yale School of Drama.

"Almost all of the people I talked to expect a serious depletion in the ranks of symphony orchestras, opera companies, resident theaters, dance companies and ballet groups over the next few years," laments the dean in The Sunday Times.

But this tale of woe is not a tale of suspense. The outcome is never in doubt—an anguished cry for federal funds. Joseph Papp, formerly of Lincoln Center and of the Vivian Beaumont Theater, is used as Brustein's barker.

"Papp is convinced that the only answer to his and others' problems lies in massive infusions of federal funds—sums not just in the millions but in the billions."

Citing the "indignity of raising cash," Papp rages, "It's a disgrace for us . . . to have to go begging for money."

Apparently judging himself something of a national treasure like, say, the Gettysburg battlefield, Papp fires a shot across the President's bow: "In the same way he's conserving fuel, he must conserve these resources." And if Mr. Carter is not cowed? "I'm going to abandon my operation at the Beaumont and I wouldn't be surprised if some of the other performing institutions join me. Imagine what this country would be like without its cultural institutions."

In short, unless the feds get together the scratch pronto, Joe just might lead the ballerinas and sopranos in a general strike—ultimate weapon of the proletaria. (Cellists of the world, unite!)

Papp needs reminding of De Gaulle's observation that the graveyards are full of indispensable men. Should he run off tomorrow in pique and join a Trappist monastery, one imagines the Republic would survive.

And yet, Brustein details a disheartening situation, and raises a serious question. Should taxpayers bail out the performing arts?

My answer is no. Given its financial crunch, there may be a weeding out process in the performing arts. But that might be healthy. They are not going to perish. There are too many people with too much money who have an ongoing interest.

A federal bailout would also be inequitable. After all, two weeks back a revered institution, The National Observer, sank beneath the waves with half a million aboard—and there were no life preservers thrown from Washington. In years past, the cultural institutions of the middle class in this city, ancient book stores, old movie houses, small theaters, have gone under without a parting blessing from Uncle Sam.

This is not to demean the performing arts, which add appreciably to the quality of life. It is to raise a counter question. Why should the working class underwrite with tax dollars the entertainment favored by an educated, affluent elite? How many middle class families with four children in Queens, for example, can afford $135 for an evening at the Metropolitan Opera?

Would the loss of Papp and his crowd to New York be mourned more than the departure of "The Boys of Summer"—the Brooklyn Dodgers? If New Yorkers were made to choose at the ballot box which should be subsidized and survive—would it be the Met or the Mets?

In an age of cable television, tapes and cassettes, families will soon have Shakespeare and Shaw in the living room. Already, at $1.95 a paperback, you can have shelves full of Hemingway, Faulkner and Fitzgerald. For a few dollars at the local record store one can find an album with a half-hour of Beethoven or the Boston Pops.

In saving the performing arts, Pope Leo XIII's principle of subsidiarity should apply. Let the arts turn first to those who benefit most—their customers. Next, let them turn to private foundations and public corpora-

tions. Then to local governments—lastly to state government.

But if Joe Papp cannot find salvation there he has no claim to be subsidized in his current calling by dunning the working people of Peoria and Yazoo City.

CONCERNING HUMAN RIGHTS IN EL SALVADOR

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. CONTE. Mr. Speaker, a number of my colleagues and I have been concerned about recent reports of threats made by a rightist terrorist group against Jesuits in El Salvador.

As a result of the concerns expressed to our State Department by myself, the gentleman from Massachusetts (Mr. DRINAN), and others of our colleagues, our Government has officially expressed its concern for the safety of these Jesuits to the Government of El Salvador. I am pleased that the Government of El Salvador has taken precautions on behalf of the Jesuits, and has assured our State Department that nothing will happen to these people that is within the power of that government to prevent.

I know that we are all grateful for this assurance, and will be counting on our Government to continue to monitor the situation in El Salvador.

At this time, Mr. Speaker, I would like to insert in the RECORD copies of correspondence between Secretary of State Vance and Father James Connor, S.J., the president of the Jesuit Conference, concerning this issue:

THE SECRETARY OF STATE,
Washington, D.C., July 21, 1977.

Rev. JAMES L. CONNOR, S.J.,
President, Jesuit Conference,
Massachusetts Avenue NW., Washington, D.C.

DEAR FATHER CONNOR: I was glad we had an opportunity to meet on July 8 to discuss the threat made by a rightist terrorist group against Jesuits in El Salvador and other human rights problems in that country. As you recall, we mentioned initiatives already taken both in Washington and in El Salvador. We also affirmed that such demarches would be made again and that a special mission to discuss these issues with the President of El Salvador would be made by Deputy Assistant Secretary Richard Arellano from our Bureau of Inter-American Affairs.

Immediately after our meeting, Assistant Secretary Todman called in the Salvadoran Charge to state the strong reaction of the United States Government and people to the White Warriors Union's ultimatum and our hope that the Government of El Salvador would make a clear statement denouncing the threat to the Jesuits' lives. The Charge promised to convey the gravity of our concern to his Government.

Deputy Assistant Secretary Arellano flew to El Salvador early last week to speak directly with President Romero on this subject and on human rights issues, generally. He stressed that the United States is deeply disturbed by the threat to the Jesuits and the striking absence of a public statement by the Government of El Salvador repudiating the threat.

He also inquired about actions taken to protect the Jesuits. He was informed that the Government of El Salvador had taken precautions on behalf of the Jesuits and was given assurances that nothing would happen to them that is within the power of that Government to prevent. In addition to regular patrols, the Jesuit High School, at President Romero's suggestion, has employed private guards. (He felt that Government forces might be blamed should any incident occur while they were used to protect the clergymen.) We were also told that a roving patrol had been ordered to provide protection for the Catholic University. President Romero stated that these actions were discussed with the Provincial Head of the Jesuit Order, who is satisfied that adequate protective measures have been taken.

With respect to the expulsion of foreign priests, President Romero said that he has made it known that Church vacancies can be filled with foreign priests so long as the Government is able to clear the names beforehand. He added that expelled foreign priests could not return to El Salvador, but Salvadorans in general, including priests who voluntarily went into exile, such as the Alas brothers, can return at any time.

As evidence of his general perspective, President Romero pointed out statements in his inaugural address which he said reflected his intention and commitment to improve the socio-economic conditions of the Salvadoran people. He said he would speak frankly to any press correspondent inquiring about the Government of El Salvador's actions to protect the Jesuits. We are hoping that such an interview will take place soon, to air publicly Government dissociation from the threat to the Jesuits.

In light of these actions, we believe that the Department and Embassy have made strong representation regarding the specific threat to the Jesuits and respect for human rights in general in El Salvador, even when Americans are not involved. You recommended that an Ambassador not to be appointed to El Salvador until the human rights situation improves in that country. As I indicated in our discussion, we recognize that such a decision might have some short-run, symbolic value. However, we feel that the greater the complexity of our relationship with a country, the more important it is that we have high-level, highly responsible representation to its government. Since we seek to have an effective influence on developments in El Salvador, we wish to have strong representation for doing so.

Please be assured that the Department will continue to monitor events in El Salvador as closely as possible and seek to continue to exert a positive influence on the developments there.

Sincerely,

CYRUS VANCE.

JESUIT CONFERENCE,
Washington, D.C., July 23, 1977.

Hon. CYRUS R. VANCE,
Secretary of State, Department of State,
Washington, D.C.

DEAR MR. SECRETARY: In the name of all the religious and lay leaders who have been associated with me in concern for the situation in El Salvador, I write to express profound gratitude for the actions you have taken, as described in your letter of July 21, 1977.

As recently as yesterday, a telephone conversation with a key Jesuit in El Salvador assured us that the government has, in fact, taken extensive measures to guarantee the safety of the Jesuits. Regular patrols are heavily deployed in the area of the University, the high school, and the Jesuit residence.

I am especially grateful for the final paragraph of your letter, in which you say that "the Department will continue to monitor events in El Salvador as closely as possible and seek to continue to exert a positive influence on the developments there." This answers to a current apprehension, namely, that once the spotlight of public attention dims groups like the "White Warriors" will attempt to have their way.

The long-term good for El Salvador, of course, is a social, economic, and political order wherein all members of that society can live and work with freedom, justice, and equality of opportunity. It is to this goal that the Churches and Jesuits in El Salvador are committed. Jesuits and other Churchmen in this country will be working to assist this long-term Salvadoran effort of reorganization.

As the State Department continues its efforts to promote the selfsame ideals for Salvadorans, please be assured of our most willing cooperation.

Gratefully,

(Rev.) JAMES L. CONNOR, S.J.,
President.

AIRBAG CHEMICAL IS A POISONOUS, HIGHLY FLAMMABLE "HAZARDOUS MATERIAL"

HON. BUD SHUSTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. SHUSTER. Mr. Speaker, if the mandatory airbag/passive restraint order stands, millions of cars could be traveling American roads with a canister containing 1¼ pounds of sodium azide, a poison so deadly that if inhaled or exposed to cuts, can cause convulsions and death according to the Library of Congress and the Office of Hazardous Materials. (Attachment 1.)

Sodium azide is a chemical compound (NaN3) used to inflate the airbag. In a frontal crash a tube from the airbag canister is broken, causing sodium azide to be mixed with a metal oxide which, in turn, causes a harmless explosion that inflates the airbag.

Sodium azide is designated as a Class B poison and is, therefore, a "hazardous material" under title 49, Code of Federal Regulations. It is described in the Condensed Chemical Dictionary as "highly toxic; severe explosion risk when shocked or heated."

I want to emphasize that according to the Library of Congress and the Office of Hazardous Materials, sodium azide does not appear to present a danger when enclosed inside the airbag canister and when properly activated to inflate the airbag.

However, it presents a serious danger if the canister is opened, broken or leaks, and someone comes in contact with sodium azide.

If, for example, a mechanic gets sodium azide in a cut on his hand, or transmits the material to food, or breathes the dust, he can be poisoned. According to the Library of Congress, one part sodium azide per million in air has produced a toxic response in animals, that is, a rapid change in blood pressure, followed by convulsions, followed by death.

DOT's Office of Hazardous Materials has cautioned that a cigarette, or spark, or match, could ignite the sodium azide and produce a fire that burns faster and with greater intensity than gasoline. They said that when mixed with an oxidizing agent, sodium azide produces

a rapidly burning material approaching black powder in intensity.

The environmental impact statement submitted by NHTSA on the airbag states on page 27:

Use of this substance complicates the problem of disposal of vehicles. Under no circumstances should the live (nonfired generator be scrapped with the rest of the body. If left in contact with lead or copper, the azide may react with these metals forming lead or copper azide. The National Institute of Occupational Safety and Health has warned that 'lead azide is a more sensitive primary explosive than nitroglycerine and a more effective detonating agency than mercury fulminate; in comparison with lead azide, copper azide is even more explosive and too sensitive to be used commercially."

Copper wiring under the dashboard and lead components in the steering column are both close to the canister.

The real danger exists, therefore, with people tinkering with cars, with the 8.5 million cars that are junked each year, and the 1.5 million cars abandoned each year. NHTSA acknowledges on page 45 of its final ruling that one of the "most significant consequences" of its mandate is "the use of large amounts of sodium azide as the generator of gas for airbags." It even admits in its environmental impact statement:

. . . abandoned vehicles with active inflator systems may present a safety problem to youths, vandals, and persons seeking replacement parts for their vehicles.

NHTSA lightly passes over the problem by saying "The Department will work with the Environmental Protection Agency to develop appropriate controls for the disposal of airbag systems employing sodium azide." But how do you control a dangerous material in millions of cars?

This problem was called to my attention in a letter from Mr. J. N. Beckley, an independent consulting engineer from Warren, N.J. We checked Mr. Beckley's credentials and found him to be a highly regarded professional who designs drug and chemical research laboratories.

He wrote:

The airbag is not an airbag. It's a bomb! It contains one and one-quarter pounds of high explosive which will be available to any kid in every abandoned car.

It was Mr. Beckley's prodding that caused us to turn to the Office of Hazardous Materials, the Library of Congress and others for more information on the dangers of sodium azide in airbags. While I believe the canister provides substantial protection against misuse of the chemical, the danger cannot be completely dismissed. Allied Chemical Company has informed me that they will not produce a sodium azide canister because there are "too many risks." I understand that there might be alternatives developed but they must be thoroughly tested in real-world experience.

NHTSA's handling of this matter adds fuel to the suspicion that, despite any evidence to the contrary, the NHTSA policymakers came to their jobs determined to mandate the airbag/passive restraint system.

I must object to the mandatory order on additional grounds today. Sodium azide, the chemical compound contemplated for use in the airbag presents a risk to the American people which has not been adequately addressed.

[Attachment 1]

CONGRESS OF THE UNITED STATES,
Washington, D.C., July 28 1977.

Hon. BUD SHUSTER,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN SHUSTER: The following confirms and summarizes the major points of the discussion we had on the potential dangers of sodium azide as it is used in the production of air bag automotive restraint units with Dr. C. Hugh Thompson, Chief, Regulation Division, Office of Hazardous Materials Operations, Materials Transportation Bureau, U.S. Department of Transportation, and Charles Schultz, Chemical Engineer with the same office. This discussion took place on Tuesday, July 26, 1977.

1. Sodium azide is classified as a Class B poison by the Materials Transportation Bureau; as such, it is a "hazardous material" under Title 49, CFR, Parts 100–199.

2. The Materials Transportation Bureau believes that "definite controls should be exercized on this hazardous material."

3. The disposal of sodium azide is a very serious problem which would come under the jurisdiction of the Environmental Protection Agency in accordance with the Resource Recovery and Conservation Act. However, since the EPA has not yet identified hazardous wastes, the control that could be exercised over disposal programs is questionable.

4. The hazards associated with sodium azide fall into two general categories:

a. It is a highly toxic substance. Ingestion could be fatal. Sodium azide dust that might settle on the ground or machinery could be toxic if breathed. Additionally, such dust, if transmitted to a worker in the area, could be fatal if such dust were transmitted to food consumed by the worker. If introduced into the blood stream through a cut or break in the skin, similar toxic symptoms could result.

b. It can create a very serious fire hazard. When sodium azide is mixed with an oxidizing agent, it produces a rapidly burning material approaching the intensity of black powder. It is much faster burning and more dangerous than burning gasoline. Thus, the introduction of a burning cigarette, match, spark or other igniting agent could produce devastating results.

5. In addition to the disposal problems mentioned above, the transportation of junked cars by trash haulers presents a regulation problem in that many small trash and waste haulers are not registered to transport hazardous materials. Thus, the potential exists for millions of automobiles, containing sodium azide, to be transported in non-compliance with federal regulatory procedures.

6. Sodium azide, when mixed with battery acid, produces hydrazoic acid, a very toxic, highly explosive material.

7. The cannister containing the sodium azide, itself, is classified as either a Class B or Class C explosive. Defective cannisters, permitting a leak of sodium azide, could produce a serious explosion.

Sincerely,

RONALD K. ENCE,
Minority Professional Staff Member.

THE FLIGHT FROM EXCELLENCE

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. O'NEILL. Mr. Speaker, I would like to submit for the RECORD the commencement address of Dr. John R. Silber, president of Boston University. Boston University is one of several universities located in the Eighth Congressional District of Massachusetts. I am extremely proud to represent BU and I ask my colleagues to read the timely and insightful remarks of Dr. Silber:

THE FLIGHT FROM EXCELLENCE

Excellence and the visibility of excellence at Boston University are matters of great pride to all of us. We pursue our policy of excellence not casually, as a temporary exercise, but with commitment, as an expression of fixed policy. No independent university with limited endowment will survive the coming decade of demographic decline unless it is both excellent and perceived to be excellent.

But it is not only or even primarily our concern for the survival of Boston University that explains our commitment to excellence. The pursuit of excellence is also essential to our national survival.

Excellence is the only standard that can sustain a free society. It has become necessary to defend excellence because in several crucial areas our society has entered into the dangerous embrace of mere adequacy. We are engaged in a headlong flight from the best.

By this I do not mean that our performance is necessarily becoming worse. In the sports in which a precise comparison is possible—notably field and track—we excel our predecessors with a consistency and regularity that threatens to become monotonous. Men and women have never run so fast, jumped so high, shot so many baskets in a single game. And the excellence of our age is not confined to sports alone. At the same time we recognize what appears to be our prevailing incompetence to teach most children to read and write, we can take comfort in the fact that science and mathematics have never been taught more effectively than today.

Our flight from excellence is not a failure in our general ability to perform, nor is it the consequence of a general desire to accept the mediocre. It is something different and strange. It is profoundly philosophical: we have begun to reject the very notion of excellence as a social ideal. Out of a well-intentioned but inept concern with the equality of opportunity, we tend to reject anything if it exceeds the grasp of anyone. Some might argue that it is our right to engage in this curious flight, and so it is, as individuals and as it concerns only ourselves. The rejection of excellence is undoubtedly a piece of folly, but it is undoubtedly the right of free men to be fools. But do we have the right as citizens in a free society to reject excellence on behalf of others who may not be so foolish? Alarmingly, many of those people and institutions that reject high standards do so in trust for others.

This is flagrantly the case in higher education, and this is especially unfortunate because higher education is popularly and properly thought to be uniquely a repository for high standards.

One of the best known examples of the flight from excellence in higher education is the war against grading. While there are many motives and rationales behind the movement to substitute pass/fail or pass/no entry "grading" for the traditional scales, all begin with the same crucial assumption: that there is no compelling reason to distinguish between excellence and mere adequacy, and that it is wrong—either educationally or morally—to record evidence of inadequacy or failure. A related error is evidenced in the phenomenon of grade inflation, whereby teachers behave as if all students are equally gifted and equally hard-working. It is also reflected in the relaxed indifference shown by so many professors and institutions to the wholesale and retail

distribution of plagiarized materials by corporations selling term papers. In all cases the threat to excellence is obvious, for our refusal to identify excellence will at length render us unable to recognize it or to care about it.

Another example occurred last year, when the City University of New York abandoned open enrollment. It did not return to its earlier admissions standards, but rather established as the minimum qualification for admission the competence expected from an eighth-grade education. This is less an indictment of the standards of CUNY, which was, after all, seeking rather tentatively to step back from the abyss of open enrollment, than an indictment of the high schools. For it should be realized that while prospective students at CUNY must all be high-school graduates and thus have attained a twelfth-grade education, they are admitted even if their competence does not exceed a level appropriate to the eighth grade. Thus, implicit in the admission standards of CUNY is a 33⅓ percent devaluation of the New York high school diploma.

It is to the credit of the City University that it has introduced very extensive remedial programs to upgrade the competence of incoming freshmen. But we may wonder if this extensive remedial work, requiring at least one full year to complete, should be carried on in the context of a great university. It is not higher education, since it is not higher than the work expected of high school students. This work could probably be done more economically and certainly could be done more appropriately by the high schools or community colleges.

It is increasingly obvious that a technologically sophisticated society will need more, not fewer, educated citizens. Post-industrial society will be grim for a functional illiterate, and it will itself be badly disrupted by the presence of large numbers of semi-literates whose skills, if any, are adapted to a world that no longer exists. A restoration of excellence is therefore in the interest of society at large and of each of its members as well.

But it is possible to misuse the concept of excellence in ways that harm society and its members. Simplistically defined, excellence can be a deleterious idea, for it is a remarkably complex phenomenon that is almost certain to be destroyed by reductionistic formulations. The most common type of these formulations is that in which one of the many essential components of an excellence is mistaken for the excellence itself. No one can doubt that an excellent attorney is skilled at the rapid and lucid analysis of cases. But legal education is too often conducted as if this ability were the whole of the law, and the comparatively low level of trial advocacy in the courts is a scandal that has finally begun to attract notice and remedy.

In college admissions, the correlation between success on the SAT and success as a student is too consistent and widespread for us to ignore. But we should never make the error of assuming that someone who can make an excellent score on the SAT will ipso facto be an excellent student, nor that someone who makes a low score will not be. Human ability is far too complex and complicated to be dealt with in this fashion, and we mock all sensible standards when we do.

In determining admission to medical and law schools, we too often fall back on mindless numerology. Scores on the Law School Admissions Test and the Medical College Admissions Test are frequently taken as an adequate measure of a student's ability to succeed as a professional in law or medicine, and as a fair substitute for a careful examination of the applicant's academic record, sense of values, and personal dedication.

But our recognition of the difficulties inherent in the assessment of excellence should not lead us to abandon it. Because tests do not deliver an infallible or even adequate judgment of the ability or potentiality of individuals, we should not conclude that they tell us nothing. Even more important, our difficulties in assessing ability should not lead us to the absurd conclusion that there are no fundamental differences in abilities or potentialities. While rejecting simplistic definitions of excellence, we should not, we must not, reject excellence itself.

Perhaps the most dangerous mistake we make in our present treatment of excellence is to behave as if it were hostile to democracy. This fallacy is most obvious in the commonly voiced charge that educational institutions with high standards of excellence in admissions, instruction, and faculty recruitment are "elitist," a term that for most people is redolent of special and unearned privilege and suggests that these institutions are havens for the probably incompetent offspring of the rich.

Our society is ambivalent about the term "elitism." Outside of sports, elitism is almost always a term of reproach. If by elitism, one means a practice in which a small group are given power over society because of such irrelevant qualifications as birth, riches, race or sex, then it is properly a term of great reproach. But so used it obviously has nothing to do with excellence: in fact, it negates excellence by its substitution of other criteria. The fact that the incompetent members of an unjustly established elite may believe that their presence at the top proves them excellent does not, of course, make them so. Nor does the fact that some people mistakenly believe themselves excellent vitiate the importance of excellence itself.

Our mistrust of excellence as an anti-democratic value stems from certain paradoxes of the democratic condition. We refuse to be governed by an hereditary or oligarchical elite. We rightly believe that our ultimate protection from tyranny is our refusal to be governed except by leaders of our own choosing; moreover, in choosing leaders, we hold that each citizen's vote must be equally valid; even though we do not believe that each citizen's vote is equally astute. In a democracy, we are also committed to the proposition that all citizens have a right to their own opinion, but we must not confuse this principle with the absurd assumption that because all citizens have a right to their opinion each of their opinions is equally valid.

Out of some confused and sentimental perversion of democracy, we sometimes even argue the absurd proposition that people are of equal ability—mentally, physically, or any other way. This nonsense is dispelled by the facts: some people are taller than others, some stronger, some, as Dizzy Dean claimed for himself, have strong backs and weak minds, others, such as Charles P. Steinmetz, have weak backs and strong minds. These variations exist, and the rain falls on the just and the unjust.

To attempt under the banner of equality to level these differences by bringing everyone down would be to embark on a program of indescribable sadism. And to do it by levelling up is patently impossible without God-like powers. An essential part of our heritage is our belief in equal opportunity. But only political demagoguery, sentimental nonsense, or delusions of grandeur could justify a belief in equality of achievement.

There is no doubt that we should do all we can to ameliorate the human condition, but we must do so in acceptance of the fact that that condition is and always will be various.

Democracy is threatened by two contradictory forces. One, from which we have been totally delivered, is the hereditary principle, holding that the best are the children of the best. We have also been largely freed from the related false belief that the best are the rich. Even though our methods for financing campaigns for elective office favor the rich, the poor still achieve high office, both elective and appointive, and millionaires aspiring to high office are at pains to disguise, rather than capitalize on, the impression made by their riches.

The other force, one that poses a direct threat to our achievement of democracy, is a counterfeit and ultimately destructive egalitarianism that considers almost anyone fit for government office. The dangerous folly of this position should be apparent. The persons to be elected to office ought to be better than the average. They ought, ideally, to be the person best qualified. They ought to be better in their moral and intellectual capacities and in their commitment to hard work. This does not mean that they should necessarily be male, college graduates, middle class, white, or indeed members of any specific group. But since lawmakers really are servants of the people, it follows that for the people nothing can be too good.

This eminently populist sentiment is constantly mocked by the establishment of *minimum* qualifications for government office. Mr. Nixon, exhibiting a failing common to presidents of both parties, proposed for the Supreme Court a candidate he could not plausibly claim met more than minimum standards. Senator Hruska helpfully spelled out what this minimum was—the attainment of mediocrity. We are probably in Senator Hruska's debt for this: the disciples of mediocrity are not usually so candid, and the national laughter that greeted the Senator's candor has perhaps been instructive.

The Senator's standards are a hangover from the day when it was overtly understood that public offices were the spoils of the political wars. But it can be continued only on the dangerous assumption that it does not really matter how well the public business is carried on. No one really believes this, of course, and it is never baldly asserted as a principle. But its implicit, even unknowing, acceptance is dangerous nevertheless.

Our inadvertent acceptance of this principle sometimes leads us into peculiar snobberies. We assume that excellence can be more easily found in Hyde Park, New York, than in Independence, Missouri. We consider Harry S Truman as an ordinary man who somehow succeeded in a difficult job. Elegant of manner though he was, Dean Acheson did not fall into this foolish error. His estimate of Harry Truman was that he was "the most extraordinary man I have ever known."

We should, however, be clear that the need to select the best qualified to govern must never be advanced as a pretext for substituting some other form of government on the promise of better performance. Even if one conceded that tyranny could be efficient in any beneficial way, the most inefficient democracy is to be preferred to tyranny of any sort, a judgment most recently confirmed by the people of India in their dismissal of Mrs. Gandhi, and by Mrs. Gandhi herself in her acceptance of their verdict.

But we must not forget that democracy is a form of government, and that it is therefore flawed. Its virtue is merely that it is flawed less seriously than any other form of government. It is a necessary way of organizing the one truly involuntary organization—the state. The necessity of democracy for this purpose does not argue that it is also necessary for organizing the voluntary organizations that make up the rest of society.

In fact, most institutions within a democracy ought to be organized around the principle of excellence. That is, decisions within them ought to be made by those most qualified to make them. Positions ought to be filled by the qualified rather than the un-

qualified. This ought to be a truism that one would be embarrassed to state publicly. Regrettably, it has become a controversial position, especially in higher education, where it is seen as opposed to other, putatively more democratic principles, namely, that decisions ought to be made either by the majority or by those who will be affected by them.

It is easy to see the fallacy of these principles in certain situations. No one is more directly affected by a surgical operation than the patient (who ought, it must be understood, make the choice of whether or not to have it). But only a foolish patient would insist that his centrality to the operation qualified him to direct it. And only a foolish patient would allow his surgery to proceed by means of series of referenda conducted among all those present in the operating room.

As long as intelligence is better than stupidity, and knowledge than ignorance, no university can accept egalitarianism as a substitute for excellence. A university that strives for the commonplace and is content with mediocrity is roughly comparable to a Supreme Court on which seats were reserved for the mediocre. Thus handicapped, these institutions could not fulfill their missions in society.

Speaking on the occasion of receiving an Alumnae Award here at the University, Representative Barbara Jordan pointed out that our confusion has had deleterious effects on the federal government's efforts to aid higher education. She said:

"We have been so brainwashed by an erroneous definition of democracy that we have difficulty in prescribing any program or formula, or giving any grant which is better or more than some other grant, because we don't want to be accused of being antidemocratic by recognizing that some people are excellent. . . . As members of Congress, we should not be engaged in a levelling process. . . We ought to enunciate and promote those policies which would lead absolutely, categorically, and without hesitation, to the best this country has to offer: in vision, in attitude, and achievement."

It is a scandal of our society that we do not organize most of our institutions around excellence. If we did, we should expect that a far higher percentage of the partners in Wall Street law firms would be women, and that approximately 11 percent of our surgeons would be black. It is not uncommon to hear calls for the maintenance of high standards misrepresented as racist and sexist. But it should be obvious that any objection to the maintenance of high standards for women and minorities must itself rest on a patently racist or sexist belief that women or members of minorities are in fact inferior to everyone else, and would be unable to compete successfully if performance were the only criterion at every appropriate stage of development.

It is curious, then, that this objection is most often made by people who would otherwise indignantly reject racism and sexism alike. A rejection of excellence in the interest of women and minorities applies, in effect, a condescending lesser standard to them, and hence is itself racist and sexist.

One striking example of this is in the movement to establish the United States as a multilingual nation. Until fairly recently, the United States was unique in the world as a very large nation covering a great land mass that maintained a single national language with dialects that are easily mutually intelligible. It is remarkable that a nation of such ethnic diversity has not been torn apart by intercommunal violence. Our comparative peace and our single language are almost certainly related: unlike Canada, Belgium and other nations with explosive linguistic problems, the United States has been able to sustain a diverse culture within the context of one official language. Recent attempts to require bilingual ballots strike at this notion of a national language by assuming that it is possible to be a citizen without being able to read the national language as long as one is literate in the language of one's ethnic group. This argument cannot be founded in any theory of right, for if that were the case, each citizen would have the right to have a ballot printed in whatever language he was literate in, no matter how obscure it might be. But no one proposes to require elaborately multi-lingual ballots set forth in all the languages that are native to American citizens. What is being proposed is to exempt one large group of citizens from a requirement that has hitherto been expected of all citizens—the acquisition of some modest competence in the national language. This is to reduce the standard of performance expected of the citizen to a derisory level. It is also to patronize the Hispanic culture by implying that it cannot survive co-existence with the English language.

It also has racist overtones, suggesting that Spanish-speaking American citizens cannot be expected to acquire the same level of competence that was acquired by immigrants from Germany, Italy, Poland, Greece, Russia, and many other countries, and was until recently acquired by all Spanish-speaking citizens.

A similar question arises with regard to the various dialects of English. In 1974, the National Council for the Teaching of English issued a position paper maintaining that students who grow up speaking dialectal variants of English should not be required to learn standard English. Recently a program on public television showed an intelligent and educated young black student who said that it was obvious that students who grew up speaking dialects arrived in school ill-prepared to function in the standard dialect. He did not think that attempts to require these students to use the standard dialect grew out of "overt racism or elitism . . . that's the way it's mapped out by society." Recognizing that the good intentions of such attempts precluded their being overtly racist, he nevertheless left the impression that he considered them part of unconscious societal racism.

Nothing could be farther from racism than requiring students from the ghetto to learn standard English. For this is to treat them as the equals of the great majority of students.

My own experience is perhaps instructive here. Like all native Texans, I had to learn English as a foreign language when I started to school. Later, when I was an instructor at Yale, I insisted on standard English from all my students. I did not exempt recent immigrants to Connecticut from Lithuania, Atlanta, or Pearsall, Texas. None of these spoke or wrote standard English at the beginning of their freshman year, but all them ignernt boys done right good by the time they wuz thew. Later, as a professor in Texas, it never occurred to me to exempt any student, white, black, or Chicano, from the requirement of standard English.

That teacher is a racist who condones the substitution of ghetto English for standard educated English, expecting less of black or Chicano students than of whites. This is a condescension that can have good results in neither the short nor the long term. It is especially disturbing to hear a minority student talking in these terms, for by doing so he greatly weakens his ability to oppose racism. He cannot plausibly use his race as a basis for claiming supposed privileges without provoking others to use the same basis for denying him genuine rights.

It is particularly reprehensible when white professors and white middle-class students encourage black students in the mistaken belief that it does not matter whether they learn to speak and write with educated middle-class proficiency. The white professors and students are shielded by their upbringing from ever having to put their convictions to the test. The minorities will risk remaining partially isolated from the mainstream of their national culture. And they alone will pay the price for the ideological whims of the whites.

Lowered expectations are a threat not only to minorities, but to all our students, since their ability to develop is very largely dependent on the goals we establish for them. They do this by discouraging students from pursuing their educational development as far as they are able. Surely one of the most obvious requirements of a democratic society is that all its members shall have the opportunity fully to develop themselves through education. Some may naively believe that children are naturally imbued with a passion for learning so that as long as they reach the well of knowledge, they will drink as deep as they should, no matter how much we discourage them. All the evidence is to the contrary. Although exceptional children, like exceptional adults, may perform to a higher standard than any set for them by others, normally if we tell children that learning is unimportant, or that it is beyond them, they will almost certainly believe us and proceed to do something else. That something else may be little more than nothing. The ability of our children to achieve self-realization is thus very largely dependent upon the goals we establish for them. Minimum expectations are likely to result in minimum achievement.

But it is not the young alone who need a vision of excellence as a guide to performance. Writing in 1830, Alexis de Tocqueville noted that in ages of faith, people concerned themselves always with a distant supreme goal beyond this life. In doing so, they learn by imperceptible degrees to repress a crowd of petty passing desires in order ultimately to best satisfy the one great permanent longing which obsesses them. When these same men engage in worldly affairs, such habits influence their conduct. . . . That is why religious nations have often accomplished such lasting achievements. For in thinking of the other world, they have found out the great secret of success in this.

But in skeptical ages, Tocqueville continued, the vision of the life to come is lost, a problem that is exacerbated in democracies, where people are set free to compete with each other to improve their situations. In such a combination of circumstances, the present looms large and hides the future, so that men do not want to think beyond tomorrow.

Tocqueville thought it especially important that the philosophers and rulers in skeptical democracies should always strive to set a distant aim as the object of human efforts; that is their most important business.

Tocqueville did not specify the nature of the goals which need to be set in such ages, but we can hardly doubt that such goals, if they are to have sufficient transcendence to give direction and meaning to life, must presuppose excellence and require the best efforts not merely of individuals but of the society as a whole. Lesser objectives would by their immediacy and triviality leave individuals so preoccupied with day-to-day affairs that they would fail to take note of the general direction and conditions on which their future and their children's future depend. That is, in a secular age in which few believe in a life to come, and in which for many God is, if not dead, at best indifferent, a vision of excellence—a secular kingdom of God—in which individuals fulfill themselves through education and useful public service, may be essential.

Tocqueville wrote in an age when philosophers were still occasionally listened to, and in which television advertisers had not replaced both philosophers and rulers as the

most important source of moral law and societal aspiration. It would be over-optimistic to rely on his advice without adapting it to the times. The evidence accumulates that the academy has given up any very serious vocation as a setter and maintainer of standards, and we cannot now easily foresee a time when government recovers from its disastrously low place in the affections and esteem of our people. The time has come for the people themselves to regain the initiative and to call the leaders and the educators back to a vision of excellence.

In my experience it is among those families in which higher education is a recent experience that one finds the greatest demand for excellence in colleges and universities. The cab driver whose son is the first in his family to go to college understands the value of education and abhors its dilution in conformity with the winds of educational doctrine. It is in those who have not yet been corrupted by the educational affluence of our time that aspiration is most apparent and the war against excellence least in evidence.

A rededication to excellence on the part of all our people and our institutions—especially on the part of our universities—is essential. And is especially the responsibility of our universities to evoke that vision of excellence in succeeding generations of students.

PERSONNEL AT THE DEPARTMENT OF ENERGY

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mrs. SCHROEDER. Mr. Speaker, as a conferee from the Post Office and Civil Service Committee, I want to commend the able leadership of the gentleman from Texas (Mr. BROOKS) in guiding the conference.

I am happy to say that the Senate accepted completely five of the six amendments dealing with personnel at the Department of Energy which were offered by the Post Office and Civil Service Committee.

The sixth amendment, regarding section 614 of the conference language, is a compromise between a Senate provision, which gave the Department a special pool of 150 civil service supergrades and another permanent pool of 600 supergrades exempt from civil service standards, and the House language which would have placed all Department of Energy supergrades under civil service standards, with a phase-in to the system of those ERDA supergrades who are not now subject to such standards. Section 614 of the conference report authorizes the Department of Energy 178 regular supergrades to be taken from the pool of positions controlled by the Civil Service Commission. It also authorizes 311 supergrade positions at the Department of Energy which will be exempted from civil service standards for a period of 4 years, after which time the Department of Energy, like any other department, will have to justify their need for the positions. I agree with both these compromises; they are quite similar in their intentions to the House passed bill.

I am disturbed, and have noted my reservation in signing the conference report, regarding the third part of the compromise on supergrade personnel. This agreement permanently exempts 200 supergrade positions at the Department from all standards.

This permanent exemption goes far beyond any need the department might claim for flexibility in hiring its top managers and scientists. It is a thrust at the heart of the merit system; and in a department which like all other departments in the Federal Government will have its employees predominantly under the merit system of civil service, will establish a system in which nearly one-fourth of the top ranking employees will be beholden to no person but their employing authority—the Secretary of Energy—and subject to no review of their qualifications—if, indeed, they have any—for these high paying jobs.

The permanent exemption, thus, is hardly the road to accountability in Government. And although I cast no aspersions at any expected Secretary of this department, henceforth we will have to bear in mind the authoirty we have given up to some future Secretary of Energy to staff his agency with up to 200 political cronies or, for that matter, a 200-member children's choir, and pay each of them $47,500 per year.

I think this exemption will be a disaster in practice and is a bad precedent which other agency and department heads may try to propose for their own fiefdoms. It cannot but reflect upon the morale of all other civil service personnel—especially those in the supergrade ranks—who are subject to rigorous job standards and periodic civil service review to see that their jobs merit continuance. I want to assure my colleagues that, as far as the jurisdiction of the Subcommittee on Employee Ethics and Utilization extends to it, this compromise will be a one-shot deal.

TRIBUTE TO REV. JAMES OTIS STALLINGS

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1977

Mr. STOKES. Mr. Speaker, I rise on this occasion to pay tribute to Rev. James Otis Stallings of Cleveland, Ohio, who is one of the outstanding leaders in our city. Reverend Stallings has recently resigned his post as executive director of the Cleveland branch of the National Association for the Advancement of Colored People. In this position, Reverend Stallings has stood at the forefront of the battle for civil, economic, and human rights for the black citizens of Cleveland. Mr. Speaker, I am sure that you and my colleagues are aware that Cleveland is currently under a court order to desegregate its public school system. Throughout the NAACP's long and harrowing legal battle with the school system, Reverend Stallings has provided exemplary guidance and leadership.

Mr. Speaker, so that my colleagues in the U.S. House of Representatives can acquaint themselves with Reverend Stallings' notable career, I would like to submit to the RECORD an article which appeared in the Monday, July 25, 1977, Cleveland Press newspaper. I am certain that my colleagues will be impressed by Reverend Stallings' sharp analysis of civil rights issues:

REV. STALLINGS MOVING ON—"BLACK FOLK MUST SEIZE POLITICAL POWER"

(By Emanuel Hughley, Jr.)

The air conditioner hummed, clicking and squeaking occasionally. It did little to cool the small, muggy office.

Boxes of varying sizes were stacked at one end of the room, partially filled with papers, books, photographs and news clippings accumulated through the years.

On the desk lay a clue to the reason for the disarray—a letter from the Howard University theology school, addressed to Rev. James O. Stallings.

The 32-year-old Baptist minister is leaving as executive secretary of the Cleveland branch of the NAACP at the end of the month to do graduate study at the Washington school.

Stallings displayed the weariness of a victorious long-distance runner as he recounted the five years he has spent leading the local NAACP chapter.

He talked of the institutional racism he saw prevalent in Cleveland schools and the desegregation suit that had been filed to end it.

He recalled the Shield Club suit against the Cleveland Police Department which resulted in a federal court order requiring the city to hire and promote minorities. He recalled the commitment the NAACP secured from Kraft Corp., the dairy products company, to deposit $1 million in the city's first black-owned bank, First Bank National Assn.

He spoke of the need for the NAACP's involvement in fostering economic development of blacks and of the need to increase involvement of young blacks in the NAACP.

"I think that black folk ideologically have made a commitment that they will use certain channels in order to fight injustices in the quest for full equality," Stallings said.

"Within those channels, I think black folk are going to have to seize power politically and economically from a style that is unique to them. I think the black community is going to have to become politically more independent and economically more flexible."

The NAACP asserts that one of the keys to obtaining political independence and economic flexibility is quality education.

"If one has a good education, his chances of operating in other fields are much better; his chances at economic flexibility are much greater," Stallings said. "Education for poor people and blacks has been the key that has unlocked other doors."

In the Cleveland school dsegregation case, Stallings said, the NAACP contended that black students have not recevied an education that equals the education received by white students because of racist practices by the School Board.

These practices, Stallings said, so poorly educate black students that many cannot fill out job applications. The practices deny black students adequate math and communications skills that will enable them to pass entrance examinations for building trade union apprenticeship programs.

Though the NAACP has traditionally been viewed as a black middle class organization, its involvement in school desegregation cases has been in behalf of poor inner city blacks.

"The school desegregation issue is not important to middle class black folk because most of them do not have their children in segregated schools," Stallings said. "Most of

them live in the suburbs and their children attend integrated schools or they have children in private schools.

"The vast majority of black folk who are in segregated school systems in our major cities are poor—those blacks who lack the financial mobility to move to the suburbs and have no effective representative or spokesman."

Stallings charged that the School Board assumes black children "cannot and will not" learn and therefore tolerates high absenteeism, and relaxed discipline in the city's mostly black schools.

"The administration on Sixth Street shows that it is racist in the fact that it will tolerate that kind of stuff in a black school when it will not tolerate it in a white school," said Stallings. "Have you ever been to South High School? You'll notice there is a difference in the way South High is operated and the way the black schools on the East Side are operated."

So what does this mean? For the NAACP it means that the only way to insure black children will get quality education is to put them in the same classroom with white children.

"White folks do not give us the same things they give themselves anywhere in this society," Stallings exclaimed.

"The president of the School Board has gone the length and breadth of the city saying the quality of education in the schools is the same. He was asked by the special master (Daniel R. McCarthy) how much is spent per pupil educating children in this system, and he could not answer the question.

"My God, if he cannot answer the question of how much is being spent her pupil, he cannot claim the same amount is being spent for black students as is being spent for white students!"

Though the school desegregation fight has diverted much of the NAACP's energy, Stallings sees the need for future involvement by the 68-year-old civil rights organization in developing economic stability among blacks.

He suggests cooperatively-owned ventures similar to efforts of Rev. Leon Sullivan, a black Philadelphia Baptist minister who organized a nonprofit corporation from members of his church to build a $1.7 million black-owned-and-operated shopping center in Philadelphia's black community.

Stallings also sees the need to increase NAACP membership and involvement among young blacks between the ages of 27 and 35. Though membership in the local chapter has increased during his tenure, Stallings admitted it is weakest among young blacks. The same is true nationally, he added.

"We lost a whole generation of blacks in the Association in the 60's," Stallings said. "You do not find a fantastic number of young blacks involved in the decision making process. We're going to have to reach out and get those folk and bring them back, but they're going to have to do some reaching also."

Mr. Speaker, I would also like to take this opportunity to relate to you some other aspects of Reverend Stallings life.

James Otis Stallings was born January 31, 1945, in Crawford Miss., the son of Mr. and Mrs. John T. Stallings. Educated in the Mississippi public school system, he later traveled to Atlanta, Ga. to attend Morehouse College. While an undergraduate at Morehouse, young James served as chief marshal at the funeral of the late Rev. Dr. Martin Luther King, Jr., in 1968. An excellent student, he received the Benjamin E. Mays debating award and the J. J. Webb oratorical prize upon graduation.

From June 1968 to March 1969, Mr. Stallings was an intern with Friendship Baptist Church in Atlanta. He was also a management trainee with Miles Laboratories, Inc. for more than a year. In April of 1970, he joined the staff of Antioch Baptist Church in Cleveland as associate minister, and in March of 1972, he was appointed executive director of the Cleveland NAACP.

Mr. Speaker, the young and dynamic reverend has been extremely active in religious, social, and educational concerns in the black community. He was the chairman of the Outreach Study Group, Community Advisory Council of the Mental Development Center of Case-Western Reserve University; former member of the board of trustees of the Urban League of Greater Cleveland; member of the board of managers of the University Christian Movement; member of the board of trustees of the Fairfax Foundation; member of the Association for the Advancement of Applied Behavioral Science in Religion; member of the Association for the Study of African/American Life and History; member of the Task Force on Church and Society; member of the Greater Cleveland Inter-Church Council; life member of the NAACP, and member of the Antioch Baptist Church.

Mr. Speaker, at this time I would like to call upon my colleagues to join with me in thanking Reverend Stallings for his unselfish devotion to the citizens of Cleveland. As a young man, he has many more mountains to climb and challenges to meet. He has made an indelible mark on our city.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare this information for printing in the Extension of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Tuesday, August 2, 1977, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

AUGUST 3

9:00 a.m.

Armed Services

Manpower and Reserve Affairs Subcommittee

To hold hearings on NATO posture.

1114 Dirksen Building

Human Resources

Health and Scientific Research Subcommittee

To hold joint hearings with the Select Committee on Intelligence on drug testing by the CIA.

1202 Dirksen Building

Human Resources

Labor Subcommittee

To continue hearings on S. 1871, to increase the Federal minimum wage.

4232 Dirksen Building

9:30 a.m.

Environment and Public Works

Resource Protection Subcommittee

To hold hearings on S. 1140, to encourage and assist States to develop improved programs for the conservation of nongame species of native fish and wildlife.

4200 Dirksen Building

Finance

To continue consideration of H.R. 7200, to improve the supplemental security income benefits program and child welfare services and social services, and other committee business.

2221 Dirksen Building

10:00 a.m.

Banking, Housing, and Urban Affairs

To continue markup of S. 1873, to amend in several regards the law as it pertains to Federal regulations of financial institutions.

5302 Dirksen Building

Energy and Natural Resources

To continue consideration of S. 1469, the proposed National Energy Policy Act.

3110 Dirksen Building

Foreign Relations

Arms Control, Oceans and International Environment Subcommittee

To hold a closed, followed by an open session on the proposed Threshold Test Ban and Peaceful Nuclear Explosions Treaties with the U.S.S.R. (Exec. N., 94th Cong., 2nd sess.).

4221 Dirksen Building

Governmental Affairs

To hold a hearing on the subject of handling employment discrimination complaints in the Senate.

3302 Dirksen Building

Judiciary

To hold hearings on the nomination of Earl E. Veron, to be U.S. District Judge for the Western District of Louisiana.

2228 Dirksen Building

Select on Indian Affairs

To hold oversight hearings on the Bureau of Indian Affairs budget process.

457 Russell Building

Joint Economic

Economic Growth and Stabilization, and Fiscal and Intergovernmental Policy Subcommittees

To resume joint hearings on the current fiscal condition of cities.

6226 Dirksen Building

AUGUST 4

8:00 a.m.

Energy and Natural Resources

Energy Conservation and Regulation Subcommittee

To receive testimony from FEA Administrator John F. O'Leary on his agency's implementation of crude oil pricing policy.

3110 Dirksen Building

9:00 a.m.

Human Resources

Labor Subcommittee

To continue hearings on S. 1871, to increase the Federal minimum wage.

4232 Dirksen Building

9:30 a.m.
Agriculture, Nutrition, and Forestry
Environment, Soil Conservation, and Forestry Subcommittee
To continue hearings on S. 1280 and S. 1616, bills to preserve, protect, and enhance the Nation's soil and water resource base.
322 Russell Building

Banking, Housing, and Urban Affairs
To hold hearings on the nomination of Lawrence Connell, Jr., of Connecticut, to be Administrator of the National Credit Union Administration.
5302 Dirksen Building

Finance
To continue consideration of H.R. 7200, to improve the supplemental security income benefits program and child welfare services and social services, and other committee business.
2221 Dirksen Building

Judiciary
Antitrust and Monopoly Subcommittee
To continue hearings on S. 1927, to promote competiting in the energy industry.
2228 Dirksen Building

10.00 a.m.
Banking, Housing, and Urban Affairs
To mark up S. 1542, to extend to September 30, 1979, the Council on Wage and Price Stability, and S. 1724, to establish a Neighborhood Reinvestment Corporation.
5302 Dirksen Building

Commerce, Science, and Transportation
Business meeting on pending calendar business.
235 Russell Building

Energy and Natural Resources
To continue mark up of S. 1469, proposed National Energy Policy Act, and other pending calendar business.
3110 Dirksen Building

Foreign Relations
Foreign Assistance Subcommittee
To resume hearings on S. 1771, to authorize a 4-year extension of the investment insurance and finance programs operated by the Overseas Private Investment Corporation and to make certain changes in its existing programs and policies.
4221 Dirksen Building

Select Indian Affairs
To hold hearings on S. 1214, to establish standards for the placement of Indian children in foster or adoptive homes, and S. 1509, to provide for the return to the United States of title to certain lands conveyed to certain Indian pueblos of New Mexico.
457 Russell Building

10:30 a.m.
Judiciary
To hold a business meeting.
2228 Dirksen Building

AUGUST 5

9:00 a.m.
Human Resources
Labor Subcommittee
To continue hearings on S. 1871, to increase the Federal minimum wage.
4232 Dirksen Building

9:30 a.m.
Finance
To continue consideration of H.R. 7200, to improve the supplemental security income benefits program and child welfare services and social services, and other committee business.
2221 Dirksen Building

10:00 a.m.
Energy and Natural Resources
To continue markup of S. 1469, proposed National Energy Policy Act, and other pending calendar business.
3310 Dirksen Building

Judiciary
To hold hearings on the nomination of John H. Shenefield, of Virginia, to be an Assistant Attorney General.
2228 Dirksen Building

AUGUST 29

10:00 a.m
Banking, Housing, and Urban Affairs
International Finance Subcommittee
To hold hearings on the dimension of national debts and payments deficits, and the outlook for the future.
5302 Dirksen Building

AUGUST 30

10:00 a.m.
Banking, Housing, and Urban Affairs
International Finance Subcommittee
To continue hearings on the dimension of national debts and payments deficits, and the outlook for the future.
5302 Dirksen Building

SEPTEMBER 8

9:00 a.m.
Commerce, Science, and Transportation
Consumer Subcommitee
To hold hearings on automatic auto crash protection devices.
5110 Dirksen Building

10:00 a.m.
Judiciary
Antitrust and Monopoly Subcommittee
To resume hearings on S. 1874, to allow recovery for damages by direct or indirect purchasers of goods.
2228 Dirksen Building

Select on Indian Affairs
To hold hearings on Federal Indian Domestic Assistance programs.
Room to be announced

SEPTEMBER 9

9:00 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To continue hearings on automatic auto crash protection devices.
5110 Dirksen Building

10:00 a.m.
Judiciary
Antitrust and Monopoly Subcommitee
To continue hearings on S. 1874, to allow recovery for damages by direct or indirect purchasers of goods.

9:30 a.m.
Banking, Housing, and Urban Affairs
To continue hearings on S. 1710, proposed Federal Insurance Act of 1977.
5302 Dirksen Building

10:00 a.m.
Commerce, Science, and Transportation
To hold hearings on the nomination of Donald L. Tucker, of Florida, to be a member of the Civil Aeronautics Board.

SEPTEMBER 14

9:30 a.m.
Banking, Housing, and Urban Affairs
To continue hearings on S. 1710, proposed Federal Insurance Act of 1977.
5302 Dirksen Building

10:00 a.m.
Select Committee on Indian Affairs
To hold hearings on the concept of creating an independent Indian Agency.
Room to be announced

SEPTEMBER 15

10:00 a.m.
Banking, Housing, and Urban Affairs
To mark up S. 1594 and H.R. 5959, to revise and extend the Renegotiation Act.
5302 Dirksen Building

SEPTEMBER 20

10:00 a.m.
Governmental Affairs
Energy, Nuclear Proliferation, and Federal Services Subcommittee
To hold hearings on H.R. 7792, to establish certain limitations on the use of franking privileges, and on simplifying mailing procedures.
6226 Dirksen Building

SEPTEMBER 21

9:30 a.m.
Veterans' Affairs
To hold hearings on S. 364, Veterans' Administration Administrative Procedure and Judicial Review Act.
Until 1 p.m. Room to be announced

10:00 a.m.
Judiciary
Constitution Subcommittee
To hold hearings on S. 35, proposed Civil Rights Improvement Act of 1977.
2228 Dirksen Building

SEPTEMBER 22

10:00 a.m.
Judiciary
Constitution Subcommittee
To continue hearings on S. 35, proposed Civil Rights Improvement Act of 1977.
2228 Dirksen Building

SEPTEMBER 28

10:00 a.m.
Veterans' Affairs
To receive legislative recommendations from representatives of the American Legion.
412 Russell Building

SENATE—*Tuesday, August 2, 1977*

(Legislative day of Tuesday, July 19, 1977)

The Senate met at 3 p.m., on the expiration of the recess, and was called to order by Hon. EDWARD ZORINSKY, a Senator from the State of Nebraska.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Whatsoever ye do, do all to the glory of God.—I Corinthians 10:31.

Let us pray.

"O Master, let me walk with Thee
In lowly paths of service free;
Tell me Thy secret; help me bear
The strain of toil, the fret of care.
"Teach me Thy patience; still with Thee
In closer, dearer company
In work that keeps faith sweet and strong,
In trust that triumphs over wrong."
—WASHINGTON GLADDEN, 1879.

In positions high and low, in duties great and small, may this be the longing

of our hearts and the response of our actions, that we may more worthily emulate Him who worked as a carpenter, washed other men's feet, and as servant of all went about doing good, in whose name we pray. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 2, 1977.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable EDWARD ZORINSKY, a Senator from the State of Nebraska, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. ZORINSKY thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia is recognized.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Monday, August 1, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

Mr. BAKER. Mr. President, reserving the right to object, and I will not object, as I advised the majority leader, we have no objection to proceeding to executive session and consideration of all of the nominations as they appear on the Executive Calendar today.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations will be stated.

DEPARTMENT OF JUSTICE

The assistant legislative clerk read the nomination of Wesley David Lane, of Minnesota, to be U.S. Marshal for the district of Minnesota.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

DEPARTMENT OF THE TREASURY

The legislative clerk read the nomination of Azie Taylor Morton, of Virginia, to be Treasurer of the United States.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The legislative clerk read the nomination of Robert H. Mundheim, of Pennsylvania, to be General Counsel for the Department of the Treasury.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

The assistant legislative clerk read the nomination of Blandina Cardenas, of Texas, to be Chief of the Children's Bureau, Department of Health, Education, and Welfare.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

FEDERAL MARITIME COMMISSION

Mr. ROBERT C. BYRD. Mr. President, I have in my hand the nomination that was reported to the Senate today by the Committee on Commerce, Science, and Transportation. I understand that it has been cleared on the other side of the aisle. I have been requested by the chairman of the committee (Mr. MAGNUSON) to seek consideration to proceed with its immediate consideration today, and I do so.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. It is clear on this side. I understand there is no report on the nomination and there is no objection to its immediate consideration.

The assistant legislative clerk read the nomination of Richard J. Daschbach, of New Hampshire, to be a Federal Maritime Commissioner.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate resume legislative session.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Orders 338 and 334, both of which, I understand, have been cleared all around.

Mr. BAKER. Will the Senator yield briefly?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. Both calendar orders are clear. I ask unanimous consent that the distinguished junior Senator from Kansas (Mr. DOLE) may include a statement in support of this measure at this point in the Record.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The bill will be stated by title.

The assistant legislative clerk proceeded to read the bill by title.

Mr. ROBERT C. BYRD. Mr. President, I withdraw the request. I understand there are budget waiver resolutions that will apply to both those measures.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The request is vitiated.

TRANSFER OF MEASURES TO UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I understand that Nos. 338, 343 and 345 are cleared for action by unanimous consent. I ask that the clerk transfer those three measures to the Unanimous Consent Calendar.

The ACTING PRESIDENT pro tempore. The measures will be so transferred.

U.S. POLICY IN PACIFIC AREA

Mr. BAKER. Mr. President, Secretary of State Vance recently addressed the Asia Society in New York. His remarks constituted the most detailed outline to date of the intentions of the Carter administration for Asia and the Pacific.

Secretary Vance stated that—

> We are and will remain a Pacific nation, by virtue of our geography, our history, our commerce, and our interests.

This is a broad commitment that all Americans should embrace. The specifics of our Asian and Pacific policy are more difficult.

These are two related policy decisions facing the Carter administration which I believe, when made, will add flesh to the bare bones of Secretary Vance's Asian speech and which will determine whether or not we will, in fact, honor the Secretary's commitment to remain a Pacific power.

First, what should our policy be in Korea? Clearly the consequences of a

misstep are severe. As I analyze the administration's policy for Korea I am concerned over the lack of a conceptual foundation for the suggested troop reduction. It was this concern which prompted me to ask Joint Chiefs of Staff Chairman General Brown why if withdrawing our troops from Korea is a sound policy, the administration is not also in favor of withdrawing troops from Europe. At a time when the United States is stepping down its military presence across the board in Pacific Asia, the free countries of that region, and indeed those that are not free, are searching each U.S. pronouncement for the conceptual basis of our policies. If the administration can provide an answer to the question I posed to General Brown which is in harmony with our historic responsibilities in Asia as reaffirmed by Secretary Vance, they will have done much to satisfy Asian concerns over whether the United States will continue as an Asian power; fulfilling its leadership and peacekeeping responsibilities.

Secretary Vance touched generally upon the second major policy issue facing the administration in this region. What should our policy be for the two Chinas? He stated:

> Our policy toward China will continue to be guided by the principles of the Shanghai Communique, and on that basis we shall seek to move toward full normalization of relations. We acknowledge the view expressed in the Shanghai Communique that there is but one China. We also place importance on the peaceful settlement of the Taiwan question by the Chinese themselves.

I think it is clear from the Secretary's statement that administration policy on this issue is in a formative stage. I would like to contribute to that process by briefly stating my views and by recommending the views of others on this issue. First, I have supported the efforts of the Nixon and Ford administrations to normalize relations with the People's Republic of China. Second, I do not interpret the Shanghai communique as requiring us to break diplomatic relations with the Republic of China. Third, I am opposed to breaking diplomatic relations with Taiwan.

Two distinguished scholars have recently contributed to the public debate over United States-China policy. Ray S. Cline, executive director of Georgetown's Center for Strategic and International Studies and Edward N. Luttwak, adjunct professor at Johns Hopkins University, in the Washington Post and New York Times, respectively, address the "two Chinas" question from different perspectives, but they come to the same basic conclusion that a break with Taiwan to satisfy Peking is detrimental to U.S. long-term interests.

As China policy is reviewed I hope that the administration will heed the sound advice conveyed in these two columns. I ask at this point unanimous consent that they be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Post]

A DOUBLE STANDARD FOR TWO CHINAS

(By Ray S. Cline)

A MIG–19 pilot recently defected from the People's Republic of China by flying his plane to the Republic of China (Taiwan). He says he was motivated to make the daring break by President Carter's call for respect for human rights, pointing out there is in neither principle nor practice any regard in the People's Republic for the rights of individuals.

The irony is that the Carter administration only a few days earlier made a public commitment to improve its relations with the mainland, despite Peking's insistence that the United States break diplomatic ties and abrogate its mutual-defense treaty with Taiwan—where the pilot fled for freedom.

Secretary of State Cyrus Vance's June 30 speech on China and President Carter's remarks on it at his press conference the following day said nothing meaningful about the U.S. commitment to Taiwan. This ambivalent style in policy pronouncements presents Washington pundits as well as foreign observers with a now-familiar puzzlement over what the administration actually intends in practical terms.

The standard method is to enunciate a high-minded policy of great simplicity and moral rigor, and then to shade or obscure what these high principles mean in practice. The impression is spreading that the young ideologues carried over from the Carter campaign staff enunciate popular concepts for the domestic audience while older, wiser heads like Vance modify them to adjust to political realities in the international arena. After all, Carter can understand that an abstract moral position that unrealistically works against the security of U.S. allies and disturbs friendly U.S. relations with other nations is really neither moral nor wise.

Examples of this kind of ambivalent policy-making are the arms-control package Vance took to Moscow, subsequently watered down at Geneva; the Mideast negotiations pattern that has so far produced no movement toward Arab-Israeli peace; and—most confusing—the rhetorically fervid endorsement of human rights accompanied by a drive for closer relations with the world's most oppressive regimes: Havana, Hanoi and Peking.

The Carter administration says its position is based on the 1972 Shanghai Communique, which they interpret to be a promise to break diplomatic relations with Taiwan and abandon the mutual-defense treaty guaranteeing the security of Taiwan. Actually the Shanghai Communique is a masterpiece of diplomatic ambiguity, and both Richard Nixon and Henry Kissinger have recently said they did not explicitly promise to change our present relationship with Taipei. In fact, the only official elucidation of the Shanghai Communique, given by Kissinger in 1972, specifically stated that the U.S. mutual-defense treaty with Taiwan "will be maintained" along with "our friendship" and "our diplomatic ties."

Of course, Peking would like to have the plum of Taiwan dropped into its hands. Taiwan is the most modern, economically advanced part of China, having a standard of living three times higher than that of the People's Republic. Its 16 million Chinese conduct a larger foreign trade than all of the mainland's 950 million people. The catch is that none of these Chinese want to be incorporated in a Communist one-party dictatorship with a stagnant, command-type economy and an oppressive internal-security system modeled on the Stalin era in the U.S.S.R.

While political democracy in Taiwan is flawed by the continuation of a (largely theoretical) state of war with the mainland and occasional recourse to martial-law court procedures in trying internal-security cases, there is an open, pluralist society in Taiwan, and the goal toward which Taiwan is consciously and steadily moving in accordance with the Constitution of the Republic of China is representative government with firm guarantees of human rights. To consign a U.S.-oriented, pluralist Chinese society with a free-enterprise trading economy to dictatorial Communist Party control from Peking is not merely amoral—it is immoral.

The Carter-administration ideologues cop out on this moral dilemma by saying that somehow the United States will assure Asians of its intent to protect Taiwan's security despite cancellation of our formal treaty guaranteeing its defense. This will be the neatest trick of the year. The Japanese, the Koreans and the Chinese will never believe such a policy. Since the "peaceful life of the Taiwanese, the Republic of China" has been repeatedly guaranteed by Carter himself, only a superficial gimmickry of tacit assurances from Peking would permit moving ahead on Peking's terms. Such gimmickry cannot really protect the right to exist of the Western-oriented society in Taiwan, which is not only a longtime loyal U.S. ally but also the 40th largest independent nation in the world.

Accepting Peking's terms for full normalization would upset the strategic applecart in all Northeast Asia. The question is whether the wiser heads in the government who know these things will prevail over the pro-Peking ideologues when final decision-making reaches the presidential level. Only then will we know whether the MIG–19 pilot found freedom in Taiwan or whether he will in due time be delivered back to totalitarian control by U.S. China-policy officials.

[From the New York Times]

U.S. POLICY: BETWEEN THE TWO CHINAS

(By Edward N. Nuttwak)

WASHINGTON.—There is now a renewed pressure on the Carter Administration to accept Peking's conditions for the establishment of full diplomatic relations. In essence, these are that we abandon all diplomatic ties with the Government in Taiwan, and that we repudiate the defense treaty that remains the island's guarantee against an invasion from the mainland. The euphemistic code word is "normalization."

It seems that most of the Administration's China specialists have lost their earlier enthusiasm for "normalization." But now the pressure comes from a different direction, from those who are hawkish on United States-Soviet relations. Their argument is that we msut "activate" our China connection in order to put pressure on Moscow to reach a more accommodating stance across-the-board, and in the arms-limitation talks in particular. The claim is that Moscow can be forced to accept détente on American terms under the compulsion of the implied threat that otherwise we would begin arming Peking with all that our weapons technology has to offer.

This gambit appeals to the strategic instincts of many. But if we are to play *Realpolitik* for real, we had better first rearm in a fairly big way to cope with Moscow's obvious countermoves. Even so, we might lose more than we gain. For example, the Russians might react by sponsoring a North Korean attack against the South. This would not only punish us directly but it might also outmaneuver our own move, if Peking found itself compelled to compete with Moscow in supporting the North against the South, and ourselves. Whatever the war's outcome, United States cooperation with Peking would be unlikely to survive the strain.

But in treating Taiwan's 17 million people as expendable in a strategic chess game, we would lose more than we gained, even if we kept the arms salesmen out of Peking. For our relations with Taiwan have acquired a new significance in non-Communist East Asia as a whole.

Virtually every government in the area, and Japan's most of all, has gone out of its way to tell us that our conduct toward Taiwan is a key test of our long-term intentions in Asia. Abandoning Taiwan would be a clear signal that, under the aegis of "Eurocentrism," our Asian interests are merely contingent, and that only our European interests are permanent.

It is already being suggested in the Japanese press that our policy is essentially racist, and that that is why we complain of the brutalities of Moscow's policemen but not of Peking's.

For the leaders of the hundreds of millions in non-Communist East Asia, this is the moment of truth: Does the United States define its interests there in *substantive* terms—economic, social and cultural—or does it focus on the strategic payoff alone? Hence, the validity of Taiwan as a test case.

For Taiwan is the most successful of all developing societies, having managed to combine very high growth rates with a remarkably egalitarian distribution of wealth. This is the one high-growth country where there is no fault-line of development at the city limits of the capital. There is much the same standard of living in towns large and small, and in the countryside as well, as a result of land reform that actually worked.

To one who has visited the People's Republic, Taiwan presents a startling contrast. Both are nondemocratic, but Peking's totalitarian control reaches into every sphere of life, while Taiwan's rulers monopolize only political power itself, giving free play to economic, cultural and intellectual life. (Taiwan's press is rated as "semi-free" by the authoritative experts of Freedom House, in New York City.) In Taiwan one sees what Chinese free of dogma can achieve from pretty clothes to open discourse.

We should certainly have full diplomatic relations with Peking, but not if this means that we have to cut our ties with the largest group of Chinese in the world with whom we can freely trade and communicate. Still less can we abrogate a treaty that has long preserved the peace across the Formosa Strait.

The Soviet military divisions on China's border were sent there before we had any ties at all with Peking. They will remain there while we wait for Peking to waive its demands. The Russo-Chinese conflict is territorial, organic and permanent; abandoning Taiwan to change the nameplate of our liaison office into "Embassy" will not make that conflict any more useful for us, while prejudicing our repute for constancy all over the world.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I have no further need for time.

Mr. BAKER. Mr. President, I yield back the remainder of my time under the standing order.

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Virginia (Mr. HARRY F. BYRD, JR.) is recognized for not to exceed 15 minutes.

The Senator from Virginia.

THE 1976 TAX LAW AND ITS EFFECT UPON GIFTS AND ESTATES

Mr. HARRY F. BYRD, JR. Mr. President, in 1976, Congress passed legislation which affected every taxpayer.

Although the official title of the law is the "Tax Reform Act of 1976," many of the changes are proving to be detrimental to many taxpayers.

As the chairman of the Subcommittee on Taxation of the Finance Committee, I had hearings on July 25 which dealt with the consequences of the estate and gift tax provisions of the 1976 law.

The principal purpose of the 1976 law in the estate field was to reduce the tax burden upon small and medium size estates and to address the needs of farmers and small business owners who wish to pass their farm or business from one generation to the next.

A panel of four lawyers, each of whom is highly knowledgeable about the practical effects of the 1976 law, testified that the estate and gift tax provisions of the law are doing the exact opposite of what they were intended.

The 1976 estate and gift tax provisions have created an administrative nightmare and added to the complexity and cost of handling the affairs of a decedent.

The law as it now stands will have a disastrous effect over a period of years on small businesses and will aggravate the problem of the ever-increasing concentration of economic wealth and power in a few large corporations.

My colleagues in the Senate may ask, "How did this happen?" A close look at the legislative history of these provisions is instructive.

House consideration of tax reform first began in 1974, in the 93d Congress. In the next Congress, in December of 1975, a tax reform measure passed the House.

The House bill, H.R. 10612, was referred to the Senate Finance Committee on December 5, 1975, and contained no revisions to the estate and gift tax law.

In June of 1976, the bill was reported to the floor of the Senate by the Finance Committee. Again, no changes were made in the gift and estate tax law. However, during July, additional hearings were held in the Finance Committee and it adopted several committee amendments, which dealt in part with revisions of the estate tax law.

The objective of these amendments was to provide needed tax relief for small- and medium-size estates and farmers. Neither the hearings before the Senate Finance Committee nor the committee amendments focused on the subject of carryover basis.

When the Senate voted for final passage of the tax legislation in early August of 1976, the Finance Committee amendments were the only estate tax provisions in the bill.

These amendments raised the estate tax exemption, increased the marital deduction, and changed the valuation rules for farms.

The bill then went to a committee of conference between the House and Senate and it was there that significant changes were made.

In August of 1976, the House Ways and Means Committee reported to the House H.R. 14844, the Estate and Gift Tax Reform Act. This measure made a comprehensive change in the estate and gift tax laws, but was never taken to the House floor.

It was, however, with some modifications, presented to the conferees on H.R. 10612 as the House alternative to the Senate estate tax provisions.

The House Ways and Means Committee proposal was accepted by the conferees. Therefore, when the Senate voted on the conference report, it voted upon broad, far-reaching changes which it had never considered either in the Finance Committee or on the floor of the Senate. Likewise, the House had never considered such provisions.

The adverse effects of the lack of adequate consideration by either the Senate or the House of estate and gift tax changes are evident.

The problems associated with the new estate and gift tax law are numerous. Many of these problems relate to the carryover basis rule.

Under the estate tax laws, prior to 1976, the basis of assets owned by a decedent was stepped-up to their value at the time of their owner's death. Under the 1976 law, the decedent's assets are subject not only to an estate tax but to a sharply increased capital gains tax as a result of the carryover basis rule.

For individuals, the law adds a high degree of complexity which will be translated into increased professional and administrative costs.

It has been conservatively estimated that complexity doubled overnight due to the new law. It negated a trend toward simplification of the laws governing administration of decedents' estates.

To arrive at the appropriate carryover basis which the heir to the property will report upon the sale of the property, four different sets of calculations are now necessary. These calculations must be done for each asset in an estate.

It has been suggested that the most efficient way to perform these calculations may be by use of a computer, and a computer data bank may eventually be needed to handle even a modest estate.

Uncertainty is now a way of life under the new law. The cost basis for personal effects such as a dining room table or a family antique may have to be determined.

Records indicating the cost of these items, which may have been accumulated over a lifetime, are the exception rather than the rule. Yet without these records, the possibilities for disputes and litigation between the taxpayers and the Government are open ended.

Under pre-1976 law, death, because of the step-up in basis, operated as a statute of limitations upon the lack of adequate records.

This no longer exists, and now the Government can question transactions which occurred many years in the past. This is at a time when the person most intimately familiar with the transaction will no longer be available to explain what happened.

For small businesses, the new law has made the income tax, in addition to the estate tax, a significant consideration when the business' owner dies.

Under the old law, a widow who inherited a business from her husband was not too concerned with income tax problems because of the step-up in basis.

Now, the basis is the original cost of the asset to the owner, with some provision for a so-called fresh start.

Because a widow often wants to turn business decisions over to someone else, business assets are often converted to other income-producing property. The 1976 law now imposes upon her a large capital gains tax, in addition to the estate tax, and much of the capital gains tax arises from appreciation due to inflation.

What has happened is that, instead of reducing the estate tax burden upon small- and medium-size estates, the 1976 Tax Act actually increases taxes for many estates and vastly complicates the process.

The sale of the family business, even to a family member, has been made more costly and therefore less attractive.

There is, however, an alternative which the widow can follow. This is to merge the business with a larger publicly held company. In this way, she can receive the income-producing stock of the larger company, tax free.

The way in which the 1976 law encourages mergers between small businesses and larger companies can be further illustrated by looking at the typical growth pattern of a small business.

Many small businesses have their greatest growth in their early years. In later years, growth of the company levels off, and in some cases, growth may decline. This process corresponds with aging of the company's founder.

The "fresh-start" rule values the basis of the company's stock, for purposes of determining carryover basis, as of December 31, 1976. Under this rule to determine a fresh-start basis for unlisted securities, which encompasses nearly all small businesses, the growth in value of a company is arbitrarily prorated over the period covering the value at the date the company first began to the value at the date of death of the owner of the company.

With December 31, 1976, now behind us if the rapid appreciation in value of an older business slows down, the longer the owner-founder keeps his small business, the greater the amount of the total value of the business which will be subject to a capital gains tax.

Thus, the owner benefits by getting rid of his business; and instead of selling for cash and incurring a capital gains tax on the entire gain, the owner's best approach is to effect a tax-free merger with a large company

The new law, therefore, fails to deal with the real world growth pattern of small businesses and utilizes a formula which has detrimental tax consequences. The effect of the new law is to favor big business at the expense of small business.

Instead of encouraging the independence and continuation of small businesses, the 1976 law discourages their continued development and growth. The trend toward concentration of business activity in large entities is thereby accelerated, and the entrepreneurial skills and vitality which small businesses so uniquely contribute to our economic growth are lost.

For farmers, the 1976 law is a cruel hoax. It purports to give farmers relief but the relief it offers fails to encompass the real world problems which farmers and their families face.

Valuation rules which value a farm at the property's value as a farm rather than its highest and best use could be a potential benefit for many farmers. However, the 1976 law restricts the rules scope so that many deserving parties fail to qualify for it. Several letters which I will be inserting in the RECORD with my statement deal with this point in some detail.

These are just some of the examples of the problems in the 1976 law in the estate tax area. The consensus of the panel who testified before the Subcommittee on Taxation and Debt Management and of the constituents, with whom I have talked, is that we would be better off if we had never changed the law and the old law were still in effect.

This dramatizes what can happen when far-reaching legislation is never adequately considered by the House or Senate. The estate tax provisions were inserted by the committee of conference without consideration of their implications.

It is vitally important that Congress give attention to the practical results of the 1976 law and seek to mitigate its harmful effects. The carryover basis concept in the 1976 law must be revised and a simpler and more equitable approach developed in its place.

There are some solutions that might be offered which would make the new law more workable.

The 1976 law gives assets in an estate a fresh-start basis as of the end of December 1976. The computations involved in calculating this 1976 basis are a great source of complexity in the law. Permitting assets owned by a decedent prior to 1976 to fall within the provisions of the old law would be a great step toward alleviating some of the hardship caused by the new law.

A less desirable alternative which would still be better than the 1976 law would be to give taxpayers the option of either using the fresh-start formula or establishing a value independent of the formula. This would provide a taxpayer with the opportunity to adopt an approach which is simpler—and more fair—than the method employed in the 1976 law.

On this point, at the conclusion of my remarks, I shall place in the RECORD a statement by Erwin Griswold, former Solicitor General of the United States and former dean of the Harvard Law School. Dean Griswold is a tax law authority. His statement is an eloquent recital of the unforeseen consequences of our actions, particularly with regard to the carryover basis part of the law.

There are other changes which would reduce the problems for small businesses and farmers associated with the 1976 law.

Often, the primary source for a small businessman for the payment of estate taxes is the business itself. This is accomplished through a redemption by the small business of the former owner's stock, thereby giving the owner's estate cash upon which to pay estate taxes and to distribute to the heirs.

Section 303 of the income tax law sets forth requirements whereby such a redemption will qualify for capital gains rather than ordinary income treatment. The 1976 act placed stricter requirements upon the use of section 303. Relaxation of these requirements for qualification would be of great assistance to the small businessman.

Also, in connection with redemptions, establishing that the redemption of section 306 stock would lead to capital gains rather than ordinary income would clarify current uncertainty and continue methods for the sale of closely held businesses established before the 1976 law.

The 1976 Tax Act in the estate area was a triumph for those theorists who felt that the step-up in basis provision in our tax law was a major tax loophole because it afforded a taxpayer a means of avoiding payment of income tax upon the unrealized appreciation inherent in an asset by simply holding the asset until death.

I can only wonder how large such a loophole is when an individual must die to get the benefit of the loophole.

To me, a loophole is a special tax section which gives unfair advantage to one who has advantages already. It is very hard for me to understand why a man's death gives the individual such an unfair advantage.

The 1976 act seems to be a triumph of theory at the expense of practicality.

For whatever additional revenues the Government may gain, the price of these gains is uncertainty, complexity, and additional professional administrative costs for the taxpayer.

The Government has in effect told the small businessman and the farmer that it does not care about their problems and that it wants to see their life's work dismantled at death.

There is an old adage that nothing is more certain than death and taxes. I think that this should be amended to read that, after the 1976 Tax Act, there is nothing more certain than death and taxes and lawyers' and accountants' fees.

I agree with Mr. Justice Holmes' assertion that "taxes are what I pay for civilization." But has not the Congress gone too far in applying both a death tax and income—capital gain—tax on the same property?

Mr. President, I ask unanimous consent that certain statements and letters which I have received on the subject of the 1976 tax law be included in the RECORD as part of my statement. These documents are:

First, a statement presented to the Subcommittee on Taxation and Debt Management of the Committee on Finance by Erwin Griswold, former Solicitor General of the United States and former dean of the Harvard Law School and a tax law authority;

Second, a letter from Barring Coughlin, of Thompson, Hine & Flory, Cleveland, Ohio; and

Third, a letter by Bruce F. Snyder, vice president, Commercial National Bank of Peoria, Ill.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT PRESENTED TO THE SUBCOMMITTEE ON TAXATION AND DEBT MANAGEMENT OF THE SENATE FINANCE COMMITTEE WITH RESPECT TO THE CARRY-OVER BASIS PROVISION OF THE TAX REFORM ACT OF 1976

My name is Erwin N. Griswold. I am domiciled in Belmont, Massachusetts, but for the past ten years have been resident in Washington, D.C., where I am now practicing law.

From 1929 to 1934, I worked for the Federal Government, in the Solicitor General's office From 1934 until 1937, I was a member of the faculty of the Harvard Law School, and was Dean of that school from 1946 until 1967. In 1967, by appointment of President Johnson, I became Solicitor General of the United States. I held that office until June, 1973, when I retired.

Early in 1913, at the age of eight, I spent a period in the hospital when my appendix was removed. People brought me stamps and it was then that I began to collect stamps. At first it was simply a boyhood hobby. As I became older, though, I followed the stamp market closely, and was impressed with the fact that stamps can be a sound investment. I became well acquainted with the factors which make some stamps good investments, while others are not. I bought stamps from dealers and at auctions. This continued for a number of years, in a modest way, until there was an important change in the circumstances of my life.

In 1939, thirty-eight years ago, my wife had a serious case of infantile paralysis. She is completely paralyzed from the waist down. She is able to get about with crutches and braces, and with the use of a wheelchair. She does remarkably well, but she is severely handicapped. At the time of her illness, I was thirty-five and she was thirty-four, and we had two small children. I had heavy medical expenses, far exceeding my salary at the Harvard Law School. (As a matter of fact, it was my wife's case which led Randolph E. Paul, then General Counsel of the Treasury, to recommend to the Congress the adoption of the deduction for extraordinary medical expenses, now found in § 213 of the 1954 Code. I have never received any benefit from that deduction, since my wife's major medical expenses preceded the adoption of that provision.)

After my wife came home, my great concern was that there should be adequate provision to see that she was taken care of in the event that I was no longer here. I took out additional life insurance, and I tried to save and to make productive investments. Over the years, I invested more and more in stamps. There were two special reasons for this, apart from their investment potential: (1) they do not produce current income, and (2) they present almost no problem of conflict of interest.

Even as a law professor, I was concerned about possible conflicts of interest. This became even more important in later years when I was in Government service. In 1961, I was appointed a member of the United States Commission on Civil Rights by President Kennedy. I resigned this office in 1967, but then held the office of Solicitor General for nearly six years. Thus, I held federal office from 1961 to 1973, a period of twelve consecutive years. Particularly while I was Solicitor General, the ownership of shares in corporations, or, indeed, the ownership of investment real estate, could frequently have raised conflict of interest questions.

Consequently, I invested more and more in stamps. This had long since ceased to be a hobby. The stamps were kept in a safe deposit box. They have continued to be good investments, even when the market for securities has declined. Making adequate provision for my wife remained a primary concern for me, but as I was able to accumulate more and more, the pressure I felt about seeing that my wife would be properly cared for was slowly reduced.

No one in my family is interested in stamps. It was always my expectation that my executor would sell the stamps, and I have left instructions with him about dealers who might be used for that purpose. I fully understood that the value of the stamps would be included in my gross estate at the time of my death, and that was all right with me. I figured that there would be no problem about valuing them, because they would be sold shortly after my death.

One of the things that has given me great concern in connection with my efforts to provide for my wife has been ever-increasing inflation. Anything else that I have done has suffered from inflation. The insurance that I took out forty years and more ago served well for a while, but its purchasing power now is considerably reduced. Some municipal bonds which I purchased, as a part of the plan to avoid conflicts of interest, are worth less now than I paid for them. It is, of course, wholly appropriate that there should be an estate tax on the value of the stamps. But is it not really, as a practical matter, double taxation to add an income tax, too, when the increment in value is, to a considerable extent, simply a reflection of the inflation which has occurred over the past twenty or twenty-five years?

In the fall of 1976, with little warning, and no public hearings on this matter, the estate tax provisions of the Tax Reform Act of 1976 were enacted, including the provision for carry-over basis. With respect to securities, this provided a new start on January 1, 1977. With respect to other property, though, it becomes necessary to determine the cost, and there is a complicated allocation of the increment over cost. I have made no count, but in my case, I would guess at least ten thousand items, probably more, will be involved in this process, bought at different times for various prices, some times as single items, but often in groups for an unallocated lump sum, with the groups often broken up and re-arranged.

Moreover, for the most part, I have few, if any, records. Some of these stamps were bought as long as sixty years ago. (Part of the money which I earned as a pageboy in the East Cleveland Public Library while I was in high school was used to buy stamps.) These early purchases do not aggregate a great deal, but beginning in the 1930s, I bought more actively. I kept no detailed record of these purchases. I did not think it was necessary, since I had no expectation of selling the stamps while I lived, and thought that the date of death value would be the relevant figure if they were sold after I died. To some extent, I suppose that I can reconstruct the cost of some of the items by using figures on my checkstubs, if I can find my checkstubs back over a period of thirty or forty years. That will be very difficult for me to do, and it could, at best, cover only a portion of the items.

Even if the records could be put together, the computations would be extraordinarily complicated. For each item, a cost and a date would have to be determined, then a sale price, which may require an allocation if all the stamps should be sold in a single lot, or in several lots. That allocation would require valuing each item, so as to determine the portion of the sale price allocable to each item. Then a gain would have to be determined for each item, and the resulting gain would have to be allocated over the period from the date of acquisition to the date of death. As I have said, there are at least ten thousand items, probably more. It would be very difficult for me to do this. It will be virtually impossible for my executor to do it.

I have worked in the field of taxation most of my life. I have argued many federal taxation cases for the Government before the Supreme Court. I fully understand what Justice Holmes meant when he said that "Taxes are what I pay for civilization." And I have no objection to paying my proper taxes. Somehow or other, though, I have not been able to escape the feeling that I have been caught rather badly, and that the effect of the change of the law in 1976, as applied to me, may be unfair, and beyond the contemplation of Congress when the carry-over basis provision was so hastily enacted.

Like many others, my basic purpose has been to see that my wife is properly provided for. This is not altogether easy in her case. She is already considerably handicapped, and her condition may become worse in later years. From some experience I have had, I know that if she should require around-the-clock attendants, it will be hard to keep the cost below $50,000 a year. If that should last for ten or twelve years, or more, the aggregate could be considerable.

My basic objective was to provide for my wife. I thought I had found a way to do this, and at the same time minimize conflicts of interest in my academic and government work. This was seeming to work out well until the fall of 1976. Now, the practical problem confronting me is a very serious one.

Could the carry-over basis, if it is to be used, be made applicable to property *acquired* after the enactment of the 1976 Act? Gain on property previously acquired would still be subject to income taxation when sold by living owners. And there would be notice so that adequate records could be kept for use where the sale was eventually made by an estate. I know of the proposal that there be an optional valuation method which uses a percentage figure for determining increase in value after January 1, 1977. But the percentage suggested is too high. And this method is unfair as to property held for a long time before 1977. Thus, the figure mentioned is eight percent, which is to be compounded. That would mean that if death occurs ten years after January 1, 1977, virtually the whole increment would be treated as having occurred after January 1, 1977. This is unrealistic when it is clear that much of the gain arose prior to that date. Surely a lower percentage should be used, and some way should be worked out to apply it in such a way that all of the pre-1977 gain will not soon be wiped out.

There is an appeal, I know, in the carry-over basis idea. But, it may be a matter of carrying things to a dryly logical extreme. In view of the persistent inflation, it may be that the Federal Government gets its appropriate share when it takes an estate tax from a decedent's estate. To apply an income tax, too, on the gain which passes with the property and as a part of the property at the time of death, may be more than is appropriate. And the difficulties are especially great in a situation where there is no feasible way to establish the cost basis of much of the property involved.

Though these facts are necssarily highly personal, I present them for consideration by the Committee in the hope that they will show a concrete example of unforeseen consequences of the legislation enacted in 1976, and may lead the Committee to develop amending legislation which is more workable and more fair as a part of the over-all system of federal taxation.

THOMPSON, HINE AND FLORY,
Cleveland, Ohio, July 21, 1977.

HON. HARRY BYRD, JR.,
U.S. Senate, Russell Senate Office Building, Washington, D.C.

DEAR SENATOR BYRD: I note that you are conducting a hearing next week on estate and gift tax problems arising from the 1976 Tax Reform Act. From advance comment on the matter, I assume that you will be concerned also with the carryover cost basis for income tax under the Tax Reform Act.

I appreciate that the effect of the carryover basis provisions will not be very great in the immediate future. It will increase in time,

however, and over a period of years it is likely to produce such a disastrous effect on small business that it will seriously aggravate many of the social problems that have recently confronted this country. Three problems particularly impress me:

1. The carryover basis provisions make the tax burden at death fall most heavily on the owners of small businesses. The estate tax on some estates subject to that tax is actually somewhat reduced by the new law. However, the smaller estate is frequently required to sell assets for the support of survivors. If, for example, an estate consists of a small business worth $100,000, founded by the decedent, the widow will probably conclude that she must sell the asset in order to support herself, particularly in that a business of this size cannot usually afford to hire the necessary executives to succeed the owner-manager and still leave anything for the widow. So a business is sold which probably has a very small cost basis. A large capital gains tax (and the capital gains rate seems to steadily increase) will have to be paid. Of course there is no estate tax, but there would have been no estate tax under the old law. Thus the entire capital gains tax represents a great increase in the tax burden imposed on the widow, and it surely will not be contended that we are dealing here with a wealthy widow. Indeed, the income what is left of $100,000 will leave the widow somewhere in what is now considered the poverty class.

If the estate is large enough to be liable for estate taxes, there is a slight decrease under the Tax Reform Act in the amount of that tax, but it is much more than offset by the capital gains tax if the widow is compelled to sell. And she will be compelled to sell, in all probability, if the value of the business is much below $1,000,000. Above that figure, we begin to get into a range where she will probably be able to hire competent management and obtain dividends which will support her. At this point there is a small saving in estate tax and the capital gains tax can be postponed to a later generation. The shocking conclusion is that the 1976 amendments grossly increase the tax burden of the widow who is left in poverty or in modest circumstances while providing at least some decrease in tax burden for the widow who is left in wealth.

2. The carryover basis provisions tend to prevent the transfer of small business to younger executives. A favorite plan of small businesses, many of which are owned by those who work for them and make them succeed, is the buy-sell agreement under which, if any of the officer-owners dies, his interest in the corporation is redeemed by the corporation or sold to the surviving executives, who will in their turn make similar arrangements with younger men who will succeed to ownership positions. Even in the absence of a pre-existing agreement, a widow often sells her late husband's interest in a business to the younger executives. Obviously this is a socially desirable arrangement in preserving small businesses and in giving young men the hope of becoming owners of them.

Unfortunately, the arrangements, since the Tax Reform Act, result in capital gains. One method of escaping this problem is to get rid of the buy-sell agreement and permit the widow of the deceased executive to continue to hold the stock if the company is successful enough to be able to support her when she provides no services. This is not a desirable arrangement for a small business nor is it one which will make its continued success more probable. Another solution which the widow will think of to avoid the problem discussed in section 1 above is to cause the company to be merged into a publicly held company.

Under the old law, she could have sold out for cash, paid no capital gains tax and invested in diversified listed securities, suitable for providing security for her. Under the new law, she can produce an equivalent result only by causing the company to be merged into a listed company, preferably a conglomerate, so that she can obtain diversification of her investments by this means. Thus the new law tends to force small businesses into large businesses instead of encouraging their continued existence.

3. The December 31, 1976 valuation date also discriminates against small business. As you know, the basis of corporate stock held by a decedent is the quoted price on December 31, 1976 if the stock was publicly traded, while for securities for which there is no public market, the value on December 31, 1976 is arbitrarily deemed to be a value determined by proration from its acquisition to the value at the date of death. Unfortunately, many small companies have their greatest growth during their early years, the rate of increase in value tending to level off as companies approach their maximum potential, and as founders age. In some cases, values may in fact decline slightly as the owner ages and potential purchasers are less likely to want to buy knowing that new executives will soon be needed. This means, now that the critical date is behind us, that the longer the founder-owner keeps his business, the greater the proportion of its value that will be subject to capital gains tax. He will be well advised, therefore, to get rid of the business at the earliest possible date. If he sells it for cash, his entire gain is taxed. His only solution, therefore, is to merge.

There are two undesirable results of this provision: the discrimination against unlisted securities (usually those of smaller businesses) and the encouragement of mergers, which usually means that the acquiring corporation is a larger one. As you know, the new law has already forced the sale of a fine old New York newspaper to a chain.

The three evils of this law, the imposition of the heaviest tax burden on the middle class, the creation of difficulties in the way of younger executives who would like to acquire ownership of the business which employs them, and the discrimination against closely held and unlisted companies are all calculated to favor big business at the expense of small business. Tax rates at present levels inevitably have social effects, good or bad. Our federal tax structure has in many ways long favored the development of large and more impersonal institutions at the expense of smaller ones. The carryover basis provision is in this respect, at least, so unmitigated an evil that I find it hard to believe that the harm it will do was unintended by those who drafted it.

Very truly yours,

BARRING COUGHLIN.

COMMERCIAL NATIONAL BANK OF PEORIA,

Peoria, Ill., July 22, 1977.

Senator HARRY F. BYRD,
Dirksen Office Building,
Washington, D.C.

DEAR SENATOR BYRD: It is my understanding that you are conducting hearings in your Senate Finance Subcommittee on the problems arising from the Tax Reform Act of 1976. We are particularly pleased that you have seen fit to conduct this series of hearings, as we are quite concerned with a number of aspects of the legislation. Our particular concern at this time involves the new carry-over basis rules and the inequities created in the new farmland valuation rules in Section 2032(A).

I am attaching an exhibit of an actual estate for which we are executor, of a person who passed away January 17, 1977. In total, the decedent's estate amounted to approximately $1,030,000. The assets in the estate are quite varied and present many of the problems which we are now encountering in most of our estates because of the new carry-over basis rules.

The decedent in question did not have children and her property passes primarily to nieces and nephews who were not very conversant with the decedent's financial affairs. Although she had excellent records with respect to a number of the bond holdings which she had, the stock holdings are quite another story. As you will note, we do not have any information at all concerning the decedent's costs on the common stocks or her acquisition dates. As an example, she owned a total of 336 shares of A.T.&T. common stock represented by 13 different certificates with dates ranging from 1951 through 1964. We have no information as to whether or not certain of these securities were inherited or whether they were actually purchased by her. The burden of research in this matter rests squarely on the shoulders of the executor, who must provide beneficiaries with specific information concerning costs and acquisition dates of a decedent. It may or may not be possible to obtain information which would give some clue as to possible acquisition costs by getting transcripts of the stockholder's records from a stock transfer agent. However, such information would still not be accurate and would not provide any certainty as to whether or not an initial certificate date represented securities acquired by purchase, as it might have been transferred by gift or acquired in some other fashion.

Inasmuch as we must endeavor to uncover such information, the time and expense involved in developing approximate data will be substantial, with the ultimate cost of such research being borne by the estate and the ultimate inheritors.

If you will, this additional expense may be considered an additional hidden inheritance tax imposed by the Tax Reform Act of 1976.

You will note that the decedent owned a farm, and the farm was held in her family for a great many years. She managed the farm herself and employed an excellent tenant to do the actual farming. Inasmuch as the Internal Revenue Service regulations concerning material participation for income tax purposes did not require such an individual to pay self-employment taxes, our decedent did not pay any such taxes. On a very preliminary basis, we have tentatively placed a value on the farmland of $495,000, which is nearly half of the decendent's gross estate. We are confident that once a full appraisal of the property is made, the value will exceed half of the estate, which would qualify the property for the special valuation rules which would allow a substantial reduction in estate taxes. However, because of the terribly inequitable requirement for material participation, it appears to us that relief as provided under Section 2032(A) will not be available to this estate. Had the decedent gratuitously paid self-employment taxes for the five years preceding her death, the property probably would qualify. I will discuss another specific situation which we have involving a similar circumstance later in this letter.

You will also note that there are a few valuable antiques for which we have no information as to basis, and I would be willing to suggest that few people in the country have any such records. The same sort of comments may be applied to most valuable family artifacts, paintings, stamp collections, and other items which most people have and for which they have no records at all.

I should like to comment again on two specific instances involving the special farmland valuation rules provided in Section 2032 (A). We have an elderly widower who has a moderate investment in farmland and has actively managed the property for nearly forty years. The property will represent more than 50% of his adjusted gross estate. He was able to quickly pay self-employment taxes for 1976 and will pay them in 1977.

Under the terms of his Will, the property is left in trust for a period of years to protect certain of his heirs.

It appears to us that if he survives three more years and pays self-employment tax on his farmland and if he amends his Will with some special language provisions, his estate and his heirs will receive a substantial reduction in federal estate taxes.

We also have a widow for whom we became conservator in December of last year. This lady's assets are quite similar to those of the widower discussed above, as she has a substantial farmland investment which has been in her family for three generations. The property is to be held in trust for the benefit of an incompetent son, and a daughter. Because of the widow's legal incompetence, it is impossible to amend her existing Will to insert language which would otherwise qualify the property for the special exemptions in Section 2032(A). Further, because of her incompetence, there is no opportunity to pay self-employment taxes on her farm income to meet the material participation test required by the law. As a consequence, her estate and her heirs will pay a substantially higher federal estate tax than our widower's estate. I wish to emphasize that the circumstances of each of these two persons are nearly identical, but the ultimate outcome in terms of federal estate tax will be far different and grossly inequitable.

In summary, we urge consideration of technical amendments which will eliminate the great administrative problems created by the carry-over basis rules and the gross inequities imposed by the material participation requirements of Section 2032(A).

Very truly yours,

B. F. SNYDER,
Vice President.

The ACTING PRESIDENT pro tempore. The Senator's 15 minutes have expired.

Mr. HANSEN. Mr. President, I would be happy to yield such time to the Senator from Virginia as he wishes. I think what he is saying is extremely important.

Mr. HARRY F. BYRD, JR. I thank my dear friend from Wyoming. At the end of the Senator from Wyoming's speech, I would like to make a few comments.

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Wyoming (Mr. HANSEN) is recognized for not to exceed 15 minutes.

ESTATE TAX REFORMS

Mr. HANSEN. Mr. President, first of all, let me express my gratitude and the appreciation of Members who will yet have the opportunity to read what Senator BYRD has addressed this afternoon. I think he has made a very significant contribution toward the understanding and possible solution or mitigation of a very real problem.

I also would like to thank the distinguished chairman of the subcommittee for holding hearings on the administrative problems of the estate tax reforms.

This is an area that does not generate necessarily a lot of interest because it is not the sort of issue that grabs headlines in the newspapers. Yet what the average American fails to understand today is that sooner or later he is or his heirs are going to learn firsthand about this carryover basis. I do not think the average American has any idea at all of what we did, the members of the Committee on Finance, and the members of the Committee on Ways and Means, last year in passing the bill to which the Senator from Virginia has alluded.

Mr. President, one of the attorneys on my staff tells me that when she was in law school, the highest grade that was ever awarded was scored in a tax class by a fellow who majored in Chinese. The professor of the class assured the students that there was a very high correlation between the fellow's ability to read Chinese and his ability to understand the Internal Revenue Code. I can appreciate that professor's observations.

Mr. President, I do not pretend to be a skilled technician in tax matters. I do believe, however, that over the years that I have served on the Finance Committee I have come to understand some theories of tax policy. Today, I should like to address an area of the tax law where it appears to me that the technicians and theoreticians have so skewed the tax law as to undermine the very credibility of the system. I refer to the so-called reforms of the estate tax law brought about in the Tax Reform Act of 1976.

As an historical matter, the estate tax has not been an important source of Government revenues. Since World War II, the Federal Government has collected $40 to $188 billion annually. Of this amount, estate and gift taxes have yielded only between $0.5 and $3.5 billion a year. Some tax experts estimate that even a plain escheat measure would only yield about 5–8 percent of Federal revenues. That is if the Government took it all they would get insofar as Government financing only from 5 to 8 percent of the amount of money that goes into Federal tax revenues.

But the theorists have nonetheless insisted that we have an estate and gift tax. Some of those theorists have been politicians. In a 1906 message to Congress, advocating a progressive inheritance tax, President Theodore Roosevelt said:

[T]he prime object should be to put a constantly increasing burden on the inheritance of those swollen fortunes which it is certainly of no benefit to this country to perpetuate.

A little earlier, in a speech on the occasion of laying the cornerstone of the House of Representatives office building, he had been a bit more detailed:

I feel that we shall ultimately have to consider the adoption of some such scheme as that of a progressive tax on all fortunes, beyond a certain amount, either given in life or devised or bequeathed upon death to any individual—a tax so framed as to put it out of the power of the owner of one of these normous fortunes to hand on more than a certain amount to any one individual; the tax, of course, to be imposed by the National and not the State Government. Such taxation should, of course, be aimed merely at the inheritance or transmission in their entirety of those fortunes swollen beyond all healthy limits.

Others have been the very people who amassed the great fortunes of America. Andrew Carnegie said:

The growing disposition to tax more and more heavily large estates left at death is a cheering indication of the growth of a salutary change in public opinion. . . . Of all forms of taxation this seems the wisest. Men who continue hoarding great sums all their lives, the proper use of which for public ends would work good to the community from which it chiefly came, should be made to feel that the community, in the form of the State, cannot thus be deprived of its proper share. By taxing estates heavily at death the State marks its condemnation of the selfish millionaire's unworthy life. . . . This policy (of taxation) would work powerfully to induce the rich man to attend to the administration of wealth during his life, which is the end that society should always have in view, as being by far the most fruitful for the people. Nor need it be feared that this policy would sap the root of enterprise and render men less anxious to accumulate, for, to the class whose ambition is to leave great fortunes and be talked about after their death, it will attract even more attention, and, indeed, be a somewhat nobler ambition, to have enormous sums paid over to the State from their fortunes.

I ask that Senators mark the rhetoric these men used. They talk about swollen fortunes and selfish millionaires and healthy limits on fortunes. They were not talking about the modest accumulations of many Americans, which are often swollen more by inflation than by greed.

Against this theoretical background of an estate tax designed to break up enormous fortunes, we have put in place a system of taxation which reaches far beyond the original goal of deterring the robber barons from pillaging the workers in our country and to keep those same industrialists from amassing monopolistic cartels. What we have now cuts far deeper than that. The estate tax cuts deeply into the economic life of middle America, and hits our farmers and small businessmen, whose fortunes, if they may indeed be called fortunes, have been amassed by hard work and personal independence, and swollen as much by inflation as by diligence.

At the same time that the theoretical basis of the estate tax has changed, making the tax more widespread, the tax has become technically unmanageable. Now, as I said earlier, I am not a technician in tax matters. However, I could not help but be impressed, and perhaps a little depressed, too, at the testimony the Finance Committee received on July 25 from four tax practitioners, telling us of the nightmares they and their clients have in trying to plan for the future in a meaningful way. One of the attorneys went so far as to say that contempt for the new estate tax rivals even the disdain for OSHA.

Why do citizens so loathe the new reform? They loathe it not because they are required to pay the tax. Americans are remarkable in their willingness to do their duty in paying taxes. They loathe the new tax because all of the academic theorists tell them and their heirs that death is a loophole, and that no one has a right to take advantage of a loophole by the mere fortuity of dying. So those same academics brought us a concept called carryover basis to close the loophole of dying.

In testimony before the Finance Committee, Ms. Doris Blazek cited many of the evils of the carryover basis. She noted the concept provides for four possible adjustments to basis which are to be effected by a series of incredibly complicated calculations, which can probably be handled effectively and efficiently only by large computer operations. Moreover, the reporting requirements apply to all

recipients of property of a decedent if no executor is qualified and there are severe penalties in instances where it will be impossible to comply with the requirements of the law. The beneficiaries do not appear to be bound by the basis determination made by the executor. Accordingly, basis issues may remain unresolved for several generations.

She also cited serious economic impacts. Small estates may pay more in tax under the Tax Reform Act with carryover basis than under prior law contrary to the policy implicit in the unified credit and new marital deduction to relieve small estates from tax burdens at death. The cumulative tax rates on medium and large estates will be so great that they will impede equity investments and the incentive to build an estate. Carryover basis as written will not accomplish the presumed objective of placing the taxpayer whose estate sells after death in the same position as the taxpayer would have been had he sold prior to death. Finally, carryover basis pits beneficiary against beneficiary on standard issues arising in estate administration, and litigation will be fostered.

The situation of pitting beneficiary against beneficiary is a problem which causes me special concern, largely because out in my own State of Wyoming, a large portion of estates is represented by family businesses and ranches. Now supposedly, the Tax Reform Act gave special treatment for the valuation of those ranches and businesses. The act provides that, if certain conditions are met, the executor may elect to value real property included in the decedent's estate which is devoted to farming or closely held business use on the basis of that property's value as a farm or in the closely held business, rather than its fair market value determined on the basis of its highest and best use. However, this special use valuation cannot reduce the decedent's gross estate by more than $500,000. That limitation is artificially low.

But, Mr. President there is a catch to this so-called benefit. The act provides that if, within 15 years after the death of the decedent, the property is disposed of to nonfamily members or ceases to be used for farming or other closely held business purposes, all or a portion of the Federal estate tax benefits obtained by virtue of the reduced valuation are to be recaptured. This recapture provision is to apply not only where the qualified real property is sold to nonfamily members, but also where the property is disposed of to nonfamily members in a tax-free exchange or where the property is disposed of under an involuntary conversion, rollover, or similar transaction. I would suggest, Mr. President, that this 15-year limitation is a long, long time.

Mr. Lewis Costello, in his testimony before the Finance Committee made the point succinctly. I quote now from his testimony:

Farming today is a low profit, high volume, capital intensive business. A typical 200-acre farm in my area now will cost for land $200,000 to $350,000 and require extensive additional investment otherwise. Financing is a continuous process. No farmer starting out, nor any heir, of even the oldest and most skilled farming family will get by without financing.

The Tax Reform Act of 1976 was built by theoreticians in an "other world" concept without adequate comprehension of real world problems.

A 15-year payment period for taxes will not really benefit farmers much. No lender will advance funds to an heir without this tax being paid, and virtually no farming operations with which I am familiar have gone 15 years without refinancing. This provision without the ability to refinance the tax lien will not help a great deal in the practical world.

The problem of a minor beneficiary, without the legal capacity to consent, and the duty of the Executor to get approval and file necessary elections for special use valuations is likewise a substantial impairment. Elections will not be available in many cases where needed most.

Elections even if available theoretically will be of limited use. The farm family most often has more than one child, and the children are to be treated equally. One child will normally have to buy out his brothers and sisters. Where the purchase is made from the estate under will provisions permitting such a purchase by one or more of the heirs, the qualification for deferred treatment may be jeopardized, and use valuation will be lost, since the property would neither be "acquired from" nor "pass from the decedent" and the additional income tax and estate tax triggered.

The disqualification of leased lands may force older parents to dispose of the family farm since the lease, even to a family member does not appear to qualify. The loss of the independence of property ownership by the older generations is a questionable virtue.

The existence of a valuation trap will mitigate against the use of special valuation. The triggering by disposition apparently results in a recapture of estate tax, a loss of special valuation, and a capital gains tax without any step up in basis that would otherwise occur if the higher valuation was used originally.

Finally, Mr. President, I note that for small businessmen and ranchers, we have further complicated the issue by taxing so heavily the gains from the sale of an asset held for a lifetime. Let me read part of a letter from constituents of mine:

My husband and I are very much concerned and disturbed about the retroactive tax imposed September, 1976, made retroactive to January, 1976.

We spent 50 years hard labor putting a small ranch together. We were forced to sell caused by my husband loosing a leg. We built our own retirement.

We sold the ranch after consulting legal advice and did what we were advised to do. We paid an extra $11,000 tax doing it this way which we thought best, then to have such a law go into effect retroactive and cost us so much more tax. This was under sale contract in 1975. We took 29 percent down in 1975. Our big payment of 71 percent came in 1976, 71 percent January 10, 1976. We feel the minimum tax was very unfair to us and to others in similar circumstances.

We were not able to change our plan after the surprise attack.

This is a tough blow to people that have planned ahead in life so they can support themselves and not be a burden to the public.

A sliding scale capital gains tax would help solve this problem. Yet, in the face of this honest attempt hard-working people have made to plan sensibly and honestly for the future and for their families, we hear more and more about closing loopholes. It just does not make sense.

Mr. President, we must take responsibility for the low esteem in which many hold us. We rely on the good faith of the people to do their duty, and we reward their faith in us by passing legislation which even professionals cannot fully understand. Mr. President, I intend in the future, as we debate about true tax reform, to take those steps which will show Americans that we in Congress do live in the real world and that we have a genuine interest in honoring families and their integrity as they plan for their futures. If we must choose between perfection of theory and decency in practice I shall choose decency in practice.

The ACTING PRESIDENT pro tempore. The Senator from Virginia is recognized.

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that a statement by the Senator from Kansas (Mr. DOLE) be printed in the RECORD at this point. I do this at his request.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT OF SENATOR DOLE

The Tax Reform Act of 1976 made significant changes in the taxation of estates and gifts. These changes especially the carryover basis provisions affect almost everyone in this country.

RELIEF TO SMALL BUSINESS

There seemed to be agreement in Congress last year that some estate tax relief should be given to farmers and small businessmen. The Congress increased the martial deduction, enacted a unified credit in lieu of prior gift and estate exemptions and a special use valuation for real property. However, many of the benefits sought to be accomplished have been either eliminated or at least reduced by the enactment of the carryover basis provision.

Under prior law, the cost or other basis of the property acquired from a decedent was "stepped-up" to its fair market value at the date of death. Section 2005 of the Tax Reform Act of 1976 added section 1023 to the Internal Revenue Code. Simply stated, that section provides that with certain modifications, a decedents' predeath Federal income tax basis will now carryover to his estate and ultimately to the beneficiary irrespective of the value reflected in his Federal income tax return.

KANSAS SURVEY

This provision is riddled with a number of transitional rules. It is complicated and very difficult to administer. Recently, I sent a letter to Kansas attorneys and certified public accountants requesting their opinions and insights on a number of tax matters. There is almost complete agreement among the respondents that the carryover basis provisions are arbitrary, inequitable, and that compliance is expensive.

Recently the Subcommittee on Taxation and Debt Management chaired by Senator Byrd, held hearings on carryover basis problems. I commended the distinguished Senator from Virginia for calling public attention to this issue.

Even though the new unified credit will eliminate all Federal estate tax filing requirements for about 90 percent of the estates, the remaining percentage results in a number of affected estates which is large in any absolute term and includes an extremely large proportion of the small business, agriculture, executive and entrepreneurial population.

CURRENT LAW COMPLICATED

Unfortunately, the population affected by this provision, in many instances cannot afford the legal specialists to interpret the law. In some cases it can take hours of research and calculations to determine the basis of a single asset

The calculations to be made are incredible. Even after the basis is established the new law provides for four possible adjustments to basis. Each adjustment turns on calculations made in the preceding adjustment.

The adjustments must be made with respect to each asset. Even a modest estate will have a number of different assets. Moreover, there may not be one but several bases for a single asset since the adjustments in value are made only for the purpose of determining gain, not loss.

CONGRESSIONAL REVIEW NEEDED

Ironically the estate tax provisions that were designed to help the American farmer have turned out to be illusory. Farmer families are now faced with a burdensome tax on appreciation largely caused by inflation.

I believe it is time for the Congress to take another look at this problem. Many of the estate provisions enacted last year did not receive the proper attention. The Senator from Kansas looks forward to working with Senator Byrd and other members of the Finance Committee in easing the hardships caused by this provision.

PUBLIC FINANCING OF SENATE ELECTIONS

The ACTING PRESIDENT pro tempore. The Senate will now proceed to the consideration of the pending business, which the clerk will state.

The legislative clerk read as follows:

A bill (S. 926) to provide for the public financing of primary and general elections for the United States Senate.

The ACTING PRESIDENT pro tempore. The Senator from Oregon is recognized.

Mr. HATFIELD. Mr. President, as each day of debate has passed, more and more deficiencies in Senate bill 926 have surfaced in this Chamber. Again, I rise to bring a further drawback to the attention of the Senate and the American people.

I address specifically section 502(c) of this bill. In part, that section states the following:

(c) To be eligible to receive any payments under section 506 in connection with his general election campaign, a candidate must certify to the Commission that—

(1) He is the nominee of a major party for election to the United States Senate; or

(2) He is not the nominee of a political party, and

(A) Received, in the preceding general election for the same Senate seat, 25 percent or more of the total number of votes cast in that election for all candidates for that seat, and was not the nominee of a political party in that election, or

(B) Was not a candidate in the preceding general election for the same Senate seat, but received, in the preceding general election for the other Senate seat from the same State, 25 percent or more of the total number of votes cast in that election for all candidates for that seat, and was not the nominee of a political party in that election.

Mr. President, translated into layman's language, this section will discourage political realinement by Senators who might want to leave their political party and run for reelection as an independent. If they did so, they would not be eligible to receive the 25-percent public financing block grant available in this bill to major party candidates. In fact, they would not be eligible for any public financing funds at all, unless they were to qualify by meeting the threshold requirement imposed by S. 926 on third-party and independent candidates.

Mr. President, there is an interesting twist to all of this. If the incumbent's principal opponent had run as an Independent for a Senate seat in the preceding general election and received 25 percent or more of the vote, that independent candidate becomes eligible for a block grant under this bill. It is, therefore, conceivable that an incumbent who determines to run as a minor party or Independent candidate could be confronted with two or three opponents, benefiting from the block grant, while he would be ineligible to receive such funds.

This provision of S. 926 will disable minor parties from attracting to their ranks known political figures. It becomes increasingly apparent that S. 926 will preserve the status quo and discourage defections from the major political parties.

Let me illustrate the point by an actual example. If S. 926 had been law back in 1970, our esteemed colleague from Virginia (Mr. HARRY F. BYRD, JR.), who decided at that time to run for reelection as an Independent, would not have qualified for the block grant, even though his opponents from the Republican and Democratic Parties would have received these funds. Senator BYRD, a proven votegetter would have been placed in a precarious financial position by reason of the Federal law. His less popular opponents would have enjoyed an immediate and undeserved funding advantage over him. Such a result is absurd on its face, but is wholly predictable if this bill is enacted. While I do not believe party defections should necessarily be encouraged, we must not place impediments to those defections by the unfair allocation of public funds.

Mr. President, such an encumbrance on the free flow of political candidates and issues should not be tolerated. This provision is yet another reason why the Senate should reject any attempt to invoke cloture on S. 926 at this time.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield at that point.

Mr. HATFIELD. I am happy to yield to the Senator from Virginia.

Mr. HARRY F. BYRD, JR. May I ask the Chair the time situation?

The ACTING PRESIDENT pro tempore. The time is not under control. At 4 o'clock, there will be a live quorum call.

Mr. HARRY F. BYRD, JR. Mr. President, I would like to pursue in some detail the points raised by the able Senator from Oregon. Because under a previous agreement a live quorum will be sought at 4 o'clock and the vote on cloture taken thereafter, there is only about 8 or 9 minutes available between now and 4 o'clock, which it seems to me will be totally inadequate to covert the subject raised by the Senator from Oregon.

For that reason, I shall delay until a later time, and, hopefully, the Senator from Oregon and the Senator from Virginia could discuss this in a little more detail.

The point raised by the Senator from Oregon is a very important one, a very valid one, and one which, as he indicated in his remarks, should be considered before the Senate concludes to invoke cloture on this vitally important bill which, in the long run, will be so very expensive to the taxpayers of our Nation.

Mr. HATFIELD. Mr. President, I heartily agree with the Senator from Virginia, that this does raise, I believe, a very significant issue in relation to this bill. I would be happy to engage in a colloquy with the Senator from Virginia at a time when we could complete the colloquy in a series of questions, if that is the way the Senator would like to pursue it.

I used the Senator as an example in raising this issue today, being very conscious of the fact that I could have raised the issue as it related to a Senator from Oregon, the late Senator Wayne Morse, and as it might relate to other Senators in the past or in the future.

As the Senator from Virginia knows, Senator Wayne Morse was elected as a Republican Senator from the State of Oregon, then changed his party affiliation to Independent, and then to Democrat in that sequence. Naturally, as a member of the Republican Party, and one who had been a loyal and long supporter of Senator Wayne Morse, I was very disappointed that he saw fit to leave my party. But that, nevertheless, was his right, and I would defend it. I did defend his right to leave the Republican Party as he felt he must do under his convictions.

I am aware that this has occurred not too frequently in our political history. To change is one of the freedoms people have. It is as much a freedom as the individual voter enjoys when he goes to the polling place and may vote despite his party registration for any candidate in the race.

I would like to feel that we are not encumbering that freedom or inhibiting that right in this bill.

There are hopes on the part of some of us that some day we can persuade the Senator from Virginia to take the next step as the late Senator from Oregon did in his party transition. But that is not the issue at the moment. The issue is strictly that of the right of any Senator, any Congressman, any person in this country to make his party affiliation not a life-long commitment. If he decides that it no longer represents his basic political philosophy he certainly has that right to change and to continue his public service, if that be the desire of his constitutents, under a different party label.

That is the freedom, that is the right, which I think is encumbered in the bill and why I raise the issue.

I would like to go into it in more specific detail with the Senator from Virginia, probably if not today then later in some succeeding session.

I just want to emphasize again that this particular provision penalizes and

encumbers that right—it does not destroy the right but it certainly encumbers it—and makes inequitable the standing of candidates who have reached thresholds, who have qualified under the election procedures in their States. It does penalize and discriminates in those instances.

I suppose as one who has followed somewhat of an independent political course in my own 27 years in political office, to the extent that my own State party chairman publicly invited me to change my registration to Democrat. I like to protect that independent role for any Senator, whether he be Republican or Democrat.

Mr. HARRY F. BYRD, JR. I might say to the Senator from Oregon the example he used, namely the late Senator Wayne Morse of Oregon. is a somewhat different situation in that he was elected as a Republican and after being elected he became an independent. But before running for office again, he became a Democrat.

As the Senator from Oregon indicated, it is undesirable to put additional burdens, unfair burdens. or burdens not shared by other candidates. on an independent. An independent has a difficult enough role under the best of conditions.

As evidence of that. I point out that only twice in the history of the Senate has anyone been elected as an independent, the first being the Senator from Nebraska, Senator George W. Norris.

Senator Norris was a Republican. He thought the Republican Party was too conservative. In 1936 he wished to support President Roosevelt for reelection. In order to do so. he become a candidate for reelection to the Senate as an independent.

The Senator from Virginia had a somewhat different situation. The Senator from Virginia had been elected to the Senate in 1966 as a Democrat. In 1970, the State central committee attempted to impose an obligation on the Senator from Virginia, to require the Senator from Virginia to take an oath which the Senator from Virginia thought was an improper one, and one which the Senator from Virginia would not take. As a result, the Senator from Virginia sought reelection as an independent.

It is a very difficult way to run. All the party machinery of both political parties is in opposition. In seeking today to improve the pending legislature in so far as independents are concerned. I am not acting from a personal point of view. For myself, if I could survive 1970, with the newly elected Republican Governor campaigning full time against me and every Democratic statewide elected official in opposition to me—if I could survive 1970—I think I can survive whatever this bill might do. So I am not concerned, personally. But I do think it is unwise to put unreasonable obstacles in the way of independent candidates.

The two great major political parties are here to stay—and the advantages lie with the candidate of those parties. But every once in a while there are valid reasons why a person would seek office as an independent—and that person should not be frozen out of the electoral process.

I thank the Senator from Oregon for bringing up this particular point. At a later date I would like to go into it more fully.

Mr. HATFIELD. I thank the Senator from Virginia for his observations. I might say I have already introduced an amendment relating to the third parties and independent candidates in order to try to remove this particular discrimination, and other biases which this bill incorporates as it relates to third parties and minor parties.

Mr. ALLEN. Will the Senator yield 2 minutes?

Mr. HATFIELD. I would be happy to yield the floor and turn the floor over to the distinguished Senator from Alabama.

Mr. ALLEN. I thank the distinguished Senator.

This has been called a Republican filibuster. I submit if all the Republicans voted against cloture, and if there had not been a small group, a very effective group, of Democrats led by the distinguished Senator from Louisiana (Mr. LONG), who has been called the father of the checkoff, cloture would have been invoked long ago.

I am hoping that this bill will be brought down after the cloture vote today. I hope we will have an opportunity to knock out part 1 and leave part 2, because part 2 is a very important provision.

The PRESIDING OFFICER (Mr. MOYNIHAN). The time of the Senator has expired.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the distinguished Senator may proceed for an additional 2 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLEN. I thank the distinguished Senator. The majority leader is always accommodating.

The history of this bill is that there were two bills in the Committee on Rules, one providing for public financing, one making some necessary reforms based on experience we have already had in political campaigns under the Federal election campaign law. I am hopeful that we shall drop part 1 and adopt part 2, because this is very necessary.

AMENDMENT NO. 635

Mr. ALLEN. I am sending an amendment to the desk at this time, not expecting a vote now, but so that it will be the pending business after the next cloture vote. I ask that it be stated.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from Alabama (Mr. ALLEN) proposes amendment No. 635

On page 19, strike all starting with line 16 through page 41, line 4 (all of part I).

Mr. CANNON. Mr. President, I send an amendment to the desk to part II of S. 926 and ask that it be stated.

The PRESIDING OFFICER. There is a pending amendment.

Mr. ALLEN. I sent up an amendment knocking out public financing but leaving the reform legislation.

Mr. CANNON. Mr. President, I ask unanimous consent that it be in order for Senator ALLEN'S amendment to be temporarily laid aside in order that I may report my amendment under the rule in the event there is cloture.

The PRESIDING OFFICER. Is there objection?

Mr. ALLEN. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLEN. I believe the Senator has until the end of the cloture vote to file an amendment but I have no objection.

UP AMENDMENT NO. 707

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Nevada (Mr. CANNON) proposes unprinted amendment No. 707.

Mr. CANNON. Mr. President, I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 70, between lines 16 and 17, insert the following:

VOTING SYSTEM STUDY

SEC. 302. The Federal Election Commission, with the cooperation and assistance of the National Bureau of Standards, shall conduct a preliminary study with respect to the future development of voluntary engineering and procedural performance standards for voting systems used in the United States. The Commission shall report to the Congress the results of the study, and such report shall include recommendations, if any, for the implementation of a program of such standards (including estimates of the costs and time requirements of implementing such a program).

Mr. CANNON. I thank the Senator for allowing me to present this amendment.

I now ask unanimous consent that the Senator's amendment be laid down as the pending amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

CLOTURE MOTION

The PRESIDING OFFICER. The hour of 4 p.m. having arrived and 1 hour having passed since the Senate convened, the Chair lays before the Senate the pending cloture motion, which the clerk will state.

The legislative clerk read as follows:

CLOTURE MOTION

We, the undersigned Senators, in accordance with the provisions of rule XXII of the Standing Rules of the Senate, hereby move to bring to a close debate upon S. 926, a bill to provide for the public financing of primary and general elections for the U.S. Senate.

Robert C. Byrd, Dick Clark, Alan Cranston, Edward M. Kennedy, Gary Hart, Mike Gravel, Adlai E. Stevenson, John A. Durkin, Spark M. Matsunaga, Wendell R. Anderson, James Abourezk, Joseph R. Biden, Jr., Howard M. Metzenbaum, Claiborne Pell, Patrick J. Leahy, Harrison A. Williams, Jr., John Glenn, Gaylord Nelson, Walter D. Huddleston, William Proxmire.

CALL OF THE ROLL

The PRESIDING OFFICER. Pursuant to rule XXII, the Chair now directs the

clerk to call the roll to ascertain the presence of a quorum.

The assistant legislative clerk called the roll and the following Senators answered to their names:

[Quorum No. 22 Leg.]

Abourezk	Glenn	Metzenbaum
Allen	Goldwater	Morgan
Anderson	Gravel	Moynihan
Baker	Griffin	Muskie
Bartlett	Hansen	Nelson
Bayh	Hart	Nunn
Bellmon	Haskell	Packwood
Bentsen	Hatch	Pearson
Biden	Hatfield	Pell
Brooke	Hathaway	Proxmire
Bumpers	Hayakawa	Randolph
Burdick	Heinz	Ribicoff
Byrd,	Helms	Riegle
Harry F., Jr.	Hollings	Roth
Byrd, Robert C.	Huddleston	Sarbanes
Cannon	Humphrey	Sasser
Case	Inouye	Schmitt
Chafee	Jackson	Schweiker
Chiles	Javits	Scott
Church	Johnston	Sparkman
Clark	Kennedy	Stafford
Cranston	Laxalt	Stennis
Culver	Leahy	Stevens
Curtis	Long	Stevenson
Danforth	Lugar	Stone
DeConcini	Magnuson	Talmadge
Dole	Mathias	Thurmond
Domenici	Matsunaga	Tower
Durkin	McClure	Wallop
Eagleton	McGovern	Weicker
Eastland	McIntyre	Williams
Ford	Melcher	Young
Garn	Metcalf	Zorinsky

The PRESIDING OFFICER. A quorum is present.

ADDITIONAL STATEMENTS SUBMITTED

Mr. LAXALT. Mr. President, as many of my colleagues are aware, I was an active participant in one of last year's major presidential campaigns. As the national chairman of Citizens for Reagan, I had a first-hand view of the operations of public financing at the presidential level and that experience alone was more than sufficient for me to oppose strongly its extension to congressional elections as proposed by S. 926.

Not only was the Federal Election Campaign Act of 1974 emminently subject to constitutional challenge, but parts of it were, in fact, successfully challenged in Buckley against Valeo. Despite valiant efforts by all concerned to avoid having the court challenge disrupt the conduct of the 1976 primary campaigns, this challenge consumed over 13 months. What is more, I can personally attest to the fact that the Reagan campaign was seriously disrupted in a way which, in view of the ultimate closeness of the outcome, could have proven decisive.

Along with certain expenditure limitations, Buckley against Valeo struck down the composition of the Federal Election Commission but left standing limitations on contributions. The effect of this action was to cut off Federal subsidies during the most critical part of the primary campaign while leaving in tact limits on contributions. Thus, the Reagan campaign during three decisive months found itself hamstrung while Congress labored to pass a new law which would provide an Election Commission more in accord with article II of the Constitution.

During that time, contribution limitations were in force but Federal monies not forthcoming and potentially decisive opportunities were lost to the Reagan campaign in States such as Ohio and New Jersey for want of adequate funding. Indeed, in 1976 the Reagan campaign was without Federal money for over 90 percent of the primaries, everything after Illinois.

My point is this historical degression is a simple one. Congress in 1974 under political pressure hurriedly passed a constitutionally questionable law and presidential candidates in 1976 paid for it when a significant portion of that law was struck down and the rules of the game suddenly changed. If S. 926 passes, Senate candidates in 1978 could suffer a similar fate.

S. 926 is certainly subject to constitutional challenge on a number of grounds. In Buckley against Valeo, the court explicitly struck down limits on so-called "independent" expenditures as violating first Amendment rights to free speech. But what about the discriminatory effects of expenditure ceilings applied to two candidates one of whom benefits substantially from independent expenditures and the other of whom receives none at all?

What about the discriminatory effects on third parties of differing qualification thresholds? And what about the constitutional validity of forcing citizens to fund with their tax dollars candidates with whom they disagree? What is legitimate under the general spending power may be something else when applied to a single State.

My point is not to suggest that these are the only areas of potential constitutional challenge to S. 926, but rather that there is no shortage of such areas and that serious court challenges are likely to ensue which make the 1978 effective date for S. 926 particularly inappropriate. Were I running in 1978, I would be very concerned about a repetition of the problems of 1976. If we must pass S. 926, we should at least postpone the effective date in such a way as to avoid disrupting the 1978 Senate campaigns.

Another problem with S. 926 concerns its major objective which presumably is to eliminate undue influence of so-called "special interests" on our elections. Although no one can quarrel with this as its goal, the bill itself will have precisely the opposite effect. In fact, S. 926 will sharpen and improve the effectiveness of "special interests."

In Buckley against Valeo, the Supreme Court made clear that expenditures on behalf of a candidate, so-called "independent expenditures," were perfectely valid expressions of first amendment rights. Thus, no public financing measure can ever remove special interests from politics and S. 926 merely injects taxpayers' dollars, a huge new Federal bureaucracy and a host of constitutional questions into Senate campaigns with no reforming effect on special interest involvement whatever.

Presently, candidates structure campaigns in a general way to appeal to the mass of statewide voters. But, special interests are increasingly effective in a targeted way, offering specific messages tailored to particular groups. If S. 926 passes, special interests will become even stronger. By virtue of their ability to focus, the special interests already achieve a greater cost effectiveness per dollar spent. Under S. 926, they will face no restriction on the number of available dollars. The expenditure ceilings and contribution limitations in S. 926, then, will have the effect of leaving a good portion of the political field to the special interests.

The specific areas in which special interests excel are communication with members, registration and voter participation campaigns. In the last presidential election the AFL–CIO's Committee on Political Education—COPE—and the UAW each spent $3 million on registration and get-out-the-vote drives. This means that the Nation's two most active union groups spent more to register voters and get them to the polls than the two major political parties combined. The total spent by COPE, UAW, and NEA was $8.5 million, a good part of which was a direct benefit to the Carter-Mondale ticket.

In short, in 1976, under public financing at the presidential level, special interests had an immense influence. It does not make much sense to think that a candidate will be influenced by someone giving him a large campaign contribution and not by others who are willing to spend a large amount of money on his behalf, although this is an implied premise in many of the proponents' arguments.

An additional possibility is that special interest organizations may evolve into virtual, if unacknowledged, appendages of campaign organizations. The beginnings of this trend could be glimpsed in 1976 when AFL–CIO research director, Mary Zon, was paid by the Carter campaign to serve three days a week as the Democratic National Committee's liaison with labor groups. Also in this last election the Democratic National Committee's campaign steering committee included COPE national director, Alexander Barkan; International Association of Machinists and Aerospace Workers president, Floyd Smith; and UAW president, Leonard Woodcock.

Presently, labor is more active in the independent expenditure area. But business and nonprofit organizations are increasingly involved. The result is that special interest moneys being collected and spent outside the campaign committee by outside groups could become even more decisive in the election of a candidate than his own efforts or those of his party. As farfetched as it may seem, special interests, if S. 926 passes, could take the responsibility for such major areas of campaigning as billboards, television, and fliers. This to me is a rather curious kind of campaign reform.

I am also rather amused by the logic of proponents of S. 926 who claim that this election reform is demanded by the times we live in. If I understand this reasoning correctly, their belief is that Americans have become so disillusioned by recent political scandals that a purification of the process if urgently required and public financing will help provide that cleansing.

Can it really be that so many of my colleagues have misread the mood of the people? I find that very hard to believe since a great majority of this bill's supporters come from the same party as our President. And he was elected in large

part because his campaign sensed the mood of the country and ran against bureaucratic intrusion.

Certainly people have been sickened by various activities in Washington of late, but this turned them to an "outsider" for President. That should tell us something. And frankly, I think it does, but S. 926's proponents seem unaware of the widespread longing in this country for less oppressive government.

The direction Americans would like to see their government move towards is the exact opposite of where this bill would take us. The public financing proposal injects bureaucracy into yet another private activity. And this particular activity—elections—is the centerpiece of our process. It is the one which the people should use to control the bureaucracy rather than vice versa.

So, having built a labyrinthian maze of government agencies, departments and bureaus these past number of decades which the public wrestles with in their business and private lives, we now propose in the name of reform to construct yet another one by grafting a Federal election bureaucracy appendage to the body politic.

If anyone doubts the detrimental effect this additional Federal weight could have on the functioning of the electoral system, I ask you to consider the following brief and by no means complete list of consequences public financing could have. First, have you tried to read the legislation? Imagine what confusion that mass of bureaucratese is going to cause the hundreds of candidates running in next year's Senate races. Imagine the interpretations and interpretations of interpretations which would be forthcoming to explain the regulations. The complexion of the law would undoubtedly begin to change as have so many others Congress has passed in recent years. The bureaucrats have developed a habit of putting their stamp on the mandates we hand them and there is no reason to think a Federal elections bureaucracy would differ very much from other bureaucracies in this regard.

It is contended, with good reason, that because of the many new campaign laws already in effect, the first thing a candidate needs to run for office is not a manager but a good lawyer and accountant. And what that indicates is that with the added complications of public financing, a candidate and his staff will be spending more time meeting the demands of election reporting redtape than meeting with the voter. In the 1976 elections, without the expansion of the public financing law proposed in S. 926, 1 million pages of disclosure forms containing 20 million pieces of information had to be processed. This bill will further complicate all of that paperwork.

Large amounts of public funds will be expended to pay lawyers and accountants just to keep up with demands from the Federal Election Commission. Ironically, this places Government in the position of dispensing public funds to candidates who in turn would be using these moneys to cover costs inflicted on them by Washington.

We have heard a lot of impassioned pleading and seen quite a bit of vigorous arm-waving by Senators intent on lessening the influences of special interests. Unfortunately, the logic of their arguments does not carry them to the obvious conclusion that with this bill the Senate will create a new special interest of its own which all candidates will have to cater to during their campaigns. With public financing will come an obeisance to Uncle Sam. Energies, attention, and time will be expended to keep the Federal moneymen satisfied.

The supposed callousness and insensitivity practiced by special interests is an argument used to point up the need to transfer election funding responsibilities to Washington. But, why place confidence in the Federal bureaucracy? Ask the small businessman just how fair and sensitive the OSHA inspector is. And other Federal programs have not exactly been smashing successes. Why place our trust in a Federal bureaucracy for something as enormously sensitive as our electoral process?

Consider also that campaigns will have to begin scheduling around the operations of the election bureaucracy certain to mushroom in Washington. Should the Senate accept public financing, candidates will be at the mercy of the Federal election bureaucrat. Paperwork, delays in delivering funds and the like will occur and as I have noted they are sure to disrupt the finely tuned engine of our political process as we know it today.

There is an analogy I would like to offer which may explain and better illustrate for the supporters of S. 926 the havoc public financing of congressional elections could wreak on our system. When we talk about this democratic system and the way it functions, we are dealing with many intangibles. The will of the people, judgment, leadership, representation and more are all intertwined and related in a way to give us the Government we have. It is a delicate fabric of threads which have been refined through history.

This very fragile process is not unlike the balance of nature one finds in the environment. In our environment each link is connected forming a complete circle of life. Each connection in that circle is sustained and sustains.

Man has on occasion disrupted the ecosystem with disastrous results. It is recognized that if the chain is broken, our environment will be damaged in ways we cannot even contemplate.

Now our own political system has its relationships which are similarly interdependent. Today the Senate is proposing to inject the heavy hand of a bureaucracy along with its myriad and confusing rules and regulations. Does anyone have serious doubts about how this could alter the face of our process? I think it is a given that things would never again be the same, but the frightening part is we will accomplish nothing positive and quite a lot that is negative.

Mr. President, we do not need public financing. There is a highly desirable alternative to injecting the Federal bureaucracy into campaigning available to us. In my opinion, Senator PACKWOOD's bill, S. 1471, allows us to effectuate the desirable goals of S. 926, while avoiding the problems of constitutionality, bureaucratic redtape and special interest influence mentioned above. But, as importantly, S. 1471 is a constructive effort toward enhancing citizen participation in politics, something we all agree to be not only desirable but also absolutely vital to the future health and vitality of our political system.

John Bolton, the attorney for the plaintiff in Buckley against Valeo, has testified that S. 1471 has no problems constitutionally. There are no expenditure limits set, nor is there any discrimination against independent candiates.

Bureaucratic "redtape" is also done away with by the Packwood bill. Already contained in existing laws are provisions for deductions for political contributions up to $100 and a tax credit of 50 percent for any political contributions with $25 being the maximum credit allowable. S. 1471 would increase the 50 percent credit limit to 75 percent with the maximum credit increased from $25 to $100 for single returns. The bill would also deny the present procedure of allowing tax deductions as an alternative to tax credit.

Mr. President, tax credits are familiar to the American public and require no great bureaucracy to administer. Furthermore, an extensive record in the Finance Committee attests to the ease of administration inherent in the tax credit approach.

However, citizen participation is probably the greatest virtue of the Packwood bill. S. 1471 encourages candidates to seek out large numbers of contributors instead of relying upon matching funds. Under S. 1471, the candidate must seek contributions from all constituents, since he will not be able to feed his campaign from public moneys.

In the 1976 Presidential elections, Ronald Reagan received contributions from twice as many people as Gerald Ford. However, due to the mechanisms devised for receiving matching funds, Ronald Reagan received only 9 percent more funds from the Treasury than did Gerald Ford. Under the tax credit plan, had it been a Senate race, Gerald Ford would have had more incentive to seek out a larger number of contributions rather than rely on matching funds. Furthermore, under the tax incentive plan "special interest" groups decrease in influence in the candidate's eyes as the lower and middle income voters' influence increases. With the maximum tax credit limitation of $100, contributions are rendered more equal in the eyes of the candidate.

Also, under S. 1471, citizen participation is greatly enhanced. Individual participation in American politics is an old and valued tradition, whether that participation is financial or takes the form of volunteered time or services. S. 1471, by providing a mechanism for channeling citizen involvement, would be a healthy addition to our political system. What is more, to seek out available contributions, under S. 1471 candidates would be required to travel the campaign trail. In the process, he would learn of his constituents' needs and then be better able to represent those needs in Washington. The candidate would not

be able to conduct a campaign behind a television camera, resting on the security of matching money.

Mr. President, S. 1471 does not require the establishment of a new bureaucracy; it preserves the citizens' control of the election system. Through the tax credit program, the voter increases his influence, the candidates are more apprised of voter needs, and "special interest" influence in political campaigns is diminished. S. 1471 represents no problems of constitutionality to bureaucratic redtape. In my opinion, the facts plainly show that it is superior in every way to S. 926 and I urge my colleagues to accept it as a substitute.

Mr. ROTH. Mr. President, last week I introduced two amendments to S. 926, the "Public Financing of Senate General Elections Act of 1977," which is now being considered. Before explaining these, I would like to state my general views on campaign reform, as well as the deficiencies of S. 926.

Without a doubt, today's campaigns are too long and too expensive. They force potential candidates to raise large amounts of money so they can purchase television time, support mass mailings, or travel throughout the State or district. But the bill now under consideration, S. 926, may create more problems than it solves.

This is not just my view, but that of both the Washington Post and former Senator Sam Ervin as well. In addition on July 31, the Post questioned the wisdom and desirability of S. 926, while former Senator Ervin wrote in the August 2 issue of the New York Times that this bill might damage the election system itself. He said the following of the supporters of this approach to financing:

> What they may fail to recognize, however, in their zeal to remove any taint of special-interest money, is not only the potentially terrible financial burden they may be laying on the taxpayer's shoulders but the damage they may be doing to the election system itself.

The Post warned that public financing is an experiment which in its maiden year "produced not just administrative burdens and snarls, but also a worrisome degree of official involvement in the details of political practices." What the Post then added should be set in bold type and laid before every Member of this Senate, because it summarizes the grievous error which well-intentioned Senators could bring about in an excess of zeal:

> . . . . Congress should not rush into public financing for Senate and House campaigns across the land. A law meant to return politics to the people would defeat its own purpose if it turned out, instead, to be dictatorial and stultifying.

I am including this editorial as well as the statement by Senator Ervin at the conclusion of my remarks.

Mr. President, I would like to explain my reservations concerning S. 926 in more detail.

DEFECTS OF S. 926

The proponents of S. 926 argue that it will remove money as a possible corrupting influence in campaigns. But S. 926 does not eliminate the role which money plays. On the contrary, in many ways S. 926 heightens the importance of money. Moreover, the bill drastically increases the comparative influence which some special interest groups can wield—and bargain with—by virtue of their special ability to provide "services" such as low-cost mailings, telephone banks, and get-out-the-vote campaigns.

Mr. President, I would like to summarize some of the specific problems I have with S. 926.

First. If the bill is designed to "clean up" the entire electoral process, why are primary elections excluded from coverage?

A major argument advanced by proponents of S. 926 is that it is necessary to provide public financing in congressional elections because, with the advent of public financing in Presidential elections in 1976, congressional candidates increasingly were the recipients of large numbers of contributions from interest groups. Senator KENNEDY, a sponsor of S. 926, pointed this out in the 1977 hearings, as follows (p. 187):

> . . . the very success of public financing in Presidential elections has made the problem of campaign financing worse for elections to the House and Senate. The special interest groups are all dressed up with nowhere to go—except to Congressional elections. With their massive warchests of campaign funds for favored candidates, they have great and growing power to tilt the issues in their favor, against the public interest.
>
> Already, Congress is awash in a sea of special interest giving. The figures published by Common Cause on the 1976 election reveal the urgency of the problem.
>
> Special interest contributions—often at $5,000 a clip—soared to over $20 million for Senate and House candidates in 1976, nearly double the level in 1974.

But S. 926 does not limit the role of money in campaigns, only the role of money in general elections. Primaries remain untouched, the amount which can be spent in a primary is unlimited. If Senator KENNEDY is correct in his charge that the special interests "were all dressed up with nowhere to go" after campaign financing for Presidential elections, they certainly know where to go if S. 926 is enacted: straight to the primary campaigns.

As I understand Federal election law, a candidate running unopposed is nevertheless engaged in a primary. So if I were running for office next year, it would be a simple matter to stay within my spending limits for the general election by simply shifting any surplus into the primary. And mark my words, if something like that can be done, it will be done.

Second. Is one man's "special interest" another man's "public interest"?

Proponents of this legislation would have the American public believe that public financing of presidential elections drove the moneychangers from the temple, when all it really did was drive out some of the moneychangers.

If there is no objection, I would like to have reprinted in the RECORD following my remarks an article by Michael Malbin which appeared in the March 19, 1977 National Journal. His analysis of the effects of Presidential campaign financing law is lengthy, but it can be summarized by a two-paragraph quotation:

> The net result has been that a law that appeared to be even-handed in theory has proven to be uneven in practice. With the virtual extinction of the individual big giver, a number of different groups appear to be the gainers in terms of political influence. But when the relative positions of these groups are assessed, labor comes out well ahead of the rest.
>
> Labor, not surprisingly, supported the 1974 and 1976 amendments to the campaign finance law. For the future, it supports an extension of public financing to congressional elections and favors universal voter registration. Public financing could leave labor in as dominant a position on congressional elections as it was in 1976 on the presidential. Universal registration would permit labor to divert the resources it now applies to registration to such purposes as beefing up its communications and voter participation programs.

Third. If the S. 926 is designed to eliminate reliance on private money and interest group funds, why are matching funds a major feature of the bill?

If the S. 926 is designed to make elections more equitable, why utilize a matching funds approach which will make elections even more equitable?

Many sponsors of S. 926 previously supported full funding of congressional elections rather than a mixed, matching grants, approach. For example, on September 10, 1973, Senators CRANSTON, MATHIAS, and KENNEDY, among others, were cosigners of the "Dear Colleague" letter urging an "extension of the Presidential checkoff concept adopted in 1971 to provide Treasury financing of qualified candidates for President and Congress in general elections." The letter supported "full funding for major party candidates." Similarly, Senators CRANSTON, MATHIAS, and KENNEDY, in introducing public financing legislation in 1975, pointed out that their bill provided "full public funding for candidates of major parties in general elections for the Senate and House of Representatives" and that, in their view, "the time has come for full public financing of all elections to Federal office." But S. 926 is a compromise which aggravates the present system's deficiencies, rather than solving them.

A matching funds system does not promote the equality of candidates. George Agree, who has been active in many campaigns and has written extensively in the field of campaign finance—and who has testified in favor of public financing (1973 hearings)—observed that the matching funds system operative in the 1976 Presidential primaries, produced an effect such that "tax money—public funds—did not flow to candidates according to the number of Americans supporting them, but in proportion to the wealth of their contributors." Moreover, "money became more important than before" (Washington Post, July 11, 1977, p. A–23.)

What S. 926 leaves us with is not a system which eliminates the importance of large contributors, but one which enhances it. For every special interest dollar received a candidate can demand another tax dollar. The role of small contributors is suppressed for the sake of certain groups of large contributors. The average taxpayer would win only the dubious privilege of seeing his tax

money used to distort the political system which is already stacked against him.

Fourth. What will happen to candidates who fraudently obtain matched funds? How quickly can such a situation be identified? What if such a candidate should win, take his seat, and serve in the Senate for 1 year or even longer?

In the 1976 Presidential primary elections the only instance of federally matched funds in the United States to date, it took the Federal Election Commission 14 months from the date of one candidate's withdrawal to determine that his matching funds had been fraudulently and illegally obtained. This was in an election with only 15 candidates receiving matching funds. If the matching funds concept were extended to Senate and House races, one might expect there to be 1,000 or more candidates every 2 years. Since the reimbursement period would be shorter than in the Presidential primary period, would candidates be able to receive their matching funds in time to make use of them? What if candidates who obtained funds fraudulently should win, take their seat, and serve in Congress for 1 year or longer?

These are not frivolous objections, but legitimate practical obstacles to the system proposed by S. 926. It is a system which could open the door to confusion or outright fraud at a time when the public already views it with a deep distrust and cynicism. If the average set so far of 1 mistake for every 15 candidates were to hold up, we would be faced with errors in 66 House and Senate races, enough votes to turn the tide on nearly every crucial question facing the Congress.

Fifth. Will S. 926 (a) encourage and (b) perpetuate minor, one-issue parties?

In the 1976 Presidential primary elections, it was generally acknowledged that Ellen McCormack would almost certainly not win the Democratic nomination.

Yet she qualified for, and received, $244,125 in Federal matching funds. She ran essentially as a one-issue—anti-abortion—candidate. The provisions of S. 926 authorize minor party candidates Federal funds upon raising the lesser of 10 percent of the State's expenditure limitation or $100,000 in contributions of $100 or less. Whether or not this would produce a proliferation of minor party candidates is debatable, but judging from the experience in the 1976 Presidential primaries, it very well could. Also, S. 926 allows "a candidate who ran as an independent in a prior election for a Senate seat and received over 25 percent of the votes cast" to be "treated as the equivalent of a major party nominee if he or she is not the candidates of a party in the current election"—page 7, Senate Report 95-300. Thus, a single issue candidate could continue to run and receive Federal subsidies as long as he or she continued to receive at least 25 percent of the vote; he or she would be treated the same as a major party candidate for the purposes of receiving public funds.

The unfortunate result of these is that tax funds would be used to perpetuate the views of narrow special interest groups. The purpose of candidates such as Ellen McCormack is to affect decisions being made on a narrow range of issues. In effect, by providing campaign funds to single-interest candidates we are subsidizing their lobbying efforts, not furthering the cause of general interest parties. Frankly, I see no reason why the money of taxpayers should be used to help one special interest group lobby the public. Indeed, for some classes of candidates—those who represent religious views for example—such a system would arguably be unconstitutional.

Six. Does public funding have extensive popular support? Will there, in fact, be enough money in the check-off fund?

Since, "nearly three quarters of the money in the Presidential Election Campaign Fund was disbursed in the 1976 elections—$72 million of a collected $95.8 million—"according to the Federal Election Commission—FEC Record, April 1977, page 1—it is doubtful that there will be sufficient money in the check-off fund to finance Senate and House elections. House and Senate public financing would cost approximately $20 million each every 2 years, or $80 million on a 4-year cycle. Although public opinion polls generally show support for some form of public financing, only 27.1 percent of all taxpayers participated in the check-off in 1976, a very small increase from 1975—25.8 percent—and 1974—24.2 percent. One might conclude that only approximately one quarter of all American taxpayers favor the check-off plan—not enough to fund House and Senate elections adequately.

Seven. In addition to the public funds for candidates, what funds will be necessary for the administration, including auditing, of this bill should it be enacted?

In hearings on S. 926, spokespersons for the Federal Election Commission estimated that nearly $1 million per year —$906,000—in fiscal year 1978 and $896,000 in fiscal year 1979—would be necessary for administrative costs for Senate general elections only—page 31. However, if the House also adopts a public financing system, these estimates would skyrocket, since there are over 10 times the number of elections to monitor. Even regarding Senate costs, the FEC recommended that "if S. 926 is adopted a 'such sums' authorization for the FEC be included" since unanticipated problems might well arise—page 424.

What such a system leaves the door open to is an open-ended raid on the Federal Treasury. The Congress is being asked to approve a program, when even the costs of administering it cannot be accurately predicted. I have seen this kind of sloppy law-making in the past, and it leads to nothing but trouble.

Eight. When candidates save contributions to be matched in the general election, but then lose in the primary election, what becomes of the funds saved?

S. 926 sets the following requirements for candidates seeking to receive matching funds—pages 7-8, Senate Report 95-300 to accompany S. 926:

> . . . contributions which are eligible for matching funds may not be accepted until September 1 of the year preceding the election, and must be maintained in a separate account until the date such candidate qualifies under the law of the state for election to the Senate.
>
> These funds may not therefore be expended or used as collateral to raise funds to finance a primary election.

The question must be raised—what happens to these accounts in the case of a losing candidate in the primary election? There were 43 serious candidates—receiving greater than 15 percent of the vote—in Senate primary elections who did not qualify to run in the general elections.

This objection is somewhat more technical than the policy matters which I raised. Nevertheless, it is a serious enough defect to create major problems in administering the programs which S. 926 proposes, a program which is already burdened with major flaws.

Mr. President, what I have proposed is a partial alternative to S. 926. As I see it, we should be occupied by two concerns:

One. We should be attempting to minimize the role which special interests play in campaigns, thereby eliminating the possibility that these groups can influence—or appear to influence—later votes. In most cases, we can minimize the role of special interest groups by controlling the role of money in a campaign. But money is never an end in itself: it is merely a means of purchasing services, ranging from a campaign staff to radio or television time. If, therefore, we focus on services we can minimize the role of both money and those special interest groups which enjoy an advantage in furnishing these services.

Two. We should be attempting to equalize the positions of incumbents and challengers.

Mr. President, I have introduced two amendments which should go a long way toward achieving these two goals. My first is a comprehensive proposal to accomplish the following:

One. Reduce the expenses of campaigns by focusing on the two services which are most expensive: radio and television time; and, mass mailings. Under my proposal candidates would be provided free radio and television time, but prohibited from purchasing any TV time in excess of that provided. Since these two services are among the most expensive—radio and television time accounts for roughly one-half the cost of most campaigns—the role of the moneyed special interest groups would be minimized. In addition, the free mass mailings would minimize the role of special interest groups which provide mailings instead of money.

Second. Limit the advantage which incumbents have over challengers by prohibiting mass mailings of franked mail within 120 days of the election. The frank is the principal advantage which the congressional office-holder has over his rival, so limiting use of the frank should go a long way toward evening the battle between candidates.

If it were not for the constitutional prohibition against taxing measures arising in the Senate, I would include within my amendment a proposal for tax credits for political contributions. The tax credit approach has been en-

dorsed by Senators of such widely differing philosophies as the late Robert Kennedy and former Delaware Senator, John Williams. Despite its merit, however a tax credit amendment is not possible in the context of this bill.

Nevertheless, I am convinced that if Congress were to adopt the approach which I have offered, abuses which have occurred in the past would be prevented from recurring in the future. Certainly, no single law will eliminate the possibility that illegal behavior may occur in the financing and conduct of political campaigns. The Congress simply cannot legislate morality. But the Congress can adopt a reasoned and rational approach to curbing campaign abuses, and I hope it will choose to do so.

Mr. President, I ask unanimous consent that the editorial and the statement of Senator Ervin be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 31, 1977]

CAMPAIGN MONEY AND PUBLIC TRUST

President Carter used familiar and fashionable language the other day in endorsing S. 926, the pending bill for partial public financing of Senate campaigns. He said the bill would "help restore the public's confidence and trust in officials" by removing "the appearance of obligation to special interests." Now, that sounds soothing—but this is no time for the Senate to relax. There is more than cosmetics involved here, and the effects of this legislation in its present form might not be as restorative as the advertising suggests.

Consider the matter of "special interests," which has become shorthand for corruption. Any two people could argue all day about which interest groups—bankers or doctors or unions or whatever—are "special" in the pejorative sense, and what their political role should be. Regardless of where one comes out, two points seem clear to us.

First, the most corrosive kinds of interest-group money, the huge, often covert donations such as those revealed in recent years, either have been illegal for decades or were curbed by the disclosure rules and contributions limits enacted in 1974.

Second, the role of political-action committees and big donors would not necessarily be reduced a whit by S. 926. Public matching of small private gifts would give Senate nominees less need to court big contributors. But the bill does not cover primaries, where some elections are settled and early, big donations can have the greatest effect. Moreover, as the Supreme Court emphasized last year, the First Amendment gives individuals and groups the liberty to spend as much as they want on independent, parallel campaigns for candidates. Last fall, while Mr. Carter's election drive was being publicly financed, labor unions were spending, by one estimate, over $11 million independently on his behalf. So when Mr. Carter says that public financing for presidential campaigns "worked very well last year [pause . . . laughter]" without any of the candidates "being obligated to anyone," we get the joke—but not the argument.

The advocates of public financing also claim that it would open up the system and, in Mr. Carter's words, "help enable deserving candidates to run for office even if they are not rich." This also sounds good—but also raises large questions about the nature of political competition and the proper role of government.

It's true that competition is inhibited by the high and rising cost of getting political messages into the marketplace at all. If a candidate can't afford advertising, voters have no way to gauge whether he is "deserving" of support. Especially in primaries, one can justify more public-service broadcasts, publicly financed mailings and perhaps modest matching grants. But public-financing's advocates have much more in mind. They want to assure challengers not just basic access but equal funds. S. 926 would promote parity by setting spending limits as a condition of public aid. And if one candidate foregoes that aid and exercises his right to spend more in private money, his opponent would get extra subsidies.

What's wrong with this? For one thing, it reflects a simplistic view of the role of money in campaigns. More dollars don't always mean more votes. In the past five years, 17 men have come to the Senate the hard way, by beating incumbents; nine of those 17 won even though they were outspent. Beyond that, S. 926 would legislate a value judgment: Big spending is bad. But if a candidate with wealth or access to large sums does spend millions, as long as his financing is lawful and fully disclosed, who should decide whether that's fair or wholesome? Since the record suggests that lavish spending is not necessarily decisive and can itself become a campaign issue, why not let the voters make these judgments on a case-by-case basis?

That leads to the rock-bottom question: To what extent should government regulate political activity? Public financing of presidential campaigns, of course, also poses that question and in time may help to answer it. In our view, that experiment worked well enough last year to be continued in 1980. It was, however, limited to contests for one nationwide office. And it did affect the structure of politics, especially the nature of fund-raising and the role of political parties, in ways that are not yet entirely clear. The problem of dealing fairly with third-party and independent candidates remains unsolved and may be unsolvable.

Finally, the whole regulatory effort launched in 1974 has produced not just administrative burdens and snarls but also a worrisome degree of official involvement in the details of political practices. That, more than anything else, suggests that Congress should not rush into public financing for Senate and House campaigns across the land. A law meant to return politics to the people would defeat its own purpose if it turned out, instead, to be dictatorial and stultifying.

No

(By Sam J. Ervin Jr.)

MORGANTON, N.C.—I fear that my former colleagues in the United States Congress, eager to rid politics of the last remnants of Watergate-type scandals, may be close to damaging the very institution they hope to strengthen.

Several proposals have been introduced in both the House of Representatives and the Senate that would provide for taxpayer financing of Congressional campaigns in much the same manner as the Presidential campaigns are financed.

What they may fail to recognize, however, in their zeal to remove any faint of special-interest money, is not only the potentially terrible financial burden they may be laying on the taxpayers' shoulders but the damage they may be doing to the election system itself.

Under many of the proposals being considered, only minimal requirements are established before Federal funds are made available to Congressional candidates. One proposal in the House even extends the concept beyond the general election to include primaries as well. Thus, one net effect of the bills, if they become law, would be the proliferation of splinter candidates or one-issue candidates, much as we saw in the early days of the Presidential campaign last year.

This proliferation of campaigns and individual candidacies would have two detrimental effects on the electoral system. First, it would tend to drain the Federal funds early in the primary season, with a large number of candidates drawing from the Federal till. And, second, it would tend to accelerate the demise of the two-party system on the national level, leading us down the coalition road already traveled by many Western allies.

One of the most compelling arguments against taxpayer financing of Congressional campaigns is that, according to the Internal Revenue Service, only about 25 percent of the United States taxpayers have gone along with the dollar checkoff for Presidential elections on their income-tax returns. Thus, if the process is expanded to include Congressional campaigns without a parallel expansion of public interest and participation, the United States Treasury might be forced to underwrite political campaigns out of tax monies pledged for other, more worthwhile projects.

Administratively the proposals would cause outrageous havoc. In testimony before the House Administration Committee recently, Ralph K. Winter, professor of law at Yale University said: "It has been estimated that the auditing of 15 Presidential candidates consumed 35 person-years of labor by the Federal Election Commission in 1976." He rightly concludes that a proposed expansion from those 15 Presidential candidates to possibly more than 1,000 Congressional candidates refutes itself.

Further, public funding would place in one executive-branch agency, the Federal Election Commission large-scale discretionary enforcement power that could increase the potential for election-year mischief similar to what we saw exposed a few years ago.

Delays in processing the required forms could leave candidates without any funds during critical periods in the campaign and it would be virtually impossible to determine later whether those delays were bureaucratic or political.

My former colleagues should consider measures looking to taxpayer financing of Congressional campaigns by amendments to the income-tax laws giving taxpayers increased tax credits or deductions for political contributions to Congressional candidates. This would tend to stimulate more open political debate in Congressional campaigns for it would require Congressional candidates to appeal directly to taxpayers for financial assistance.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that a letter to our colleague, Senator PACKWOOD, reflecting the position of the American Civil Liberties Union, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN CIVIL LIBERTIES UNION,
New York, N.Y., July 26, 1977.

Senator ROBERT PACKWOOD,
U.S. Senate, Dirksen Office Building, Washington, D.C.

DEAR SENATOR PACKWOOD: We are writing to express to you our strong opposition to S. 926, the public financing bill which the Senate is taking up this week.

Over the last five years, the ACLU has been centrally involved in litigation designed to insure that reform of our political process does not come at the expense of the First Amendment's values of freedom of speech, press and association. We represented the plaintiffs in *Buckley* v. *Valeo*, because of our general opposition to limitations on expenditures which are made for the purpose of advocating causes or candidates in the public forum. In that case we succeeded in per-

suading the Supreme Court to rule that the Congress, in placing expenditure limits on campaigns, had violated the very core purpose of the First Amendment, namely, to insure that speech about politics and public affairs should be "uninhibited, robust, and wide-open." In S. 926, another attempt is made to violate that principle.

The ACLU is not opposed to the concept of public financing. But in our view, any valid public financing scheme must at least square with the following two principles:

(1) It must insure that minor party and independent candidates have a full and fair opportunity to qualify for such subsidies, and

(2) it must not condition the receipt of campaign subsidies on an agreement to abide by otherwise unconstitutional spending limits.

The first principle is based on our concern that public financing schemes will simply continue to perpetuate the power of the two major parties at the expense of the presentation of controversial and dissident viewpoints by minor party and independent candidates. The second principle is based on our belief that attempts to achieve supposedly fair and even-handed limitations on political communications will inevitably turn out to be unfair, unworkable and unconstitutional.

It is clear to us that S. 926 violates both of those principles. It once again perpetuates the invidious distinction between major party candidates and all others, making access to public funds far easier for Democratic and Republican candidates than for everyone else. And it once again contains mechanisms designed to limit the amount of funds that can be spent to communicate a candidate's case to the electorate.

Consider, for example, the effect of the bill on a challenger of moderate personal means seeking to wage a campaign against an incumbent. If the challenger accepts public funds, then he or she must submit to the limits attached as condition to the receipt of those funds, and must then face the almost impossible task of beating an incumbent, who possesses all the advantages of office, without being able to outspend that incumbent. If the challenger declines public funds in order to avoid the spending limitations, then not only must the challenger raise all campaign funds privately, but if the challenger does raise more money than the limits, the incumbent is then likewise freed from those limits, can raise private funds on top of the public subsidies, and can still deny the challenger the ability to compensate for all the advantages of incumbency.

Either way, fairness and free speech are the losers.

Finally, it is particularly inappropriate for the Senate to consider such incumbent-serving and unconstitutional schemes when other alternatives are available to facilitate raising campaign funds. One such approach—liberalizing the tax credits or deductions for small contributors—is contained in your own proposal and has a great deal to commend it.

But for the Senate to be considering schemes which are the most unfair and unconstitutional raises the gravest doubts about whether the goal is reform of the political process or perpetuation of power of those who currently control that process.

Sincerely yours,

ARYEH NEIER,
Executive Director.

Mr. CHURCH. Mr. President, as one who has consistently supported public financing for election campaigns in the past, I have voted for the motions to invoke cloture so that the Senate might vote on the pending legislation extending public financing to congressional elections.

It was in 1968 when the late President Dwight Eisenhower said:

We have put a dollar sign on public service, and today many capable men who would like to run for office simply can't afford to do so. Many believe that politics in our country is already a game exclusively for the affluent. This is not strictly true; yet, the fact that we may be approaching that state of affairs is a sad reflection on our election system.

In the nearly 10 short years since this prophetic statement, public financing of congressional elections begins to look like an idea whose time has come. The success of the 1976 Presidential election showed that the principle of public financing is both sound and workable. And recent polls have indicated that the public supports, by wide margins, the financing of congressional elections through the income tax checkoff system. This support has also been indicated to me in a number of letters and communications from Idahoans urging my support for the pending legislation.

Mr. President, I ask unanimous consent that several representative letters and a recent editorial from the Washington Star, which encapsulates the issues and arguments presented in this bill, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Star, July 29, 1977]

CONGRESSIONAL CAMPAIGNING

The basic question involved in the current debate on campaign financing is this: Should congressional campaigns be financed largely by $1 contributions from American taxpayers or by contributions from special interests?

Stated another way: Should members of Congress be beholden to the American public or to business and union interests that are able to contribute large amounts of cash to campaigns?

The answer is easy: Pulic officials should be indebted and answerable to the public, not to special interests that finance their campaigns.

That isn't the question raised, though, by Senate opponents of legislation that would provide public financing for congressional campaigns. Led by Minority Leader Howard Baker, they are raising the smokescreen charge that the legislation is designed to perpetuate incumbents in office. They would have everyone believe that if incumbents had access to the federal treasury for campaign funds, it would take blasting powder to get them out of office.

The answer we like best to that argument is one used some time ago by John Gardner, founder of Common Cause: "If it (public financing) really favored incumbent, Congress would have passed it years ago."

No, public financing wouldn't be an incumbents' protective system. That label could more appropriately be attached to the present system of private financing, under which the special interests—the lobbyists, the fat cats—beat a path to incumbents' doors, carrying campaign contributions and expecting or hoping for favors in return.

Except in a few cases, notably candidates with large personal fortunes, it is considerably easier for incumbents to raise campaign money than it is for opponents. More than anything else, what has kept public financing of congressional campaigns from being enacted has been incumbents' fear of giving opponents access to the federal treasury.

If direct evidence is needed to counter the claim that public financing is incumbents' protective legislation, one need look no farther than last year's presidential race. For the first time, public money was made available to presidential candidates. Who won? Not the incumbent, Gerald Ford, but the challenger, Jimmy Carter.

But the important point about the financing of the 1976 presidential campaign is that the candidates no longer had to depend on contributions from special interests and fat-cats. Mr. Carter came to office less beholden to special interests than any president of recent times.

It is not stretching things much to say, as Mr. Gardner and others have, that when special interests found that they couldn't buy a president they tried to buy a Congress. A study by Common Cause showed that special interests contributed more than $22 million to House and Senate campaigns in 1976, twice as much as in 1974.

President Carter put in a timely plug yesterday for extending public financing to congressional campaigns. We hope his support will be enough to swing today's Senate vote against the filibusters who are trying to talk this important reform to death.

NORTH WIND RANCH,
Harrison, Idaho, June 28, 1977.

Senator FRANK CHURCH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CHURCH: For some time I've been greatly concerned over the steady erosion of public confidence in both the office of the Presidency and of the Congress as well. The feeling is all too pervasive and frequently expressed that big money elects all of our government officials.

For this reason I was overjoyed that the office of the presidency should be open to people of smaller means through the public financing of campaigns.

Now that the same sort of support for congressmen seeking office is in the works I'm very concerned that we give our support to it. I urge you to strongly support S. 926.

Unless the influence of special interests in electing our congressmen can be curbed our democratic electoral process can amount to little. Moreover, our offices should be reachable by people who are not wealthy and out of touch with the problems of the ordinary citizen.

Very truly yours,

BERT AND MARIE RUSSELL.

BUHL, IDAHO, *June 30, 1977.*

Senator FRANK CHURCH,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CHURCH: It is my understanding that the Senate will soon be voting on S. 926, the Senate public financing bill. I know that you have supported public financing in the past and I feel it is important again that we have public financing for congressional campaigns. If for no other reason than to prevent the wealthy candidate from having an unfair advantage over a non-wealthy candidate.

I hope you will support and vote for Senate bill 926.

Thank you.

Sincerely,

KATHERINE HEIDEL.

BOISE, IDAHO, *July 1, 1977.*

DEAR SENATOR CHURCH: I am much concerned about the manner in which campaigns for election to the Congress must be financed. Too often the candidates must depend on contributions from special interests, who thus can achieve undue influence on Congressional decision-making.

Consequently, I recommend that you support S. 926, which provides for public financing of Congressional races. This method has its problems, no doubt, but I think it would move us closer to true democratic action and enable our Congressional delegates to exercise their best judgment in voting on

the numerous important issues that face our nation today.

Sincerely,

LIVEN A. PETERSON, Jr.

THE LEAGUE OF WOMEN VOTERS,
Idaho Falls, Idaho, July 14, 1977.

SENATOR FRANK CHURCH,
Russell Senate Office Building, Washington, D.C.

DEAR SENATOR CHURCH: On behalf of the League of Women Voters of Idaho Falls, I would like to urge you to support S. 926 the Public Financing of Senate Elections Act of 1977.

In 1974 the League took a position on campaign financing, believing that changes must be made in the methods of financing political campaigns in order to make our government more accountable, more representative and more responsive to all of our citizens.

The League position favors a system of combined private and public funding for all federal campaigns—congressional as well as presidential; primaries as well as general elections. We support measures which would encourage broad-based contributions from the general public and the use of tax credits and deductions; we also support measures which would provide public financing, including income tax checkoff and supplemental government appropriations.

We believe that passage of S. 926 would help make the campaign process more competitive, preventing the wealthy candidate from having an undue advantage over a poorer opponent. We also believe that this bill would reduce the influence of special interest givers on congressional decision making, and would help restore public confidence in the integrity of Congress. Therefore we urge your support of S. 926.

Sincerely yours,

KAREN W. HOBBINS,
First Vice President, Idaho Falls League of Women Voters.

Mr. TALMADGE. Mr. President, if the Senate passes this bill it will perpetuate a fraud on the American people.

This bill is a sham. It promises one thing and does another. It falsely holds out hope to deliver something that it cannot deliver.

It is illusory. It is deceptive. It is inherently fraudulent and, moreover, it poses a severe threat to the most sacred of all American institutions, our system of free elections and freedom of choice by the voter.

Yet, this bill comes to us wrapped in a sanctimonious cloak of respectability. Proponents of public campaign financing would have us, and the American public, believe that this will make elections as clean and as pure as the driven snow.

They would have us believe, by inference, that private contributions—the bedrock of the American political system for as long as anyone can remember—automatically lead to corruption. This bill is supposed to sweep away, in one fell swoop, undue pressure and influence by special interest groups.

This bill is supposed to promote citizen participation in politics and the elective process, and encourage the candidacy of more qualified people for public office.

Were this bill to achieve all these praiseworthy goals, we could truly rejoice in the arrival of the millennium. This is where the falsity and the fraudulence of this bill becomes apparent.

It promises all these marvelous things. It has the endorsement of virtually every so-called do-gooder organization in the United States. It has been so elaborately packaged, so devoutly pushed, and so adroitly foisted upon the American public that to oppose it is about like being opposed to God, mother, or apple pie.

This bill will no more insure clean elections in every instance than Congress can pass a law that will automatically make everyone healthy, wealthy, and wise.

There will be election abuse, either intended or unintended, as long as human beings are fallible. And, financing elections from the public treasury will never make it otherwise.

Where there is abuse or wrongdoing in elections, prosecution and punishment ought to be swift and severe. Present law is adequate to take care of anyone who would subvert the election process.

The fact is, Mr. President, this bill will open the door to potential fraud and abuse that would be so wrapped in bureaucratic redtape that detection would be virtually impossible.

Fifteen candiates in the most recent Presidential election qualified for Federal subsidies under public financing. One case involving mismanagement and questionable fundraising activities already has been revealed. I do not mean to imply that there are more, but the situation does indicate what can happen.

That was in a race for a single office. Imagine the cost, imagine the potential for abuse, in congressional races for the Senate or House when there could be hundreds, even thousands, who qualify for Federal subsidies and who get on the public gravy train.

It would take a whole new army of bureaucrats in the executive branch to even attempt to maintain order or adequately police such a monumental situation.

Also, I, for one, refuse to subscribe to the insulting notion that contributions from private sources, whether they be large or small, are inherently corrupting.

This is an insult to the American citizen, rich and poor alike, who view political participation as their right and duty—which it is—and who demonstrate freedom of political expression by supporting candidates of their choice through their contributions.

It is also an affront to the integrity of the Congress of the United States, and to each and every Member of the Senate and House, to try to make it appear as though we can be bought and sold like cattle at auction.

This bill will not bring more citizens into active participation in politics and Government. It will not encourage more qualified people to offer for public office.

It will drive them away. It will widen the already dangerous gap between the people and Congress. It will further undermine public confidence in Government.

If we have public financing in the election of the President, if we have public financing in the election of Members of Congress, how long will it be before there are demands that there be public financing of Governors and mayors and county commissioners and sheriffs?

The further bureaucratic institutionalization of the election process can only turn people off about their Government even more, and even further dull their interest in elections.

I submit that we are in the process of taking away from the American people one of the few most sacred rights that they still have left—freedom of choice in the electoral process.

Furthermore, based on what I have read and heard, the American people want less, not more, Government. They want more, not less, control over the kind of Government they have. They want less, not more, regulation over their lives and well being.

That being the case, Mr. President, they most assuredly would not want this law if they were fully aware of what it does.

The people need to be told that this bill does nothing to strengthen the election system. It adds nothing substantive to the law that is not already required of candidates and contributors.

It does create more bureaucracy. It does put an additional burden on the taxpayers. It does attack the electoral process. It does constitute a threat to the legislative branch of Government, which is and ought to be chosen by and responsive to the American people. It does drive a wedge between the people and their candidates for office.

This bill is, on the one hand, a form of political suppression. It restricts the right of people to support candidates of their choice to the extent they may desire.

This bill, on the other hand, is a form of political coercion.

It makes people, through their tax dollars, support candidates who may be totally repugnant to them.

I do not know why it is so difficult to get this point across. Personally speaking, it is inconceivable to me that public funds, my tax dollars in part, would be given to support a candidate whose political views are diametrically opposed to my own.

It is inconceivable to me that we would pick the pockets of the public to support every candidate who comes down the pike, regardless of his ideology or worthiness.

Candidates should have to go to the people for approval and support—not Government.

The right to vote is the most fundamental of all American rights. It is amply protected by the Constitution and by statutes. Just as sacred to the American people and necessary under our republican form of Government is the right of the people to participate in politics, and to become actively involved in support of candidates.

This is more than a right. It is a responsibility of good citizenship.

No less important is the right of people not to support candidates, not to become involved in their campaigns, and not to promote their election in any way whatsoever.

This is freedom of choice in elections. When this freedom is gone so will all the other rights of the American people be gone.

There are many ways to become involved in the election of this or that

candidate. One can volunteer his time and contribute man hours in the campaign organization, in one capacity or another.

But, as we all know, one of the most important ways in which citizens can support a candidate is through a contribution of money to his campaign efforts.

By the same token, a citizen can demonstrate nonsupport of a candidate by withholding financial support.

I hope the time never comes in the United States when rank and file Americans will have to support any candidate for public office against their wishes. Yet, this is what public financing would demand.

It would deny the people of their right to freely express themselves in elections. It would dictate to the people whom they must support.

The stated purpose of this bill is to improve election law. You do not improve elections by forcing people to prop up candidates not of their choice with their tax dollars.

Moreover, it is also a stated goal of this legislation to control special interest groups and their influence in elections. It fails in this regard as well.

The sponsors of this bill maintain that by placing a ceiling on expenditures and by publicly subsidizing elections, undue pressure group influence will be greatly reduced.

S. 926 will not do this. If anything, it only makes matters worse.

The most reasonable and effective steps possible already have been taken to guard against an individual or an organization buying an election or contributing outrageous sums of money. The individual is limited to a $1,000 contribution. A political action organization is limited to a $5,000 contribution. All contributions and expenditures must be fully disclosed and publicly reported. Period.

Those two conditions do more to stem the big spenders and special interest groups than this bill could ever hope to do.

Under S. 926, a spending ceiling would be established. The Federal Government would provide an initial sum of money and matching funds for contributions solicited.

By doing this, it is alleged that influence of special interest groups will somehow be muted. The average voter will now have a greater say in the election of public officials. Participation will increase. More talented individuals will seek office. Congress will be more effective, and, indeed the country will be saved. Or, so the fable goes.

Well, now that the country has been spared and the special interest groups have been run out of town. I would like the Senate to consider a point or two.

Once we set this ceiling, with the matching funds and all, a candidate will only have to raise a certain amount of money.

The remainder will be provided by the Government.

Now, where is the candidate going to get the money he raises?

Some from special interest groups? Some from small contributors?

About the same percentage from each as before?

My bet is that there will be an increase in the percentage of special interest contributions over that of the average voter.

The bulk of the money that is not provided by the Federal Government will come from large contributors, not small ones.

After all, special interest groups will still be in business to promote their particular cause.

They will still be able to contribute until the limit is reached. All this proposal does is keep these groups on their toes. They will now have to get their money in quickly before the ceiling is reached.

When that happens, the average guy, who might want to give $15 or $20 to a candidate of his choice would not be able to.

The candidate's limit will have been reached.

So what do we have here? This average guy is being denied the right to support the candidate of his choice.

At the same time, he is being forced, through his tax dollars, to support a candidate he may despise, and for whom he has no intention of voting.

So, tell me, whose influence has been increased? To whom has the candidate become more beholden?

The average man? No way. All this bill would do is reduce the common denominator for the amount of campaign contributions, and in the process squeeze the small contributor out of the picture.

You do not improve Government that way. It would not become more responsive that way. You do not get more people involved in elections that way. You would not see candidates going to the people any more. The candidate would not have to sell himself and his ideas to potential supporters.

He will be removed that much further from the electorate, and that much closer to the special interest groups.

Also, suppose the spending limit for a candidate is $400,000. Automatically, the candidate receives $100,000.

The Government will then match, dollar for dollar, everything the candidate raises until the $400,000 limit is reached. The candidate raises $150,000. the Government matches with $150,000.

So what happens to the special interest dollar? It now becomes worth $2. The Government will now have gone into the business of subsidizing special interest groups. It will support, even encourage, what it seeks to prevent. A special interest group gives $100 to a candidate. The Government will match it.

Their $100 is now worth $200. Furthermore, Buckley against Valeo makes it clear that an individual or organization can spend as much as they like on a candidate as long as they do so independent of the candidate's campaign committee.

They can spend millions of dollars if they so desire.

They can hire thousands of workers. They can send out millions of letters.

They can buy TV and radio time. If they wish, they can buy up every billboard in the country.

It has been conclusively documented that millions and millions of special interest dollars were spent independently in the Presidential election of 1976. What is worse, money spent in this manner need not be reported. Proponents of this bill, who so piously protest special interest influence, do absolutely nothing to remedy the situation.

They would make it worse. Suppose a particular interest group was intent upon defeating a Senate candidate who refused to support its cause. That group could spend a fortune if it wanted. Yet, the candidate himself would be limited in the funds he could spend and, therefore, virtually powerless to counteract.

Mr. President, in the final analysis, special interest group participation in elections will never be eliminated.

It should not be. As with any citizen, organizations have a right to back candidates they support and ideas they believe in. But I do not believe any group or organization ought to have an undue or excessive impact on the outcome of an election, or influence over an elected official.

We all agree on that. But it is an outrage and an insult to anyone's intelligence to pass the bill off as a safeguard against special interest influence. It is not. There is no way on Earth that such a claim can be substantiated.

The opposite is the case.

As I have pointed out, we have already taken what I consider to be appropriate steps to control the influence of special interest outfits. We have limited the amount they can contribute. we have made it mandatory that all contributions and expenditures be reported.

This is a proper course of action in controlling special interest influence. S. 926 is not.

I fully support the substitute offer by Senator PACKWOOD, myself, and other Senators which would provide increased tax credits for political contributions.

It would allow taxpayers a credit of 75 percent of their political contribution in a calendar year up to $100 on an individual return, and $200 on joint returns.

I hope the Senate will adopt this substitution, and reject public financing.

By doing so, we will relieve taxpayers of yet another burden. We will not add another layer on the bureaucracy. We will not open new doors to Federal regulation. We will not increase opportunities for election abuse.

We will, on the other hand, preserve freedom of choice in elections in the United States.

Mr. THURMOND. Mr. President, on many previous occasions. I have stated my opposition to S. 926, the bill to provide for public financing of congressional elections.

I seriously question in both a philosophical and a practical sense whether taxpayer funds should be used as subsidies to pay the bills of candidates who want to run for public office.

Briefly, Mr. President, I shall now review several of the points discussed in the hearings which highlight some of the philosophical and practical problems I have with the concept of public financing.

Arguments have been advanced to the effect that public financing will remove the evil of special interests from the po-

litical process. I contend the opposite will occur.

After the Watergate situation, the cry for public financing on the part of some proponents became more vocal, and public financing was labeled by some as the remedy to prevent future "Watergates." Former Senator Eugene McCarthy has very effectively disposed of the arguments that Watergate involved the corruption of money and that public financing is a cure-all for future political scandals. In his testimony before the Rules Committee, Senator McCarthy succinctly addressed this point, and I believe the Senate will benefit from his views which follow:

. . . Rather, they involved the corruption of power and the use of government power to punish the Administration's political enemies. Instead of limiting that power, the FECA has increased it—by giving to incumbents the right to appoint and control the Federal Election Commission and by giving to the Commission what amounts to the power of life and death over political campaigns.

One of the pending bills, S. 926, would extend to Senate candidates those controls of the FECA which they have not experienced already.

It would subject them to limits on campaign spending—limits which would infringe seriously upon their freedom of speech, and limits which would take no account of differences of geography, travel expenses and media markets among the various states.

It would subject their campaigns to regulate audits by the Federal Election Commission. In return for federal subsidies, they would be required to keep their books as the Commission requires and to furnish upon request any type of information the Commission demands. In effect, they would be required to give up their right of privacy in exchange for federal funds.

S. 926 would give Senate candidates virtually no choice as to whether to accept public subsidies. Our experience with existing provisions for presidential subsidies indicates that they offer no real choice; because the contributions limits, which apply to all candidates, make it impossible for a nonsubsidized candidate to compete with those who are subsidized. The alleged choice offered in S. 926 is another effort to appear to offer freedom of choice, while, in fact, offering no choice at all. If a candidate foregoes the subsidy and raises enough money to exceed the spending limits to which his/her subsidized opponent is held, the opponent is then free to exceed the spending limits which are supposed to be a condition of the subsidy. The subsidized candidate can have it both ways. For the candidate who prefers to refuse the federal subsidy—and the elaborate controls that go with it—this is a heads-you-win-tails-I-lose proposition. To offer such an alternative as a genuine choice is unworthy of the Congress of the United States.

The whole concept of public subsidies for political campaigns is alien to American constitutional philosophy and to our traditions. The founding fathers, who were concerned about shielding the people and the political process from the government, would have been appalled by the concept of public funding. Had anyone raised the issue at the Constitutional Convention, he would have been reminded that King George III did not say to the colonists, "You gentleman raise a few thousand pounds; we will match it; and you can have a minor revolution." Having the government control the process by which the government itself is chosen goes against common sense and against every tradition of democracy.

Mr. Chairman, this Committee should not endorse the extension of public subsidies to Senate candidates. Rather it should endorse the elimination of public subsidies for presidential candidates. Beyond that, it should work to end all of the repressive features of the Federal Election Campaign Act.

Edmund Burke, in speaking of an anti-Catholic penal statute passed by the English parliament in 1699, declared: "Gentlemen, bad laws are the worst sort of tyranny. In such a country as this, they are of all bad things and worst, worse by far than anywhere else; and they derive a particular malignity even from the wisdom and soundness of the rest of our institutions."

The remedy Burke suggested for the penal act is the same I recommend for the federal election act. It should not be extended, not altered, not amended. It should be repealed. Only by repeal can the Congress sustain "the wisdom and soundness of the rest of our institutions."

Mr. President, I strongly urge my colleagues to pay attention to the wisdom of our former colleague. Often, when we served together, Gene McCarthy and I were on opposite sides of the issue. On this question, though, Mr. President, I have heard no more eloquent spokesman than he in opposition to the bill. I commend him for the foresight and courage with which he has spoken out on this issue. Again let me emphasize the words of our former colleague:

Having the government control the process by which the government itself is chosen goes against common sense and against every tradition of democracy.

Additionally, Mr. President, I would call to the attention of the Senate, recommendation No. 7 contained in the Report of the Select Committee on Presidential Campaign Activities, which urges the Senate not to adopt any form of public financing. The committee position reads as follows:

The Committee recommends against the adoption of any form of public financing in which tax monies are collected and allocated to political candidates by the federal government. The Select Committee opposes the various proposals which have been offered in the Congress to provide mandatory public financing of campaigns for federal office. While recognizing the basis of support for the concepts of public financing, and the potential difficulty in adequately funding campaigns in the midst of strict limitations on the form and amount of contributions, the Committee takes issue with the contention that public financing affords either an effective or appropriate solution.

Thomas Jefferson believed, "to compel a man to furnish contributions of money for the propagation of opinions which he disbelieves and abhors is sinful and tyrannical."

The Comimttee's opposition is based, like Jefferson's, upon the fundamental need to protect the voluntary right of individual citizens to express themselves politically, as guaranteed by the First Amendment.

Futhermore, we find inherent dangers in authorizing the federal bureaucracy to fund and excessively regulate political campaigns.

Mr. President, I would call to the attention of the Senate the strong opposition to public financing expressed by the majority of the Watergate Committee. No doubt, Mr. President, men of the caliber of Sam Ervin, HOWARD BAKER, LOWELL WEICKER, and HERMAN TALMADGE would have endorsed it as a remedy in the final report if they had thought it would prevent future corruption in the Government. Let the record speak for itself; these were the men who have opposed public financing as a remedy for Government corruption.

Another aspect of the bill troubles me greatly, Mr. President. It is the fact that people, the essence of the body politic, are further removed from campaign financing, which is at the core of any political campaigns.

As distasteful as I find campaign fundraising—and I think every candidate for office does find it distasteful—private contributions show that people believe in a candidate, and by virtue of their financial support, they help him to build a political base.

Mr. President, the American people are already distrustful and feel alienated from Government. Public financing gives the Congress and the Federal Election Commission control over an integral part of political campaigns and removes the people from the financing process.

Our distinguished and eloquent colleague from Connecticut (Senator WEICKER) has appropriately analyzed this aspect of public financing as follows:

One measure of a candidate is his or her ability to generate contributions for public office. Candidates should sell their ideas to win, not just be a warm body and rely on the Federal dole. . . . Once we hand the Congress the political purse strings, the people will no longer have the final say. Instead, politicians will be monitoring politicians—and that is not a healthy situation.

Senator McCarthy made the same point in a different way in his testimony before the Rules Committee. He said:

Particularly with reference to the congressional race, to have Congress sitting in judgment upon the political process, while someone is challenging an incumbent, it seems to me it sets up a relationship which is really not to be defended.

Mr. President, proponents claim this bill will reduce special interest money. On close analysis, however, it does not reduce certain special interest "in kind" contributions such as partisan communications, get-out-the-vote campaigns, and voter registration drives.

In an excellent article by Michael Malbin in the March 1977 National Journal, he brought into sharp focus the disequilibrium with which the campaign financing law treats organized labor and other groups. He wrote:

When Congress amended the campaign finance law in 1974 and 1976, the bill's supporters said they would bring an end to the days when special interests could have undue influence over elections.

It hasn't worked out that way.

The new law has eliminated some of the ways that money can influence politics. But the net result of limiting some contributors has been to increase the power of other big spenders who were permitted to operate as they always did.

The biggest winner was organized labor. The magnitude and sophistication of labor's efforts last year are even more impressive when stacked up against what others could do, particularly on the presidential level. Public financing for the general elections shut off private contributions to the two major presidential candidates. Contributions to the national party committees were permitted, but even this was limited. In contrast, labor was able to spend as much as it wanted to in communicating with union members and their families, registering them to vote and getting them to the polls.

Labor, not surprisingly supported the 1974 and 1976 amendments to the campaign finance law. For the future it supports an extension of public financing to congressional elections. Public financing could leave labor in as dominant a position on congressional elections as it was in 1976 on the presidential.

Further, Mr. President, I am concerned about the problem of targeted campaigns and the inability of candidates to counter an offensive mounted by membership organizations in the closing days of a campaign because of the respective expenditure limits on candidates and no limits on independent expenditures:

Our colleague, Senator PACKWOOD, cautioned against this possibility as follows in hearings before the Rules Committee:

What labor learned in 1976 will soon be discovered by other large membership organizations. Woe be to the candidate who votes for gun registration and earns the wrath of the National Rifle Association. Say goodbye to the candidate who votes for legal abortion and draws the wrath of Right to Life organizations.

The amount of money that a candidate could spend under public financing would be dwarfed by the narrowly targeted massive spending of organizations dedicated to the defeat of a candidate whose sole sin was to vote his conscience, and in so doing, crossed the passions of a particularly massive and wealthy special interest group.

These independent and wealthy organizations are also independent of accountability to the voters which is a very critical element in our political system.

What happens to the competition of ideas when powerful one-viewpoint organizations can use their resources to subvert the electoral process?

These are vital questions, and in framing answers we must remember that campaigns are waged to give voters a choice about their representation, not merely for the benefit of the candidates, the political parties, labor unions, the rich, or special interest groups.

Later in the same hearing, in a colloquy with Senator ALLEN, Senator PACKWOOD further underscored the problem:

Senator ALLEN. Well, can they spend in communicating only with their members or with the public generally?

Senator PACKWOOD. Both under the law, unions and businesses are allowed to use union dues or corporate treasury money to communicate with their members, but they are perfectly free to set up political action funds, and this is what the Buckley case held for groups as well as individuals, political action funds, voluntary contributions, and they can spend it for television to communicate with the general public, with any kind of mailings, with any kind of radio time.

I can picture, Senator, a group with $400,000 or $500,000, using about $150,000 of it to produce an excellent television documentary, and the other $350,000 to run it for the last week of a campaign, and it would be dynamite. And there would be no way you could counter it.

Mr. President, it is my contention that this bill gives a new weapon to the political fringe groups, extremists, special interest groups, moneyed groups, and labor organizations who may decide to target a particular candidate. Its victims will not be predominantly Democrats or Republicans, incumbents or nonincumbents, but the American voter, who finds that campaigns will be distorted by special moneyed groups outside the ambit of this law.

To the proponents, let it not be said that they were not warned about the great distortion this bill invites.

S. 926 unwisely increases the Federal power over the election process at the expense of individual freedom. It further removes the electorate from a fundamental aspect of political campaigns and vests the regulatory power in the Federal bureaucracy. Instead of reducing the role of special interest groups, it enhances this role and distorts the political process.

Mr. President, after my colleagues have analyzed this bill, I hope they will agree with me that it is legislation which the Senate should reject. It will harm the Republican Party. It will harm the Democratic Party as well. Most important, however, it will do grave harm to the body politic.

VOTE

The PRESIDING OFFICER. The question is, is it the sense of the Senate that debate on S. 926, a bill to provide for the public financing of primary and general elections for the United States Senate, shall be brought to a close? The yeas and nays are mandatory under the rule.

The clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. MCCLELLAN) is necessarily absent.

I further announce that, if present and voting the Senator from Arkansas (Mr. MCCLELLAN) would vote "Nay."

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

The yeas and nays resulted—yeas 52, nays 46, as follows:

[Rollcall Vote No. 321 Leg.]

YEAS—52

Abourezk	Glenn	Moynihan
Anderson	Gravel	Muskie
Bayh	Hart	Nelson
Biden	Haskell	Pearson
Brooke	Huddleston	Pell
Bumpers	Humphrey	Proxmire
Burdick	Inouye	Randolph
Byrd, Robert C.	Jackson	Ribicoff
Cannon	Kennedy	Riegle
Chiles	Leahy	Sarbanes
Church	Magnuson	Sasser
Clark	Mathias	Stafford
Cranston	Matsunaga	Stevenson
Culver	McGovern	Stone
DeConcini	McIntyre	Williams
Durkin	Melcher	Zorinsky
Eagleton	Metcalf	
Ford	Metzenbaum	

NAYS—46

Allen	Griffin	Nunn
Baker	Hansen	Packwood
Bartlett	Hatch	Roth
Bellmon	Hatfield	Schmitt
Bentsen	Hathaway	Schweiker
Byrd, Harry F., Jr.	Hayakawa	Scott
	Heinz	Sparkman
Case	Helms	Stennis
Chafee	Hollings	Stevens
Curtis	Javits	Talmadge
Danforth	Johnston	Thurmond

Domenici	Long	Wallop
Eastland	Lugar	Weicker
Garn	McClure	Young
Goldwater	Morgan	

NOT VOTING—2

McClellan	Percy

The PRESIDING OFFICER. On this vote the yeas are 52, the nays are 46. Three-fifths of the Senators duly chosen and sworn not having voted in the affirmative, the motion is not agreed to.

AMENDMENT NO. 635

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Alabama (Mr. ALLEN).

Mr. CANNON. Mr. President, I ask for the yeas and nays on the amendment of the Senator from Alabama.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. HATFIELD. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. President, I ask unanimous consent that Geoff Garin, of Senator HEINZ' staff, be permitted floor privileges.

The PRESIDING OFFICER. Without objection, it is so ordered.

Will the Senators please be in order and show courtesy to their colleagues.

Mr. ROBERT C. BYRD. Mr. President, will the Chair persist in his attempt to get order?

The PRESIDING OFFICER. The Senator is correct. Will the Senators take their seats. Those Senators wishing to converse please retire to the cloakroom. The Senate will be in order. The Senators will take their seats.

Mr. ROBERT C. BYRD. Mr. President, the amendment by Mr. ALLEN would strike part I from the bill; am I correct?

The PRESIDING OFFICER. The Chair will not interpret the amendment. The clerk will report the amendment.

The legislative clerk read as follows:

On page 19, strike all starting with line 16 through page 41, line 4 (all of part I).

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. President, that is the public financing section of the bill. We are ready for a vote. The yeas and nays are ordered.

Mr. HATFIELD. Mr. President, I am ready for a vote on this amendment.

Mr. ROBERT C. BYRD. Vote. Vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Alabama. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON of California. I announce that the Senator from Alaska (Mr. GRAVEL) and the Senator from Arkansas (Mr. MCCLELLAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

The result was announced—yeas 58, nays 39, as follows:

[Rollcall Vote No. 322 Leg.]

YEAS—58

Allen	Cranston	Hatch
Baker	Curtis	Hatfield
Bartlett	Danforth	Hathaway
Bellmon	DeConcini	Hayakawa
Bentsen	Dole	Helms
Bumpers	Domenici	Hollings

Glenn	Metcalf	Williams

NOT VOTING—3

Gravel	McClellan	Percy

So Mr. ALLEN's amendment was agreed to.

Mr. CANNON. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The question now recurs on agreeing to the amendment of the Senator from Nevada.

Mr. CANNON. Mr. President, I ask unanimous consent that I be permitted to yield to the majority leader without losing my right to the floor.

Mr. ROBERT C. BYRD. Mr. President, I take the floor at this time to see if it will be possible to get a time limitation agreement on the bill, amendments thereto, and motions in relation to the same, so that the Senate may complete action on this bill today.

Mr. BAKER. Mr. President, will the majority leader yield?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. Mr. President, I, too, would like to know how we can proceed next. It has come to my attention that there are amendments on this side which I think still will be offered. If the majority leader will permit me to do so, I would like to inquire on this side what amendments that remain with which we are still confronted.

Mr. PACKWOOD. Mr. President, I have an amendment to offer which would provide for an increase in the tax credit for political contributions.

Mr. BAKER. Would the distinguished Senator from Oregon care to give some estimate of the time he would require?

Mr. PACKWOOD. Oh, I would think a total of 40 minutes.

Mr. BELLMON. Mr. President, I have four amendments which I would be glad to have considered en bloc, I would be satisfied with a 30-minute time limitation.

Mr. BAKER. For all of them together?

Mr. BELLMON. Yes, for all of them.

Mr. HEINZ. Mr. President, I have one amendment to section 301, on which I think I would be happy with a 15-minute limitation.

Mr. ROBERT C. BYRD. Mr. President, are there other Senators on this side who have amendments?

Mr. CANNON. I have the pending amendment and three additional amendments, Mr. President. I would be willing to agree to 10 minutes on a side.

Mr. BAKER. Mr. President, will the majority leader yield to me for one moment?

Mr. ROBERT C. BYRD. The Senator from Nevada has the floor. Will he yield to the minority leader?

Mr. CANNON. I do so provided I do not lose my right to the floor.

Mr. BAKER. Mr. President, I have a number of Senators on this side who have indicated they either have amendments or matters they wish to discuss. Could we have a brief quorum call while we try to get our thoughts together?

Mr. ROBERT C. BYRD. With the understanding that the Senator from Nevada does not lose his right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GLENN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SARBANES). Without objection, it is so ordered.

Mr. GLENN. Mr. President, I ask unanimous consent that a member of my staff, Walker Nolan, have floor privileges during the consideration of this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GLENN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. RIBICOFF. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RIBICOFF. Mr. President, I ask unanimous consent that the following staff members of the Governmental Affairs Committee be permitted the floor privileges during the consideration of the Department of Energy conference report and the proceedings now pending on the floor: Dick Wegman, Ellen Miller, Paul Hoff, and Claude Barfield.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that two staff members of the Joint Committee on Taxation, Mr. Lawrence Browne and Herbert Chabot, be granted the privileges of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRIFFIN. Mr. President, I have the same request with respect to Hank Chesborough and Bill Dahling.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that a member of my staff, Mr. Ken Wolgamott, be granted the privileges of the floor during the debate and votes on the pending measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, I ask unanimous consent that Charles Trabandt, of the Energy and Natural Resources Committee staff, be granted the privileges of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. JACKSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JACKSON. Mr. President, I ask unanimous consent that Deborah Merrick and Dan Dreyfus of my staff, the Energy and Natural Resources Committee, be granted privilege of the floor for the day.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC FINANCING OF SENATE ELECTIONS

The Senate continued with the consideration of S. 926.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that I may be recognized without prejudice to the distinguished Senator from Nevada who is entitled to be recognized under the order previously entered.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, after conferring with the distinguished minority leader and other Senators on that side of the aisle, and with the distinguished Senator from Nevada (Mr. CANNON) and the equally distinguished Senators from Iowa and California (Mr. CLARK and Mr. CRANSTON), and others on this side of the aisle, that with respect to the pending measure there be a two-hour limitation on S. 926, the time to be equally divided between Mr. CANNON and Mr. HATFIELD; that there be a time limitation on one amendment by Mr. TOWER of 60 minutes; that there be a time limitation on one amendment by Mr. HELMS of 60 minutes; that there be a time limitation of 20 minutes on an amendment by Mr. BAKER; that there be a time limitation of 45 minutes on an amendment by Mr. DOMENICI; that there be a time limitation of 60 minutes on an amendment by Mr. BELLMON; that there be a time limitation on an amendment by Mr. PACKWOOD of 40 minutes, with the understanding that no point of order concerning germaneness may be raised against that amendment; provided, further, that there be a time limitation on any other amendment of not to exceed 30 minutes; that there be a time limitation on amendments in the second degree, motions, appeals, points of order, if such are submitted by the Chair to the body for its decision, or should the Chair entertain debate on such, the time limit not to exceed 20 minutes; that no amendment pertaining to public financing be in order; and that

the agreement be in the usual form in every respect.

The PRESIDING OFFICER. Is there objection?

Mr. BAKER. Mr. President, reserving the right to object—and I will not object—the only reservation I have is this: It is now my understanding that the request for the enumerated amendments and the times should be two amendments by the distinguished senior Senator from Texas (Mr. TOWER), with an allowance of 1 hour on each.

Mr. ROBERT C. BYRD. I so modify my request.

I also include four amendments by Mr. CANNON, on which there be a time limit of 20 minutes each.

Mr. PACKWOOD. Mr. President, reserving the right to object, in addition, my amendment will not be subject to a point of order as being public financing. Is that correct?

Mr. ROBERT C. BYRD. There will be no point of order against the Senator's amendment as to germaneness.

Mr. BAKER. Mr. President, reserving the right to object, I thought it was understood that the Packwood amendment, which is a tax credit amendment——

Mr. ROBERT C. BYRD. That is correct.

Mr. BAKER (continuing). Would not be prohibited by that part of this agreement which prohibits——

Mr. ROBERT C. BYRD. Nongermane amendments.

Mr. BAKER (continuing). Which prohibits amendments dealing with public financing.

Mr. ROBERT C. BYRD. The answer to the question is that no point of order will lie against his amendment with respect to germaneness.

Mr. PACKWOOD. I object.

Mr. ROBERT C. BYRD. A constitutional point of order would lie, the Senator understands——

Mr. BAKER. Mr. President, reserving the right to object, I do not doubt for one moment that a constitutional point of order might be raised against the amendment. But I wanted to make sure that this unanimous-consent agreement, which prohibits other amendments offering a plan of public financing, does not prohibit the tax credit amendment by the distinguished Senator from Oregon.

Mr. ROBERT C. BYRD. It would not.

Mr. PACKWOOD. One further question. What was the time limit on the debate on points of order?

Mr. ROBERT C. BYRD. Twenty minutes.

The PRESIDING OFFICER. Twenty minutes.

Mr. PACKWOOD. The constitutional point of order that will be raised to my amendment is of some significance to the Senate and the procedures it has followed in the past and may want to follow in the future, and I may object to a time limitation on a constitutional point of order.

Mr. ROBERT C. BYRD. Let us increase the time limitation on the point of order.

The PRESIDING OFFICER. The Senator would have his time on the amendment, in any event.

Mr. PACKWOOD. Yes, but a constitutional point of order is going to be raised to it, which is of significant moment to the Senate; and I would not want to be limited to a 20-minute debate on the point of order that will be raised to the amendment.

Mr. BAKER. Let us increase it. What does the Senator want—30 minutes to a side?

Mr. ROBERT C. BYRD. Mr. President, I modify the request to provide that there be a time limit of not to exceed 1 hour on a constitutional point of order, if raised, as I am sure it will be raised, in connection with the amendment by Mr. PACKWOOD.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request that has been stated by the majority leader? The Chair hears none, and the unanimous-consent request is granted.

(Subsequently the following occurred:)

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent with respect to S. 926, that Mr. STEVENSON be allowed 1 hour to be equally divided on each of two amendments which he may call up and offer to that bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the unanimous-consent agreement is as follows:

Ordered, That during the further consideration of S. 926 (Order No. 277), a bill to provide for the public financing of primary and general elections for the U.S. Senate, debate on any amendment in the first degree (except 4 amendments by the Senator from Nevada (Mr. CANNON), on each of which there shall be 20 minutes; 2 amendments by the Senator from Texas (Mr. TOWER), on each of which there shall be 1 hour; an amendment by the Senator from North Carolina (Mr. HELMS), on which there shall be 1 hour; an amendment by the Senator from Tennessee (Mr. BAKER), on which there shall be 20 minutes; an amendment by the Senator from New Mexico (Mr. DOMENICI), on which there shall be 45 minutes; 4 amendments by the Senator from Oklahoma (Mr. BELLMON), on which there shall be a total of 1 hour; two amendments by the Senator from Illinois (Mr. STEVENSON), on each of which there shall be 1 hour; and an amendment by the Senator from Oregon (Mr. PACKWOOD), on which there shall be 40 minutes, with no point of order on germaneness being in order thereon) shall be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the bill, and debate on any amendment in the second degree, debatable motion, appeal, or point of order which is submitted or on which the Chair entertains debate (except a constitutional point of order on the Packwood amendment, on which there shall be 1 hour, if made) shall be limited to 20 minutes, to be equally divided and controlled by the mover of such and the manager of the bill: *Provided,* That in the event the manager of the bill is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the Minority Leader or his designee: *Provided further,* That no amendment that is not germane to the provisions of the said bill shall be received and no amendment relative to public financing shall be in order.

Ordered further, That on the question of final passage of the said bill, debate shall be limited to 2 hours, to be equally divided and controlled, respectively, by the Senator from Nevada (Mr. CANNON) and the Senator from Oregon (Mr. HATFIELD): *Provided,* That the said Senators, or any one of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, debatable motion, appeal, or point of order.

(The following proceedings occurred later in the day and are printed at this point in the RECORD by unanimous consent.)

Mr. CLARK. Mr. President, I should like to take 2 or 3 minutes to explain what, from my point of view, has occurred on the floor the last 2 weeks and most particularly today.

I voted for Senator ALLEN'S amendment that was pending after the cloture vote because it seemed to me quite clear that it would be impossible to get cloture in this body on public financing. We had three cloture votes, and the votes were very clear in terms of the intention of the majority of the Members of the Senate to support public financing. It seemed to me the Allen amendment, which struck public financing, did at least leave in place some minor but nevertheless correct adjustments and changes in existing law.

Now, the interesting thing that has happened, I think, these last 2 weeks is that we were never able to substantially receive any Republican support for this legislation. We received about 80 percent of the Democratic votes, I think all but about 11 or 12.

Indeed, interestingly enough, ultimately we received the votes of every single Democrat in this body outside of the South, except for one.

That is a very significant figure, it seems to me, and I want to come back to it in just a moment. But only one of the five Republican sponsors of this legislation, Senator MATHIAS, ever voted in any of the three cloture votes to shut off debate, to even allow us to have a vote on the merits of public financing.

Now, that is the fact of the matter. The people who were publicly committed to this kind of legislation, people who put their names on it as sponsors—in one case a major author of the bill—never would allow us to even come to a vote on that legislation.

As I said here yesterday, frankly, it does not surprise me that the Democratic Senators who do not believe in public financing should not vote for cloture. Why should they? It does not surprise me that Republican Senators who are opposed to public financing should not vote for closure. Why should they? The Democrats who were committed to this legislation voted for cloture.

The fact is, and the irony of this is, that those people who are on record in questionnaires, in their mail to their constituents, and in their public statements in favor of public financing refused to allow a vote on public financing. That is the interesting thing to me, not that people who are opposed to it would oppose cloture on the Democratic or the Republican side.

Indeed, I must say from a self-interest point of view it would be very difficult to see a Southern Democrat vote for this

legislation because it would have given a grant of money and matching funds to Republican candidates in every State in the South, where many times Democrats have not had any serious opposition.

I do not see this, frankly—and the Republican Party can interpret its own interests—but I must say I do not know how that could have been a party vote against the interests of the Republican Party.

Let me just say, in conclusion, Mr. President, we did not bring this bill to the floor with the hope that we were going to get 60 votes at some future period. The fact is that the day this bill was brought to the floor we had 60 votes for cloture. We had 60 votes, including 11 Republicans. What happened in the meantime? What happened? Well, I think it is quite clear. People began to put partisanship ahead of their own public statements, and ahead of their own personal commitments, that are clear for anybody to read. I think that is what happened.

People really succumbed to the idea of partisan pressure and partisan views over and above their stated positions. I think that is the fact of the matter.

We did not start out in the hope that we would somehow pick up 8 or 10 Republican votes. We had them and lost them despite their commitments, and I think that is the fact of the matter.

I had hoped, because of the fact that we had offered compromises of various kinds, to try to satisfy the opposition to public financing, by making changes that addressed the major points of criticism; in fact, none of those compromises were ever acceptable. They were not acceptable, as I had hoped, to Senators who are publicly committed to public financing, not those who oppose it. As for those who are publicly committed to public financing who would not even vote for cloture so the Senate would have a chance to vote on the issue, I hope they can face up both to their own consciences and their constituencies.

The PRESIDING OFFICER. The time of the Senator from Iowa has expired.

(At this point, Mr. RIBICOFF had asked unanimous consent to have a summary of the provisions of a conference report printed in the RECORD.)

Mr. HEINZ. Reserving the right to object—and I hope I do not have to object—I must reserve my rights not because of anything the Senator from Connecticut is doing but because there has just been a speech on the floor entered into by unanimous consent, of which I was not a party. I did not know it was coming up, but that is my fault. My concern bears on the matter we just voted on, namely the striking of title I of S. 926.

The PRESIDING OFFICER. Does the Senator from Pennsylvania object to the unanimous-consent request?

Mr. HEINZ. I would like to ask unanimous consent that when the Senator from Connecticut has finished his presentation—I do not know how long it will be—that I might proceed for not to exceed 5 minutes on the same subject as the Senator from Iowa.
